Politically, Culebra is a part of Vieque, not having a sufficient number of inhabitants to constitute a separate municipality. When the population reaches 2,000 it can have a member in the House of Delegates of Porto Rico. Just now the head of affairs in the island, despite the presence of the appointed delegate, is Lieutenant Harding. In addition to his duties as commandant of the military camp he does all

When you drink Champagne, drink the very best, *Cook's Imperial Extra Dry*. It always satisfies, never disappoints.

Use BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. It costs a jar.

**Advice to Mothers:** Mrs. Winslow's *Soothing Syrup* should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhea.

The famous Scher Piano has justly earned its reputation, because it is the best instrument in the world.

he can for the island and its people. His wife, who is the only American woman on Culebra, is a veritable queen among the natives. She is idolized by them for her many acts of kindness, and spends much of her time in the saddle, riding astride, as straight as an arrow, over the island trails. She it was who guided Lieutenant McCormick and myself on some of our recent investigating trips. She says she hardly has time to get lonesome—a remarkable admission for a young, graceful, and pretty woman whose lot is cast in such an out-of-the-way place. Her husband is big-hearted, brawny, and patriotic, and often works harder than his men. Last Fourth of July he arranged a very successful celebration at which he was the orator and which included a lively and close horse-race.

The island is healthy, there being little sickness and an average of but five deaths a year. On the wall of a tiny cemetery near the village is the public coffin, in which all bodies are carried to the burying ground. The North Atlantic squadron could certainly find no more salubrious climate than that of Culebra, and the marines stationed there seem exempt from disease. There are worse places for a permanent naval station.

## Not a Live Issue.

WE ARE glad that we are not able to agree with our highly esteemed contemporary, the *Springfield Republican*, in its estimate of the reciprocity issue. So highly does the *Republican* esteem it that it says, "The country is almost compelled to defeat the President's party in order to sustain the President and win that fulfillment of the national obligation for which he so creditably stands." The *St. Louis Globe-Democrat*, an enterprising and responsible newspaper, and a leader of Western Republican thought, has made a careful canvass, and it finds that very little popular interest is taken anywhere in the reciprocity issue.

This does not mean, however, that it is not worthy of general and generous attention. It only signifies that until a public question is brought home to the busy American, he will be too busy to give it attention. It took years to cultivate a taste for a protective tariff, and the demonstration of its success was not by facts and figures but by the concrete argument of the full dinner-pail. So with reciprocity. Generalizations and tables of statistics will not do. It must be brought nearer to the voter; it must be made a personal matter involving his own welfare. He is too busy to deal with abstractions. He wants to know how much there is in it for him. Lamentable as this may appear to be, from the sentimental, idealistic, and patriotic standpoint, it is nevertheless the fact: and if any of our Democratic friends or those of the independent school of the *Springfield Republican* expect that reciprocity will be a living, forceful, vital issue in the coming congressional campaigns, we fear they will be disappointed.

If the country "defeats the President's party" this fall it will not be because it wishes to teach Congress a lesson regarding the benefits of reciprocity. The public may, by its votes, enter a forceful protest against the extravagances of Congress, for the public knows what these extravagances mean. The public knows that the money that was spent belongs to the people; in other words, to the public itself. So with the question of the trusts. The Democratic outcry against the Republican tariff, as the father of the trusts, will be listened to by many a housewife whose meat bill, ice bill, or coal bill seems unnecessarily high, and the danger of the situation is that she will not stop to listen to reason and accept the proof that neither the Republican party nor the tariff is responsible for the increased cost of living, but will insist that the voting members of her family shall go to the polls, not to vote for party principles, but for "a change."

It would be a bad outlook if the President and his party were at variance on any line of policy. Reasonable differences between the President and Congress and party leaders, have not been unusual. Nor have they been unreconcilable, as both McKinley and Roosevelt have repeatedly shown. A defeat of a President's party would therefore be a defeat of the President himself, and if it were otherwise, the party would see to it that it had a President with which it was in harmony and which it could loyally support.

## A Mischievous Movement.

WE OBSERVE with regret that an organized movement has been set on foot already with the avowed purpose of bringing about the annexation of Cuba, and that the names of several prominent and influential public men, including Senators Mason and Elkins, are connected with it. When such a movement was rumored, immediately after the adjournment of Congress, we believed it to be a bit of idle gossip and gave it little credit, but there seems to be no doubt about it now. Whether or no annexation is the ultimate destiny of Cuba, or whether it is a desirable thing at any time either for Cuba or the United States, are points which we have already discussed in these columns, and our views need not be rehearsed here.

The immediate point to be considered now is the effect that annexation talk and agitation in this country will have upon public sentiment and the course of events in Cuba itself, and especially upon the administration of President Palma and his coadjutors in the government of the new republic. As to this, we believe that the effect will be mischievous and highly injurious directly to the Cubans and indirectly to ourselves. The annex-

tion movement, in a word, we regard as a premature, foolish, and dangerous piece of business, discreditable to the good sense and the honest motives of all who engage in it.

It might go without saying, one would think, among intelligent men everywhere, that a proposal of annexation at this juncture in the history of the island republic, and under existing circumstances, could only be regarded as impertinent and insulting to every patriotic and self-respecting Cuban. To suppose that in the very birth-hour of this little nation, when the echoes of popular rejoicing over its advent have hardly died away, that at the consummation of a political independence toward which multitudes have been looking and longing through many dark and weary years, and to the achievement of which they have poured out unstintingly of their blood and treasure—to suppose that at such a time they will kindly receive and seriously entertain a proposal for absorption into another nation, is to attribute to them a degree of fickleness, shallowness of character, infirmity of purpose, and lack of civic pride and devotion which would render them unfit to become citizens of the United States, or any other enlightened nation.

It will be time to talk of annexation after Cuba has had a fair and reasonable opportunity under favoring auspices to test her free and democratic institutions and the capacity of her people for self-government. That it will take years to demonstrate whether an independent existence is the best thing for Cuba or not, is a reasonable assumption. These years, at the best, will not pass without many sore trials, difficulties, and discouragements for Cuban administrators, incident to the fact that the population of the island is a mixed race, that some strongly antagonistic elements exist among them, that intelligence and morality generally are at a low ebb, making necessary a vast amount of education and development before the mass of the people can be lifted up to the level where they can truly appreciate the advantages of self-government and give intelligent and helpful co-operation toward its establishment.

It is not for us to add to these trials and difficulties by introducing divisive issues among the Cuban people, sowing unrest and discontent, nor by meddling and offensive interference in their affairs. Common decency, to speak of no higher consideration, demands not only that we should give the Cubans a fair chance to prove their capacity for self-government, but that we should give them all possible encouragement and co-operation in that endeavor. We are in honor and duty bound to do that, by the relations we have borne to them during the past few years, and by the promises, express and implied, which we have given. We cannot do less and justify ourselves before honorable men the world over.

Let there be an end, therefore, of this silly and fatuous scheme of annexation, which can only make its promoters ridiculous and do injury to a people who need and deserve all the help and sympathy we have to give.

## The President's Plain Talk.

IT APPEARS that the so-called "regular" Republican State Convention of Delaware has nominated a ticket and pledged to President Roosevelt the support of Delaware Republicans in 1904. This is the anti-Addicks convention. The Addicks, or Union, Republicans of Delaware have also held a State convention recently, and have also strongly pledged the Delaware Republicans for the renomination of President Roosevelt. Meanwhile, with the Republican party divided as it is, the Democrats of Delaware are preparing to walk off with the State, to capture a congressman, a state treasurer and state auditor, and finally to fill the two places in the Senate belonging to Delaware, with two Democrats.

If the Republicans of Delaware would get together they could fill these two places in the United States Senate with Republicans. President Roosevelt ought to be, and is, more interested in securing the electoral votes of Delaware in 1904, than the delegates to the national convention. He is also interested in having the support of two Republican Senators from that State instead of the opposition of two Democrats, and the question arises if it is not time for him to lay his heavy hand on the situation and compel a truce if he cannot establish peace between the factions. Addicks is said to be willing to meet his opponents half way. Isn't it a good time for conciliation on both sides?

President Roosevelt in no uncertain way has indicated his discontent with Republicans who make personal rather than party success their chief consideration. The emphatic way in which our outspoken chief executive recently expressed to the chairman of the Republican State Committee of Texas his disapproval of factional differences was not meant alone as a rebuke to the Republicans of Texas. We have the highest authority for stating that it expresses the sentiments of the President regarding factionists in the party wherever they may be found. The President feels that Republican leaders who are able to make a good showing at the polls, rather than those who simply contrive to get delegates and patronage, are the ones who should be credited with hard work.

The redemption of the State of Delaware from Democratic misrule was a proud accomplishment for the Republican party, and the men who led in the successful movement will best prove their Republicanism by keeping the State in line. The President is justified in proposing to recognize State winners rather than patronage seekers; and while he cannot and would not interfere directly in any factional contest, he has the right, in distributing patronage, all other things being equal, to recognize those who achieve results for the party rather than those who are looking for personal promotion. If the Addicks leaders have made the fight for the party in Delaware and won it, they deserve recognition. If

the credit belongs to their opponents, then the President should recognize the latter. If both are deserving, let the two factions meet each other like sensible men and compromise their differences, or submit them to fair-minded arbitrators. But both factions should heartily indorse the President's outspoken declaration in favor of party supremacy rather than factional success.

## The Plain Truth.

OBJECTION HAS been made, not without reason, to the magnificent educational scheme to the foundation of which the late Cecil Rhodes left several million dollars, on the ground that it will require that American students selected for the scholarships shall receive their university training at Oxford, England, thus taking them out of touch with American life and ways, and making their after service less useful, perhaps, to their own country. No such objection at least can be urged against the plan set on foot by President Butler, of Columbia University, to create scholarships enabling French students to study at American universities and to give Americans a chance to take courses in the French colleges. It is a wise proposal, at all events, and can only have excellent results for both countries thus related if carried into effect. It will be the weaving of another strand in the tie that is bringing all the world together in relations of peace and amity. It is announced that Mr. James H. Hyde, of New York, will furnish funds to enable two French students to go to Columbia University every year. Mr. Hyde, who is vice-president of the Equitable Assurance Society, is noted for his interest in the French language and Frenchmen, and he has been most fittingly decorated with the rosette of Officer of Public Instruction, in France, in recognition of his Franco-American educational efforts.

PERHAPS NO other utterance of Mayor Low, in all his sensible weekly talks on public questions, has attracted as much attention as that regarding police reform. The mayor realizes, as every one does, the disorganization which Tammany left in its wretched police department. Day by day, newspapers are filled with stories of outrageous acts, and often of crimes, committed by police officers of this city, and the leniency with which delinquent officers are treated when brought to trial is amazing. Mayor Low realizes that existing conditions are incompatible with the prompt and complete reform of the department. There has been improvement since his inauguration—that is undeniable; but legislation is needed to facilitate a complete reorganization of the force, and the mayor has named Colonel Partridge, ex-District Attorney Philbin, and ex-Police Commissioner Andrews, as a commission to suggest the desired legislation. This means that once more an appeal must be made to the "hayseeds" at Albany by the home-rulers of New York. Once more our much-tinkered home-rule charter fails to provide for an emergency requiring drastic action. If the "hayseeds" will insist upon legislation that will wipe out the existing police force and establish an entirely new one from top to bottom, under a State constabulary law, or under a new local-police law, we do not know. But that a clean sweep should be made, there can be no question, and it should be one of the first acts of the incoming legislature. Whatever the "hayseeds" do, however, will be sneered at and denounced by Tammany Hall and all the so-called home-rule reformers.

THE SMUG-FACED, oily-tongued political impostor and presidential impossibility who is making a fortune out of the ruin he has wrought in the Democratic party is rapidly being found out. The New Orleans *Picayune*, staunchly Democratic as it is, calls him sharply to account for his misrepresentation of the true idea of Democracy, and says that any man who seeks to create class jealousy becomes a dangerous demagogue. A well-known Democrat of Hartford says that the recent visit to Connecticut of the Nebraska perambulator did great injury to the Democratic party in the State, which is sick and tired of his theory of finance; and the New York *Times*, whose Democratic leanings are apparent, says that every journey the Nebraska spouter makes to the East, "every speech he delivers here, every political demonstration gotten up or attempted in his honor, causes a loss of votes to the Democratic party and diminishes the probability of Democratic victory at the polls." Still the *Times* gives the creature its valuable space. The Washington correspondent of the Democratic *Brooklyn Eagle* quotes a Boston traveling man who, as the result of careful observation, extending from Maine to California, says that the greatest obstacle to Democratic unity and success is the money-making man from Nebraska, who keeps himself so persistently in the foreground. But ex-Senator Lindsay, of Kentucky, according to the New York *Times*, is the most outspoken. He is quoted as saying that the twice-defeated candidate for the presidency "is the biggest political fraud in history, the only man who made money after being twice defeated." It is not to be wondered at that the subject of this paragraph complains because he says his enemies are calling him names, but he has not hesitated to denounce the ablest Democrats in the country, ex-President Cleveland, Senators Hill, Gorman, and others included, in the most shameful manner. While denouncing the aristocracy of wealth and posing as the friend of the poor, the Nebraska howler has heaped up a fortune of over a quarter of a million of dollars and is enjoying himself. If the Republican managers are as smart as we take them to be they will be willing to put up an equal amount to keep him in the front, as the leading Democratic disorganizer, until the campaign of 1904 has been fought and won.

## PEOPLE TALKED ABOUT

THERE RESIDES in Albuquerque, N. M., a man who helped to make some very important history. This

EX-GOVERNOR ROSS,  
Whose vote saved President Johnson.

is ex-Senator and ex-Governor Edmund G. Ross, whose vote saved President Johnson from removal, and thus spared the country from everlasting discredit and defeated something which might become a perilous precedent for periods of public frenzy like that of 1868. Senator Ross was born in Ashland, O., in 1826, learned the printer's trade, worked in the office of the *Milwaukee Sentinel* in 1847-51, went to Kansas in 1856, in the early part of the territorial struggle, was a member of the Kansas constitutional convention of 1859 and of the Legislature for several years, ending in 1861, at the same time editing the *Kansas State Record* and the *Kansas Tribune*, the latter one of the oldest and greatest free-State papers in the Territory. Supplementing the work which he did for the cause of freedom in the Kansas territorial fight in 1856-61, he enlisted as a private in the Union army in the latter year and left the army as major after Appomattox. Appointed to the Senate in 1866 to succeed James H. Lane, who had committed suicide, he was then elected to fill out the term, serving until 1871. It was while in the Senate that Mr. Ross won the place which he will hold in the history of the time. In the contest between President Johnson and the Republican Congress the President was impeached in 1868 by the House for various offenses, was tried by the Senate, the Chief Justice (Chase) presiding, and the division in that body was thirty-five voting "guilty" and nineteen "not guilty." Seven Republican Senators—Fessenden of Maine, Fowler of Tennessee, Trumbull of Illinois, Grimes of Iowa, Henderson of Missouri, Van Winkle of West Virginia, and Ross of Kansas—voted with the Democrats "not guilty." One vote transferred from the smaller to the larger side in that division would have given that element the necessary two-thirds, and Johnson would have been removed. The one vote which the Republican leaders worked hardest to get, and which they thought they would get, was that of Ross. Against its own will the Republican party was thus saved from a grave blunder, and a profound and permanent humiliation for the country was averted. For this act of heroism and public spirit the Senator was driven out of his party, and in 1882 he removed to New Mexico, edited a paper there, was appointed Governor of the Territory by President Cleveland in 1885, held that post until Harrison entered the presidency in 1889, but has had no important public office since. Ex-Senator Ross, now seventy-six years of age, poor, modest, but sincere and intrepid to the last, is a man who deserves well of his country.

ALTHOUGH NOW past his eightieth year, Dr. Theodore L. Cuyler, the distinguished preacher and writer, maintains his mental and physical vigor to a remarkable degree. His chief physical affliction for years past has been deafness. His handwriting has always been delightful, clear, bold and legible, and never more so than now. It is a good index of his character.

MECKLENBURG-SCHWERIN, although one of the smallest kingdoms known to modern history, with an area about equal to our State of Connecticut, has been very much in the world's eye during the past year or two. It was Prince Henry, of the house of Mecklenburg, whom Queen Wilhelmina, of Holland, chose for her husband; and a younger sister of the same young man was proposed by the match-makers for a possible union with the hereditary Grand Duke Michael of Russia.

FREDERICK FRANCIS,  
Duke of Mecklenburg-Schwerin and the youngest ruler in Europe.

Later than all, as a fact of positive history, came the technical accession to the throne of Mecklenburg-Schwerin, of the Grand Duke Frederick Francis. This young man is only twenty years old, but he has been thoroughly trained and well educated, his ministers are able and experienced men, and the grand duchy is in a prosperous and happy condition. The grand-ducal house of Mecklenburg is the only reigning family in western Europe of Slavonic origin, and claims to be the oldest sovereign house in Europe. In their full title the grand dukes style themselves Princes of the Wends, and the romantic incidents and stories relating to the family during its history for twenty-five generations would make almost a library in themselves.

DURING HIS recent speech making tour in New England President Roosevelt met no more congenial comrade

than Governor Crane, of Massachusetts, who accompanied him through a part of the Bay State, and who was with him in the lamentable accident near Pittsfield. Governor Crane, who has been for years a close friend of the President, is one of the best chief executives Massachusetts ever had. Praise of a public man could hardly go farther than this, for that grand old commonwealth has had Governors of remarkable ability and worth. Mr. Crane is a man of exceptional talent and of the highest integrity. His fitness for office and his personal popularity have been well recognized by the people of his State, for he is now serving his third term in the gubernatorial chair. The Governor is expected to be free from official cares in 1904, and to then take an active part in national politics. It was hinted that Senator Hanna would retire from the chairmanship of the Republican National Committee, and that Governor Crane would direct the next presidential campaign for his party, but this has been denied.

GOVERNOR CRANE,  
Of Massachusetts, a fine executive and the President's friend.  
Copyright, 1898, by E. Channing.

A DIVORCE between King Alexander of Serbia and his Queen, who was formerly a maid-in-waiting to Queen Natalie, Alexander's mother, was rumored some months ago, but the trouble has apparently blown over, since it is now announced that the royal couple are to make a tour of Russia together about the first of October.

KING ALEXANDER AND QUEEN DRAGA,  
Who have been reconciled, and who will visit Russia in October.

The visit will be made in the Crimea, at Livadia. The Russian Minister of Foreign Affairs, Count Lamsdorf, the president of the Servian Council, Doctor Vouitch, and other dignitaries will assist. King Alexander and Queen Draga will return home, says the *Paris Temps*, with increased prestige and rehabilitated by this recognition. The question of the succession to the throne in Servia remains open. But the person officially designated as heir to the throne will be Prince Mirko, son of Prince Nicholas, of Montenegro, and brother of the Queen of Italy.

THE DEEP relief which the country feels over the escape of President Roosevelt from a terrible death at Pittsfield is extended

SECRETARY GEORGE B. CORTELYOU,  
President Roosevelt's faithful and sagacious secretary.

also in a marked degree to the like good fortune of Secretary Cortelyou, who was a member of the presidential party at the time, and who sustained severe injuries in the smash-up. According to the accounts, Mr. Cortelyou and the President were thrown out together on the ground, the former being stunned for a moment and quite painfully cut about the head, causing the blood to flow freely. Notwithstanding his plight Mr. Cortelyou seems not to have lost his presence of mind for an instant, for, with characteristic thoughtfulness, he immediately jumped to his feet and wrote out a message to be sent to Mrs. Roosevelt assuring her of the safety of the President, and another to the authorities at Washington to the same effect. It will be remembered that a similar display of promptness and of solicitude for the feelings of others characterized the conduct of Secretary Cortelyou at the time of the terrible tragedy at Buffalo a year ago. Not only in these emergencies, but in all other situations in which he has been placed during the course of his official life, he has shown himself to be a faithful, efficient, and courageous man. As secretary to Presidents McKinley and Roosevelt, he has displayed unusual qualities of heart and mind, and has discharged his duties with rare tact, firmness, and unflinching courtesy. It has been

reported that when the new Department of Commerce is created, as it probably will be this winter, Mr. Cortelyou will be made its first Secretary, and thus a member of the President's Cabinet. Such an appointment would be eminently proper and fitting in every way, and a just reward for long and honorable public service.

A GOLDEN jubilee is a rare event in the life of newspaper editors. Insatiable and persistent demands for "more copy," the never-ending chase after "faithful" but delinquent subscribers, and the thousand and one worries and anxieties incident to the business of trying to please everybody in general and some people in particular—all of these things generally wear patient and long-suffering editors out long before they have passed the fiftieth milestone in the service. Either this or they retreat after a time into the business of boiler-making, going to the Legislature, managing academies for boys, or some other occupation more conducive to that peaceful, quiet, and studious life to which their tastes incline them. Mr. John Mahin, publisher and editor of the *Muscatine Journal*, is an exception to this rule. He has not only served in this capacity for fifty continuous years, but has been so happy, contented, and prosperous in his business that his semi-centennial celebration found him, at the age of seventy, as cheerful, hale and hearty as anyman of his age in Iowa, and good, apparently, for another fifty years at the tripod, in sturdy, able, and consistent advocacy of Republican principles and other measures for the well-being of the public in general, and for Muscatine in particular. We doubt, indeed, whether any editor now living in the United States can claim so many years of continuous all-around service on one paper as Mr. Mahin. If there are any such we have never heard of them. He is a native of Noblesville, Ind. but went to Muscatine when a mere lad and became an apprentice in the office of the *Journal*. At nineteen he was editor of the paper and has stood steadily at the helm ever since. Mr. Mahin also has the distinction of having had Mark Twain in his employ as a printer for a short time when that distinguished humorist, while a young man, made his home for a brief period at Muscatine. From early manhood Mr. Mahin has been a strong prohibitionist in theory and practice, and has several times had his life threatened, and at one time, May 11th, 1893, his home containing himself and family was blown up by dynamite placed there by hirelings of saloon men. But in the advocacy of this policy, as in his Republicanism, he has been loyal, sincere, and courageous, and has won the admiration and respect of all good citizens throughout the State.

MR. JOHN MAHIN,  
Fifty years the editor of the same newspaper.—*Townsend*.

ANOTHER ROYAL personage who has announced his intention of making a tour of Europe soon is Emperor Menelek, of Abyssinia. While Abyssinia is not counted among the "great Powers" of the world, it has been strong enough to resist every attempt upon its sovereignty from outside nations, and was able a few years ago to administer a crushing defeat upon an invading army from Italy. Emperor Menelek is said to be a very sagacious, strong, and able ruler. He claims descent from King Solomon and the Queen of Sheba, and he believes that it is his mission to build up a great and powerful empire in Africa, and to restore the glory of Ethiopia.

A JUST recognition of the valuable service rendered to the cause of statistical science, as well as to the knowl-

edge of colonial affairs, has been made in the election of Mr. Oscar P. Austin, chief of our National Bureau of Statistics to membership in the International Colonial Institute of London. This organization is composed of the leading statisticians of colonial affairs in the principal countries having colonies. The central offices of the organization are at Brussels, but its meetings are held successively at the capitals

MR. OSCAR P. AUSTIN,  
Chief of our National Bureau of Statistics.

of the countries from which its membership is drawn. Mr. Austin, who is the author of two publications on colonies, "Colonial Systems of the World," issued in 1898, and "Colonial Administration," issued in 1901, attended the meeting of the institute at The Hague last summer by special invitation. His latest work on colonies, "Colonial Administration," has been highly commended by members of the association, including Lord Reay, its president. Before he assumed his present position at the head of the Bureau of Statistics Mr. Austin had an extensive and all-around experience in journalism, having served as a reporter, editor, and Washington correspondent of several papers. He edited documents for the Republicans in 1892 and 1896, and has been an occasional contributor to the columns of *LESLIE'S WEEKLY*.

# A Quaint Fishing Settlement

## It Is Among the Homes of Millionaires

By John Mathews

FORTY YEARS ago a fisherman stood by the sea on the shores of New Jersey and studied the scattered footprints in the sand. The tracks were made with bare feet, and he saw that two men had walked along together, side by side. He studied the footprints further and observed that the right foot of one of these two men turned in as he stepped in the sand. The large toe on the left foot of the other man had twisted a little as it left the ground, leaving by the side of each track a little heap of sand. From these footprints the fisherman knew that John Cooper and Bill Collins had passed by that day together. Cooper always "turned in" with his right foot and Collins had a crippled large toe on his left. Cooper and Collins are dead these many years, but the fisherman who stood alone on the desolate sands of the Jersey coast forty years ago still lives, and lives on the same ground at the same spot that he did then. But he can no longer distinguish the footprints of those who walk along the shore, for there are millions of tracks each summer within the limits of the ocean border where a few years ago there were so few that he could recognize each one of them. For more than a mile along the coast his fishing hut was the only human habitation. And the tides rose and fell as they do now, and the sea waves broke and rolled upon the sand, singing their soothing lullaby.

Very little change has come into the mode of life of this old fisherman, while great changes indeed have gone on about him. It is an interesting and picturesque situation that surrounding the fisherman's house have been built homes of many of the wealthy of New York and other cities of the East, so that this rude fishing settlement is like a squatter's camp in the very midst of the fashionable summer places of millionaires. And aside from the picturesque side of this situation there is a practical side of it. Nelson Lockwood, this fisherman who has lived so long on the Jersey coast, owns eighty feet of ground along the water front, and this location among wealthy neighbors had made his property valuable. Besides, there are those who do not appreciate the picturesqueness of the fisher's camp and consider the little colony a blemish on the landscape. Scores of persons have sought to purchase the Lockwood property. Many of them have offered large prices for it, but the old fisherman steadily refuses to sell. One offer was made to him of \$20,000, but he declined. "What would I want to sell out for?" he asked. "I'm comfortable here; my living's here. I don't know of any place along the coast where the fishing is as good as it is right here. So I think I'll stay."

Mr. Lockwood, fisherman, owns a good frame house across the road from his fishing huts and he employs twenty-eight men. He has four crews, one in each of the four "pound" boats, as they are called, and his largest fishing net is two miles out at sea. Other small industries may suffer by the encroachments of great combinations,

but Mr. Lockwood, fisherman, has suffered no damage. On the contrary, his business is constantly improving. There is a better market for his product, and his finny victims are just as numerous now as they were many years ago, for the ocean's population is not decreasing; the sea is not being "fished out." Besides, this fisherman's facility for gathering a good crop has been improved by the invention of modern machinery. The fishing boats, about the same size as the gigs in the navy, are now propelled by a screw driven by a gasoline motor, while the fisherman rests his muscle. Thus ease and speed are attained at once.

Fishing on the large scale for commercial purposes is an interesting process. The nets, of course, are the most important part of it. This is the way that the Lockwood nets are placed: Each net has three parts. They are called the "leader," the "forebays," and the "pocket." The "leader" is a long net, with meshes the size of a tennis net, reaching out to sea at right angles with the shore line. This net extends perpendicularly from the surface of the water to the bottom of the ocean and it is attached to a long row of poles. This "leader" is one thousand feet long, and at the outer end of it is the "forebays," a heart-shaped inclosure of netting, about thirty yards across. This, too, is a fence of netting extending from the surface of the sea to the bottom. At the apex of the heart-shaped inclosure is a small opening about two yards wide. This leads into the "pocket," which is nearly as large as the "forebays" and is a huge submarine bowl made of netting. It is circular, and the outer walls, extending from the surface of the ocean to the bottom, are attached to poles anchored in the ground under the sea. The sea bottom within this inclosure is covered with netting, so that when a fish has once gone into the "pocket" he can escape only through the opening into the "forebays" through which he entered. The fish seldom does this, for his instinct is to swim seaward with all his might when he apprehends trouble. And it is this instinct which gets the poor fish into the trap. As they swim along through the water the fisherman's prey strike first the long net, the "leader." They are worried a little by this, realizing by instinct that such an obstruction in the open sea is unusual. They attempt to swim to the end of it, always, of course, continuing seaward. In doing this the fishes swim directly into the "forebays," the heart-shaped inclosure.

Continuing around this, always swimming out to sea, they reach the apex of it and slip through the opening into the "pocket," the final trap. They go no farther, but there await their fate, always with their noses against the net on the seaward side, the side opposite the opening. Twice a day the fishermen go out in their pound boats. The first trip is at daylight, the second about noon. When they reach the "pocket" they first untie the ropes, which hold in place the net which is the floor of the "pocket." With the net floor free, the net is drawn gradually into the boat until only a small part of it remains under the water. In this hundreds of captive fish dart about in a panic of fear, vainly attempting to escape. During the latter part of August nearly the entire haul consists of bonitos, which under the water are as green as grass.

In the midst of the whirling pool of finny prisoners was one quicker and brighter than all the rest. It attracted the attention of even the phlegmatic fishermen.

"Ha, look at the dolphin!" exclaimed one of them.

Then they all stood in line at the edge of the big pound boat, and at the signal from the captain of the crew, who was Charles Lockwood, son of the old fisherman, they gave the final pull on the net. There was a tremendous splutter among the fish as they began to breathe the air, which stifled them. They threw a spray of water like a shower and then helter-skelter they fell into the bottom of the boat. The fishermen took no notice of their struggling, but proceeded around the "pocket" of the net, tying again the ropes that held the nets to the bottom. The gasoline motor was started, and the fishing pound was off for the shore. As soon as the boat was hauled on to the beach the fish were piled into baskets, then each basketful was weighed. It was a "light day." The nets had yielded only nine hundred pounds, and the fish had already been sold at three cents a pound. An average day's yield from the nets of Mr. Lockwood is three thousand pounds, and the average price of fish is two and a half cents a pound. The fishing season lasts until cold weather and each fish has his season. Along this part of the Jersey coast, where they are sheltered by the Shrewsbury rocks, are caught weakfish, porgies, plaice, butterfish, and Spanish mackerel. This fish is very much like the bonito in size and form, and the latter are often served in restaurants in the place of the former. There is, however, one marked distinction. The Spanish mackerel has on its sides rows of golden dots about the size of a head of a nail. This ornament the bonito does not possess.

When the cold season comes on the fishermen retire and mend their nets. The cost of repair of the nets of Mr. Lockwood amounts to about \$6,000 a year. He has two sets of nets for each "pound" or fish trap. These nets must be changed once every eight days or they would be covered with sea grass, so quickly does the vegetation of the ocean start its growth. The nets are often torn in times of storm. The great waves throwing themselves against the meshes rip them from the poles, causing no end of damage. But the fishermen have a way of preventing this. When a storm is coming they hurry out to their nets and loosen them from the poles, allowing the skeins to sink to the bottom of the sea. Ropes tied to the nets, however, are made firm around that part of the pole which extends above the water's surface, so that when the storm is past the nets may be again hauled into place without difficulty.

In this routine has Nelson Lockwood spent his many years. It has not always been peace and monotony, however, for the fisherman was at one time in the life-saving service and has seen many a ship go ashore in fierce storms, and has saved many a life. He has, in testimony of his bravery one awful day in February, a gold medal voted by special act of Congress in recognition of his heroism. He swam out to sea in the deadly cold water, amid breakers mountain high, and rescued one who had gone overboard from a wrecked Spanish brig. That was a score of years ago.

A DEVASTATING CYCLONE SWEEPING THROUGH NEBRASKA.

THE ONLY PICTURE SHOWING THE FUNNEL'S "PIG-TAIL" CURL.

THE TERRIBLE STORM WHICH IS THE DREADED SCOURGE OF THE WESTERN PRAIRIES.

### Striking Pictures of a Cyclone.

A SEVERE cyclone recently visited the vicinity of Scribner, Neb. While most people were seeking the shelter of cyclone caves, or in the absence of such were repairing to their cellars, an enthusiastic photographer succeeded in securing two remarkable pictures of the cyclone.

Near the close of a warm midsummer day a bank of ominous-looking clouds appeared on the horizon and swept toward Scribner with great rapidity. The approaching storm was accompanied by a violent wind.

Before long the funnel of a cyclone appeared. It passed over the outskirts of the town, but, as is seen in one of the pictures, the funnel lengthened soon afterward. The

second picture is probably the only one of its kind ever taken, as it shows the seldom-seen "pig-tail" curl in the funnel.

Very little damage was done in Scribner, but in the surrounding country districts, through which the cyclone tore, the crops were seriously damaged and some live stock lost.

### Salt River a Never-failing Stream.

AN OFFICIAL of the Weather Bureau is authority for the announcement that the Great Salt Lake is drying up. As this lake has no visible connection with Salt River the passage up that gentle stream is likely to be as free as ever for the defeated in 1904.

### The Old Camper

has for forty-five years had one article in his supply—Borden's Eagle Brand Condensed Milk. It gives to soldiers, sailors, hunters, campers, and miners a daily comfort, "like the old home." Delicious in coffee, tea, and chocolate.

Of course you can live without telephone service, but you don't live as much as you might, because telephone service saves time, and time is the stuff of life. Rates for Residence Service in Manhattan, from \$48 a year. New York Telephone Co., 15 Dey St., 111 W. 38th St.

#### Wireless Telegraphy a Solid Fact.

NOW THAT the sensational and "nine days' wonder" period following the invention of wireless telegraphy has passed, and the period of practical development and extension has set in, we shall probably hear much less through public prints about this really marvelous device, although, before we are fairly aware of it, it will be in general and familiar use throughout the world. That wireless telegraphy has already been brought well within the realm of practical usefulness is evident by the fact that our government is establishing a system for its own use in Alaska, and that nearly all the ocean steamship companies are equipping their vessels with wireless apparatus. That it is being taken up also as a new and promising field for the investment of capital is evident from the state-

ment that a company has just been formed in England with a capital of about \$875,000 for the purpose of operating an extensive system of both wireless telegraph and telephones. The *Westminster Gazette* says it is informed in behalf of this company that they can telegraph or telephone fully five miles, and by the time the company is in working order they expect to be prepared to sell an apparatus with which every one will be able to telegraph or telephone anywhere within at least twenty miles. The ground will be always used as a conductor. All that is needed, it is said, is to connect the telephones in a room with the transmitter or receiver by means of a short wire with the nearest gas or water pipe, which will carry the current to and from the earth. The walls of houses do not form any obstacle to the transmission of messages. If the public mind had not long since lost its capacity for

"staggering" over the achievements of modern inventive genius, it would surely experience that sensation when it contemplates the possibilities opened up by this announcement.

#### An Undecorated Hero.

THE LONDON *Spectator* thinks that Captain Freeman, who took the British steamship *Roddam* out of the harbor of St. Pierre at the time of the eruption of Mont Pelée deserves something more than "a service of plate" from the English Board of Trade. It refers to the captain as "the undecorated hero," and speaks of his service at the time of the catastrophe as "a deed which, in coolness and undaunted courage, is absolutely unparalleled in the history of a nation of brave men."

# John Smith, of New Jersey, and His Big Family . . . . By Tom Thorne

UNCLE ABRAM SMITH.  
One of the founders and present  
leader of the Smith family  
association.

IT MAY be that the famous Smith family of New Jersey have held their last reunion. There is a touch of sadness in the thought as there is in the breaking up of a family and a home. For the Smiths of New Jersey are all of the same branch, all related by blood or marriage; and for twenty-seven years they have assembled every summer in a grove of apple-trees on the farm of one of the founders of the tribe, and while it has been the custom to make merry over the idea of a reunion of Smiths, there has been nothing farcical in these meetings. It may be that the twenty-seventh reunion, which took place recently, will be the last because of the gradual encroachment of the wealthy people of New York. The farm near Peapack, N. J., where the Smith reunions have always occurred, is already surrounded by the country places of wealthy

The Smiths of New Jersey, now numbering 2,200, are the descendants of one man, John Smith, who came to America from Holland in 1740, and settled first on Long Island. He moved afterwards to New Jersey and his body

THE OLD PETER SMITH HOMESTEAD, ONE AND ONE-HALF MILES FROM PEAPACK, WHERE TWENTY-SEVEN REUNIONS OF THE FAMILY HAVE BEEN HELD.

the parents of seventeen children, nine sons and eight daughters, who married and took homes in Huntington County and Somerset and other counties near by, and raised families of their own. So the Smith family was growing and prospering. Two of the sons of John Smith each became father of thirteen children, and one of these two sons was Zechariah Smith, who owned a farm of 600 acres in Somerset County, which included the homestead near Peapack where the reunions have always been held. The house fell to Peter Z. Smith, who was one of the thirteen children, and who was one of the organizers of the Smith annual picnic. Peter Z. Smith has been dead eight years. While he lived, there was never a danger that the farm would be sold. He would not have parted with it for millions. At his death it became the property of his wife, and the will forbade that she dispose of the ancestral property. But a month ago she died; and the four children, Isaiah, Daniel, Oscar, and Dayton, who own the farm jointly, are not bound by other than the obligations of family memories to keep the place.

This reunion of the Smiths at Peapack, N. J., which has made that town famous, is intended not for all the Smiths of the United States, as many have supposed, but particularly for the members of that family in New Jersey. Their friends are invited and are made welcome, and so are the Smiths from other branches in other States, but they are not taken into close communion and allowed to register in the great family book unless they can show that they are lineal descendants of the John Smith who came from Holland.

For many years there was annually a family meeting of the Smiths of New York State, an organization entirely separate from that of New Jersey. The reunions in New York State, however, are no longer held, while those in New Jersey have grown with each succeeding year.

In its outward form the reunion of the Smiths at Peapack differed little from any other large country picnic. One observed, however, the prevalence of a decided type. It was characterized by clean features, a high thin nose and firm mouth.

The 3,000 guests, most of them farmers and dwellers in small villages, distributed themselves through the orchard—where the apple-trees are now crowded by forest trees—along the little stream and at the old farm-house. Hundreds of people for miles around came to the picnic in farm wagons and buggies. Others came a distance of fifty miles by train over a spur of track, built, it is said, by the Delaware and Lackawanna railroad for the special accommodation of the Smiths who annually go to Peapack. The great crowd of men and women, girls and boys, most of whom were of kin, made little effort to amuse themselves. They seemed even to be at a loss what to do. Perhaps

they were satisfied to be there, to meet each other and shake hands.

persons. On one side is the magnificent Blair estate, founded by the late John T. Blair, railroad magnate; near by are the summer homes of rich New York business men and capitalists. It is one of the most picturesque spots in New Jersey. At one end of the Smith farm is a small lake, formed by the damming of a little stream, called the North Raritan Branch. The city folk, who live in the summer palaces on the hills, are anxious to have this lake made larger. To accomplish this it will be necessary to raise the dam of the little stream, and in so doing flood many acres of the Smith farm. An offer of \$20,000 has been made for the purchase of the farm of 100 acres. Four heirs of the late Peter Smith, in whom the title of the estate is vested, demand \$10,000 for the old homestead. It is not unlikely that before another year is past a compromise will be effected, a price agreed upon, and the old Smith home, which is hallowed with the memories of twenty-seven reunions, will pass out of the family forever.

The older members, those whose hair is white, whose steps are unsteady, those who are already living in the past, cannot bear the thought of meeting elsewhere than at this same quaint and old-fashioned homestead of Zechariah Smith.

THE ANCIENT BANNER WHICH HUNG IN THE TREES AND GREETED ALL ARRIVALS AT THE PICNIC GROUNDS.

now lies in the little graveyard of his family at Stanton in that State. John Smith and his wife, Christiana, were

A GROUP OF SMITHS ON THE FIELD WATCHING THE BALL GAME.

THREE THOUSAND BOTTLES OF SODA-POP WERE DISPOSED OF AT THIS BOOTH.

## How Rural Mail Delivery Kills Trade.

THAT THE new system of rural mail delivery has many decided advantages over the old method of the country post-office there can be no doubt, and those who have set forth in glowing terms the blessings it will confer upon the farming population in the way of intellectual improvement have, perhaps, not overstated the case. Yet to this picture, as to most others, there are two sides. Some years ago, when rural delivery was first proposed in this country, the scheme, as we remember, was stoutly opposed by a certain distinguished and usually broad-minded statesman, on the ground that its institution would tend to do away with the good old practice of the country people congregating at the village post-office to talk over local politics and other neighborhood affairs, and thus would be a severe blow to democratic institutions. More practical, however, than this, is the objection now coming from country storekeepers in localities where rural delivery is in actual operation. They complain that it is injuring their business. Under the old postal regulations the farmer went to the village for his mail, and just so sure

as he went he left some money with the storekeeper. Now he remains at home, never going to the village except in cases of necessity, enlisting the services of the mail-carrier to make any little purchases he may desire.

## A Girl's Problem.

HOW TO FEED HERSELF WHEN RUNNING DOWN.

"I AM a stenographer!" That statement brings up a picture of long hours of tiresome indoor confinement, close mental concentration, and subsequent exhaustion and brain fog. Then comes up the food question.

A young lady in Dayton, Ohio, writes: "Some time ago I was a stenographer in a large city retail store, and having the responsibility of the office work resting largely upon me my health began gradually to decline, and I stood facing the difficult problem of finding relief of some kind or leaving my situation. Worry added to my trouble; I became dyspeptic and nervous, and suffered with insomnia and restlessness at night.

"I was speaking of my illness one day to a trained nurse, who recommended that I begin a systematic diet

of Grape-Nuts at once, as she had seen its beneficial effect upon several of her patients who had suffered as I did.

"So I began to use the food conscientiously. It formed my entire breakfast with perhaps Postum Coffee or some other nourishing drink, and a second dish was taken at the evening meal. In about two weeks' time I began to feel stronger and more hopeful; my digestion and appetite were better; I was less nervous and could sleep. I continued the diet steadily, and soon courage and vitality began to revive and once more I began to think success lay somewhere in this big world for me.

"My work grew smoother and easier, and after seven months of this diet I could do almost twice the amount of work in a day and do it easily and without feeling exhausted.

"To-day I am filling a much more responsible position and do the work easily and satisfactorily. I attribute it all to Grape-Nuts, which I still continue to use. For a palatable and healthful diet, there is nothing on the market to equal it, and the fact should become of common knowledge." Name given by Postum Co., Battle Creek, Mich.

"The state cannot do as much for us as each can and must do for himself."—Rear-  
platform speech at Old Orchard.

"We need in civil life the plain, practical, every-day virtues."—Address at Portland.

"The country districts are those in which we are surest to find the old American spirit."—Oration at the Eastern Maine Fair at Bangor.

"We need fearlessness in applying legislation to new evils, but common sense and self-  
restraint in applying these remedies."—Speech at Waterville.

# Pete Gilbray's Tame Trout

A French-Canadian Fish-Story

By Herbert L. Jillson

SOME TWENTY of us were gathered round the blazing fireplace of the log cabin office of a Maine sporting camp, one evening, when Johnson came in with his French Canadian guide, Joe Gilbray. Joe hurriedly sought a seat, as Johnson explained briefly that Gilbray had consented to tell us about a tame trout his little boy, Pete, once owned. Then we all turned toward Joe.

M. Gilbray rose with evident embarrassment, placing the match with which he had just lighted his corn cob between his teeth, and throwing the pipe into the fire place.

"I no laik spiek in companie," he began, "but Meester Johnson she say sport man from New Yorik an' Bostong an' down river laik hear 'bout tame trout me leetle boy, Pete, haff some taim go, bimeby, meebby."

"You see it wair dis way. Me leetle boy she fall an' break hees laig on buck-board rud, between big rock an' dark, an' for wan leetle while or longer, meebby, she wair vair seek. 'Long 'bout taim she git better, so he out 'bout yard, wan sport man an' wan sport woman see heem an' talk peety on her, goeving heem wan fine feesh pole; wan nice feesh rod. Den me leetle boy she want go feeshing, but he haff no feesh hook or feesh line, so I go buy heem some at store in town."

"Whan furst I go in I tink I want wan feesh hook, but store man he say dey no feesh wan feesh hook nowaday, so I buy some fleas—store man call 'em—purty tings wid bright wings and tings—'cause dey all cost same wages, an' I kno' dey please boy. An' I naiver haff see more tickle chil' den whan I geef dose tings to heem."

"Bimeby, some time after, meebby, whan she git stronger, he go feeshing; wan sport man an' wan sport woman, who geef heem wan fine feesh pole, haffing tol' heem how use dose purty tings wid bright wings an' tings, which store man call fleas. At furst he no catch trout or odder kinds of feesh, an' I luff on heem whan she come back each day 'bout six wan half o'clock; but after while, purty queek, I luff 'long way off, for he get so she feesh wid dose fleas like wan real sport man, an' I bein' fadder dat boy, feel right proud, I dunno, meebby."

"Wall, wan night short way off, she come home wid wan vair fine trout 'live in pail; weigh wan pound, half pound, meebby, an' he wair such purty feesh me leetle boy want kaip heem 'live in wan wash tub which stan' in yard. I no laik such, but boy she feel so baid an' taik on so wan I 'fuse, so fin'ly I say yes. So feesh he go in wan wash tub an' swim 'bout happy an' smilin' laik, lookin' up at me leetle boy every now an' den to shake hees head an' wag hees tail."

"In wan vair leetle while I see dat feesh loff me leetle boy an' dat me leetle boy loff hees feesh, an' I tink lot of heem from den, an' maik no trouble whan I haff go buy nudder wash tub for my woman."

"After leetle while get so me leetle boy spen' 'bout all her taim playin' wid dat trout, an' whan he go feeshing an' leaff heem behin' it seem dough hees heart would bruik. Bimeby, say wan week wan haff, meebby, she git tired totin' hees tame trout 'long brook in pail water while he feesh, so she put heem in brook, see what she do, an', by gor! day feesh foller 'long in brook after me leetle boy, laik wan dawg, lettin' heem taik heem out any time he want or whan dey git ready go home, bimeby, meebby."

"He won't feesh, dat trout, an' after leetle while, say

forget, an' do it some more, nex' time she get chance; purty queek, meebby."

"Den togedder, dat trout know whair fin' big feesh; better dan wan sport man an' wan guide, who tink dey know everythin', an' me leetle boy he no tell an' tame trout no talk, an' no tell eef he could, she loff me leetle boy so. In vair short while der maik what wan sport man an' wan sport woman who geef me leetle boy dat fin' feesh pole, call 'nominal' catches; but I no tell it wair 'cause tame trout, an' me leetle boy he kaip still, an' feesh he no talk, an' no tell eef he could, 'cause he loff me leetle boy so."

"Bimeby dat tame trout grow be grent heeg feesh; so heeg wan wash tub not small 'nuff hold heem, an' me leetle boy haff kaip heem in pon' close house, whair feesh fret all while whan he wair 'way from me leetle boy. All time it seem he wait for her funny whistle by which she call dat won'ful feesh."

"Bimeby, wan bad sport man, who haff seen dat feesh an' who haff grent big eyes whan he look on heem, he wair so heeg, laim me leetle boy's funny whistle, an' wan daik night, whan feesh she no see who call for heem, bad sport man call dat trout 'shore, ketch him, keel heem an' taik heem 'way wid her."

"I t'ought me leetle boy's heart would bruik whan he call her feesh an' he no come, an' bimeby, week or tree, meebby, whan he laim trout 'frum nudder sport man, who had seen bad sport man wid dead trout, an' knew her, I t'ought he would die, he feel so bad. I feel bad too, an' so my woman, who say she giff all her wash tub get dat feesh back. But it wair no use; she wair long time dead—grait way off, meebby. Me leetle boy she kaip taik on so, I write dese leetle verse an' tack it board pole side pon' whair Beelee—dat wair feesh's naim—once live:

"GOOD-BYE, BEELEE.

"Here lived Beelee, wan tame trout,  
Caught by bad sport man in de noight!  
She called heem whan she couldn't see,  
An' beet hees head agin a tree!

"Poor leetle Pete's heart did almost burst,  
Whan she heard de news, at furst;  
But now he do not feel so blue;  
'Cause he 'members wha' hees feesh could do!"

As M. Gilbray took his seat he was surrounded by sorrowing friends, for the fisherman's heart is a sympathetic one.

"HE WAIT FOR HER FUNNEY WHISLE BY WHICH SHE CALL DAT WON'FUL FEESH."

two tree day, meebby, she fin' out what me leetle boy wair on brook for, an' he get so he make odder feesh in brook, big ones mos'ly, bight dose purty tings wid wheech me leetle boy feesh. He do dis vair elevair. Sometim' he maik dive for dose fleas laik he wair goin' eat dem whol', an' udder feesh see heem an' maik rush too, bein' so greedy dey push dat leetle tame trout wan side laik he wair so much nuddings, an' purty queek me leetle boy haff dem foolish feesh on bank. Den dat tame trout wag hees tail jus' laik tickle dawg, an' swim way do same ting some mo'."

"Den odder times, he fin' feesh who no care feed or maik loff, an' den he taik dose party fleas an' lay dem down befo' her so obligin' laik dat she no refus', an' purty queek she be in me leetle boy's basket too. Dees maik tame trout look sad, but he loff me leetle boy so she soon

whair Beelee—dat wair feesh's naim—once live:

"GOOD-BYE, BEELEE.

"Here lived Beelee, wan tame trout,  
Caught by bad sport man in de noight!  
She called heem whan she couldn't see,  
An' beet hees head agin a tree!

"Poor leetle Pete's heart did almost burst,  
Whan she heard de news, at furst;  
But now he do not feel so blue;  
'Cause he 'members wha' hees feesh could do!"

As M. Gilbray took his seat he was surrounded by sorrowing friends, for the fisherman's heart is a sympathetic one.

## The Value of "Waste" Products.

THE SAYING that an enterprise has "all ended in smoke" does not have the significance that it did before a way was found to materialize that airy product into substances as tangible as oils, acids, spirits, and tar. A single blast furnace in a Western State, which captures the smoke of its charcoal pits and conveys it into stills, has been able to realize enough from this source to pay a large share of its running expenses. It has demonstrated that each cord of wood contains 28,000 cubic feet of smoke, and that 2,800,000 feet of smoke produces 12,000 pounds of acetate of lime and 200 gallons of alcohol and twenty-five pounds of tar.

Smoke from the factory chimneys is largely carbon in another form, and in the course of a few years we may expect to see some diminution of the smoke nuisance so prevalent in large towns, not from the vigilance of the sanitary inspectors, but because consumers are beginning to learn that instead of allowing the particles of carbon to escape with other products, so helping to poison themselves and their neighbors, they might have lighter coal bills to pay by burning up these particles.

In the utilization of vegetable waste much of a surprising nature could be said. The seeds or stones of many fruits, which would apparently seem useless, have some economic value. In some parts of Egypt the date stones are boiled to soften them, and the camels and cattle are fed with them. They are calcined by the Chinese, and said to enter into the composition of their Indian ink. In Spain they are burnt and powdered for dentifrice, and vegetable

ivory nuts are said to be applied for the same purposes. Some species of Attalea nuts are burned in Brazil to blacken the raw Indian rubber. In India the seed or stone of the tamarind is sometimes prescribed in cases of dysentery as a tonic. In times of scarcity of food, the natives eat them after being roasted and soaked for a few hours in water; the dark outer skin comes off, and they can then be cooked in various ways. From this seed an oil has also been obtained. The seed of the carob bean is ground up as food for cattle, and is used in Algeria, when roasted, as coffee. The use of some Mexican and other grasses for brushes is being rapidly developed. This material is as strong and flexible as bristles, and even the refuse from this is being used as stuffing for mattresses. The use of esparto grass for paper making is well known, and straw is largely used for the same purpose.

## Alaska Returning Big Dividends.

A STANDING reminder of the limitations of human wisdom and foresight is furnished in the case of Alaska. The purchase of which at \$7,200,000 was denounced by many astute statesmen as a piece of inexcusable extravagance. Revenue exceeding \$9,000,000 has been received from the Territory since the purchase, and the value of the products exported every year now from Alaska is about \$15,000,000. If all of Uncle Sam's investments were returning as big dividends as this our public debt would soon be a thing of the past. But great as its progress has been, Alaska's development has only just begun.

## A Doctor's Experience.

MEDICINE NOT NEEDED IN THIS CASE.

It is hard to convince some people that coffee does them an injury! They lay their bad feelings to almost every cause but the true and unsuspected one.

But the doctor knows; his wide experience has proven to him that to some systems coffee is an insidious poison that undermines the health.

Ask the doctor if coffee is the cause of constipation, stomach, and nervous troubles.

"I have been a coffee drinker all my life. I am now 42 years old, and when taken sick two years ago with nervous prostration my doctor said that my nervous system was broken down and that I would have to give up coffee. I got so weak and shaky I could not work, and reading my advertisement of Postum Food Coffee, I asked my grocer if he had any of it. He said, 'Yes' and that he used it in his family and it was all it claimed to be."

"So I quit coffee and commenced to use Postum steadily, and found in about two weeks' time I could sleep soundly at night and get up in the morning feeling fresh and well. In about two months, I began to gain flesh. I only weighed 146 pounds when I commenced on Postum, and now I weigh 167 and feel better than I did at 20 years of age."

"I am working every day and sleep well at night. My two children were great coffee drinkers, but they have not drank any since Postum came into the house, and are far more healthy than they were before." Stewart M. Hall, Fairfield, W. Va.

## NOTABLE WORKS OF FICTION WRITTEN BY BRILLIANT WOMEN.

THE QUESTION has been up for discussion recently as to whether the element of love is essential to success in a work of fiction. A sufficient answer to this might be made in the statement that many novels had a large and enduring success in which the tender passion plays only a slight and unimportant part. These include the majority of Dickens's novels, some of the best of Thackeray's, to say nothing of such famous pieces of fiction as Defoe's masterpiece, in which there is no play of love at all. "All the world loves a lover," but this does not imply that the world has no heart for the man or woman in whom some other sentiment is uppermost. All the world is given to hero-worship, too, and its greatest heroes did not earn their honors by love affairs such as are described in fiction. Robert Louis Stevenson became immensely popular despite his perfunctory treatment of lovers, and Kipling, who is still the costliest fiction-writer of whom publishers know, excludes lovers from almost all his stories. It might be supposed that the example of writers so notable commercially and in the literary sense would have broken the spell that the love story had cast upon authors and publishers alike. Still, old ideals, like old wrongs, die hard.

The foregoing suggests an improvement that might be made in the historical novels of the day. Thus far they have been merely accessory to some young woman's love affairs. A great battle is in progress—a battle of which the novel's readers heard something when they were in the history class at school—but the author is evidently going to describe it in full, for he introduces a great general and his staff, describes the position of the troops, tells of the hopes of the army and the nation, puts some brave words and rapid orders into the general's mouth, and then, just as the fine old soldier is about to reproduce the scene which made him famous, up dashes a young woman in tears and a carry-all, and the reader learns to his disappointment that the hero of the scene is not the renowned general but a young officer who is detached from the staff to give the young woman safe conduct from the field, and who, of course, is the only man she ever really loved, though two or three others had hopes. The disappointment of the reader might be modified were the young woman specially charming, but by some mysterious chain of coincidences the heroines of the more famous of the new historical novels are very young and uncertain creatures, who tax the patience of their sweethearts greatly, and are endured by the reader principally because of their surroundings.

IN A RECENT letter to a friend Miss Ellen Glasgow mentions some incidents which are interesting in connection with her remarkable novel, "The Battleground," recently issued by Doubleday, Page & Co. Two uncles of Miss Glasgow's were killed in the Civil War, and mentioning this fact she says: "The one on the Union side, though a Virginian, lived North and was an ardent Unionist. He was killed in a charge in which his half-brother was engaged in the opposing ranks. My grandfather, who was wrapped up in his Unionist son, for a long time after the war refused to hold communication with his Southern children. The incident of the old lady in the book who read herself to sleep with 'The Mysteries of Udolpho' and a silver candlestick on her breast was taken from my great-aunt and adopted grandmother, the wife of Chancellor Creed Taylor, of Needham, Va. The old lady herself was a different type, but the will incident is quite true, and I know that a particular servant was accustomed to put out the candle and protect the bed curtains as soon as my great-aunt began to nod. Much of the life of the book is taken from stories told me in my childhood of the good old Virginia days, and, for the war, past impressions have been gathering since my earliest youth. As a mere baby I was brought up on stories of the war, and I used to play at making coffee of sweet potatoes, as my home people did, and of boiling young pokeberry shoots, as did the soldiers I had known. Of course I have read a great many books and all the war files of several newspapers, but, despite the fact that I have read everything I could find about the period, I think these minute descriptions I heard as a child have been of most help to me."

IN AN ARTICLE published in *The Congregationalist* some months ago Miss Josephine Dodge Daskam was made to figure prominently as one of a group of young college women who have recently distinguished themselves in literature. It seems that Miss Daskam's "Smith College Stories," published two years ago by the Scribners, were partly written while she was yet an undergraduate at Smith. Her more recent books, "Fables for the Fair" and "The Imp and the Angel," have helped Miss Daskam

a long way forward on the road to fame and popularity. The humor in these books has a delicate and original flavor which makes them specially enjoyable. Miss Daskam's brief career in literature thus far has been so "monotonously prosperous" that it raises the question whether trouble may not lie along the way for her somewhere in the future, so that things may be evened up somehow to the level of most other literary careers. According to *The Bookman* she has never had the experience of receiving back her manuscripts from the different publishers to whom they were sent. Commenting upon this she remarks, humorously: "Perhaps, if my work had had the honor of being refused by eight publishers, it might have run into the three-hundred-thousand stage subsequently; but as it was promptly and uneventfully accepted, I have no hope of its ever making much splash, not being great enough to be misunderstood." Miss Daskam finds her own chief title to fame in her omission to write an historical novel. Of this she says: "Being the one young American who hasn't written the American success of the season seems to me to carry a certain eventual prestige."

IT IS almost unprecedented that a publishing house should bring out simultaneously three books by a comparatively unknown author, but this daring feat has just been performed by The Century Company in the case of Anne Douglas Sedgwick. In this country "The Rescue" has already attained considerable notice and praise

SOME YEARS ago Cheiro, the well-known palmist, took an impression of and read Mrs. Mary Hartwell Catherwood's hand. At that time she had just published her first novel, "The Romance of Dollard." After congratulating her on the success of her story and astonishing her with a number of revelations, he said to her: "Madam, this peculiarly developed Mount of Mercury, which denotes power of expression, proclaims for you a wonderful success in literature, but in the years to come. You will write a romance—a romance so great that the most merciless vivisector can find no flaws in it nor in your hero." This prediction seems almost, if not quite, fulfilled in Mrs. Catherwood's "Lazare," her latest romance. This novel has a staying power far beyond that of most of the historic romances of the past few years.

FEW PERIODS in American history lend themselves more fully and readily to the requirements of a writer of romance than the period covered by Mary Devereux's "Lafitte of Louisiana" (Little, Brown & Co.), and few personages more completely fill out the ideal of the hero, as that word is commonly accepted, than the character who plays the title rôle in the story. And if Lafitte's career is not sufficiently wild, adventurous, and exciting, there is Napoleon, who also figures in the tale, and our own General Jackson, who is not far behind any in the matter of heroic deeds. The scenery shifts back and forth between Louisiana and France, and of thrilling situations there are many, of bloodshed not a little, and a thread of gallantry and sweet love to bind them all together.

MARY CATHERINE CROWLEY'S "The Heroine of the Strait," which Little, Brown & Co. published recently, is a second story of old Detroit, even more interesting than "A Daughter of New France," by the same author. Its principal events are the surrender of Detroit to the English, the conspiracy of Pontiac, and the siege of Detroit by the Indians under his command. The romance has been drawn from historical authorities, the old French manuscript of the story of the siege of Detroit by the Indians under Pontiac being the principal source, the translation followed being that preserved in the collection of the Michigan Pioneer Association.

A STORY THAT, in charm and sweetness as well as in its setting, reminds one of Bayard Taylor's "Kennet Square," is the "Oldfield" of Nancy Houston Banks (Macmillan Company), and we do not know how to render better praise than that. The scene is in the Pennycroyal region, where "living was leisurely," a name suggestive, too, of the old-time loveliness and simplicity which impart their subtle aroma to the tale. If you want a story that harmonizes with the dreams and fancies of an afternoon *siesta* read "Oldfield" and be content.

MISS LILLIE HAMILTON FRENCH'S story of her canaries, "Hezekiah's Wives," is winning a very hearty appreciation. So discriminating a critic as E. C. Stedman pronounces it "A little classic, a prose poem," and says "it is one of those pastels into which one looks and learns that a chamber-corner is as real and as large as the solar system. It is so marked by a certain grace of art—more common in a French tale than an English—that an artist must needs put it along with his *contes de choix*."

KATE DOUGLAS WIGGIN'S latest book, "The Diary of a Goose Girl," is being hungrily read, and the only regret heard in connection with it is that it could not have been longer. But, as the *London Times* says, "though a small book, it is simply brimful of humor and of good humor."

MISS MARY JOHNSTON, author of "Audrey," the most popular book of this year, spent the past summer, as usual, in Virginia. It is said that she had begun another book.

LITTLE, BROWN & CO.'S fall fiction includes: "The Pharaoh and the Priest," translated from the original Polish of Alexander Głowatski by Jeremiah Curtin; "The Queen of Quelpart," by Archer Butler Hulbert; "Tower or Throne: a Romance of the Girlhood of Elizabeth," by Harriet T. Comstock; "The Shadow of the Czar," by John R. Carling; a new edition of "The Colonel's Opera Cloak," by Christine C. Bush; a new edition of "Miss Belladonna," with additional chapters by Caroline Ticknor; and a new book by the author of "Miss Toosey's Mission," entitled "Faithful."

LIGHTER hearts and stronger bodies follow the use of Abbott's, the Original Angostura Bitters. At grocers'.

MARY CATHERINE CROWLEY,  
Who wrote "The Heroine of the Strait."

MISS JOSEPHINE DODGE DASKAM,  
Author of "The Imp and the Angel."

MISS ELLEN GLASGOW,  
Author of "The Battleground."

through its serial publication in *The Century Magazine*, and because of its high literary merit, originality and power, the author is likely to rank with our greatest modern novelists. In England the critics have already coupled her name with the Brontës and with George Eliot, a deserved tribute to a remarkable young woman. Miss Sedgwick is a many-sided author, with a charming personality, who talks very much as she writes—brilliantly and forcefully. She is an accomplished musician and a painter of no mean skill. Some of her canvases have already been exhibited in the Paris Salon. Miss Sedgwick's first dip into literature was purely for fun. She had been studying art for some six years in Paris and was quite devoted to her work. She was just twenty-four years old when, to please her two sisters, she wrote her first story, "The Dull Miss Archinard." This novel, a most fascinating romance of a modern Cinderella, was intended only for home consumption and to satisfy the whim of an hour. Probably it would never have appeared between covers had it not been for a family friend who was captivated by the power and sweetness of the girl's first literary production and insisted forthwith on sending the manuscript to a London publisher. Its reception encouraged the author to write her second novel, "The Confounding of Camelia," a dramatic and keenly analytical study of "a spoiled beauty."

THE POPULARITY of Maud Wilder Goodwin's colonial romance is attested by the fact that her publishers, Little, Brown & Co., have issued a seventh edition of "Sir Christopher," while a new edition of "White Aprons" uniform with "The Head of a Hundred" has also been issued. These three colonial stories form a series of which "White Aprons" stands last in the time of its action. The three are bound together, first, by unity of scene, the region along Chesapeake Bay where Maryland and tidewater Virginia made their first settlements, and secondly, by a thread of sequence in the lives involved in their plots. The career of Sir William Berkeley, the beginning of which is sketched in "Sir Christopher," is traced to its close in "White Aprons." The new edition of the latter contains, in addition to five full-page illustrations, a colored frontispiece by Thomas Mitchell Pierce.

### THE DRAMA IN NEW YORK.

NOTABLE SUCCESSES WHICH CHARACTERIZE THE OPENING OF A MOST PROMISING SEASON.

BOOKMAKERS' EXPENSES AT RACE TRACKS  
TENNIS EXPERTS NEED MORE TRAINING

# In the World of Sports

CYCLE TEAM RACING MUST STOP—FINE  
OUTLOOK FOR HUNTERS

THE TRIALS OF THE BOOKMAKERS.—The bookmaker at the race tracks is the natural prey of the public, the owners, and the trainers, and this alert and clever turf financier really does more to pay the freight for the entire racing institution than is generally supposed. He must be even-tempered and polite under the most trying circumstances, and for him to strike a blow in the betting ring, no matter what the provocation, would mean his instant expulsion from all tracks in the country. For instance, at Sheepshead Bay the other day, there were about two hundred bookmakers in line. Of these, the favored ones pay the racing association \$100 a day for the privilege of laying odds. Then there are the bookmakers on the back line who pay \$37 a day, and the "dead line" men who pay \$17 a day. In the fifty-cent field there were about one hundred more bookmakers who pay into the association treasury each \$22 a day. Besides these expenses each bookmaker must employ from three to six assistants at salaries of from \$5 to \$50 each—sheet writers, cashiers, and runners. Then each bookmaker must pay \$2 a day for six little bits of manifold copy, on which are written the names of the horses in each race and their jockeys. There is an official water-carrier who makes two or three trips behind the bookmakers' stands each afternoon with a bucket of water for drinking purposes, for which each stand pays the sum of twenty-five cents a day. All this goes into the treasury of the racing associations, and a mighty sum it amounts to in a year.

When one considers the admission fees, the forfeits, and other income of the racing association one need not worry about dividends if lucky enough to hold stock in one of the big tracks of the East. The millionaires hold most of it, and while it sounds nice to read about wealthy men lending their names to racing, and the good it does the breeding interests of the country, the rich men find enjoyment and big profits from their investments.

DO TENNIS EXPERTS TRAIN FAITHFULLY?—Those who watched closely the international lawn-tennis contests at Bay Ridge, near New York, and later on at Newport, are beginning to discuss the training question with more interest than before. The unexpected happens so often in tennis that the close observer of physical condition is apt to believe that the players in this healthful pastime do not train as faithfully as do athletes in other branches of sport. Larned's backward slide at Bay Ridge, when he was beaten by the elder Doherty after Larned had all but won the contest, followed by his unexpected victory at Newport, has set the tongues of the critics wagging throughout the country. Whitman saved the day at Bay Ridge by steady, nervy, and consistent play, and he was expected to hold the American championship at Newport by his skill, steadiness, and coolness. When he met defeat the critics gave up all hope, for they did not think Larned equal to the occasion. The American champion, however, came to the net with 24 to 1 offered

against his chances, played the best tennis of his life, and sent Doherty to defeat amid the plaudits of his friends. The experts are still of the opinion that D. L. Doherty is a better player than his brother, and the prediction is made that the smaller Englishman will be the man to play in the singles against the Americans next year. Both Dohertys and Dr. Pin made an excellent impression during their visit to this country, and they will be welcomed next season with increased heartiness and additional show of hospitality. Physically the Dohertys appeared to be in better condition for the games than did any of the Americans, with the possible exception of Whitman.

CYCLE TEAM RACING WILL HAVE TO STOP.—The powerful that-be in the cycle racing world are confronted with a condition

which will have to be eliminated sooner or later, and the quicker the bull is taken by the horns the better it will be for the sport on track and road. Team racing this year has been so unsatisfactory that stringent rules will have to be made to stop it. It is not popular with the public, and that fact alone should warrant its quietus. The teaming against the colored rider, "Major" Taylor, has been so flagrant that the friends of the dusky rider have advised him to quit the country and go abroad, where his wonderful speed upon the bicycle would be sure to bring him rich financial returns. The color line has been brought so taut about Taylor that it is little wonder that the black whirlwind loses his temper at times and becomes eccentric and hard to manage. There is no reason for teaming any way. Such practices are bound to work to the disadvantage of riders who enter a contest determined to fight it out alone. The National Cycling Association owes it to itself to correct the evil as quickly as possible. Dividing purses cannot be construed into sportsmanlike arrangements, no matter how one looks at it. This is not intended as a rebuff to Kramer, the national champion, for he is simply doing something which the rules permit. Among the amateurs there has been less team riding and consequently better all-around racing.

GOOD SHOOTING PROMISED.—While the fishing season has been good, those returning from their vacations in

the North say that the game fish have been contrary during the greater portion of the season. Shooting promises, however, to more than make amends for the timidity of the water gamesters. Indications point to good quail, duck, partridge, and grouse shooting through most of the Southern and Western States. From Canada come reports that elk, moose, and deer are to be seen on every hand. More turkeys have been seen along the Blue Ridge recently than for several years.

GEORGE E. STACKHOUSE.

## Sporting Queries Answered.

J. A. M. CHICAGO.—Field hockey is played on either a grass or "skin" field. There are eleven players on each side, and the team scoring the greatest number of goals wins.

# Finding Fortunes in Rubber

HOW THE NATIVES CUT THE RUBBER TREES.

A STREET IN TUXTEPEC, MEXICO, NEAR THE OBISPO RUBBER PLANTATION.

A RUBBER TREE TWO YEARS OLD.

## The Boom in Mexico's Great Industry

By Oliver Shedd

MEXICO IS full of opportunities for enterprise and capital. The surest, cleanest, and often the quickest fortunes are those made by the intelligent development of the uncultivated resources of nature. There was a time in the United States when the young man could "go West and grow up with the country," being assured, with the exercise of reasonable intelligence and industry, of an ultimate substantial fortune and position in the community in which he lived. But there is no longer a frontier—no longer a "West" in the sense in which Horace Greeley used the word. There are no longer fertile virgin fields teeming with productive resources, smiling with rich verdure, waiting only for the plow. But the resources of Mexico have been only half developed. The products of its fertile soil have been used unintelligently and to a limited extent by the natives.

American push and "headwork" are being abundantly rewarded in the agricultural districts of the Mexican republic. One of the industries which has been developed there, and which is proving to be among the most profitable, is the production of rubber. About five years ago Americans began to realize the chance to make fortunes out of rubber, and the way the industry has already grown since the new American methods have superseded the crude and wasteful methods of the natives, and the enormous profits which this industry yields, are attracting the attention of those who are looking for new fields of opportunity.

There is in the eastern and southern part of Mexico a long, irregular strip of land fifteen or twenty miles wide which has a soil as fertile as any in the world. The wonderful fertility of this limited area is due to an interesting fact. It lies at the base of the great mountainous plateau which runs lengthwise through Mexico, and between the narrow strip and the coast lie open plains perhaps fifteen miles in width. The warm currents of air, laden with moisture from the ocean, moving across these plains, encounter the cold air from the mountains. The result is an abundant rainfall over the territory where these currents meet. This rainfall has for ages produced abundant vegetation, which, dying and enriching the earth, has made a soil of great fertility. The black soil of this district is forty feet deep and so fertile that three crops may be raised on it every year, for in this country there is no winter. Corn, cotton, cocoa, coffee, rice, pineapples, oranges, and many staple fruits grow with rapidity and produce with great abundance. And it is in this strip of land that the rubber trees thrive.

Another fact that makes opportunity for Americans is that this rich territory, which was once almost inaccessible, is now reached by railroads which have been built through subsidies from the Mexican government. Products are easily taken to the coast ports and shipped by steamer to the great markets of the United States. Rubber has for many years been produced in this part of Mexico, but until five years ago it was gathered entirely by natives, who were employed by those who sold the rubber to be shipped. These men would "grub stake" the natives, and then send them into the forests to look for rubber trees. There are no rubber forests and few groves, the trees usually standing alone in the tropical thickets, so that the natives would frequently spend months in the forests before they returned with the crude rubber. They disregarded the fact that the liquid which contains this product is entirely separate from the sap.

By their crude methods the natives killed the trees which gave them a livelihood. Sometimes they felled the trees and then cut the bark so that the rubber liquid would run out. Other times they would make gashes at regular intervals in the bark as the tree stood, sometimes on both sides of the trunk, and this mutilation always killed the tree. The sap would run down the trunk to the lowest gash, and in this the gatherer would stick a stiff bit of leaf, which the liquid would follow to the end and then drip into a round hole which the native dug in the ground. The interior of this hole would be washed with the juice of moonplant to prevent the milk of the rubber bark from soaking into the earth. The rubber in the rubber-bark sap is like the cream in milk. It separates of its own accord and the watery residuum will dry up in the course of two or three

days, leaving the pure rubber. The native would pack this hardened rubber in rough sheets or roll it up in balls to be delivered to the man by whom he was employed. The balls of crude rubber were always cut open before the native was paid for them, to thwart a little trick for profit which was often practiced—that of wrapping the ball of rubber around a stone. The natives were paid for their rubber by weight—about twenty cents a pound. The rubber gathered in this way was always far from clean. Usually the crude balls or sheets delivered by the natives contained forty per cent. of foreign substance.

Another fact that reduced the profit of this method of gathering was that seventy-five out of a hundred of the natives who were employed, or "grubstaked," never returned to their employers. Many of the former would become sick in the dense forests, others would give up the task through indolence, and others, after they had gathered a load of the product, would sell it to some one more convenient, perhaps, than he who furnished the outfit. Not only was the native method costly and unsatisfactory, but it was rapidly killing off the trees and reducing the supply of rubber. This fact was illustrated recently in a rubber-trade publication by a table showing the rise and fall of the rubber production in Colombia, South America. The table showed that in 1855 half a million pounds were taken from that country. The quantity increased, as the demand grew, to seven million pounds in 1873, and then the product decreased, because the trees had been killed by the shortsighted natives and new fields were hard to find. In five years the quantity of Colombia's rubber was reduced to three million pounds a year, and in 1900 less than one million pounds was shipped. It was the custom to fell the trees, but the authorities, appreciating the loss to the country, prohibited it. Then the natives tapped the trees, lacerating the bark so that the trees died. The same course was pursued in Mexico by the native rubber gatherers.

Then came the Americans with intelligent business methods. In the first place, it was obvious that, inasmuch as the supply of trees had been reduced through their destruction by the natives, the first step should be to plant more trees. Immense nurseries were started, the young, broad-leaved plants looking like fields of tobacco. The shoots are set out four hundred to the acre. When they have started on a strong, assured growth they are thinned out, usually at six years old, and two hundred are left standing. Each tree that is cut down at this stage will produce about five pounds of rubber worth seventy cents, so that in this process of development each acre produces \$700. In some cases trees are tapped for rubber milk when they are four years old, four hundred young trees, tapped by native methods, yielding forty-four pounds, worth \$30.80, at each tapping. It is usually considered advisable, however, to wait until the sixth or even the eighth year before beginning to draw the rubber milk. The bark is cut carefully and only a limited quantity of the milk is taken at a time, so that the tree is not injured and its growth not in the least retarded. From an eight-year-old tree a pound of rubber a year may be safely taken. When there are two hundred trees to the acre the product of each acre a year would be two hundred pounds of rubber, worth \$140. This would be obtained without any expense or labor in maintaining or caring for the trees, the only work being the tapping.

A man owning one hundred acres would thus receive \$14,000 a year income. But rubber trees grow rapidly,

and as they increase in size the quantity of the rubber milk which they will produce grows in an equal ratio. A tree nine years old will give one and three-fourths pounds of rubber; a tree ten years old, two and one-half pounds in the same time; a tree fifteen years old will produce five pounds a year, so that one acre will yield 1,000 pounds, worth \$700, and the product of one hundred acres would be worth \$70,000.

The enormous possibilities of the rubber business have led investors to buy large tracts of rubber land in Mexico. Senator Clark, of Montana, owns one of the largest plantations, and near his property and below Vera Cruz is the Obispo plantation, represented by Mitchell, Schiller & Barnes, of New York, and called by the natives "La Suerte de los Gringos"—in English, "the luck of the Yankees." This plantation contains 9,000 acres. On it there are 120,000 trees permanently set out, and besides a nursery containing 600,000 trees which are over a year old. On this plantation 8,000 acres will be planted entirely in rubber trees, showing to what an extent the industry will be developed. This will be 1,600,000 trees. These trees are to be tapped within six years and will then produce \$1,120,000 worth of rubber. In seven more years the product will be worth four and a half million dollars a year, and rubber trees live to be more than fifty years old. Figures like these show the possibilities for enormous fortunes in the yet undeveloped rubber resources of Mexico.

Those who have bought rubber lands in Mexico have paid small prices. The land was formerly owned by native plantation owners who did not cultivate it, being too indolent or too ignorant to develop its resources. Many of these native owners would become burdened with the large amount of property which they owned. They would borrow money to pay expenses, and then, when they were pressed by their creditors, would be glad to sell in order to be free from debt. In this way many American investors were able to buy wonderfully fertile land at a small price. On the Obispo ranch were found many rubber trees in a tract supposed to have been depleted of its rubber, and this land was purchased without its owner realizing its value.

American ingenuity has devised several new methods for getting rubber ready for the market. The milk is drawn from the bark by suction, so that the pure sap is obtained free from the grit, bark, and foreign substances which were always present in such large quantities in the rubber sold by natives. After the rubber milk is obtained, the pure rubber is separated from the other ingredients of the sap, in much the same way that cream is separated from milk, by a patent process. In the new method introduced and practiced by the Americans there is no waste of sap. By the natives half of it was wasted. When the rubber is coagulated, it is tied up in bales and shipped to New York, where it sells at from seventy-five cents to one dollar a pound, and the total expense of extracting it, separating and coagulating it, and shipping it to the Eastern market, is not more than five cents a pound. This shows the enormous profit.

The value of rubber has increased recently because of the decrease in the quantity imported into the United States. In 1900, this was 58,506,569 pounds; in 1902 the amount received was 50,939,248 pounds. The destructive methods of the natives are responsible for this, and make demand for new rubber greater. It is interesting to know that rubber is constantly becoming more valuable as its uses in a hundred branches of manufacture increase. The general use of rubber tires on vehicles of all sorts—carriages, automobiles, bicycles—and the depletion of the uncultivated rubber trees by the destructive natives wherever rubber is found, combine to make a price that will constantly advance.

Andrew Carnegie recently was asked by a reporter in Pittsburgh whether, if he were a young man, he would go into the manufacture of steel. He said "No," and added: "The best opening for a young man to-day is in rubber. Rubber will, in a few years, make a greater fortune under present conditions than steel, or, in fact, any other branch of manufacture. The great value and manifold uses of rubber are just beginning to be properly appreciated, and the profits in its production are greater than almost anything about which I am informed."

## Hints to Money-makers

NOTICE—This department is intended for the  
information of the regular readers of LESLIE'S  
WEEKLY. No charge is made for answering ques-  
tions, and all communications are treated confidentially.  
Correspondents should always enclose a  
stamp, as sometimes a personal reply is necessary.  
Inquiries should refer only to matters directly con-  
nected with Wall Street interests. Subscribers to  
LESLIE'S WEEKLY at the home office, at regular  
subscription rates, namely, \$4 per annum, are  
placed on a preferred list, which entitles them, in  
emergencies, to answers by mail or telegraph. Address  
"Jasper," LESLIE'S WEEKLY, 120 Fifth Avenue, New  
York.

THAT the money situation is far from  
favorable to a bull movement is plainly  
indicated by the action of the Secretary of  
the Treasury, in arranging to relieve the  
strain by enabling the banks to take out  
new circulation, or, in other words, to add  
from ten to twenty million dollars to the  
circulating medium. At other times, but  
only in emergencies, the Treasury Depart-  
ment has relieved the situation by the pur-  
chase of bonds at fictitious premiums.  
Secretary Shaw wisely concludes that this  
is not the most judicious course to pursue  
on the part of the government, and that  
if the banks overload themselves with obli-  
gations they must be prepared, when they  
need help, to help themselves. The appeal  
of the bankers to the Treasury Department,  
as their life-saving station, has only been  
made in the past in the face of grave condi-  
tions, and this appeal at present indicates  
that such conditions, if they do not exist,  
may be approaching.

Suppose, however, that this moderate  
relief should not be sufficient to sustain the  
market. What will happen next? The  
overburdened banks and the still more  
greatly overburdened trust companies will  
be obliged to call in some of their loans,  
and the borrowers, thus deprived of their bank-  
ing facilities, must unload their securities  
on the stock market at any sacrifice. Then  
we shall have the bargain-counter in Wall  
Street opened again, and it is for that oppor-  
tunity that I am advising my readers to  
prepare themselves. Sooner or later, it is  
bound to come.

"W." Brooklyn: Not a bit.  
"P." Brookline, Mass.: No rating.  
"P." St. Paul: Answered by personal letter.  
"N." Sandusky, O.: Answer by personal letter.  
"W." Baltimore: Four dollars received. You  
are on my preferred list for one year.

"T." New York: Anonymous communications  
not answered.

"S." Atlanta: Have referred your matter to an  
expert and will reply if the suggestion is entertained.

"F." Dayton, O.: (1) No. (2) No. (3) Not as an  
investment. (4) Yes. (5) It is a matter for study  
and observation.

"C." Montgomery, Ala.: I am making inquiries  
regarding the Northern Security Oil and Transpor-  
tation Co. and its singular offer.

"K." New York: If you can do all that you say,  
you ought to have no trouble in finding a market  
for the invention. The difficulty is to prove it.  
Capital is very chary of experiments.

"S." St. Louis: The United States of Mexico five  
per cent. bonds of 1899 are selling between 98 and  
par, and outside of the possibility of civil outbreak  
in Mexico, which now seems remote, are fairly well  
regarded. (2) St. Louis Transit Company's first  
lien, around 88, ought to be a fair investment.

"S." Hartford, Conn.: Your correction indi-  
cates that your letter is right as to the year's ex-  
ports. You are wrong as to the exports at the  
time I wrote. You have a right to be a bull if you  
please, and I have the same right to my own judg-  
ment as to the real situation. Let the future decide.

"C." Medina, O.: (1) It is not an investment;  
purely speculative. (2) Reports of a forthcoming  
dividend on Southern Pacific are given out, but  
there is no guarantee that it will be paid. For a  
non-dividend payer, it has been selling pretty high  
and is too speculative to buy on a slender margin.  
The "enclosure" was not found in your letter.

"M." Washington: (1) You evidently refer to  
LESLIE'S WEEKLY, not to Harper's. My intro-  
ductory note tells what my preferred list means.  
(2) I would not advise you to allow anyone to  
speculate for you. A Consolidated Exchange  
house of excellent reputation is Watson & Gibson,  
55 Broadway. (3) Do a large business but have  
no rating.

"A. H. V." Chicago: One dollar received. You  
are on my preferred list for three months. (1) No  
rating and not a concern that I would advise  
dealings with. (2) Ditto. (3) No. Never was an  
investment; purely speculative. (4) I do not  
understand that it is to be used on the whole system,  
but rather that a trial order has been given. (5) It  
has no influence or circulation.

"C." Goldensburg, N. Y.: (1) They deal largely  
in propositions more or less speculative. (2) I  
should not call them investments. The concern,  
however, seems to be doing a large and profitable  
business. (3) As a rule I do not recommend  
anything but investment securities, because when  
the stress of times comes, speculative properties  
must be the first and hardest sufferers.

"Cautious." New York: I would not make the  
exchange at present. Delay will not cost you any-  
thing, and the offer of the St. Louis and San Fran-  
cisco company will probably be made good at any  
reasonable time. I do not regard the offer to the  
Chicago and Eastern Illinois preferred shareholders  
as very favorable to the latter. (2) I am not advis-  
ing the purchase of anything while the money mar-  
ket is so unsettled and prices so high.

"T." Rochester: Two dollars received. You  
are on my preferred list for six months. (1) I  
think well of Manhattan. It has an investment  
quality and ought to improve. Among the cheap  
industrials in which speculation is now being en-  
couraged I might include American Ice preferred,  
and Corn Products common. The cheap specula-  
tive railroads include Kansas City Southern, and  
Toledo, St. Louis and Western, and Texas Pacific.

"X. Y. Z." Washington: (1) They do a large  
business and seem to be successful. (2) With the  
market as sluggish as this is, advice regarding short  
sales is hard to give. I shall be much surprised if,  
within a year, nine-tenths of the stocks on the list  
are not selling lower than they are to-day. (3) St.  
Paul is so widely distributed and closely held that  
heavy purchases would no doubt give it a further  
rise, but the common looks as high as it ought to be  
on its earnings and dividends.

"E." New Hamburg, Ont.: Two dollars re-  
ceived. You are on my preferred list for six  
months. (1) An upward movement has been pre-  
dicted in Republic Steel and the outside steel cor-  
porations, based on the impression that they might  
be consolidated in opposition to U. S. Steel. If I  
purchased either, I would take the preferred; the  
common is simply water. (2) I think better of  
Lake Superior at present. (3) Unless the market  
sustains a severe break, you ought to get out of  
your Erie common without loss, but I would not  
wait too long.

"P." Deposit: International Paper preferred ap-  
pears to be very cheap considering the dividend it  
pays, but, as I recently pointed out, its last annual  
report was decidedly discouraging. While the gross  
earnings decreased the net profits greatly declined.  
Pump preferred has also met with considerable  
favor, and yet I know that one of its promoters,  
when the company was organized, declared that its  
over-capitalization was such as to make the stock  
very unattractive to deal in. I think better of  
Leather preferred or of Corn Products preferred.

"T." St. Louis: The Bamberger, Delmar Gold  
Mines Company is a Wyoming corporation, which  
is offering for sale a part of its 500,000 shares at  
the par value of \$10 a share. The officers of the  
company, as far as given, include several gentlemen  
of excellent standing. Their prospectus states that  
experts report sufficient ore in sight to enable the  
company to pay not less than 10 per cent. divi-  
dends per annum for five years to come. This is  
a mining proposition, rather highly capitalized, and  
until greater developments are shown, I should  
regard it mainly as a fair speculation.

"B." Albany, N. Y.: Check for four dollars  
received. You are on the preferred list for one  
year. (1) Western Union's record as a dividend-  
payer commends it to investors, in spite of its  
recent trouble with the Pennsylvania Railroad.  
The impression prevails that the Gould interests  
are sufficiently powerful to control the situation.  
(2) Hooking Valley preferred, from the investment  
standpoint, looks better. The uncertainties re-  
garding the railroad situation in the South and the  
attitude of Mr. Morgan regarding recent develop-  
ments, do not commend Southern Railroad pre-  
ferred to me at present.

"G. M. F." New York: (1) I am told that  
American Ice is not assessable unless there should  
be a reorganization, and if the earnings as reported  
are correctly given, there should be no need of  
that. The stockholders should fight against any  
such move. (2) It all depends upon the plan of  
reorganization. Assessments are usually placed  
upon the common and not the preferred shares.  
(3) I have no doubt indeed there have been heavy  
purchases of the stock on the decline, but they  
have veiled their operations carefully. (4) Am  
endeavoring to ascertain. Something mysterious  
about it. (5) I would keep them for the present.

"R." Detroit: The Alta Mines Company was in-  
corporated in Colorado, with a capital of \$2,500,000,  
par value one dollar. It was organized to take  
over what are said to be profitable mines, known as  
the San Juan and Alta groups. No shares have  
been issued for promotion, and the directors state  
that every share has been issued for its equivalent  
in cash at the prevailing price of the stock. The  
mines are located near Telluride, in the heart of a  
famous gold-producing section. The officers in-  
clude prominent business men of Milwaukee, and  
the list of stockholders embraces a number of Mil-  
waukee people of high standing. Wis. J. Morgan  
& Finck, of Milwaukee, are the financial agents.

"L." Hoboken, N. J.: The Oro Grande Placer  
Mining Company is incorporated under the laws  
of Iowa, with a capital of \$3,000,000, non-assess-  
able, and of the par value of one dollar each. The  
company reports the ownership of a very extensive  
placer property, with abundant water rights,  
ditches, pipe lines, and an up-to-date plant, em-  
bracing all the latest gold-saving devices. Reports  
made by the experts regarding this property, in-  
cluding Professor W. O. Crosby, of the Massachu-  
setts Institute of Technology, are certainly very  
favorable. The officers of the company include  
a number of men who stand very well in the financial  
world. I have not made a personal investigation  
of the company's condition, but its connections,  
as published, all seem to be good.

"O. K." Kansas City: Two dollars received.  
You are on my preferred list for six months. If I  
had Chicago and Alton and Chicago and Great  
Western common, or any of the other low-priced  
speculatives, I would rather be inclined to get out at  
the first fair profit than to wait for a long pull. It  
is true that the strategic position of Great Western  
may mean its ultimate absorption at higher figures,  
but it begins to look as if many of the so-called  
deals and combinations will have to be indefinitely  
postponed, in the face of the strained condition of  
the money market. If I held them for a long pull I  
should certainly make the margin a good one.  
Chicago and Alton is so water-soaked that it is not  
surprising that the common shares have not ad-  
vanced. No dividends are in sight for it at present.

## The Clock That Keeps Wound

THE Clock Without the Key—the clock that needs no winding—the clock that is right, goes right,  
and stays right—and the price is right—was gradually perfected until it was a complete unac-  
tioned success, and at once gained public approval.  
This clock wonder is appropriately called the

## "KEYLESS CLOCK"

and is made only by

## The United States Clock Company of New York

It is protected by the strongest kind of patents in the United States and Europe. It goes for day  
whole year without attention, and it keeps time—the best of time. It's a beautiful clock—a novel  
clock—a safe clock—an economical clock—a clock that causes no trouble.The "KEYLESS CLOCK" is made for public buildings, business purposes, home use. For any-  
one, everyone, for everywhere and anywhere.The four manufacturing departments are on Centre Street and Broome Street, New York. The  
general office and exposition rooms are at 90 and 92 Broome Street. Come see the clock.The "KEYLESS CLOCK" is not sold at clock stores, but only at the offices of THE UNITED  
STATES CLOCK COMPANY, which are being established everywhere.GUMBLE, HELLMUTH, HEN, with limited capital, can secure territorial rights to represent this  
greatest of money makers. If you know a good man, tell him you know of a good thing; come and  
see the wonder clock or send for prospectus and catalogue.

## "Keyless Clock" SHARES are now \$7.50 each

Par value \$10.00, full paid and non-assessable

The stock of the "KEYLESS CLOCK" Company sells as rapidly as the clock. If you want an  
investment that is absolutely safe, instantly profitable, sure to increase in value, send your subscription.  
Best telephone stock went from nothing to \$4000. UNITED STATES CLOCK stock will be a  
bigger investment in the very near future.More orders at 50 per cent. profit are now on hand than the four departments can turn out.  
REMEMBER: This is not a scheme or a project, but an established, profitably running company,  
with factories, full operation, grade in great and growing demand, no debts, mortgages, or other  
obligations, and with a big deposit and surplus in National banks in New York.

Don't put off until to-morrow what you should do to-day—WRITE OR CALL. Address

A. E. Siegel, Secretary, The United States Electric Clock Company  
407 Broome Street, New York

## OFFICIAL LEGAL NOTICES.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 22 to September 5, 1902, of the confirmation by the Board of Revision of Assessments, and the entering in the Bureau for the Collection of Assessments and Arrears, of Assessment for LOCAL IMPROVEMENTS in the BOROUGH OF THE BRONX:

24TH WARD, SECTION 11, EAST 176TH STREET REGULATING, GRADING, CURBING, FLAGGING, LAYING CROSSWALKS, PAVING, FENCING AND PLANTING TREES, from Jerome Avenue to Tremont Avenue.

EDWARD M. GROUT, Comptroller.  
City of New York, August 21, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 22 to September 5, 1902, of the confirmation by the Board of Assessors and the entering in the Bureau for the Collection of Assessments and Arrears, of Assessment for LOCAL IMPROVEMENTS in the BOROUGH OF THE BRONX:

24TH WARD, SECTION 11, MARION AVENUE SEWER, from the existing sewer in East 189th Street to Kingsbridge Road, EAST 178TH STREET SEWER, from Lafontaine Avenue to Hughes Avenue; EAST 187TH STREET SEWER, from Valentine to River Avenue.

EDWARD M. GROUT, Comptroller.  
City of New York, August 22, 1902.

Notice to Taxpayers.  
Department of Finance,  
Bureau for the Collection of Taxes.

New York, September 1st, 1902.

TAXPAYERS WHO DESIRE TO OBTAIN their bills promptly should make immediate written requisition (blanks may be procured in the borough offices), stating their property by Section or Ward, Block and Lot or Map number, making copy of same from their bills of last year.

If a taxpayer is assessed for personal tax, the requisition should also request bill for such tax. Each requisition should be accompanied by an envelope bearing the proper address of the applicant and with return postage prepaid.

In case of any doubt in regard to Ward, Section, Block or Lot number, Taxpayers should take their deeds to the Department of Taxes and Assessment and have their property located on the maps of that Department, and forward to the Deputy Receiver of Taxes, with the requisition, a certified memorandum of their property, which will be furnished by the Department of Taxes and Assessment.

Taxpayers in this manner will receive their bills returned by mail at the earliest possible moment and avoid any delay caused by waiting on lines, as is required in case of personal application.

The requisition must be addressed and mailed to the Deputy Receiver of Taxes in whichever borough the property is located, as follows:

John J. McDonough, No. 57 Chambers Street, Borough of Manhattan, New York.

John B. Underhill, corner Third and Tremont Avenues, Borough of The Bronx, New York.

Jacob S. Van Wyck, Municipal Building, Borough of Brooklyn, N. Y.

Frederick W. Blackwelder, corner Jackson Avenue and Fifth Street, Long Island City, Borough of Queens, New York.

John DeMogias, Stapleton, New York.

DAVID E. AUSTEN,

Receiver of Taxes.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 27 to September 10, 1902, of the confirmation by the Board of Revision of Assessments, and the entering in the Bureau for the Collection of Assessments and Arrears, of Assessment for LOCAL IMPROVEMENTS in the BOROUGH OF THE BRONX:

23D AND 24TH WARDS, SECTION 11, INWOOD AVENUE REGULATING, GRADING, CURBING, FLAGGING, LAYING CROSSWALKS AND FENCING, from Crosswell Avenue to Featherbed Lane.

24TH WARD, SECTION 11, EAST 180TH STREET REGULATING, GRADING, CURBING, FLAGGING, LAYING CROSSWALKS AND FENCING, from Webster Avenue to 3d Avenue.

EDWARD M. GROUT, Comptroller.  
City of New York, August 26, 1902.

## Hints to Money-makers.

Continued from preceding page.

"T." St. Louis: Sorry for the delay.  
"W. W. J." Chicago: (1) I do not regard it as an investment. (2) I would take a profit if I could get it.

"H." McLean, Ill.: I advise you to have nothing to do with the so-called "combination." The concern has no rating.

"H." West Superior, Wis.: All the stocks you mention are far removed from the investment class. Unless you wish to speculate and run chances I would not advise their purchase.

"S." Salem, O.: (1) You could hardly call such shares investment securities. They do not come under that head. Obviously, they must be highly speculative. (2) Promises have long been made of better reports from this property. Thus far I have not seen them. (3) Is not rated. (4) I think very little of it.

"S." New Orleans: It has long been the belief on Wall Street that the Morgan crowd would some day advance the price of United States Steel shares. This advance might naturally follow a favorable decision of the court in pending litigation regarding the preferred stock conversion scheme. You, no doubt, will be able to get out with a profit, but I would not wait for the last cent.

"H. A." Nantucket, Mass.: I would not sell my United States Express until the reason for the great advance is made more apparent. There must be a reason for it, or the stock would not be in such demand by investors. It is not a speculative security. Its capitalization is small, and I have no doubt that if it were doubled existing dividends would continue to be paid upon it.

"L." Meriden, Conn.: (1) The thirty-cent mining stock offered by W. H. Baldwin & Co., of Albany, in my judgment, will make the man who buys it feel like thirty cents before he gets through. (2) The Mining and Development Company, of New York, has some phosphate properties which it is undertaking to sell. Its proposition looks very speculative to me. I do not believe in rain-bow-chasing.

"S." Newark, N. J.: (1) I would be inclined to take a profit on almost anything, in such a market, and yet the settlement of the coal strike would no doubt advance all the coal shares, including Ontario and Western. If the money market does not disturb existing situations, I would be inclined to hold a little longer. (2) Leather common, in an active market, is a cheap speculative favorite. American Lee preferred is getting to be in the same class. Corn Products common has merit on re-construction.

Continued on following page.

## Modern Bookkeeping.

FROM "FINANCE," March 20th, 1902.

A New York banker says: "I am thoroughly convinced, from my contact with merchants and other business men, that a vast proportion of the failures which take place would not occur if the managers of business houses and corporations were thoroughly and constantly familiar with their condition, and intelligent results of their transactions frequently laid before them."

"The lack of this very essential information is not always due to the fact that books of account, intended to show such results, are not kept, but rather because the methods in use are complicated, slow, and imperfect. Many bookkeepers get into what may be called a rut, and follow customs which have long since become obsolete. This is very apt to be the case with a bookkeeper whose duties confine him strictly to his office, and who, therefore, has no time to familiarize himself with unknown methods and with other and ready ways of obtaining results. He frequently has no knowledge of any but the system which he has followed for years."

"The heads of the house have their entire time and attention occupied with the buying and selling of merchandise and the management of the business, which renders them unable to improve the accounting system, even granting that they had the ability to do so."

"These slow and obsolete methods may be, and sometimes are, the result of prejudice upon the part of managers who have become wedded to a given system and are reluctant to try a new system with which they are not familiar and which may require study and investigation on their part."

"I recall several large institutions and business houses which at one period of their existence have found it impossible to secure a statement of their condition, or of the results of business done, except at very long intervals, and then only after tedious and annoying delays. But now, after introducing the improved and more direct method devised by The Baker-Vester Company, these same institutions and business houses have been able at any time to secure a true statement of their assets and liabilities and of the results of their monthly transactions within a few days after the first of any given month."

"This company has done more to produce accurate results by simple, concise, and economical systems than any one unacquainted with their system could possibly imagine. By the use of their devices and forms the employer can understand his records, and the bookkeeper's work is decidedly easier."

## THE ALTA

ALTA MILL SHOWING AERIAL VIEW.

**IT'S A MINE** in the San Juan Region, Colorado, owned by **THE ALTA MINES COMPANY**. January 1st its \$100,000 mill will be treating **One Hundred Tons of Ore a Day**. Shipments now being made to smelters. **Nearly a Mile** of developmental tunnels completed. Indebtedness of \$514,000 has been reduced to \$125,000. To pay a portion of this the Company offers full-paid stock at a low figure. No promoter stock. **Booklet Free**. Write to us. References: D. C. Brewster, or any Milwaukee Bank.

**WIN J. MORGAN & FINCK**  
12 Pabst Bldg., Milwaukee, Wis.

## "Drink Beer"

When you get run down, your doctor says "drink beer." Or he prescribes a malt tonic — concentrated beer.

Weakness calls for food, and barley-malt is a food half digested. The digestion of other foods is aided by a little alcohol, and beer has 3½ per cent.

Weakness requires a tonic — that's hops.

And it's good for well people, too, if you get a *pure* beer. That's essential.

Even a touch of impurity makes beer unhealthy, because beer is saccharine. Impurities multiply in it.

And a "green beer"—insufficiently aged — causes biliousness. But a pure beer — well aged — is the beverage of health.

Schlitz beer costs twice what common beer costs in the brewing. One-half pays for the product; the other half for its purity.

One-half is spent in cleanliness, in filtering even the air that touches it, in filtering the beer, in sterilizing every bottle. And it pays the cost of aging the beer for months before we deliver it.

If you ask for Schlitz you get purity and age, yet pay no more than beer costs without them.

Ask for the Brewery Bottling.

## BUY HIDDEN FORTUNE GOLD MINING CO. STOCK AT \$1.00 PER SHARE

If you wish an investment that will show tremendous profits by advance in price and bring large returns in the way of dividends. Homestake stock, started about \$1.00 per share, has never missed a dividend in twenty-five years and now sells around \$100 per share. \$100 invested in this stock shows a profit of about \$10,000, besides many times your money back in the way of dividends. Hidden Fortune Co.'s mines are surrounded by the Homestake property and cover part of the same system of veins, so should show as large profits as Homestake stock. Hidden Fortune is absolutely safe, as experts report over \$7,000,000 in sight of gold ore, being more than two dollars per share for every share issued. Mill now being built, foundations already in and balance being pushed to completion. Company should pay large dividends as soon as mill is completed. One vein on this property is over 350 feet wide. Company offering small amount of treasury stock to complete payments for mill. Send for illustrated prospectus.

BROWN PALACE HOTEL, DENVER, COL.

## The Busy Man's Way.

When you are going anywhere you always want to go quickly; and it is to appease the demands of the busy man that hourly trains have been placed in operation between New York and Philadelphia via the New Jersey Central, and to further aid him they are arranged to leave either city every hour and on the hour from 7 a.m. to 6 p.m. The trains are palaces in railroad parlance, for no detail is neglected in their make-up. The road-bed is model in every respect — rock ballasted, automatic block signal system and heavy railed — and the running time is scheduled down to two hours for the 90-mile run. Then, too, the country traversed is wealthy in scenic adornment, and one finds comfort, convenience and speed, the signal word for every passenger. Next time you go to Philadelphia try the Jersey Central.

## BLOOD POISON

Primary, Secondary, or Tertiary Blood Poison. Permanently Cured. You can be treated at home under same guaranty. If you have taken mercury, iodine, potassium, and still have sores and pains, Mercurial Sores in Mouth, Sore Throat, Pimples, Copper-Colored Spots, Ulcers on any part of the body, Hair or Eyebrows falling out, write

1124 Broadway, Room 35, New York.

**INFORMATION ABOUT GOAT LYMPH.**

In response to a large and constantly increasing demand for information about the Goat Lymph treatment, we have issued a booklet that covers this subject in a comprehensive manner. It tells all about Goat Lymph: what it is, how it is obtained, how it is administered, what ailments it cures, and how it differs from any of the distressing ailments in which the use of this remedy is indicated, may obtain it.

Why Goat Lymph cures such ailments as chronic articular rheumatism, locomotor ataxia, epilepsy, paralysis agitans, beriberi, melancholia, hysteria, neurasthenia, primary dementia, senility, mental and nervous prostrations, and premature old age, is fully explained.

The subject is thoroughly discussed in an interesting way by physicians and former patients. The booklet will be sent free on application to the

**A Genuine Pleasure Place.**

There is no section where recreation is more popularly enjoyed than at the seashore. Thousands, yes, hundreds of thousands, will choose the seashore to any other region for a day's outing or a prolonged stay, and it is not difficult to trace the cause. The heady expanse of water, the glittering sands, the exhilarating snuff of salt water, the hundred and one sports, the delights of a plunge into the surf, the palatable shore dinner and the general atmosphere of the shore are the attractions; and nowhere can one find more admirable outing places than those on the New Jersey coast reached by the New Jersey Central. Every point of renown, including Monmouth, Nantuxet, Atlantic Highlands, Seabright, Long Branch, Ocean Grove, Ashbury Park, Allenhurst, Spring Lake, Belmar, Barnegat, Beach Haven, Atlantic City, Ocean City, Cape May and a score of others are reached through the superb train service of the New Jersey Central, and each resort abounds with fine hotels and boarding houses. A Hotel List is published by the General Passenger Department of the New Jersey Central, Central Building, New York, and it's yours for the asking. Send a postal for it.

**Hints to Money-makers.**

*Continued from preceding page.*

"H." Philadelphia: Answer by letter.

"O." Bourke, M.: Dublin, Ireland: I find no evidence of the existence of any such estate.

"D." Waterville, N. Y.: I am unable to obtain any report regarding its financial condition.

"D." Pittsburg: It would be impossible, with the multiplicity of my cares, to follow up the matter as you suggest, but I appreciate your confidence.

"C." Oneida, N. Y.: The firm you mention is doing a large business, and apparently a profitable one. I have never personally investigated any of the properties.

"H. M. L." Roslindale, Mass.: I do not believe in the combination scheme or any other scheme of Alfred Grant & Co. that has thus far been shown me. Anonymous communications not answered.

"G." Seneca Falls: I judge from the preliminary statement of the American Bicycle that the common stock will be either wiped out or heavily assessed. If I bought anything, I would speculate in the bonds.

"C." S. Dak.: (1) Not rated. (2) I am not advising the purchase of any shares at present. The money market outlook, and the final outcome of the corn-crop situation, are to be considered.

"T." Nagsari, India: Most of the companies regarding which you speak are absolutely speculative ventures with no element of investment about them. The figures they give are largely fictitious and for the most part deceptive.

"Queest." South Norwalk, Conn.: I have always regarded it as a speculative proposition, and therefore have not advised my readers to embark in it. The capital was very large and thifty promoters were in charge of the enterprise, apparently.

"S. S." New York: The First Consolidated General Funds of the National B. R. of Mexico are not an investment bond, but they have merit. They sold in July as low as 78, and last March at 81½. Apparently they have not been in great demand.

"H." Allentown, N. J.: (1) Ontario and Western is probably as good a speculation as can be found among the cheaper stocks, provided the market maintains its strength. (2) The commercial agencies make a fairly favorable report. It is speculative.

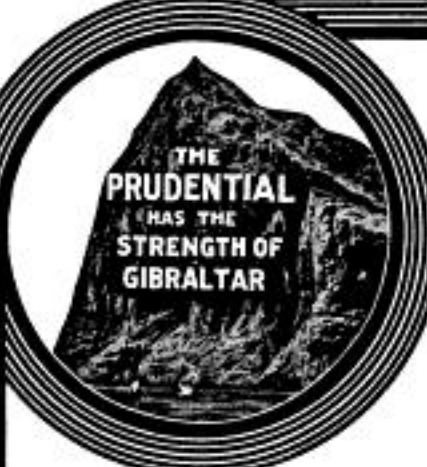

"H." Utica, N. Y.: One dollar received. You are on my preferred list for one year. (1) I would not advise short sales of Wheeling and Lake Erie at present, though the stock has had a good advance. Its connections are excellent and speculatively it has merit.

"B." Johnston, Penn.: (1) They have no rating and I do not like their method of doing business. (2) I have no faith in the combination offers of Alfred Grant & Co. (3) Reputable brokers do not take accounts with which to speculate, as a rule. You must buy and sell at your own discretion. (4) Harrison & Wyckoff, 71 Broadway, deal in small and large lots on the Stock Exchange.

"J." Santa Fe, N. M.: I see no particular merit in the proposition of William A. Meers & Co. It is a very alluring thing to speak of "gold manufacturing on the same basis as iron manufacturing," but the mere suggestion of such a thing is preposterous. I do not advise the purchase of the shares of the Oro Honda Mining Company.

"G." Nagsari, India: (1) Not an investment. (2) Ditto. (3) From Spencer Trask & Co., 27 Pine Street. (4) Rhoades & Richmond, 20 Broad Street, New York, and Spencer Trask & Co., 27 Pine Street, New York. (5) The Commercial and Financial Chronicle, New York. (6) They have no rating. (7) Standard Oil shares can be bought through any broker's office. Their selling price at this writing is between \$650 and \$680 per share. (8) I believe in Marconi's discoveries, but he is by no means the only inventor of the wireless telegraph. Several other companies are in the market.

**Stanlaws Menu and Dinner Cards**

**BEAUTIFULLY PRINTED UPON HEAVY BOARD WITH BEVELED EDGES**

No prettier novelty has been published than these Stanlaws cards. The subjects are all reproductions of copyrighted drawings by Stanlaws.

The cards come in three sizes, viz.:  
Size 5½ x 7½, ten subjects to a set, 55 cents apiece or \$5.50 for a complete set, suitable for a dinner service for ten persons.  
Size 4½ x 7, twelve subjects to a set, 20 cents apiece or \$2.40 for a complete set.  
Size 3½ x 4½, ten subjects to a set, 10 cents apiece or \$1.00 for a complete set. This last-mentioned size can be used either for a dinner card or for a presentation card to accompany a gift.

Any of the cards in the two larger sizes can be most appropriately used for Easter cards; and if hand-painted in water colors make beautiful gifts. We can furnish them colored by hand in aquarelle (if desired) at 50 cents apiece; or they can be hand-painted by the purchaser. The study of the art of water coloring has been extensively taken up by the fashionable world; and these cards furnish delightful subjects for practicing the art.

**THE STANLAWS TALLY CARDS**

**For Progressive Euchre and Whist**

The Tally Cards come in either oblong or diamond shape and are printed in colors, each card bearing one of Stanlaws' unique designs. The Tally Cards are sold at 50 cents per dozen.

KEEP YOUR BLOOD CLEAN

## Life-insurance Suggestions

### Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of LESLIE'S WEEKLY. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be included, as a personal reply is sometimes deemed advisable. Address "Hermit," LESLIE'S WEEKLY, 119 Fifth Avenue, New York.]

A READER of this column tells me that it has often inspired him to take out a policy of insurance in favor of his family, but that he hesitated to do so because of a superstition that it might lead to evil consequences, but he confesses that a recent narrow escape from death has brought him to his senses. My correspondent says the lesson was that the duty of every man is to make provision for his family, and with this lesson in mind my correspondent immediately set aside from his surplus earnings a sum sufficient to pay for a policy of life insurance. I refer to this matter simply because it is a text for a sermon which I need not preach. The little incident in itself constitutes the discourse and it is both timely and instructive.

"S." Worcester, Mass.: I have your letter. It would be impossible, in my limited space, to name every company having merit.

"A." Alpina, S. D.: I do not believe in the company or the form of contract you mention, and prefer an old-established concern.

"H." Scranton, Penn.: Your continuous installment policy in the Mutual Life of New York will give protection to both you and your wife, and, as I understand the facts you give, suits your case very well indeed.

"S." Cordele, Ga.: The literature you inclose tells its own story. I do not believe in any company whose financial standing is not beyond question. The company you refer to certainly is not in the first class. Life insurance is not a subject to be trifled with.

"T." Melrose, Mass.: Everything depends upon your circumstances. If you are young and prosperous a twenty or thirty-year endowment might

suit you best, giving, as this would, both insurance and investment. If your surplus earnings are small a simple straight life policy would suit you better. Deal with none but the strongest companies.

"A Member," New York: Some of the largest and strongest companies lean on their policies. Better make application at the home office. Outside brokers sometimes charge exorbitant rates. All the great companies have an abundant surplus, which they are always willing to loan on good security, and what could be better security than their own policies?

"P." Portland, Me.: You are right in the statement that an action has been begun by the Tennessee policy holders of the Mutual Reserve for the appointment of a receiver, and that the plaintiffs allege fraud and collusion on the part of the directors, to conceal the financial state of the company. The company in its answer insists that it is solvent. The case is in the United States Circuit Court at present.

"E. W. T." Michigan: (1) The scheme of the National Life and Trust Company has many attractive features and its officers include some very strong men, but I think the gold bonds you have taken in the Mutual Life will, in the end, satisfy you better. (2) You are commended for your judgment in preferring the gold bonds of the Mutual Life to a policy in the Modern Woodmen, or any other fraternal beneficiary association.

"H." Savannah, Ga.: The Equitable Loan and Security Investment Co. has been enjoined from the further payment of dues by certificate. It is alleged that it has liabilities to certificate-holders aggregating \$700,000 and assets of less than \$150,000. This, of course, has no connection with the great Equitable Life Assurance Society of New York, which is engaged in an entirely different business. I have constantly advised against the purchase of such certificates as the Georgia company offered.

"S." Collierville, Tenn.: I would not take a policy in any company that embodied deceptive clauses in its contracts. This is one of the difficulties with all cheap concerns. The cheapest is at the expense of security. It would be wiser to take a straight life policy in one of the strongest old-line companies—those that make the best showing and have the highest standing. The Kentucky company you mention is not of the first rank. All of the leading New York, New Jersey, and New England companies are.

*The Hermit.*

### Hints to Money-makers.

Continued from preceding page.

"K." New York: Personal answer.  
"W." Chicago: Letter satisfactory.  
"Carl." Richmond: Both of them are highly speculative.

"White Horse," Brooklyn: (1) Only for speculation. (2) Ditto.

"H. H." New York: I am unable to obtain information regarding the matter.

"E." New York: I know nothing about the matter personally and regard it as speculative.

"A." Honolulu: Answer by letter. Project not feasible under existing money market conditions.

"B." Wilkesbarre, Penn.: Two dollars received. You are on my preferred list for six months.

"F." Fargo, N. D.: It is a speculative proposition which has yet to demonstrate its dividend-paying power.

"L." Baltimore: Almost any of the real stocks and all the dividend-payers will offer chances for speculation on the next decline.

"H." Pittsburg, Penn.: Have answered by letter. I could not personally profit by your suggestion. It is against my rule.

"Enrique," Mexico, D. T.: The Alfred Grant & Co., to which you refer, is not the Grant & Co. whose references you speak of so highly.

"Pennsylvania," Richmond, Ind.: Regardless of the par value, they are quoted on the basis of \$100 when bought and sold on the Exchange.

"H." Kansas City: You can get the quotation on almost any California oil stock from Joseph B. Toplitz, 330 Pine Street, San Francisco. Mention LESLIE'S WEEKLY.

"F." Elizabeth, N. J.: I do not advise the purchase of the oil stock recommended by F. Ellsworth Vail. It is not a difficult thing to get reputable men to lend the use of their names to speculative corporations.

"N." Six Mile Run, Penn.: I do not believe in any of the so-called financial bureaus, syndicates, and bunco games offering profits of 100 per cent. per month. All these schemes on their very face reveal their character.

"B." Savannah: Many believe that Amalgamated Copper is about as low as the insiders expect it to go, but it is a eliquid stock and the only reason it looks cheap now is because it is selling so much lower than its highest price.

"K. B. R." New York: (1) I would not hold anything very long if I had a profit, in such a questionable market as this. You will have a chance, if you are patient, to buy back on reactions. (2) Kansas City Southern common, on reactions, still has merit.

"G. W." Milwaukee: The Chicago, Peoria and St. Louis Railroad is an organization of the railroad of the same name with which the St. Louis, Chicago and St. Paul railroad was consolidated. For information write to the secretary, Ralph Blaisdell, Springfield, Ill.

"S." Chicago: (1) The literature sent me by the Palmdale Park Company shows that its lots are well located, but the proposition is not as meritorious as some others, in my judgment, offered by real estate dealers in the vicinity of New York. (2) I think better of Rugby.

"D." Warren, R. I.: The new Rock Island bonds will no doubt be a fair investment. As to the common and preferred shares, the future must depend upon business conditions. If I held the stock I would be inclined to hesitate before I consented to the conversion scheme.

"A." Lynn, Mass.: (1) You had better hold them for developments. The impression prevails that telephone promoters have engineered the scheme in order to take in the property at the lowest price. (2) I think well of American Telephone and Telegraph Company's stock as an investment.

"P." Lead, S. D.: Two dollars received. You are on my preferred list for six months. (1) Great Western and Mexico Central both have had considerable of an advance. I think better of the

If you wish to be always satisfied, order no other Champagne than Goh's Imperial Extra Dry. It has quality and purity.

Advice to Mothers: Mrs. Winslow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

THE Solmer Piano are pronounced superior to all others by leading artists.

## Prosperity Is the Issue.

THE presidential campaigns of 1896 and 1900 proved that on the issue of prosperity the Republican party could not be defeated, and on that issue it cannot be defeated in 1904. If defeat comes in that year it will come because of adversity, but it must be adversity as the result of Republican folly. Democratic leaders realize this situation perfectly, and are doing the best they can to disturb existing conditions. Behind all their talk against the trusts stands a grim purpose to reopen the warfare on the protective tariff. They recall that the first Democratic victory achieved in twenty-five years, from the time of Buchanan to the day of Cleveland, was won on the issue of tariff revision, masquerading under the attractive title of tariff "reform." The Democratic party has wandered after all sorts of false gods and created all kinds of new issues since Cleveland's defeat in 1884, in the vain hope of trying to get back into power. Having signally failed, the leaders are turning back to Jeffersonian principles and tariff "reform." The rise in the prices of domestic commodities, coincident with an era of industrial combination and speculation, has focused attention on the so-called trusts. The coal trust is denounced in the cellar, the beef trust in the kitchen, and the tin trust on the roof. For the time being, the full dinner pail is forgotten in the outcry against the terrible trusts. The agile and acrobatic, and not too conscientious, demagogue sees in this situation his opportunity, and proceeds at once to declare that protection is the mother of all trusts. He does not stop to explain how it is that in free-trade England the trust is greatest in number and in influence. He refuses to answer the question how protection can possibly be the mother of the coal trust and the Standard Oil trust, while both coal and oil are on the free list. These inconsiderable trifles do not faze him. His one purpose is to convince the wage-earner of the country that the Republican party is no longer his friend, and that Republican protection, in spite of the splendid record of the past six years, should be denounced and overthrown.

No one denies that there are trust evils, but, as President Roosevelt recently said, "We must not strike out blindly in an attempt to hit the trusts, and destroy all commerce. When we have prosperity, some persons, for whom we do not much care, prosper more than others, but it is a great deal better that some people should prosper too much than that none should prosper at all. Some of us will feel the good times more than others, some less, but we all feel the good times somewhat, and when bad times come we will all be put back." This is the kind of talk that should be heard from the Republican platform and from the Republican press. Preach prosperity and the gospel of the greatest good to the greatest number. Keep it before the American people, that during the past six years, when there has been little or no tariff discussion at Washington, we have had an era of unparalleled prosperity. Compare these six years with the preceding years of tariff discussion, of unsettled business, of bankruptcies and failures, all leading up to the terrible panic of 1893.

Is it not time to stop and think—to begin to consider the facts of the situation and the peril that will come with a renewal of the assaults on the protective tariff? Let the battle against the trusts proceed, on the lines that the President has suggested or on any other line that commends itself to public confidence and that will accomplish its purpose. But do not make the trust evil an excuse for an assault on the principle of protection, which has done so much and which can do so much more to maintain the highest standard of American wages and to make the United States the first industrial Power of the world.

Prosperity is the issue—McKinley prosperity in 1900 and Roosevelt prosperity in 1902.

## The Problem of the Police.

THE POLICE of New York City are not alone in their failure to hold in subjection those elements of society over which they have been placed, nor in their open and notorious alliance with vice and criminality, which they are supposed to control. From almost all of our large cities come charges of police corruption and blackmail and complaints of the utter failure of the present police systems to accomplish the purpose for which they are organized.

The conditions in Chicago and Minneapolis are even worse than they are in New York, while in St. Louis the

criminal elements have recently been so daring that daylight robberies and hold-ups have been common occurrences, and the whole population is in arms. Local forces in St. Louis proved, as they have elsewhere, powerless to bring about an effective reform, and the Legislature of Missouri passed a police bill placing the control of the police in the hands of commissioners appointed by the Governor. This remedy is not a new one, for it has been tried in several States. In Indiana, a State police law was passed several years ago, and although the State contains few cities of considerable size, yet local conditions were found to be so intolerable that the operation of the police law has been extended from time to time, until the police of most of the larger cities in the State have been placed under the control of the Governor.

The reason for this failure of locally controlled police to suppress the vicious and criminal elements is clear. While there are several contributing causes, the chief reason for the failure of our police system lies in the familiarity and identity of interest existing between the police and those they ought to control, and this can only be avoided by removing the police from local influences. The increase of crime and the growing contempt for law is attributed to the low character of the policeman, from whom the lower classes absorb their ideas of law.

As a matter of fact, New York City has such a large foreign population, for the most part ignorant of our institutions, that it has no more right to claim home rule for its police than has Alaska or the Philippine Archipelago; and the political conditions arising from the efforts to secure the support of the foreign vote are such as to preclude the possibility of securing locally a police either able to appreciate the intent of our laws or inclined to enforce them, and such police officers are nothing less than inducers to further crime.

The real objection to a State constabulary law lies in the additional burden which is laid by it upon an already overburdened State executive. It is charged by the friends of the late Governor Mount, of Indiana, who died suddenly in January, three days after his successor had been sworn in, that his death was the direct result of exhaustion and worry over the direction of the police of the different cities throughout his State. It is not, therefore, surprising that Governor Odell is reluctant to have such an additional burden imposed upon him. An article recently contributed to *LESLIE'S WEEKLY* by Professor Guy Morrison Walker argues in favor of a military police and suggests that the State police be placed under the same control as our State militia, which has so often been called out to aid and support the police in times of riot or special excitement. This plan relieves such measures of one of the chief objections, and some development of it seems likely to offer the true solution of a very serious problem.

## The Rage for Risk.

AN EXPERT in the science of psychology might possibly be able to throw some light upon that mysterious element of human nature which leads so many men, and women also, to indulge in what they are pleased to regard as recreations or amusements attended with the utmost peril to life and limb, and often ending in frightful and fatal disaster. The reason, the impelling motive of this rage for risk, as we may term it, is to the ordinary mind inscrutable. We only know that it exists among even the most cultivated and refined classes everywhere, and that it apparently increases as the progress of civilization and the inventive arts supply new and improved means for its indulgence. The ordinary applications of steam and electricity are not enough, it would seem, to give that touch of peril which some natures crave in their enjoyments, but new applications of these agencies must be sought to satisfy the needed hazard.

At present the automobile and the flying-machine, in some of its many forms, seem to be the favorite devices for people possessed with the rage for risk, and the number of fatalities regularly credited to these agencies has no apparent effect in diminishing the number of persons who seek pleasure and excitement by such means. And neither the automobile nor the balloon, it should be observed, are specially hazardous when operated in the regular way and under reasonable conditions; the great risks and the frequent fatalities come with the speeding contests, the testing exhibitions, the seventy-miles-an-hour pace of the horseless wagons, the parachute attachments of the balloons, and other contrivances which add to the chances of killing and being killed.

A list made up by us at random from newspaper accounts, and without any thought of completeness, of the number of persons who have lost their lives through this passion for risk, the love of hazard, during the past few months, makes a total of several hundred. This includes some forty-five persons who have lost their lives in automobiles, seventeen who have "missed" their footing in balloon exhibitions, nine who have been ushered out of existence by the means of the bicycle and its allied contrivances, two who have climbed steeples for the last time, three bridge-jumpers, seventeen Alpine climbers, five long-distance swimmers, seven who have been blotted out of existence in efforts to break athletic records, and scores of others who have gone to a better and, it may be hoped, a safer land by various other agencies or methods designed ostensibly to promote the joys of this present life. If to this list we should add the three hundred other mountain climbers who, it is said, have lost their lives in the Alps during the past ten years, the total sacrifice of human life to the rage for risk would indeed assume formidable proportions.

It would probably be quite useless to reason with the people who thus venture upon undertakings where the chances are largely against their coming out alive, since

they enter upon them open-eyed, with premeditated design and a full knowledge of the probable consequences. For the peculiar satisfaction coming from such risks they are willing, apparently, if need be, to pay the cost. It can hardly be supposed, for example, that the two people who recently lost their lives in an automobile disaster near Paris did not know that they were taking an exceedingly narrow chance in rushing their machine along a country road at a speed of over sixty miles an hour—a high and dangerous rate even for a passenger coach on most railroads, where a guarded and inspected course, a level grade, and a firm road-bed all help to insure safety. If people will take such hazards for the possible joy they may derive from the exercise, there is evidently nothing for the rest of us who are more timid or cautious by nature to do, than to be as thankful as we may when they come out whole, and to accept the situation as calmly and philosophically as we can when the results are otherwise.

## The Plain Truth.

THE BANKRUPTCY of the American Bicycle Company furnishes the best evidence that advertising pays, or rather that a failure to advertise does not pay. The success of the early bicycle companies, when the newspapers and weeklies were full of their advertisements, was phenomenal; but when the bicycle combination was formed, including all the leading American companies, the managers undertook to retrench in all departments and began by almost abandoning the advertising field. It is to the credit of Colonel Pope, who was connected with the new combination, but who was not active in its management, that he objected to the elimination of this publicity. He knew by his own experience that advertising paid most handsomely, and he realized precisely what would happen if advertising were discontinued—that public interest in the sport would diminish, as it did, until it almost died out. The failure of the American Bicycle Company, with enormous liabilities and small assets, is therefore not surprising, though when it was organized, only three years ago, its prospectus set forth that the company would probably earn twenty per cent. on its common shares. Instead of this, it was unable to pay the interest on its bonds, and its common and preferred shares have practically been wiped out. The lesson to be derived from this humiliating experience is too obvious to need to be further impressed upon the reader.

THAT PATIENCE has its perfect work is illustrated once more by the sudden supremacy of ex-Senator David B. Hill, as the leader of the Democracy of New York. Two years ago he was set aside at the State convention and barely consulted by Croker and his dominant Tammany faction. At the National Democratic Convention at Kansas City, he was kept off the committee on resolutions and told to go "way back and sit down." Today his influence and favor are being sought in Croker's absence by every Tammany Hall leader and by all the Democratic bosses, great and small, throughout the State. He will formulate the platform at the approaching Democratic State convention at Saratoga, and will name the candidates on the ticket, from top to bottom. He will sound the opening note of the campaign for his party, and will himself manage its canvass in this State. It is no secret that he believes that he has more than a winning chance with a good ticket, and that he has advised the Democratic leaders throughout the State of that fact and has imparted to them some of the enthusiasm which he himself manifests. Republicans, who realize how strong their party is throughout the State and how united and well satisfied it feels, and who also recognize the great popularity of Governor Odell, have no fear of the outcome, but it is well to bear in mind that for the first time in many years the Democratic forces of the State are also being brought rapidly into line, and that they will be marshaled by their most skillful, resourceful, and successful leader.

WHILE IT is often difficult, as a matter of fact, to draw a sharp line between a method of money-getting which may be justly regarded as gambling, and so highly reprehensible on moral grounds, and those speculative operations which are entirely harmless and wholly legitimate under the conditions of modern trade, no question whatever exists as to the vicious and detestable character of the form of gambling known as policy playing. It is not real gambling, in fact, a game in which the element of chance enters, but a system of swindling, a method of robbery pure and simple, organized and carried on for no other purpose. Investigation has shown that policy playing abounds most among the poor and the tenement dwellers of the cities; that it thrives, for example, in the crowded quarters of New York, where it swallows up regularly a vast amount of money made up of the pennies of women and children and the scanty earnings of others who fall victims to its wiles. The fact has been brought out in the police investigations of recent years that a widespread system of policy shops has existed in New York, owned and controlled by a few Tammany politicians and other scoundrels, who have grown enormously rich from their plunderings of the poor. It is against this systematized iniquity that the Anti-Policy Society instituted by Captain Goddard has conducted a constant warfare for a year or two past, and has already accomplished excellent results. This society is determined to uproot the swindling business completely, and to assist in that laudable undertaking the *New York Evening Post* has recently opened a subscription to raise a fund of \$7,000, the amount considered absolutely necessary to carry on the campaign to a successful finish. An excellent opportunity is thus offered to all who would like to have a hand in crushing out this nefarious and despicable policy business, to do some effective service to that end.

# PEOPLE TALKED ABOUT

THE FEAT of swimming the channel between England and France appears to have a spasmodic fascination

MONTAGUE HOLBEIN,  
Who nearly succeeded in swimming  
the English Channel.

for the natatorial sports. Few have been called to the task, and still fewer have been chosen to succeed in it. The latest Leander to undertake to cross this western Hellespont without a boat is Mr. Montague Holbein, whose recent attempt was an aggravating failure, since he was only half a mile from the goal when exhaustion forced him to give up. Mr. Holbein's course was from Cape Grinez to Dover. He calculates that he made 25,000 strokes on the trip, and yet after being in and working hard in the water for twenty-two hours and

twenty-one minutes, he did not, when he had rested, feel much worse for the experiment. It is the belief of pilots, familiar with the strait, that Mr. Holbein would have accomplished his purpose had he started from the English instead of from the French coast, the direction of the current being from the former toward the latter. This view is strengthened by the fact that Captain Webb, who followed this plan, succeeded, and was able at the end of the swim to wade out and walk on the beach without assistance. Mr. Holbein, while training for his latest undertaking, made some notable practice record, one of these, being a swim from Dover toward Ramsgate in which he covered the exact distance between England and France.

OUR ENGLISH cousins, who sought from the first to utilize for various purposes the ceremony of the crowning of King Edward and Queen Alexandra, are still discovering the uses of it. The latest device in England for raising money for charitable objects is the exhibition of a peeress in her coronation robes and coronet. The noble personage who was the pioneer in consenting to pose before the public in this fashion is Lady Raglan, wife of Lord Raglan, who lately resigned the under Secretaryship of War, and daughter of the Earl of Bessborough. Lady Raglan, in all the finery which she wore during the gorgeous function in Westminster Abbey, exhibited herself at a charity show for the benefit of the local hospital at Beckenham, Kent. Her appearance there was announced on posters throughout the town, as if she were a celebrity of the stage. The very moderate fee of six cents was charged for admission to the hall in which she was on view, and so the spectacle was within the reach of all. As Lady Raglan possesses good looks as well as magnificent costumes, there was naturally a considerable rush to see her at such a bargain-counter figure, and the hospital reaped much financial benefit.

WHATEVER ELSE one may deny to Russia or to the Russian soldiery, it will not be disputed that

the great empire of the North has ever been able to command the loyal service of men as brave and true in war, as resolute and valiant in battle, as any the world has ever known. Cruel they may be and often have been, but never weak or cowardly. How true this is a hundred desperate battle-fields attest, from the most ancient days of Russian conquest down to Sevastopol and Erzerum. A worthy member of this line of warriors and heroes is he whose portrait we present herewith, Corporal Alexis Strachow of the Sixteenth East Siberian Infantry. This wearer of four crosses and a war medal, who joined the army only six years ago, is well entitled to be called a hero, for he has proved himself worthy of the highest decorations that can be given to a man, without a commission, who serves the Czar. In China Corporal Strachow gained the Order of St. George by gallantly saving his commander's life under a heavy fire. This was on July 17th, 1900. His valor again served him on September 17th of the same year, when he, with three others, was instrumental in putting sixty Chinamen to flight. He was again noticed in April, 1901, when, serving under a commander who, with only fifty-eight men, was opposing a Chinese force of seven hundred, he rendered conspicuous service.

CORPORAL ALEXIS STRACHOW  
A young soldier of whom Russia  
is proud.

THE ADMINISTRATION of public affairs in France has been noted for a frequency of sensations, and one of the most recent of these involved the naval service of that country. By order of President Loubet, two of the most prominent officers of the navy—Vice-Admiral de Beaumont, Maritime Prefect of Toulon, and Rear-Admiral Servan, commanding the Atlantic Squadron—

were summarily relieved of their commands. Admiral de Beaumont's retirement was due to a published interview which represented him as severely criticising M. Pelletan, the Minister of Marine. He repudiated the criticism, but that did not in the least help his case. The removal of Admiral Servan is ascribed to supposed sensational developments in connection with the suicide of Captain Barry, commander of the cruiser *Tage*. Captain Barry shot himself some time ago in the cabin of his vessel while the latter was off Martinique, Admiral Servan being then on board. In what way the Admiral was mixed up in the tragedy has not as yet been revealed to the public. The *Tage*, which was the flag-ship of the squadron, was at New Orleans at the date of the Martinique disaster and promptly sailed for the stricken island, carrying supplies for the sufferers contributed by the residents of the Crescent City. For this timely generosity the admiral

REAR-ADMIRAL SERVAN,  
Summarily relieved of command of French Atlantic squadron.  
Prouisoon.

expressed fervent gratitude. The many Americans whom he met and favorably impressed have been deeply grieved by the disgrace which has befallen so able and eminent a naval officer.

JUST WHAT effect the renomination of Robert La Follette for Governor of Wisconsin will have upon the chances for the return of the Hon. John C. Spooner to the Senate from that State does not yet appear. The Republican party in Wisconsin has been sadly divided over La Follette, his nomination being bitterly opposed by a large and influential element of the party who are not in sympathy with the Governor's views on primary election laws and other State issues. Senator Spooner has been counted with this opposition, and it therefore remains to be seen whether the amazing strength which La Follette developed at the recent State convention will be thrown for or against Mr. Spooner as a senatorial candidate. His indorsement for re-election will depend, it is said, upon his acceptance of the State platform with special reference to its election and taxation planks.

HON. JOHN C. SPOONER,  
Who hopes to be re-elected to  
the United States Senate  
from Wisconsin.

There is no reason why such an indorsement should not be accepted by Spooner men, who can afford to stand on the party's platform at all times. Senator Spooner has served in the Senate almost continuously since 1885, and is generally recognized as one of the ablest and most useful men who have ever sat in that body.

THE AMERICAN Bar Association, at its recent session in Saratoga, was extremely fortunate in its selection

of a president for the current term. The new incumbent, Francis Rawle, Esq., of Philadelphia, is a gentleman who, in point of ability and character, is fully qualified for his high honorary position. In his hands the traditions of the office will be well maintained. Mr. Rawle is a leader of the Quaker City Bar and comes of excellent ancestry. To some extent he inherits his legal ability, for he is a grandson of Mr. William Rawle, the first United States district attorney for Pennsylvania, counsel for the United States Bank, and first president of the Pennsylvania Historical Society. Mr. William Rawle was also author of the well-known work on the Constitution of the United States. Mr. Francis Rawle, since 1876, has been librarian of the Law Association of Philadelphia, a place which has been filled by many distinguished lawyers. Among his

FRANCIS RAWLE,  
New president of the American  
Bar Association.

contributions to legal literature is the last edition of Bouvier's Law Dictionary, in the preparation of which he spent five years. So long as it places at its head men of such eminence in the law, the American Bar Association will retain the respect of the members of the profession.

ONLY TIME will reveal how genuine is the desire expressed by the imperial government of China to bring about a settled peace in regard to church matters in China. Some time ago there was issued an edict of the Imperial Chinese government appointing Bishop Favier to bring about peace between the Catholic Church and the Chinese people. The next question was what was to be done with the Protestants, who have no executive head of their various denominations. It remains to be seen whether the imperial recognition of Dr. Timothy Richards will secure the desired results. In May, 1901, Dr. Richards was requested by the governors of the provinces to give them his assistance in the settlement of matters both missionary and commercial. He spent a month at Peking, having been called there by the plenipotentiaries to assist them. Afterward the Tai Yuen Fu, Martyr Memorial University, was for the first ten years put in care of Dr. Richards. On July 4th, 1902, there was issued an imperial edict declaring Dr. Richards to be a man of high attainments, possessed of a right public spirit and worthy of all admiration, and commanding the "Ministry of Foreign Affairs, who have drawn up a scheme for the furtherance of harmonious relations between Christians and the populace generally, to consult with Dr. Richards on the matter, in the sincere hope that with his valuable assistance the objects in view may be attained, and the masses may be able to live at peace with their neighbors, the Christians."

DR. TIMOTHY RICHARDS,  
Who may establish religious peace  
in China.

THE PRESENT dean among the editors of denominational weeklies in this country is Rev. Dr. James M. Buckley, of the *New York Christian Advocate*. The *Advocate* is one of the official organs of the Methodist Episcopal Church in this country, the editors of which are elected by the conferences of that denomination. Dr. Buckley was chosen as editor-in-chief of the *New York Advocate* in 1880, and has been retained in that position ever since, and doubtless will continue to hold the place as long as he lives. Dr. Buckley is a man of impressive and vigorous personality, and besides being a first-class editor is regarded as one of the finest parliamentarians and readiest debaters on the public platform. There is a strong element of pugnacity in his composition, and few there are who dare to cross swords with him in public debate, where his remarkable memory and power of repartee make him a formidable antagonist. He is a conspicuous figure at any conference he may attend, and may usually be depended on to enliven the proceedings.

THE AMERICAN people have a special interest in the honor which has recently been conferred upon the

THE DUKE OF MARLBOROUGH,  
Who has been made a Knight  
of the Garter.

Duke of Marlborough, since this scion of the English nobility, some six and a half years ago, took to himself a wife in the person of Miss Consuelo Vanderbilt, a member of the well-known New York family. The honor referred to was that of an appointment to the knighthood of the Order of the Garter. As the duke comes of a family famous in the military annals of England this distinction is by no means the first of its kind to be conferred on a member of his house. The first to get this most coveted honor in the kingdom was the third Duke of Marlborough, a grandson of the hero of Blenheim, who was appointed commander-in-chief of the British forces intended to serve in Germany under Prince Ferdinand of Brunswick. The fourth duke also had the Garter, as did the sixth and seventh. The present duke, it is hardly necessary to add, is the ninth of his race. He was paymaster-general of the forces in South Africa, three years ago. Like the Duke of Norfolk, he deemed it incumbent on him to go to "the front," and was a staff captain in the Imperial Yeomanry in 1900, when he had the distinction of being mentioned in the dispatches.

THE LONDON *Spectator* thinks that Captain Freeman, who took the British steamship *Roddam* out of the harbor of St. Pierre at the time of the eruption of Mont Pelée deserves something more than "a service of plate" from the English Board of Trade. It refers to the captain as "the undecorated hero," and speaks of his service at the time of the catastrophe as "a deed which, in coolness and undaunted courage, is absolutely unparalleled in the history of a nation of brave men."

# "Frontier Day"—Wyoming's Notable Celebration

THE FAR-FAMED "Magic City of the Plains," Cheyenne, the capital of Wyoming, is situated on a broad plain, with Crow Creek, a small stream, winding around two sides of the town, the land rising slightly to the westward. In its short existence, Cheyenne has had its vicissitudes. In the old frontier days it was accounted a very fast town, bearing the fearful appellation of "Hell on Wheels." It was not until November 14th, 1867, that a passenger train reached Cheyenne. When it became known that Cheyenne was to be the winter terminus of the Union Pacific there was a grand rush of all types of Western life to this city. Habitations sprang up like mushrooms. Town lots were sold at fabulous prices. Gambling flourished and depredations on life and property were so frequent that vigilance committees were organized and lynch law was fully established. Within one year after their organization, the "Vigilantes" had hung and shot twelve desperadoes and sent five to the penitentiary. The town grew up like magic. Over the quiet hills and plains came a change. Where once no sound was heard save the halloo of the herdsman; clatter of hoofs and horses, and jingle of spur bells, there came the crunching roar of dynamite tearing rocks asunder, grinding and rattling of wheels, the shouting of mule drivers and freighters, with sounds of saw and axe and hammer—the pioneers of the mighty wheels of commerce of "The Overland Route."

It was fitting, then, that Cheyenne should have been selected as the most suitable place in which to depict the stirring scenes of border life and reenact on its very plains the thrilling and blood-curdling adventures of the hardy pioneers of thirty years ago. In 1897 it was suggested by Colonel Slack, of Cheyenne, and F. W. Angier, of Denver, that Cheyenne ought to reproduce the life and amusements of the early frontier days, when the country was full of Indians and buffaloes and other wild animals—those early days of the Western country, when settlers were in peril by day and night from Indians and from outlaws, often more terrible than the savages. The first celebration of frontier life at Cheyenne was given on September 23d, 1897, and it proved to be so successful and fascinating that the popular demand has caused an annual celebration ever since.

No trouble or expense was spared to make 1902's celebration a success. Days and weeks were spent in searching the country for the riders and horses, none but the best standing any chance of selection. No less than 500 cowboys, all gayly attired in their fantastic equipment, and riding steeds requiring the most skillful horsemanship; cowgirls, as much at home on horseback as on foot; Indians, proud and hideous in their war paint, ready for their Indian dances, races, games and pipe smoking; military bands, and drum corps; preachers, busy marrying couples who came to take part in the celebration; fakirs, masquerade balls, and open-air night attractions, formed a kaleidoscopic picture of fun and frolic on the plains.

As early as twelve o'clock not less than 25,000 people had assembled to witness the reproduction of old frontier life, with its captivating excitement, its dashing cowboys and red-skinned savages. At no other exhibition in the world can be found such marvelous horsemanship as is exhibited in "Frontier Days" at Cheyenne. Some of the events were as follows: A frontier Derby race, free for all, three-quarters of a mile; cow pony race, for Rocky Mountain horses, half mile; Indian pony race, half mile, catch-weights, for Indians only; wild horse race, half mile, horses furnished by the committee, riders drawing for horses, no hobbling of stirrups, each rider having one assistant on foot; ladies' cow pony race, half mile, catch-weights; Indian war dance; Indian squaw race, half mile, Indian women only; bucking and pitching contest; race for champion cowgirl rider of the world; championship roping contest; drill by Thirtieth Battery, United States Field Artillery; stage coach held up by road agents. The races followed one another with great rapidity, the names of the winners being heralded to the four corners of the enclosure by a huge megaphone.

The wild-horse race proved to be one of the most interesting and exciting events of all. Imagine a dozen wild horses bolting through the open gates of the pen and making frantic attempts to escape the ropes of the dare-devil men endeavoring to saddle and hobble them and then ride the "outlaws" round the half-mile track. In this exhibition one of the horses got away after being roped and a wild chase took place before he could be roped again. Before this wild-horse race could begin it was necessary to subdue the untamed broncos. One of the cowboys, swinging a lariat in his hand, darted into the medley of cowboys and wild horses, then came bolting out, whooping and dragging

a panic-stricken cayuse at the end of his rope. This was repeated over and over again until, on the track in front of the grand stand, there stood panting and struggling, about a dozen wild, vicious and defiant steeds, fighting unsuccessfully against their cowboy conquerors. A dozen saddles lay scattered on the ground and their riders stood ready to spring at the horses' heads at the word "go." At a signal the riders started to saddle. The helpers were jerked in all directions. It was an indescribable sight; men dodging wildly back and forth, horses wild with fear or mad with rage, bounding, bucking, rearing and rolling all over the track. Out of the seething caldron of men and beasts a horse was seen emerging, struggling and lunging for liberty, ridden by a slight but wiry youth, Frank Irwin, of Bosler. Following closely came the others, all lunging and pitching in their frantic and unsuccessful efforts to unsaddle their riders. The Bosler lad saddled, mounted and broke his bronco, and rode over the half mile in 1:31 1-5—the quickest time ever made in a wild-horse race.

The cowgirl race, half mile, was won by Mrs. W. H. Irwin, after a fine exhibition of horsemanship; time, 55

saddle worth \$200, donated by the Union Pacific Railway Company.

After war dances, pony races, more bucking broncos, and stage-coach attacks had ended the set events, in marched the Thirtieth Battery of United States Artillery with six guns, and for half an hour entertained the multitude with an exhibition of mimic warfare. At sunset the crowd made for town, with horns blowing, megaphones roaring, every one shouting, singing, and filling the plains or the streets as they headed for home or the Masque Ball. Adopting the sentiments so well expressed by "Polly Pry" of the Denver Post, we may exclaim: "Wonderful West and marvelous Cheyenne! Crouching to-day upon the very borderland of our storied past, the one real link between the then and the now, the solitary place in the whole State where the strenuous life of the hardy pioneer is still in evidence, and where, on a free range, wild horses and wild cattle still roam and the gun still remains the final arbiter in the settlement of active affairs. Astonishing Wyoming! Still holding within her borders all the elements of such a frontier show, making the tented exhibition of 'Buffalo Bill' like a street brawl after a battle!"

A. D.

## Virginia, the Pride of the Nation.

By MINNA IRVING.

Thy troth is plighted to the sea,  
It is a fitting mate for thee.  
A silver girdle round thy waist,  
The broad Potomac's foam is laced,  
Virginia.

Mount Vernon like a pearl is set  
Within thy emerald coronet,  
And English oaks their branches spread  
With native pines above thy head,  
Virginia.

Mother of Presidents art thou,  
The laurel binds thy noble brow.  
By wood and wold thy waving corn  
Uplifts its tassels to the morn,  
Virginia.

Thy hands a wealth of roses wreath,  
Thy acres of tobacco breathe  
Of pipe and book and hearth aglow,  
When windy winter blows the snow,  
Virginia.

Hail! elder sister of the States,  
Hospitable with open gates.  
No stranger yet by night or day  
By thee was ever turned away,  
Virginia.

We drink thy health in all the rills  
That sparkle down thy breezy hills.  
The Union's boast from coast to coast,  
The nation's glory, and our toast,  
Virginia.

## Cowboys Cruelly Kill 600,000 Sheep.

THE STRUGGLE between the cattlemen and the sheepmen for the possession of grazing grounds in Colorado and Wyoming, which has been going on for the past ten years, has lately become more acute than ever. An intermittent war has been waged during the last decade by the two parties, and the sheep herders have had much the worse of it. During the raids made by the cowboys a dozen men have been killed and three times as many wounded; 600,000 sheep, valued at \$2,400,000, have been slaughtered, and thousands of dollars' worth of wagons, buildings, etc., has been destroyed.

Recently one hundred and fifty masked men attacked George Sedgwick's camps in the New Forks country, Wyoming, shot to death a Mexican herder, drove off all the other employees, killed one flock of 2,000 sheep and stampeded 65,000 more into the mountains, where wolves and mountain lions tore them to pieces. The next day John Mercer's flock of 2,000 sheep was killed, and two days later Mrs. Nancy Irving's Angora goat ranch was raided, and 1,200 valuable animals were slain. It is feared that if the general government does not soon interfere the extensive sheep industry in the regions mentioned will be utterly ruined.

The cause of the conflict is the fact that the sheep crop the grass of the ranges closely, trample the soil and kill vegetation, and leave behind an odor which is offensive to cattle. Land once used for sheep grazing is useless for cattle for several years afterward, and even the water in which sheep have been accustomed to drink, unless it be running, is shunned by the cattle. The cattlemen, having been first on the scene, regard the sheep men as trespassers and are trying to run them out. As a matter of fact, the land is public territory, and neither side has leased any grazing privileges upon it.

Some of the raids by the cattlemen have been characterized by wanton and revolting cruelty. Dynamite has been thrown among the sheep flocks, killing the innocent creatures by hundreds. On one occasion 6,000 sheep were driven into a narrow cañon and clubbed to death. Two flocks, one of 4,000 and another of 3,500, were forced over precipices and all perished.

Attempts at retaliation on the part of the sheepherders have not been wanting. Not long ago the town of Battle, Wyo., was attacked by a crowd of Mexicans, because the townspeople had slaughtered 5,000 sheep of which the attacking party had charge. The Mexicans were repulsed, after a lively fight, with the loss of two killed and one wounded. Two of the townspeople were wounded.

# Revelations Regarding Reciprocity

As Blaine, Garfield, and McKinley Understood It

By the Hon. Wharton Barker

BECAUSE THE American people give now so much time to discussion and consideration of plans for extension of foreign commerce I have concluded to make a public statement of what took place at a conference at the White House early in April, 1881, to which I had been called by President Garfield to discuss with him and with the Secretary of State, Mr. Blaine, a plan of action Mr. Garfield and I had

talked over many times, to establish an American commercial union—an American Zollverein. To this plan Mr. Garfield in general committed himself when he and I agreed that he should be urged upon Republicans as presidential candidate for the nomination of 1880. As both President Garfield and Secretary Blaine are dead I must establish my relation to General Garfield and to the question before the conference, to insure for my statement acceptance and full belief. This position I shall now establish by several important quotations:

From a memorial note written at the request of the Council of the Historical Society of Pennsylvania, and read before it at its meeting held September 26th, 1881, by Judge Samuel W. Pennypacker, now Republican candidate for Governor:

"No party convention ever had it in its power to affect more seriously the institutions of the country than that which assembled in Chicago in 1880 to nominate a candidate for the presidency. A few months earlier the selection of ex-President Grant had seemed inevitable. For two years a banker in Philadelphia (Mr. Wharton Barker), with a taste for higher politics, had been urging the nomination of Mr. Garfield in the columns of the *Penn Monthly* and making combinations looking to that result."

From the *Fortnightly Review*, May, 1881, "Commercial Union," by Sir F. Hincks:

"Mr. George Anderson, M. P., stated in an article contributed to the *Contemporary Review* a few months ago, that he had been informed on reliable authority that certain American statesmen of no mean influence were about to move in the matter of Canada, and to make it a prominent feature in the policy of the Garfield administration. Mr. Anderson further stated that he had before him two published letters, written by Mr. Wharton Barker, an eminent banker and politician in Philadelphia, the chief supporter of Mr. Garfield as President, one of which was addressed to Mr. Garfield prior to his election, and the other to the late Senator Brown, of Toronto. The subject of these letters was what has been termed 'Commercial Union' between the United States and Canada."

From a letter of Garfield to Barker under date of Washington, February 3d, 1880: "Yours of the 2d instant has been read with interest. I should be glad to consult you on the question of our trade relations with Canada, and will try and find the necessary leisure whenever you come to the city."

Garfield to Barker:—"MENTON, O., December 20th, 1880.

"Yours of the 15th instant came duly to hand. I have read with interest your memorandum of the commercial relations of Canada and the United States. I see there is some probability of a commission to adjust our differences with England on the fisheries question. If action is taken during the present administration I hope it will not be confined to that single question. There are several other important matters that should be adjusted at the same time. Please keep me advised of any new phase in the Canadian question. Accept my thanks for the information you give me on the other questions."

"FREMONT, 12th April, 1887.

"MR. WHARTON BARKER:

"MY DEAR SIR: Thanks for the Canadian article. Looking forward with confidence to the unification of all English-speaking people on this continent under one government, my opinions on all measures touching Canadian affairs are formed with respect to their bearing on this result. I hope to meet you. With all respect,

"Sincerely, R. B. HAYES."

In April, 1881, came an invitation from President Garfield to discuss with him and Mr. Blaine the plan for an American commercial union I had considered, and talked of so much, for five years. Almost at once upon meeting, the President said to Mr. Blaine, "I want you to give to what Mr. Barker has to say careful attention, and I want you to ponder upon the plans he will present." At the time of this meeting Mr. Blaine had not, I think, given any serious attention to a policy that is now known as "Blaine's Reciprocity Policy," and I am sure he did not then give his approval to it, although he saw that could it be carried out America would be for a long time independent of all European complications. Of course, I cannot give the words used at this conference—I can make only general statements that will give a fair and comprehensible view of what was said.

I began: "When President Grant and Secretary Fish sent to the Senate of the United States the Canadian reciprocity treaty of 1874 my attention was called with great force to the importance of the question of how our foreign commerce should be extended so as to secure

lasting approval of our own people and also of the nations we made compacts with. Satisfied that the proposed treaty was neither sound in general plan nor sound in detail, I took as vigorous steps as I could for its defeat. I realized that those who caused this defeat must propose a line of action that would meet the demands of the situation. After much study of our trade relations with all countries, and after much consideration of the problems I had set myself to solve, I concluded that a commercial union of the nations and dependencies of America under a common tariff, and a proper distribution of the customs receipts among them, was the only way to insure permanent peace and lasting prosperity on the American continent. From that day I opposed all treaties of reciprocity and urged establishment of reciprocal relations when it could be had on natural lines and on fair terms. I believe all adjustments can be better made by direct declarations and open offers of an act of Congress than by treaties, the result of negotiations of diplomatists."

I then asked the President and Mr. Blaine to accept as true the declaration that natural and profitable trade was found north and south rather than east and west—between countries of different climate and resources rather than between countries of the same latitude and similar resources. This proposition they did accept because it was self-evident. I then said, "We want no responsibility for any internal questions, social or political, beyond the borders of our own country, for there must be home rule to meet the various phases of life of different peoples."

I informed Mr. Blaine that I had been able to convince President Hayes of the soundness of the American policy I urged, but that I could not get him to take any action other than to send a commission of observation to the nations of South America. This interest of President Hayes is made clear by what General Garfield writes in his letter I quote. It is most interesting to note in the letter of Mr. Hayes of 1887 his live interest in the Canadian-American situation, for it proves his commitment to part of my plans for the general unification of all American nations and American dependencies of European nations.

But let us go back to the conference of 1881. Remember that at that time Mr. Blaine had given only meagre attention and consideration to trade relations with American States. He had given much study to how to hold the American markets for American manufacturers, and he was the leading man of the country in advocacy of protective policy, but he was unwilling to mark a great policy if such course would not receive at once acceptance. While he could not offer any reasonable opposition to my plans, he urged the President to go slow, and said internal questions were of more importance than the great American policy I urged. He admitted that commercial union of all the Americas would make nations of America superior to depressions, civil, military, and commercial, among European nations. He was also willing to admit that such a policy would carry the Monroe doctrine to its logical conclusion. This advice and position of Mr. Blaine prevented the sending out by President Garfield of invitations to American States to meet in conference at a special congress at Washington to discuss this plan of American commercial union. This was, of course, a great disappointment to me. The political struggle between the forces led by President Garfield and Senator Conkling put an end to further discussion of the question with the President, and his death sent the question to the rear for a time.

When reciprocity treaties and reciprocal trade are under discussion it is proper for me to go beyond the "Garfield-Blaine-Barker Conference" and say something of my part in later negotiations and discussions, because that part has been one of influence. In 1883, when the Mexican reciprocity treaty, largely the work of General Grant, was before the Senate, in a long open letter addressed to Senator Mitchell, I said among other things: "All treaties are objectionable which may serve as hindrances to the execution of whatever fiscal policy the country hereafter may see fit to adopt. Commercial treaties of this kind are mortgages on the future and inconsistencies in the present. It is impossible to reconcile them with any principle of national policy. Consistent free traders repudiate them, equally with consistent protectionists"—and then, "I need not remind you that commercial treaties are especially objectionable as requiring the assent of but one branch of Congress to their validity." The same forces defeated this Mexican treaty of 1883 and the Canadian treaty of 1874.

After the death of General Garfield, Mr. Blaine and I became intimate, and while I did not think his nomination for President in 1884 was wise I concluded to give him earnest and aggressive support. I did so because he had become the advocate of an American policy so dear to me. I knew he would not go to the length I urged, but I believed he would take steps at once upon becoming President that would lead soon to the adoption of commercial union urged by me at the White House conferences of 1881. That my relations with Mr. Blaine were cordial in 1884 no one will doubt who reads the letter from him I now print for the first time—I have many letters from him of like intimacy.

"AUGUSTA, Me., June 14th, 1884.

"MY DEAR MR. BARKER: I wish you would pack your

grip sack and run down here for a day or two—coming directly to my house. I have so many things to say to you that it is discouraging to begin on paper. If you gain no other pleasure from the trip, I promise you a sight of the beautiful island where your eminent grandfather was born in 1778 (I think) in the midst of the great struggle. It is not fifteen miles from my door. Come as early next week as your convenience will allow. The committee to advise me of my nomination will be here on the 20th—a good time for you to come. I refrain from giving thanks—or suggesting plans. Hope to cover all points in our conference. Pray keep this note private.

"Sincerely, JAMES G. BLAINE.

"Wharton Barker, Esq."

From 1874 I have urged the broad and comprehensive policy of commercial union of all American nations and dependencies, and I have opposed all such operations as those the Spanish war forced upon us in the far East. I believe in trade and not territorial expansion. I believe in American trade—free trade in America with common tariff, and not in Asiatic and European trade brought through reciprocities. Of course we must trade in a large way with all nations, but let us have trade in North America and South America as free as between New York and Ohio—and we shall have a period of real prosperity such as heretofore unknown.

For more than twenty-five years I was intimate with Mr. McKinley and I talked with him many times on the question of trade relations with foreign nations. He was slow to move to new and untried positions, but when he did move his statement was direct and positive. In June, 1901, I sent him copy of a letter that I believe was an exhaustive statement of the subject of trade versus territorial expansion, addressed by me on May 27th, 1901, to the late Hon. Frederick Fraley, president of the National Board of Trade. This letter received from President McKinley prompt attention. When he made his Buffalo address I hoped, almost believed, he was about to ask Congress to consider the great policy and to urge the acceptance of it.

My last public utterance on this question was in my open letter to the Ways and Means Committee of the House of Representatives. I inclose copy—which was written to aid those who oppose the narrow policy President Roosevelt urges for the solution of the Cuban situation. The rejection by Congress of the President's proposal opens the way for the establishment of a policy that will fix the relations of the United States to Cuba and to all American nations—an American policy that would continue for all time the independence of American nations and prevent the interference of European nations in American affairs; a policy, I repeat, that would carry the Monroe doctrine to its proper and logical conclusion.

## Is \$1,000 a Year Enough?

IT HAS remained for a Chicago bank, according to newspaper reports, to fix not an age limit but an income limit for young men contemplating matrimony. It has set the mark for its own clerks at least at \$1,000, and the young men have protested and threatened to strike. They think it unjust and cruel that an employé should jeopardize his position if he ventures to take himself a wife before he has been "raised" to \$1,000, especially when the "raises" are slow and long coming. We are inclined to the side of the strikers in this case. The bank would be more sagacious if it encouraged its young men to marry, for the household economies they would have to practice on a thousand a year or less would sharpen their wits and make them all the more faithful and efficient in service. A good wife and a thousand a year ought to make any young man happy and contented.

## Sour Bread.

ANNOYED THE DOCTOR.

If you get right down to the bottom of your stomach trouble it is wrong food, and the way to correct it is not by drugs but by using the right food.

A physician in Barron, Wis., writes an instructive letter on this point. He says, "I am a practicing physician, 45 years old, and about 6 feet in height. When I began using Grape-Nuts last spring I weighed 140 pounds, was thin and poor, had a coating on my tongue, and frequently belched wind or gas and small pieces of undigested bread or potatoes which were very sour, in short I had acid dyspepsia.

"I consulted a brother physician, who advised me to eat about four teaspoonfuls of Grape-Nuts at the commencement of each meal and drink Postum Cereal Coffee. I had been in the habit of drinking coffee for breakfast and tea for dinner and supper. I followed the advice of my brother physician as to diet, and experienced relief at once.

"Ever since that time I have eaten Grape-Nuts with sweet milk or cream each morning for breakfast, and now I weigh 155 pounds, and am no more troubled with sour stomach. I am very fond of Postum Food Coffee, and attribute my relief as much to that as I do to Grape-Nuts.

"Often when I am called out in the night to see a patient and on my return home feel tired and hungry. I eat the usual quantity of Grape-Nuts before going to bed and then sleep soundly all night." Name given by Postum Co., Battle Creek, Mich.

## A Remarkable American Romance

THE VAST possibilities of the individual in the United States make it a land peculiarly favorable to the development of romantic careers. Under institutions that foster freest endeavor and that permit the humblest to rise to the highest places, there are naturally many lives which are full of notable experiences and remarkable contrasts. A glamour lies on the pathways trod by many of our successful men and women. The annals, public and private, of various of our prominent families read like creations of fancy, and shame the most striking efforts of fiction. In scarcely any other country is there to be noted that whirl of change which lends to American biography its interest.

The recent tragical death in France of Mr. and Mrs. Charles L. Fair was only a gloomy chapter in a genuine and variegated American romance. It is a story whose main features deal with the humble birth of the founder of a great fortune, his long years of toil with moderate prosperity, his quick leap to amazing wealth, the power of riches to secure political elevation and social advancement, domestic scandal, the passing away of the head of the house followed by sensational litigation over his property, the dissipation, the opposed marriage and the reform of a son, the untimely fate of the latter and his wife in the flush of youth, and with evidences also of the better side of human nature. It contains all the elements that in the hands of a Balzac might have been wrought into an imperishable tale.

When James Graham Fair, born near Belfast, Ireland, in 1831, arrived in the United States at the age of eleven he had unknowingly taken the first step that led to an opulence and prominence that doubtless surpassed the wildest dreams of his later youth. The Fair immigrants settled in Illinois, and the boy, after attending the public schools, received a business education in Chicago. The lure of gold drew him to California in 1849 and he remained in that State, engaged in mining with but meagre results, until 1860, when he moved to Nevada, where he became known as a successful constructor of quartz mills, water-works, and chlorinizing furnaces. Later he superintended successively the Ophir and the

Hale and Norcross mine. It was not until 1867, however, that the decisive turn in his roadway to success took place. In that year Mr. Fair formed a partnership with three other men whose careers, like his own, were destined to be unusual. James G. Fair, John W. Mackay, James C. Flood, and William S. O'Brien made a magical combination, and every member of the quartette became a multi-millionaire. The partners secured mines that became famous for their yields, and Mr. Fair himself eventually amassed an estate valued at \$50,000,000. He interested himself largely in railroads and manufactories on the Pacific coast, and at length was elected to the United States Senate by the Legislature of Nevada, holding his office from 1881 to 1887. His rise in the world eventually served to lift his two beautiful and estimable daughters to a high social plane and desirable alliances, one of them marrying Mr. Herman Oelrichs, and the other Mr. William K. Vanderbilt, Jr., both being now in the full swim of fashionable society.

In his later years the Senator pursued an erratic course which brought about scandal and a divorce. His two sons imitated their father's wildness, and the elder of them, James, died a drunkard ten years ago. The Senator's death in 1894 was followed by prolonged litigation over his estate. A variety of wills was produced, and numerous women claimed to be his widows. Ultimately one will was decided to be the legal one, but it was contested and broken by his second son, Charles L. Fair. The latter had wasted his years in fast living. This had turned his father against him, and the paternal ire was further fanned by the son's determination to wed Miss Caroline Smith, of Plainfield, N. J., an actress known on the stage as Lillian Nelson. She was of lowly origin and it was on her account that the Senator discriminated against Charles in the will which was set aside. Young Fair, despite his sire's displeasure, carried out his resolve and made the actress his wife. For him she appears to have been a most suitable mate, although his relatives and society refused to recognize her. Her influence on her husband was beneficial. She persuaded him to give up his habit of excessive drinking and otherwise to re-

form his ways. The young couple in time went to Europe, where they occupied themselves after the usual manner of people of wealth and fashion.

Mr. Fair took a great fancy to automobiling and bought a number of powerful and rapid machines. His latest purchase was a forty-five horse-power vehicle which had a going capacity of seventy-four miles an hour. It was while hurrying in this machine from Trouville to Paris that death overtook him and his spouse. Mr. Fair, who seems to have been afflicted with the "speed madness," lost control of the automobile, which ran from the roadway, dashed up an embankment, and crashed into a tree. Mr. and Mrs. Fair were almost instantly killed and the chauffeur was severely hurt. The bodies of the dead were shipped to San Francisco, where they were interred in a leading cemetery.

Thus for these two ended life's romance, but each had left an estate and each had made a will bequeathing to the other the major part of it. A nice legal question arose as to which one had died first, as the heirs of the one who survived the other by even a breath would be entitled to the property of both. Mrs. Fair, who had in life liberally aided her mother, sisters, and brothers, also remembered them in her will, but there was a hint that they might begin proceedings to secure all that she had been possessed of. Of this, however, there proved to be no need. Mrs. Oelrichs and Mrs. Vanderbilt, who were their dead brother's natural heirs, went to the limit of generosity and awarded a round million to Mrs. Fair's relatives. The latter were thus thoroughly contented and no sordid wrangle arose on the heels of the tragedy. The only angry note heard was that of one of the Senator's alleged widows. She declared that the Senator had expected Charles L. to provide properly for her and had invoked the vengeance of heaven on him in case he failed so to do. The so-called widow asserted that Charles L. had broken his promises to her, and she professed to see in the sad occurrence near Trouville a merited retribution. This view of it lends additional spice and interest to one of the most varied and picturesque of American romances.

## The Nation's Great Army Manœuvres

By C. M. Harger

THE ARENA of action in the nation's list of army posts is Fort Riley. Nearly \$1,000,000 will be spent there during the coming year, adding to its already extensive buildings and making the famous prairie post to the army of the United States what Potsdam is to Germany and Aldershot to England, with the difference that it will contain what neither of those places does—the school and field of operations.

Situated in the exact centre of the nation, with 19,000 acres of rolling Kansas prairie for its site, the Kaw River flowing through its boundaries, and with all the advantages of perfect drainage and a delightful landscape, the fort is remarkably attractive to the soldier. Its buildings are of stone, beautiful, costly, modern and numerous. It possesses what no other post on earth does—a riding hall, 300 by 100 feet, with massive stone walls and no pillar to break its immense area. A whole troop of cavalry can drill at once within the ample walls, and drilling goes on from morning till night, day after day. The fort is designed for cavalry and light artillery, and here are brought the troops that have need of drill or are weary with routine work at some remote point on the plains. But it is more than that. The War Department has by several inspections become convinced that this should be the great mobilizing point for the militia and regular troops of the nation. The great open plain at hand and the accessibility of the post from every part of the nation, make it particularly fit for the object in view. The other forts of the old frontier, except Fort Leavenworth, have passed away or have deteriorated. These two remain and will be the centre of the army's activities in the West.

Four great camps for the mobilization of the army have

been planned for by the army board and the Secretary of War: At Chickamauga, for the Eastern and Southeastern troops; at some point in Dakota for the Northern posts; in California for those on the coast; at Fort Riley for the troops between the two great ranges of mountains and including the entire Mississippi valley.

The first mobilization of troops began last week, and 15,000 regulars are now in camp on the Pawnee flats that lie just east of the post buildings. They came from a dozen States, and will pass their period of drill in executing manœuvres, sham battles, marches over the plains to surrounding points, and other parts of the army manipulation. Army officers look upon this as a great opportunity, as they have a chance to handle large bodies of practically untried men and conduct operations of war upon a scale that has never been known in time of peace in this country.

Theoretical instruction does not complete a soldier's experience. The practical arena of active work in the field is needed. The troops that come to Riley for these gatherings make practice marches from the forts of the middle West. They go with all their accoutrements, and when the commands gather in camp at Fort Riley they are equipped as they would be for a sojourn in the enemy's country. The elements of camp life and the soldier's proper care for himself and his belongings are taught; and it is believed by army men that with the drill that will come out of these mobilizations, many of the evils that have afflicted the soldiers in the Philippines will be eradicated. In coming years more troops will be brought here, as the facilities are increased for better caring for them. Next autumn fully 30,000 men will be accommodated, and the year after 50,000.

Perhaps of more vital interest to the citizen is the concentration of State troops that is also contemplated for this central post. With the exception of a few of the larger States, like New York, Massachusetts, Ohio, and Pennsylvania, none of the States has a thoroughly equipped national guard, let alone a well-trained one. The States named, with some others, have summer camps that are of value, as was manifest in the Spanish-American war. But of necessity the instruction does not go beyond the regimental school; there can be no massing of armies, with the accompanying problems of food supply, equipment, sanitary precautions and similar matters to be solved. It is proposed to bring to Fort Riley a large number of the State regiments at the same time as the concentration of regulars, and familiarize them with actual army life on a large scale. Just how extensive this concentration of troops will be cannot be told; it will depend to some extent on the appropriations made by Congress and by the various States. However, it is probable that 25,000 men of the national guard will next year make this a rallying place. A few States sent small bodies of militia to the camp this year, and others a few officers.

Colonel Carr is now post commander at Riley. Before him were General Forsythe and other famous fighters of redskins. On the reservation is a handsome monument to the soldiers who fell at Wounded Knee and one to Major Ogden, a brave soldier, who sacrificed his life nursing his men in the cholera epidemic at the fort in 1855. There are few more beautiful views on the plains than from the hills of Fort Riley. When the prairies below are covered with the tents of an army of 50,000 thousand soldiers it will be a marvelous picture.

# Have We Counted the Cost of the Panama Canal?

By Peter Mac Queen

PANAMA-COLON, August 21st, 1902.

IT IS an old saying that fools rush in where angels fear to tread. Whenever any great project, glazed over with glittering words, comes before the nation, the thoughtless millions clap their hands and cry, "Great is Diana of the Ephesians!" Of all the myriads in the United States who want a canal dug somewhere through the isthmus which connects North America and South America, how many really understand just what is going to be the cost, and what the return for this gigantic labor?

To begin with, let us consider the Frenchmen who have left, scattered across this place from Panama to Colon, forty-seven miles of eloquent testimony to fruitless folly. It is estimated that over two hundred and fifty million dollars in good French gold lies rotting in the swamps of Panama, or has been wasted in the most fantastic tragedy of the nineteenth century. I remember being in Paris years ago, and noting the strained, wild looks on the faces of the French middle class who had come from the Loire and the farms of Brittany to give in their last franc to the construction of a soap-bubble. How many died of poverty and a broken heart in France will never be known; but certainly there were enough to count a dead man or woman for every tie on the Panama Railroad.

Since coming here I have been given splendid, courteous opportunity to see the line of the proposed canal. Colonel Shaler and the officials of the railroad have been more than kind in the matter. We crossed the isthmus on the colonel's special car, and marked the various deviations of the canal and the houses and hospitals built by the French companies at the several points. The work of the old French de Lesseps company had excellencies of its own. But the recklessness and extravagance of the scheme are scarcely believable. Two hundred splendid Belgian engines are lying idle in the sheds, thousands of tons of elegant machinery are rusting out in the torrid swamps; there have been waterworks built that would be luxurious in Paris, and some of the hospitals cost a million dollars and were as royally equipped as those near the Champs Elysées. What man has done man may do again. We must not rush into this great scheme without deep, careful thought. At the lowest estimate to finish the canal even now will cost more than the Spanish-American War.

It is true the French companies have left nearly twenty miles of the forty-seven practically cut. But the Americans will have to widen, deepen and improve all this work. The Chagres River, at places a great help by furnishing water, will at other points be a menace which will tax the utmost skill of the best engineers of the century. A vast excavation through the mountains near Panama known as the Culebra cut has been dug to a great depth with exceeding skill. But colossal work is

still required. If laborers work for the government they will blunder and idle away much time and money before the ditch goes through. The question of whether the work shall be done by contractors or directly by the government means millions.

One important element to consider is the health question. No part of Central America is a sanitarium. Nevertheless, I will say that Colon, though excelling all other places I have seen for dirt, is yet not so pestilential as I expected to find it. Words and photographs would not describe the superlative nature of Colon's filth. Of course I am here at the height of the rainy and unhealthy season. There is no attempt at drainage. Refuse is flung out of the windows into the streets. On a morning walk you must look out that you do not get the contents of a wash-basin on your new duck suit. Colon has a population of 3,000, variegated beyond the usual—Jamaica negroes left over from the old de Lesseps days; Indians mixed with Spaniards, creoles, English, Scotch, Danish West Indian colonists—a vast mosaic of all the clans, and problems that have come down to us from the days of the pirates of the Spanish Main. In the face of appalling filth and uncleanness there has not been a case of yellow fever or contagious disease of any kind treated at the Colon hospital thus far during 1902.

The American colony, numbering about 150 souls, lives along the sea-front at Colon. Their homes are very attractive, and, sanitary conditions being well attended to, they have delightful and healthful places of abode. But unless the American government gets full jurisdiction of Colon before the canal is begun, the influx of people to this Atlantic terminus of the canal would be a dangerous menace to the whole isthmus. Just now the cases of invalidism here are largely due to malaria or accident. I was allowed by Dr. Randall, physician of the Panama Railroad, to examine the hospital records for eight years; and I was much surprised to find that yellow jack is not nearly so prevalent as is generally supposed in the United States.

The health of Colon, however, will be in a very different way when 25,000 or 50,000 workmen assemble here from all the world. The sanitary expense of the canal project, then, is one we must not ignore. The whole town of Colon will have to be lighted, filled in, and drained. When the soil is turned up pestilential vapors will be loosed; and though I do not agree with Senator Morgan that the health of people on ships passing through the canal will be endangered, yet we must count on losing more lives on the isthmus during the digging of the waterway than we lost in both the Cuban and Philippine wars.

The annual rainfall for the year at Suez is two inches; at Colon it is 100 inches; at Nicaragua the rainfall is 300 inches per year. When it poured in torrents the other day the people told me that this was not a storm—only

a shower. This rain of eight months every year presents tremendous engineering difficulties, never before encountered in the history of the world. No doubt the original estimate of the cost of constructing the canal will be increased by at least one-third.

At present the idea is to build a canal with locks, but I have no idea that this will ever be done. A sea-level canal is the only one that will finally be feasible. The tide at Panama is eighteen feet; the tide at Colon is eighteen inches. When our engineers get down into the Culebra cut they will doubtless, very reasonably, report that the locks and gates are great impedimenta. People here look upon a sea-level canal as a foregone conclusion. By sinking the Culebra cut eighteen feet more than the present surveys call for, this result can be obtained. That means fifty million dollars at one clip. Before we have mastered the problems of health, rain, wind and tide, mountain cutting and level dredging, this isthmian ditch will probably cost half a billion dollars.

The Colombian government is another question. I had several long conversations with Dr. Mutis-Durrand, the finest product of Colombian civilization, an able jurist and formerly Governor of the province of Panama. He opines that all parties in Colombia favor the canal, and favor giving America all reasonable concessions. But even this splendid, broad-gauge Colombian statesman hesitates about passing over to us the jurisdiction of Panama and Colon. Panama city is a Spanish community of 25,000 inhabitants—very charming in situation and romantic in history; but just as unsanitary as can be. As my genial friend, Captain Beers, of the Panama Railroad expressed it: "Between the heavy rains and the buzzards, the streets of Panama are as clean as a whistle."

These, then, are approximately some of the difficulties involved in the constructing of the canal: 1. Immense problems in sanitation. 2. Great difficulties of climate to be overcome. 3. Critical diplomatic relations with the Colombian government, which can only be overcome with great patience and toleration. 4. The inevitable increase of expense above the original estimates of cost. The most careful financial observers assure me that the cost of this undertaking with the expenses attached to its operation will be to our government about \$12,000,000 a year, while the tariffs resulting from the world's trade will, on the same estimate, give us only \$7,000,000; thus leaving a deficit of \$5,000,000 a year.

On the other hand, if this water-way is put through successfully, it will make the United States the arbiter of the commercial destiny of North and South America. I have no thought that the American people will fail in any great project to which they put their hands—but I sincerely ask, are we ready to undertake this colossal task, and will it pay us in the end?

THE CHIEF BUSINESS STREET OF A TOWN FOUNDED BUT LITTLE OVER A YEAR AGO.

NOW THE LEADING THOROUGHFARE LOOKED ON AUGUST 9TH, 1901—A LANE THROUGH THE CORN.

## WONDERFUL PROGRESS OF ANADARKO, OKLAHOMA, SCARCELY MORE THAN A YEAR OLD.

Photographs by Mrs. C. R. Howe, Anadarko.

### A Young City's Marvelous Growth.

THE RAPIDITY with which things are done in the bustling West is strikingly shown in the case of Anadarko, Oklahoma, a little city which has just celebrated the first anniversary of its founding. Marvelous has been its history, from the sale of the first lot in a corn-field, August 6th, 1901, to its present metropolitan appearance. Large brick blocks have taken the place of the tents and shanties in use then. Graded streets and broad sidewalks displaced the corn-rows long ago, telephone lines form a network at some of the busy corners, and everywhere may be seen improvements not found often in cities of ten times its age. A mammoth ice plant, with a capacity of seventy-five tons daily, not only supplies the city but adjacent cities also.

Contracts are now being let for a \$30,000 court-house, \$5,000 jail, \$20,000 school-buildings, \$40,000 waterworks, etc. Electric light companies are making propositions, so that soon the city will be thoroughly lighted, watered, and equipped in all particulars. The population now is about 3,500, and is growing substantially all the time. Good homes are springing up throughout the city. Indians recently received a large payment due them on

the sale of their reservation, and spent it mostly at Anadarko's numerous stores.

From September 15th to 19th the reunion of the Grand Army of the Republic of Oklahoma took place at Anadarko. Thousands were present from all parts of the Territory.

### A Peculiar Adirondack Crop.

THE PICKING of berries offers, in many sections of the country during the summer months, profitable employment to large numbers of people. At West Chazy, Clinton County, N. Y., this sort of industry has features of more than passing interest. In that town Mr. Albert E. Wood owns a blueberry "patch" comprising one thousand acres. This tract is an old lake-bed, shells being found imbedded in the rock and the loose stones plainly showing the wear of water. The property and business of blueberrying have been in the Wood family for at least forty years. The blueberry season at West Chazy opens on July 1st, and lasts until August 20th or September 1st. Nearly three hundred pickers, many coming from the neighboring towns, but the majority from Canada, establish themselves for the short season

in little shanties at some fifty "camps" on the Wood tract, and whole families engage in the work of picking. In the centre of the tract there is a store where the berries are measured and bought, and where groceries are sold to the pickers. Mr. Wood pays the pickers from five to seven cents per quart, and sells the fruit mainly in Troy and Schenectady for from nine to fifteen cents per quart. This year he shipped more than 50,000 quarts to the cities named. Some of the pickers can earn \$3 or \$4 per day, and not a few families make enough thus to keep them through the winter. The tract is, of course, deserted at the close of the season.

The pickers' preparations for dinner afford an interesting sight. Few of them are supplied with stoves and the greater part of them do their cooking over open fires built in front of their one-story huts. The campers are an industrious and busy lot, and no day sees them idle unless it rains and makes the berries wet and unsalable. Among their simple diversions in camp are included the visits of pack-peddlers, and fortune-telling by palmists or other seers.

# Pets of Popular Players and Stories About Them

By Eleanor Franklin

"FAUVETTE," MISS ELSE DE WOLFE'S VALUABLE TOY FRENCH BULLDOG.—Marceau.

READING RECENTLY about Miss Blanche Bates's encounter with horse thieves at her summer place up at Mamaroneck, I was reminded of an evening last season when I had the pleasure of meeting her interesting horse "Cochesse"—known to his intimates as "Baby"—in Miss Bates's dressing-room at the Academy of Music during her run there in "Under Two Flags." This sounds a bit unusual, but it is true nevertheless. "Baby" is a remarkable horse and good to furnish enough press-agent stories to pay for himself. He does something exciting every once in a while, just as if he appreciated the necessity of an actor's keeping always in the public eye, so I was not surprised to hear that a band of bold robbers had tried to steal him from Miss Bates's stables in the middle of the night.

Miss Bates is very devoted to "Cochesse" and his running mate, "Molasses," and, I doubt not, would have been inconsolable should she have lost either. "Cochesse" is the

pretty little bay that carried Miss Bates up the dangerous "run" in the gorge scene of "Under Two Flags," so many hundred times during the two seasons she appeared in that melodrama. She taught him to take curtain calls with her and to bow to the audience, and as a reward she would allow him to come into her dressing-room to get a drink and eat some pieces of carrot which she always had prepared for him, and it was thus I enjoyed the privilege of meeting him.

While Miss Bates is very fond of her horses, they are not foremost in her affections by any means. She is a cat-lover of the most pronounced order, and that is about as nice a thing as one can say about anybody. She has one magnificent Persian with princely blood in his veins, which answers to the upper-crusty name of "Reginald Vere de Vere," but Reggie dear is forced to hobnob with "Happy Hooligan," a back-fence specimen of an exaggerated type, "Weary Willie" with only half a tail, "Meandering Mike," who walks on three legs, and a good many other felines of low degree, because Miss Bates's arms are always open to any homeless, yowling kitty that happens along. Isn't that nice? Nor does she desert them when she starts her season on the road. If she cannot find good homes for them she boards them in a cattery. "Reginald Vere de Vere" usually goes with the company, and can be found almost any night cuddled up in a tray of one of Miss Bates's trunks in her dressing-room.

It is probably the fascinating unreality of the thing that causes ordinary, average humanity to curl itself up into an impertinent interrogation mark in its attitude toward anything that concerns that always-better-than-this-world beyond the row of footlights. I was talking shop with "Merrily yours," Marshall P. Wilder, not long ago, and in the course of our

conversation I happened to glance out of a window and saw Mr. Lloyd Bingham walking up Broadway followed by a monarch-of-all-I-survey English bulldog.

"There goes Lloyd Bingham with 'Boxer,'" said Mr. Wilder.

We had just been gossiping about some of Miss Amelia Bingham's pet schemes and pet aversions, which are so generously discussed by the daily press, and the sudden appearance of Mr. Bingham with his pet bulldog was a bit of a coincidence.

"Boxer" is a magnificent fellow. "The most hideously handsome bulldog you ever met," says Miss Bingham, and so he is. He won a first prize at Islington a couple of years ago. Miss Bingham was at the show watching the awards at the time, and she bought him in the ring and brought him over here. She has never shown him in this country, so that ended his bench record. The chief business of Boxer's life now is keeping "Climber," Miss Bingham's French poodle, scared out of his seven senses. They have a big five-story house in Thirty-fourth Street to live in, but it is seldom you can find the two of them on the same floor, which fact is due to "Boxer's" superior knowledge of scrapology.

The love of animals must go with the "artistic temperament," because most actors are devoted to some sort of pet, and in a great many instances to a collection of pets. I don't mean to imply that "artistic temperament" is an affliction peculiar to the dramatic profession. Oh, dear, no! Quite the contrary. But there is a combination of eroticism, inebriety, and general shiftlessness, that in the minds of some people passes for the real thing in temperament, just as drinking stale beer out of tooth mugs in a so-called "den" bestrewn with sketches and scribbings, pipe racks, and actresses' photographs, satis-

MISS GRETCHEN LYONS AND HER BRIGHT LITTLE FOX-TERRIER. Wisdeatt.

fies some heart yearnings for bohemianism. Anyway, a great many actors are animal-lovers and there are few dramatic companies on the road that have not a mascot of some sort.

At last season's bench show at Madison Square Garden Mr. Kyrle Bellew became the owner of "Messenger

Girl," by "Pressmore Dandy—Regent St. Meg," one of the best English bulldogs ever shown in this country. She is only a puppy yet, but she won a first at Islington and got two ribbons to her credit on this side before Mr. Bellew bought her.

Mrs. Fiske rejoices in the ownership of a beautiful Russian poodle called "Fifi." "Fifi" is really a better traveler than her famous mistress, and she enjoys it too. She will sit for hours and gaze out of the car-window at the flying scenery, and seems always to regret the termination of a journey. Perhaps this is because she dreads the invariably disagreeable interview with the hotel clerk, which sometimes results in her dismissal to the baggage-room.

MISS FISKE'S INTELLIGENT FRENCH POODLE, "FIFI." Sarony.

If "laughter is God's greatest gift to man," then Mr. Chauncey Olcott and his big dog "Prince" are certainly a gifted pair. When they laugh together, if the world doesn't laugh with them "it is not to laugh" and the world is a sorry place. "Prince" and Mr. Olcott are co-stars between whom there is absolutely no professional jealousy. They even "dress together," and that is saying a most marvelous thing. A dressing room may be ever so spacious but it is never quite large enough to hold the dignity of a star, and to crowd that dignity—well, I guess not! But Mr. Olcott and "Prince" are not like that. "Prince" finds the most comfortable place in the room, where he stretches out and licks and prunes himself while Mr. Olcott turns himself into *Garrett O'Magh*, or some other Irish laddie of a century since, singing as he does so, little Irish love tunes *solo voce*, to which "Prince" whines an approving accompaniment. "Prince" has been an actor so long that he "knows the ropes" as well as anybody. He knows what the "half hour" and "fifteen minutes" calls mean, and when "overture" is called he invariably gets up and walks to the dressing-room door, looking back expectantly to see if his master is coming. "All right, old chap. Wait a minute—curtain is not up yet," says Mr. Olcott, and the dog lies down and watches the crack under the door. In some of Mr. Olcott's plays "Prince" has appeared so often that he has come to know his cues and never has to be led on nor called off.

Miss Lulu Glaser also has a beautiful St. Bernard, but he is not an actor. He is a fine big fellow of royal blood and beribboned record, and carries himself at all times with the dignity befitting his rank in the dog world. Miss Glaser tells many interesting anecdotes about "Hector" and his devotion to her. He has constituted himself her special body-guard on duty at all times. "Whither thou goest I will go," says "Hector," and in spite of protestations insists upon accompanying his pretty mistress everywhere.

# Books and Authors

By La Salle A. Maynard

WHILE WE have by no means seen or read all of the coronation poems, we have read a large number as they have appeared in our English exchanges and elsewhere, including the lines of Mr. Kipling, Poet-Laureate Austin, Mr. William Watson, the prize-ode of L. MacLean Watt as it appeared in *The Critic*, and also the productions of our own Bliss Carman, in the *Saturday Evening Post*, and William Winter, in the *Tribune*. As an off-hand judgment of some of these, we would say that Mr. Kipling's was the poorest of all, Mr. Watt's the most elaborate and stately, Mr. Watson's the most serious and philosophic, and Mr. Carman's by far the sweetest and most musical. Our readers may judge of these things somewhat for themselves from the opening stanzas of three of these coronation poems. Here is the specimen from Mr. Watson's:

Sire, we have looked on many and mighty things  
In these eight hundred summers of renown  
Since the Gold Dragon of the Wessex Kings  
On Hastings field went down;  
And slowly in the ambience of this crown  
Have many crowns been gathered, till, to-day,  
How many peoples crown thee, who shall say?  
Time, and the ocean, and some fostering star,  
In high cabal have made us what we are,  
Who stretch one hand to Huron's bearded pines,  
And one on Kashmir's snowy shoulder lay,  
And round the streaming of whose raiment shines  
The iris of the Australasian spray.

Mr. Watt's poem opens as follows:

Here, all alone in the dark,  
While the stars are dying,  
My soul grows still, and I hark  
To the voice of the sea-winds crying  
From far away, where, low on the long-  
ridged sands,  
The tired gray sea beats out his time-old song  
With weary hands.  
And as I listen, up from the ghostly street,  
I hear the throb of a thousand marching  
feet.  
And ever, as they come,  
The faint, dull, guiding pulse of a distant  
drum.

The foregoing, however, does not convey a fair idea of the metrical quality of Mr. Watt's poem, which contains about three hundred lines in a variety of measures. But there is a joyous swing to Mr. Carman's lines, a melodious beat which we do not find in any of the others. They begin in this way:

There are joy-bells over England, there are flags  
on London town;  
There is bunting on the Channel, where the  
fleets go up and down;  
There are bonfires alight  
In the pagant of the night;  
There are bands that blare for splendor, and  
guns that speak for might;  
For another King in England is coming to the  
crown.

And it is not alone in melodic charm that Mr. Carman's poem excels, but also in the finer qualities of appropriateness, of delicacy of sentiment, and range of thought. Among the poems of occasions it surely deserves a high rank, and far more than a passing value.

AMONG THE coronation poets mentioned Mr. Watt has hitherto been practically unknown to American readers, although, as we are informed by *The Critic*, he is the author of several volumes in prose and verse which have met with great favor in England. Mr. Watt, as we learn from the same authority, was born in 1867, and is of Skye origin. He was educated at Edinburgh University, where he obtained Masson's prize in poetry with his "Kit Marlowe," a dramatic monologue by a contemporary player, with a threnody by a contemporary collegian. He carried off prizes for essays and some distinctions in classes, and in 1896 was licensed as a preacher in the Church of Scotland. In 1897 he was elected minister of Turriff, Aberdeenshire, and last year was transferred to Alloa, where he has a congregation of about two thousand communicants. In 1899 he published a book of lectures on the Lord's Prayer, entitled "God's Altar Stairs," which had an excellent sale, and last year his book of poems called "In Love's Garden" was well received. Mr. Watt's coronation ode was one out of one thousand and twenty-three submitted in competition for a prize offered by *Good Words*, an English magazine, the award of excellence being made to Mr. Watt by a joint committee composed of several eminent *littérateurs*. The poem bears the stamp of true genius, and may well give rise to the belief that in Mr. Watt another star has arisen in the firmament of English literature.

AMONG AUTOBIOGRAPHIES of the present that of the late Sir Walter Besant (Dodd, Mead & Co.) easily stands as the first in point both of literary and of human interest. It appears from a prefatory note that the work was written with a view to publication, yet it is not presented in the finished form it would have appeared in had it undergone the minute revision to which all his written matter was subjected. The fact is that death overtook the author before he had prepared it for the press. The design of Sir Walter was to describe a working novelist's career; he expressly states that he is not making confessions, and he refers but seldom to his peaceful and happy domestic life. The first chapters, dealing with his

child-  
hood,  
school-  
days, and  
college

life, are the most complete in the book. In these he tells us how he utilized in his novels the scenes, characters, and incidents which were familiar to him as a boy and as a young man; thus "By Celia's Arbour" is full of descriptions of Portsmouth, where he was born and brought up. The chapter on "L'Île de France," giving an account of his experiences as a professor in the college at Port Louis, is one of the most interesting in the volume, but it is the latter and smaller part of it, treating of his literary life, which will be most eagerly read. One wishes that it had been lengthier and more replete with detail, but still it must be said that the three chapters, "First Steps in Literary Career," "The Start in Fiction," and "Novelist with a Free Hand," give us a tolerably complete picture of "Walter Besant, Man of Letters," as he was wont to describe himself. Not the least interesting passages are those which refer to the collaboration between himself and James Rice—the partnership which produced that perennial joy, "The Golden Butterfly," to say nothing of "The Chaplain of the Fleet," and other very excellent novels. We observe, by the way, that a posthumous novel by Sir Walter is announced for publication

doubted that this institution through its publications, its corps of lecturers, and its naturalist clubs in the public schools and elsewhere, has rendered a large and valuable service in developing an interest in natural science. Among the lecturers in nature study at Cornell is Mary Rogers Miller, whose delightful "Brook Book" (Doubleday, Page & Co.) we have recently had occasion to notice on this page. Mrs. Miller is a native of Dallas County, Iowa, and has been a teacher all her life. She entered Cornell University in 1893, studying the natural sciences and higher mathematics, and was graduated in 1896 with the degree of bachelor of science. In 1897, when the university-extension movement was inaugurated in the Cornell college of agriculture, she was appointed a lecturer on nature study, and has since had charge of that line of work in the teachers' institute of New York State. How keen an observer she is and how wide and varied her range of study and research may be judged somewhat from her "Brook Book," a truly charming work.

"AS DULL as a sermon" has become a proverb, and "Who reads sermons?" is a question supposed to have only the answer "Nobody." Yet somebody must buy sermons, and the presumption is that people do not buy books, as a rule, that they do not intend to read. Sermons must be bought by some one, because so many volumes continue to be published. Every year fresh volumes of sermons are put upon the market, and the cry is "still they come." Very likely many are bought by ministers for mental stimulation, and to be used for illustrations and apt quotations. Others are purchased by the personal friends, parishioners and admirers of the author, and some are used by invalids unable to attend church, and by those who live in places so remote that attendance upon public worship is impossible. Then, the modern sermon, if popular, is not, cannot be dull. The old-fashioned sermon, with its tedious divisions and sub-divisions, would not be tolerated to-day. The present-day preacher who gets a hearing, to say nothing of a reading, must be bright, alert, go straight to the work, and not be too long about it, either.

MANUSCRIPTS WRITTEN by Burns command prices that very few authors of to-day could afford to refuse for the production of original work.

"Scots, wha hae," for instance, sold in May, 1890, for \$350, and three years ago last June his "Commonplace Book" fetched a sum equal to about \$45 a page, or probably over twenty-five cents a word—a rate which most authors would find very acceptable. Those collectors who aspire to possess Scott manuscripts must at the same time be prepared to dip somewhat deeply into their pockets. Certainly \$310 purchased an introductory essay in his own handwriting some little time ago, but 840 square inches of £5 Bank of England note paper, or \$500, was required for a portion only of "Tales of a Grandfather"—a sum which was only \$70 less than was paid for a sent used by Shakespeare. For the manuscript of "Old Mortality," which was sold on the first occasion for a column of sovereigns only two inches high, or \$165, ten and a quarter pounds avoirdupois of gold, or \$3,000, was given recently. What it will fetch in a few years' time one dare not conjecture.

THE CAUSE of progress in religious thought has in this country no more ardent champion than Dr. George A. Gordon, minister of the historic Boston congregation known as the "New Old South Church." He has been styled by an eminent authority, "leader of thought," and in his latest book, "The New Epoch for Faith," will be found the fullest justification for the use of the appellation. Dr. Gordon believes religious thought has advanced to a freer and fuller interpretation of Christian doctrine; and this freedom of spirit in religious matters is the keynote of his book, which follows logically upon his "Christ of To-day." The chapters which make up the volume were originally delivered as a course of lectures in the "Lowell Institute" of Boston, an endowed lectureship which has brought forth some notable utterances in the cause of religious progress. Houghton, Mifflin & Co. will issue the work about the middle of February.

A "JAMES K. HACKETT" edition of "The Crisis" will soon be issued by the Macmillans. It will contain, in addition to Christie's illustrations, scenes from the dramatization as performed by Mr. Hackett and his company.

INCREASE YOUR strength, ward off ill health, use Abbott's, the Original Angostura Bitters, the strength-giver.

MARY ROGERS MILLER,  
Author of "The Brook Book."

RONALD MAC DONALD,  
Author of "The Sword of the King."

this fall, by the same publishers who issued the autobiography.

FOR A STORY of genuine romantic flavor, one of the kind that keeps its readers up until the "wee sma' hours" if need be to see it through, Ronald MacDonald's "Sword of the King" may be strongly recommended. The scene of the story is laid in England in the closing years of the seventeenth century. It teems with adventure and hair-breadth escapes, in all of which the leading part is borne by the heroine, Philippa Drayton, the daughter of an aged baronet who sides with William of Orange in his successful contest for the British throne. The maiden's lover, who has not laid eyes upon her since she was a little girl, is at his own home, in attendance on the prince, when Philippa, disguised as a trooper, comes to warn his royal Highness of a plot against his life. She saves the future King by her timely arrival and the prompt use of her sword, and is rewarded for her gallantry by the gift of the prince's own weapon to replace the blade broken in his defense. That she had occasion to draw it, the same day, to defend herself from her unsuspecting lover, illustrates still further the romantic character of the story. The latter has been dramatized and is now being presented on the stage in this country by Miss Henrietta Crossman. Mr. MacDonald spent several years in America, not long ago. He is the second son of the poet-preacher-novelist, Dr. George MacDonald, was born in 1860, and received his education at Trinity College, Oxford. For two years he was a schoolmaster in England; also for two years he taught at Pottstown, Penn., and then, for four or five years, he was head master of the Ravenscroft school at Asheville, N. C. In 1894 he returned to England, and since then he has had two or three years' experience on the stage, and has written several plays, in one of which he toured in the provinces with his collaborator, Mr. H. A. Saintsbury. His wife is an actress, a niece of Mrs. Kendal's, and is known on the boards as Miss Constance Robertson.

IT WOULD be impossible to say how much of the present interest in nature study is owing to the wise and energetic efforts put forth in that direction by the college of agriculture at Cornell University, but it cannot be

# Electricity to Displace Steam

By Charles Elley Hall

General Staff Correspondent

**E**LECTRICITY AS a science is but little understood. The leading minds in the electrical world realize that the inhabitants of the earth—"Metaphysia," or beautiful garden—are attempting to utilize a powerful force of unknown origin. It seems reasonable to expect that the electrical belt surrounding our planet furnishes the magnetic power that will completely revolutionize the motive power of America and foreign countries.

We are as yet in our infancy as regards the development of electrical or magnetic energy and its utilization, but all signs point to marvelous achievements during the next twenty-five years of the twentieth century.

Thomas A. Edison, in a recent letter to the official press organ of the exhibition opened in Copenhagen, Denmark, June 14th last, writes as follows: "I believe that within thirty years nearly all railways will discard steam locomotives and adopt electric motors, and that the electric automobile will displace horses almost entirely."

The Chicago *Record-Herald*, date of August 2d, 1902, prints an interesting editorial, from which the following extracts are copied: "The most important development of the next two years in transportation in this country will be the abolishment of steam as a motive power and the substitution of electricity on the lines of the New York Central in the city and within a distance of thirty miles from its limits. . . . This great project, which public sentiment has demanded since the tunnel accident, will involve an outlay of over \$14,000,000 for installation and for changes that must be made in the company's yards and stations to accommodate the new motive power. The third rail will be used to carry the power, steam will be abolished everywhere, electricity being employed for switching, for signaling, and for every operation incident to the movement of the trains, operating in New York City within two years the greatest electric traction system in the world."

Mr. William E. Curtis, the talented and versatile staff correspondent of the Chicago *Record-Herald*, under date of August 15th, 1902, in an article from New York in relation to this proposed change, says, among other things: "It is believed that this will be only the first step toward the adoption of electricity as the motive power for the entire New York Central system. It is no longer a scientific but an economic problem. The railway world is preparing for radical changes in means and methods to take place during the early years of this century, and several other inventions of equal value are now being talked about as having great possible influence upon the transportation problem."

The published opinions quoted recall to mind a recent experience of mine in Chicago—a ride upon a car operated under a new electro-magnetic system, the invention of Mr. P. W. Leffler. The inventor, a practical mechanic and electrician, has spent many years of his time and a large sum of money in perfecting his ideas and in bringing the necessary mechanism to its present state of perfection. It is predicted that the new system will greatly benefit the general public, as it is a marked improvement over existing street railway and steam railroad systems.

It will be operated at less expense. The cars run quietly and with less noise than those of any other known system. The cars cannot jump the track, due to the magnetic tendency which holds the car. No "burn-outs" occur on the track or car magnets, thereby lessening the expense for repairs about three-fourths over those of other systems. The installation of this system leaves the highways free from obstructions, such as poles, wires, and slots, and the final prediction is made that it is possible for the cars of the new system to run one hundred miles an hour with safety.

As the subject is one of general interest I will endeavor to describe, briefly, the results of my investigation, being indebted to the Century Dictionary for definitions of the technical terms and phrases.

The electrical power is generated in and transmitted

from the regulation steam or water power house, with, however, a change in dynamos. A constant-current machine or generator (a dynamo-electric machine) is employed in which the whole current generated in the armature (the iron device applied to the two poles of an electro-magnet as a means of maintaining the magnetic power undiminished) is passed through the coil of the field magnets. With this "series system" dynamo seventy-five amperes (the unit employed in measuring the strength of an electric current) are generated, with a voltage or pressure that will rise from 200 to 2,000 volts, according to the number of cars in operation, the current or flow of electrical fluid remaining the same (the conductors and magnets being highly insulated) and not accessible by water from the time of leaving the central station until it returns again to the dynamo.

Practically any number of cars can be supplied by coupling-in series dynamos in the car station, thereby obtaining any voltage or electro-motive force desired, within safety of insulation.

Practically speaking, the current is furnished by an arc-light machine capable of producing seventy-five amperes, instead of ten, the number generally employed in generating power for arc lights.

Even if it were possible for a short circuit to occur in this system, still there would be no danger, due to the fact that the wires are safely embedded in the iron construction. In case a short circuit does occur, the electrical current passes through the iron base from the feed wire to the return wire, both of which are under and in connection with the track magnets.

In this way all danger is obviated, as regards loss of life and limb, to both man and beast. Adjoining property is also rendered safe from fire or damage to contiguous water or gas pipes. These pipes in large cities are frequently subject to electrolysis, or decomposition, by escaping electric currents or from defective wires. Another valuable point lies in the fact that expensive and frequent repairs are greatly lessened by the use of the Leffler electro-magnetic system.

The electro-magnets shown in accompanying illustration are placed in the centre of the track, two feet apart, being alternately energized, north, or positive, and south, or negative, and immediately under the car. At twelve-foot intervals is a shunting device, which operates as the car armature moves over each shunting box, adjusting itself automatically by magnetic action as it passes out from under the armature, operating the current in a powerful magnetic field. This explains the lack of deterioration or the apparently small loss of the dynamic force employed in operating the new system, the construction of which is, of course, electrical and above the ties upon which the usual rails are laid, the electro-magnets being also laid upon the ties, on heavy iron bars parallel to and midway between the rails.

The operator on the car uses but one lever, starting, stopping, and reversing at will. He has absolute control of the car or cars in hand, regardless of snow, ice, or slippery rails. Brakes are not applied, as it is more economical to start and stop by means of the single lever spoken of. Thus is avoided the dangerous conditions met with by the ordinary electrical and steam railway systems, all of which are obliged to resort to frictional brakes in order to stop moving cars or trains.

This point illustrates clearly the basic principle of Mr. Leffler's patent, which is the north and south, or positive and negative alternating current, which enables him to stop and start his cars with the single lever as quickly as it is possible to do, in relation to the safety of passengers. It also illustrates the fact that the majority, at least, of accidents occurring because of the inability of operators on existing systems to stop quickly will be avoided by the use of the new principle described.

It must not be taken for granted that cars on the new system will not be equipped with brakes. The law re-

quires that this shall be done. They would serve the same use as on any other system, in case of a sudden loss of energy from dynamo or power house.

It is estimated that cars operating under this electro-magnetic system can run twenty-five per cent. faster than those of any other system on account of the ease with which cars are started and stopped. The statement is made that the same speed of other systems can be maintained by using one-half of the fuel; also that three cars can be made to do the work of four cars (operating the same number of car miles) of other electrical systems.

The following results were obtained during a test on one of the "L" roads in Chicago: "A motor car equipped with two ordinary motors, 150 horse-power each, showed a draw-bar pull in starting of 5,500 pounds, with an expenditure of 187,500 watts, or about 251 horse power, while the Leffler system full-sized equipment demonstrated a draw-bar pull in starting of 5,100 pounds, with an expenditure of but 25,600 watts, or about thirty-five horse-power, being approximately seven to one in favor of the Leffler system. This difference, it is expected, will drop considerably under speed, but not under two to one in favor of the Leffler system under any speed that can be made with ordinary motors."

The experimental car illustrated on this page represents a regular car of standard construction, to which one or more additional cars, or "trailers," may be attached. It is equipped with a horizontal armature extending lengthwise and suspended to the car axle, and receives the electric current from a small storage battery carried on the car, which is controlled by a pole changer and which keeps the polarity (the being attracted to one pole and repelled from the other) in the car armature north and south between each pair or set of magnets, meaning each pair of north and south magnetic poles in the track, twelve of which, with attracting and repelling or pulling and pushing force, are in each section. Each alternate track magnet, when excited or actively charged, maintains a polarity, and practical operating results are gained without electrical contact between the moving cars and the power house.

The operating expenses of this system will be much less than those of the overhead trolley, the underground electrical, or the steam railway systems now in use, while, as before stated, it overcomes the danger to life and property, especially and particularly when compared with the overhead trolley and the usual contact electrical systems. The installation of the system costs but two-fifths of the sum required for the underground trolley and but one-half more than the overhead trolley systems. The estimate for the entire operating expense is twenty-five per cent. less than that required for other systems.

A road equipped with this system will be put into operation as soon as it is deemed expedient.

The Chicago *Evening Post*, in a column article headed "Solves City Problem," states, as a result of the interview had with Mr. Leffler at his office in the Fisher Building, that his invention will doubtless solve the great transportation problem at present confronting the city; that it will do away with the dangerous overhead trolley wires; that there is no third rail; that many municipal officials and street-railway chiefs have seen the large model car in operation at the works in Chicago, and that they have all been favorably impressed with it. The *Post* further says: "The fundamental idea of the new system is to 'cut a motor in two.' The electro-magnets form one-half of the motor. The other part, the armature, is attached lengthwise to the bottom of the car. It is a long iron bar cut up into feet, and so attached that the ends ordinarily are within an inch of the top of the magnet boxes. But the primary difference between the new system and the trolley-car motor is that the electro-magnets do not cause the armature to turn the wheels. The new car is not propelled by the friction of the wheels with the track, but by the invisible force of magnetism."

## Pets of Popular Players.

Continued from page 302.

"Pinky Panky Poo" and Mrs. Patrick Campbell are in New York again after spending a quiet summer abroad. "Pinky Panky Poo" is Mrs. Campbell's monkey-griffon dog, as everybody knows. He is her constant companion and her press-agent's joy. At this writing he is ill. The last of a long line of dogs bred in the royal kennels of Belgium, he was given to Mrs. Campbell by King Leopold as the greatest token of esteem his Majesty could possibly bestow. The ancestors of "Pinky Panky Poo" were trained by the princes of Belgium to fight long-drawn and bloody battles on the royal tables as an after-dinner diversion for his Majesty and his Majesty's courtiers. So one would imagine that "Pinky Panky Poo" might have inherited a very unapproachable disposition. On the contrary, he is most engaging in his manners and decidedly optimistic in his view of life generally.

Another famous dog is Miss Elsie De Wolf's little bat-eared French bull, "Fauvette." This little dog has a great bench record, having won everything in her class in Paris, where she is so well known on the boulevards that the cabbies call out to her as she passes "A la petite Fauvette." She is said to be the smallest dog of her kind ever shown. She was quite an important figure in Miss De Wolf's production of "The Way of the World" last season. She sat up in the automobile in the first act and gazed about her in a superior way that lent an air of positive "smartness" to the whole scene.

Nobody who sees Miss Bessie Clayton, the whirling-twirling little danseuse down at Weber & Fields', would imagine that she is the "doggiest" kind of a dog fancier. But she is. From a real fancier's standpoint, too. At her summer home in Long Branch she has a kennel of bulldogs that are her greatest pride, and she is yearly represented to no small degree in the bench shows here and there. Miss Clayton is Mrs. Julian Mitchell "off the stage," and a year or so ago Mr. Mitchell bought for her the famous bat-eared French bull, "Boulot, Jr." He has a great bench record, and made a valuable addition to Miss Clayton's collection. Then there is "Midget," a cute little Boston terrier that came to her one night over the footlights, nestling in a basket of flowers. She thinks a lot of him and of a little silken Yorkshire that Mr. Mitchell recently imported, which answers to the euphonious name of "Yoodie."

GOVERNOR R. F. FLOWER'S STATUE UNVEILED AT WATERTOWN, N. Y.—EX-SENATOR DAVID B. HILL (X) DELIVERING HIS ABLE AND ELOQUENT ADDRESS BEFORE THE LARGE ASSEMBLAGE.—Photograph by A. B. Phelan.

Miss Eleanor Robson has the "loveliest little doggy" ever, a tiny mite of a toy spaniel known to the profession as "Jiggerty Jack." The "Jack" was given him in a legitimate way, but the "Jiggerty" he won for himself by virtue of his own peculiarities. Miss Henrietta Crossman's beautiful foxhound, "Crackers," also won his name for himself. Mr. Maurice Campbell brought him into Wallack's Theatre one night where Miss Crossman was giving a performance of "Mistress Nell" and presented him as a member of the family. Miss Crossman was delighted, and between scenes spent her time making him acquainted. She called him "dearie" and "doggy" and "you beautiful thing" until she got him to her hotel, where her first thought was to feed him. She ordered supper from down stairs, but began meantime to feed him crackers which she happened to have in her room. Well, he was ravenously hungry and he liked them. He devoured them so voraciously that she began to call him "Crackers." He knows no other name now, and he still likes Uneeda biscuit. Foxhounds, by the way, of the "Crackers" type, are very rare in this country.

Mr. Joseph Hart takes the greatest delight in introducing to his friends a scrappy Scotch terrier which answers to the appropriate name of "Hoot Mon," and in telling the story of how he became the proud possessor of this interesting animal. Mr. Hart is of an athletic turn of mind, so he says, and likes to take long morning walks into the country. Last spring, when he was on the road playing "Foxy Grandpa," he started out one morning before breakfast for a constitutional. A constitutional before breakfast on a one-night stand? Yes, he told me so himself, and "Hoot Mon" stood by and listened. The merry spring sunshine was making the birds sing and filling the air with the fragrance of swelling

the buds. Just at that moment the proprietor of the place put in an appearance. Mr. Hart asked him if he'd part with a breakfast for a monetary consideration, and was delighted to see him disappear into the interior to forward the request to the mistress of the mansion. He returned in a moment and finding Mr. Hart petting the dog said:

"Nice dog, that."

"Yes, he's not bad."

"Needs clippin' purty bad."

"Clippin' wouldn't spoil his beauty much."

"Well, while yer eatin' yer breakfast I'll fix 'im up. Have 'im slicker'n a whistle afore yer done."

"All right," said Mr. Hart. "Do what you please with him. I don't care."

When Mr. Hart finished his breakfast he came out and found the old fellow just putting the finishing touches on a very decent-looking dog.

"Well, how much do I owe you for breakfast, sir?" he asked.

"Oh, about two fifty, I reckon," said the farmer.

"Two fifty?"

"Yep. I reckon on fifty cents fer the grub and two dollars fer clippin' the koodle."

"What's the dog got to do with me? I don't own him," said Mr. Hart with exaggerated dignity.

The farmer stroked his chin thoughtfully for a moment, shifted his "terbacker," and said:

"Oh, don't ye? Well, ye told me to clip 'im an' if I don't git them two dollars there's goin' to be somethin' doin' round here purty quick."

Protestations were useless. The actor paid up and walked wearily away, followed by "Hoot Mon." Of course "Hoot Mon" won his way, as any dog will if you give him half a chance, and is now a household pet.

That's what Mr. Hart says.

## Novel Uses of Glass.

WHILE IT is true that the manufacture of malleable glass is still among the "lost arts," the inventive and resourceful scientists and mechanics of our day have discovered a great number of new and novel uses for this fragile and translucent product. One of the latest and perhaps the most valuable of these uses is the employment of blocks of glass to insulate the third rail on electric railway systems. This has been done in London with success. A similar application of glass is seen in the use of it for railroad ties in place of the ordinary wooden ones, a practice adopted several years ago by some railroads in the United States, though not to a great extent. A still more novel use of the substance is as sheathing for vessels instead of copper. The Italian government tried an experiment of this kind nearly twenty years ago with a single vessel, but as nothing more was heard of it the test was probably not satisfactory. It was thought at the time that it would have an advantage over copper in being free from oxidation, and also in affording no hold for barnacles and other substances which cling to the bottoms of other vessels and seriously impair their sailing qualities. Glass has also been converted into casks for wine and beer, into weights for window sashes, bearings for machinery, and into bricks for building purposes. In the latter case they are made hollow and have served admirably for the purpose. In fact, glass is entering more and more as a factor in the construction of buildings, including the use of glass-stone, or ceramocrystal, a French device, for doors, ceilings, and walls.

UNIQUE FLOAT IN THE LABOR-DAY PARADE AT CHICAGO—BIG CONTRIBUTION-BOX ON WHEELS, INTO WHICH THE CROWD CAST \$6,000 FOR THE COAL STRIKERS.—WPA.

Another material in which glass is the chief constituent is known as glass-cotton. It consists of glass made into

small fibres and is used as filters in laboratories, where it is valued because of its durability and cleanliness.

## General Miles as a Student.

GENERAL NELSON A. MILES is one of those men who have never considered themselves too old to learn. He took up the study of French when past maturity, and to pass away some spare time in the West, and now speaks that language fluently.

## A Cat's Intelligence.

DUMB ANIMALS CAN SCENT DANGER.

A CAT will refuse to drink coffee, but will drink and thrive on Postum Food Coffee.

Mrs. Alice Gould, of Maywood, Ill., says, "Coffee drinking made me very much run down, thin and nervous, and I thought I should have to give up my work."

"I was induced to try Postum by a friend who suffered four years from severe sick headaches lasting for several days at a time, who said that since using Postum Coffee she had been entirely free from an attack. I found that by making Postum according to directions it was equal to coffee in flavor."

"It is now six months since I began drinking Postum, and I have gained 18 pounds in weight. It has built me up and I feel like a new person."

"We all drink it now, even to the cat, who is the pet of the family, and it is funny to see him drink his bowl of Postum Food Coffee every morning. We often try to get him to drink coffee, but he has the good sense to refuse it."

# Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *LESLIE'S WEEKLY*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always include a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *LESLIE'S WEEKLY* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.

**C**ONSERVATIVE financiers are all beginning to realize that the condition of the money market is the most important factor in Wall Street. I observe that my old friend, Henry Clews, experienced as he is in the ups and downs of Wall Street, at last makes public proclamation of the fact which I have presented several times heretofore in this column, namely, that the stock market is in a highly artificial condition, with prices high and big holders deliberately planning all sorts of schemes by which to distribute their burdens. Mr. Clews also admits that "the limitations of the money market impose an effectual barrier against any regularly organized bull campaign," and that, "if the speculative spirit breaks out beyond control, we may witness some sharp spasms in the money market, with more or less discomfort for holders of weakly margined stocks."

Mr. Clews has reached these conclusions rather late, a little later than usual, but better late than never. Against his judgment and that of Russell Sage, J. Edward Simmons, and other astute and observant financiers, appears the utterance of James R. Keene, on his return from Europe, to the effect that, "outside of some great and unexpected calamity, I can see nothing which might disturb the upward trend except a possible money stringency." Only two years ago, just before McKinley's election, when stocks were on a much lower level than they are to-day, Mr. Keene gave out his famous bear interview, in which he said that stocks were all too high, that our railroads were enormously over-capitalized, that 35 per cent. of their capital was "absolute water," and that, no matter whether McKinley was elected or not, stocks were a sale and not a purchase! At the very time that Mr. Keene was making these remarks for consumption at home, it is understood that he was buying American railroad shares abroad and preparing for the boom which followed McKinley's election. The natural conclusion, therefore, is that, while Mr. Keene is now proclaiming that the market is a purchase, he is quietly unloading whatever he can of his superabundant treasures. It is hard to teach old dogs new tricks.

An old financier, who recently disposed of nearly every share of the stocks that he held, told me that it was one of his fixed rules to sell any railroad stock which netted him less interest than he could receive from a savings-bank. He says that, with scarcely an exception, such stocks can always be sold with a guarantee that they can be bought back within a year or two at 25 per cent. less than the selling price. It has just been pointed out that the sixty most active railroad shares, which averaged six years ago a little over \$40 a share, now average over \$114, the highest record price. Many of these yield scarcely 3 per cent., and most of them less than 4. Is it surprising that financial men are getting out of such a market?

Curious rumors are heard on Wall Street, including one that the failure to pay the required dividend on Reading and to dissolve the voting trust was due to the fact that insiders had sold out most of their holdings and had been unable to buy them back. It is said the same condition exists in the Southern Railway, and that the voting trustees of both these properties, finding themselves thus cumbered, fell back on the trump card of declining to pay the last required dividend before the dissolution of the trust, and thus retaining virtual possession of properties they did not own. The control of Erie, it must be remembered, is also in the hands of a Morgan voting trust and will be until the directors elected by the trust shall declare 2 per cent. semi-annual dividends for two consecutive half years on the preferred stock. Those who are buying Erie shares on the expectation that the property will shortly revert to the possession as well as ownership of the stockholders will observe that the same scheme which is

being worked in the Southern and the Reading roads may be utilized to indefinitely prolong the voting trust in the Erie. The institution of a suit by the stockholders to test the equity of such an extension might be like the explosion of a bombshell in Wall Street.

The public may suffer, but it is rare that the insiders are caught, and those who have been on the inside of the United States Steel Corporation have been among the heaviest of the winners. The original Morgan syndicate, which guaranteed the stability of the United States Steel Corporation and agreed to advance any amount up to \$200,000,000 within fifteen months for that purpose, advanced actually \$25,000,000 for eight months, and for this service received a profit of \$30,000,000, with an expectation that this will be doubled later on. The Bethlehem Steel Works, purchased by Schwab for \$7,500,000, it is understood, has been sold to the United States Ship Building Co. for \$26,000,000 in bonds and stocks, and the United States Steel Company is no doubt in close touch with the United States Ship Building Company. Now comes the proposition of the steel trust to add \$50,000,000 to its surplus funds by an exchange of bonds for preferred stock, and once more a syndicate steps in and asks \$10,000,000 for financing this simple operation. Is it remarkable that the public is getting a little tired of this sort of thing and of the men who are engineering these profitable deals?

"P." St. Paul: Am returning your correspondence. It looks as if you were smart enough even for a Wall Street sharp.

"I. C. Company," Springfield, Mass.: Have no rating, and do not consider the plan advisable to follow. Altogether too risky.

"K." Westfield, Mass.: J. L. McLean & Co., 25 Broad Street, are members of the Consolidated Exchange and do a large business.

"S." Brookline, Mass.: Jacob Berry & Co., 44 Broadway, Alfred M. Lamar, 60 Broadway, and Douglas, Lacey & Co., 66 Broadway, are all members of the Consolidated Exchange.

"B." New York: At present, the C, B and Q Joint Four Bonds seem to be the best investment of those you mention, though the preferred shares at a lower range would be attractive.

"A. B. C." Cincinnati: The capital of the United States Cast Iron Pipe and Foundry Co. is very much larger than it should be. The preferred does not look like a good permanent investment.

"A. H. V." Chicago: (1) The mere fact that the Lincoln Financial Bureau talks of doubling your account in sixty days ought to be sufficient to make you chary of it. (2) I never advised its purchase.

"M." Belleville, Ont.: Your letter was sent to 141 Fifth Avenue, the address of *Leslie's Magazine*, with which *LESLIE'S WEEKLY* has nothing to do. It should have been addressed to *LESLIE'S WEEKLY*, 110 Fifth Avenue. Answer mailed.

"T." Nassau, India: (1) Not safely. (2) I have previously commented on the Palisades Park Company's offer. From data submitted to me, I see nothing very promising in the offer. (3) About Queens County real estate write to Wheeler Bros., 16 Court Street, Brooklyn, N. Y. Their standing is excellent. I have sent your address to them.

"J." Fall River, Mass.: (1) Unless the market has a severe decline, none of the speculative cheap railroad stocks offers special opportunities for investment. (2) I do not think whether money is easy or not, that stocks, on their merits, ought to sell much higher. (3) Impossible to answer definitely, as many deals are kept confidential until stock market purposes are accomplished. (4) Only fair.

"Pam." Fair Haven, Mass.: One dollar received. You are on my preferred list for three months. (1) Yes, unless money market conditions are substantially improved, but on reactions, such stocks as Pennsylvania, Southern Pacific, Union Pacific, and the Wabash B bonds ought to offer good opportunities for speculation. (2) Would keep out of the market until conditions are more stable. (3) Not an investment.

"Inquirer," Louisville, Ky.: A very clear little pamphlet on "The Organization of Industry," by John Moody, contains a list of the railroads and industrial corporations controlled by Morgan interests, and also a list of all the leading American trusts. This valuable little publication will be sent you free of charge if you will inclose a 2-cent stamp to John Moody & Co., 35 Nassau Street, New York, and mention *LESLIE'S WEEKLY*.

"Medicus." Conn.: (1) Both General Electric and Westinghouse have had an extraordinary advance, especially the former. Any serious financial difficulty would put an end to the exploiting of new electrical enterprises and would be injurious to both these companies. Of the two, Westinghouse seems to offer better opportunities at present. Almost any banker will take your order, but the amount of the margin might depend upon the condition of the money market. (2) Not rated, but apparently doing considerable business.

"S." Hagerstown, Md.: The Seaboard issue is in the hands of masters of the art of speculation. They have had all the rise that their earnings entitle them to, but manipulation and new deals and combinations may continue to do them a service, until the insiders have unloaded. (2) Tennessee Coal and Iron is not, in my judgment, as good a property by any means as Colorado Coal. The expectations of its absorption by other large interests give it speculative value. (3) Rutland and Ice common are both now considered fair speculations, considering the prices at which they are held.

"V." Hartford, Conn.: If the Baltimore and Ohio Railroad has been making all the money that its reports have shown, it is a little singular that it is necessary for it to issue at once \$42,000,000 of additional stock, of which \$20,000,000, it is said, is required for equipment. It is a curious fact that so many of the railroads that are talking about their big earnings are also talking about the necessity of new issues of bonds and stocks for equip-

ment and improvement. The Baltimore and Ohio stock will be offered to stockholders at par. Within a year or two they will be lucky if it sells at that figure.

"Banker," Detroit: I agree with you that neither the political nor industrial situation justifies the belief that the prosperity of the last five or six years is to be indefinitely continued. The report that the Teamsters' Union of the West intends to demand an increase of 20 per cent. in wages is significant. Railroad employees evidently are determined to have their share of the big earnings which have been reported for the last few years. The trust agitation and the tariff discussion, both of which are bound to come at the approaching short session of Congress, will not help matters any.

"S." Troy, N. Y.: The heavy judgment against the National Salt Company justifies the warning I gave my readers a year ago, to get out of the concern. (2) The Philadelphia gang of exploiters and manipulators, having unloaded the shares of the American Alkali Company on the innocent public, can now afford to laugh as they see it go into the hands of receivers. It makes a very bad statement. Better stick to the legitimate railway and industrial shares and leave the new-fangled ones alone. (3) The statement that the American Tobacco Co. has lost \$7,500,000 in its fight with the British manufacturers was made by one of the latter.

"W. W." Cohoes: Wabash preferred, Texas Pacific, Ontario and Western, and Missouri, Kansas and Texas preferred have all had considerable speculative attention. I have repeatedly pointed out that the Wabash Debenture B, standing ahead of the preferred, were a much better speculation. Texas Pacific will profit greatly at some time by the refunding of its bonds at lower rates of interest. Ontario and Western is, perhaps, the cheapest of the anthracite properties, with good prospects ahead. Missouri, Kansas and Texas preferred is a Standard Oil stock, in so far as Rockefeller is largely connected with it, and some day ought to sell higher. There is little choice at present between these stocks.

"B." Louisville, Ky.: The earnings of International Paper, during the past fiscal year, show an increase of over fifty per cent., compared with 1898, while the surplus applicable to dividends declined nearly forty per cent. If this statement is

## FINANCIAL AND INSURANCE.

### OFFICE OF CLAUDE ASHBROOK STOCK BROKER

MEMBER CINCINNATI STOCK EXCHANGE,  
Cincinnati, Ohio, September 15th, 1902.

Traction securities furnish the safest and surest channel for making money. It is with satisfaction that I am able to point to the earlier numbers of this series of market letters, which commenced in February last and have been continued weekly in the Cincinnati papers, and have also been published from time to time in New York, Montreal, Toronto, Chicago, Cleveland, Columbus, Indianapolis, Louisville, Philadelphia and Pittsburgh papers.

It is with a feeling of sincere gratification that I am able to point to the thousands of investors in the markets of the various communities referred to who have been influenced by the opinions and advice given in these weekly market letters.

#### FOR THEY HAVE ALL MADE MONEY.

I repeat that this is exceedingly gratifying and mutually satisfactory. Here are the results, which speak for themselves. The rise in quotations since February have been brought about by giving the public the facts.

	Low 1902.	High 1902.
C. & N. & C. St. Ry.	Far	127
Southern Ohio Traction	58	88
Cin., Dayton & Toledo	20	36
Detroit United	56 1/2	67
Toledo Hwa. & Light	28	41 1/2
Northern Ohio Traction pf.	87 1/2	95

The former plan, heretofore often adopted, was to accumulate a line of stock, run the price up as high as possible and unload on the public.

Our plan is different. The primary object in view is to investigate thoroughly the intrinsic merits of the security, start the price as low as possible and take the public in at the start, to let the legitimate demand from investors regulate the advance in price and not to force it by manipulation. As a result all of my customers, with very few exceptions, have made money, and some of them are accumulating the foundations of fortunes. Great are the opportunities for making money in traction securities! The element of risk is almost entirely eliminated; reactions in price are trivial and are invariably followed by high record prices. The earnings constantly increase from 10 to 30 per cent. over the previous year's showing, and stocks that to-day are quoted at 25 will sell at par in less than five years.

#### GREATEST INTERURBAN IN THE WORLD.

The Aurora, Elgin & Chicago is the greatest interurban line in the world. It is attracting the attention of thinking people on both sides of the Atlantic, and is an actual demonstration to-day of what a really great electric railway property is capable of.

#### AURORA, ELGIN & CHICAGO

6 per cent. cumulative preferred stock, now quoted at 93, possesses all the requirements necessary to justify the prediction which I now make, that the stock will advance in price, caused by a legitimate demand from high-grade investors, to 120, at which figure the net income yield is exactly 5 per cent.

Of the common stock we have heard but little, excepting that it is quoted at 46 and so closely held as to be practically unobtainable. But we will learn much of

#### AURORA, ELGIN & CHICAGO PREFERRED

stock from now on, for it is not often that a really desirable 6 per cent. stock of the cumulative preferred class can be had under par. The stock is listed on the Cleveland Stock Exchange, and will be much in evidence in the unlisted department of the Cincinnati Stock Exchange. It is also dealt in by brokers in Columbus and Louisville, and recently some very urgent demand has made its appearance from Chicago, which latter city, like Cincinnati prior to 1902, is not awake to the enormous possibilities of tractions as wealth getters.

#### AURORA, ELGIN & CHICAGO

as a property is the foremost example of a heavy high-speed electric railway in the world. It is not a trolley, but is operated by the

#### THIRD RAIL SYSTEM.

It covers the most populous suburban district adjacent to Chicago and crosses at various points the Wisconsin Central, the Great Western and the Illinois Central. The system serves some twenty

not given out to mislead the public, the shares are not a purchase at present. (2) The surplus of the Chicago and Northwestern last year was over 25 per cent. on the common. This is one of the gilded railroads. (3) I do not see why Wabash common should be regarded as a purchase. Before anything can be paid on it or on the preferred shares, six per cent. is due on the \$26,000,000 Debenture B bonds, though less than three per cent. was earned on these last year.

"Nuisance," Chicago: (1) I would prefer the bonds. (2) It looks like a better speculation than an investment. (3) American Can is selling at about half the price at which it was originally distributed and therefore looks like a good speculation. (4) A movement in the coppers is promised, but much depends upon the outlook of the copper market and the supply and demand. (5) The per value of Manhattan Transit is \$20 per share. It has a scheme for the transportation of freight in New York City. It has been built up on the reorganized General Carriage Company, which had a meteoric existence. (6) The only thing favorable about United States Rubber is its low selling price, as compared with its price in other days.

"Investor," Cincinnati: I would not sell my Manhattan Elevated unless I had a good profit. The last annual report shows over six per cent. earned on the stock, and this should be largely increased after the completion of the electric installation. (2) I have been unable to understand why Southern Railway common should be regarded with such favor. While the gross earnings have been largely increased, the outstanding capital has been swollen to undue proportions. Some combination may make the common shares worth more than they are, but they look high enough on the basis of earnings. (3) The cotton crop this year now proves to be disappointing, as the corn crop was last year, the average of the cotton crop having shrunk from 95 per cent. in May to 64 in September. Instead of a record-breaking crop of 12,000,000 bales, we are liable to have one of about 10,000,000. This is not encouraging to the bulls on Southern Railway shares, nor is there encouragement to bulls generally. The estimate of the world's yield of grain this year shows pretty generous crops in Europe as well as the United States. This means lower prices.

Continued on following page.

## FINANCIAL AND INSURANCE.

cities and towns outside of Chicago, having a population of 350,000. Rails are eighty pounds to the yard in sixty-foot lengths; the third rail 100 pounds to the yard. The road is gravel ballasted throughout, after the manner of steam railroad construction, and the ties are spaced 2,840 to the mile. Its stone culverts of fine masonry work and its steel bridges are things of beauty and joy, surpassing those of any interurban line in the world and resembling in style English steam railroad construction.

#### SEVENTY MILES AN HOUR

is the maximum speed capacity, and if you doubt this you will be fully convinced by going to Chicago and taking a ride over the A. E. & C. It will give you a sensation. Including stops three miles apart, trains are operated at an average speed of fifty miles an hour. To insure this high speed each car has four 125-horse-power General Electric motors, and they are finished in a style similar to the Pullman vestibule cars.

#### AURORA, ELGIN & CHICAGO

supplies a modern necessity in serving a large population with rapid transit, which has heretofore been hampered by time necessarily lost in making connection between the different steam roads entering Chicago. The time of two hours heretofore consumed in the distance from Aurora or Elgin is now reduced to one hour, and on express trains to forty-five minutes.

#### AURORA, ELGIN & CHICAGO ROUTE

extends from the union loop in Chicago to the terminal of the Garfield branch of the Metropolitan West Side at Fifty-second avenue, a distance of six and a half miles; double track twenty-one miles to the Chicago Golf Club at Wheaton. From Wheaton there are two branches: one northwest to Elgin, sixteen and a half miles, and one southwest to Aurora, fourteen and a half miles, making the road from the eastern terminus to Aurora thirty-three miles. Another branch from Aurora extends to Batavia, seven miles. Of the fifty-six miles of road, twenty-one miles are double track, and the sidings bring the total mileage up to eighty-two miles of track. The running time from Aurora, Elgin or Batavia to Chicago is forty-five minutes for express trains and one hour for locals. Fifteen-minute service to Wheaton and half-hour service to Elgin and Aurora. The maximum grade is 1.08 per cent. for about 1,000 feet, and the remaining grade is, comparatively speaking, level, thus greatly reducing the cost of operation.

#### CAPITALIZATION.

Common stock, \$3,000,000; preferred stock, \$1,500,000, bonds, \$1,000,000. With the exception of the city crossings the A. E. & C. owns in fee its right of way. In all the cities and villages the company bought either the whole or portions of the lots necessary, in many cases wrecking the improvements on the realty. Being organized under the railroad law,

#### FRANCHISE QUESTION

has no terrors for this company. The property was constructed and is now managed by the Mandelbaum-Pomeroy syndicate, which also controls the Cincinnati, Dayton & Toledo Traction company, the Cleveland, Elgin & Western, and others.

Great interest is being manifested in the probable earnings of Aurora, Elgin & Chicago.

It is too early yet to give any detailed figures, but President Wolf, who has just returned from Chicago, reports that the road was unable to accommodate fully 3,000 people who congregated at Fifty-second street, where the road connects with the Metropolitan Elevated, on Sunday last, and that the earnings of each car in operation have averaged over \$120 a day, and have reached as high as \$300 a day for a single car.

The road is as yet opened to less than half of its natural traffic, not being open to either Batavia or Elgin, but the average earnings on the part open between Aurora and Chicago for two weeks have been \$904.39 per day.

Even the Aurora cars stop in the suburbs as yet, on account of paving operations, which prevent their running down into the business district. These improvements will soon be completed, and the Batavia branch will be ready for business in about ten days, but the Elgin branch can hardly be completed before the first of the year.

#### AURORA, ELGIN & CHICAGO PREFERRED

6 per cent. stock will do to buy. It is good, and I recommend it to my readers as not only an absolutely safe investment, but one which at the same time will from now on rise in market value. My prediction is that it will go to 120, and no one can possibly make a mistake who succeeds in buying it under par. CLAUDE ASHBROOK.

### Hints to Money-makers.

Continued from preceding page.

"S." Philadelphia: They have no rating. "Trustee," Nashville, Tenn.: (1) I think well of the new Oregon Short Line four. They seem to be well secured. (2) Your experience with the Triple Liquid Air Company recalls the fact that I pointed out its enormous over-capitalization when the stock was being sold, and the fact that liquid air had not yet been manufactured by anyone as a commercial product. (3) The earnings of New York Central must have been largely increased by the splendid showing of the Lake Shore last year. The latter's surplus was equal to over 30 per cent. on its capital stock. "S." Cincinnati: (1) I advised the sale of National Salt a year ago, because of conditions which were disclosed at its annual meeting. You will observe that heavy judgments have now been rendered against it, and I doubt if you will realize much for your common shares. (2) That would seem to be advisable. Others are doing it. (3) The report of International Paper, recently made, showed a heavy decrease in the earnings; and if it was not doctored for stock-jobbing purposes, Paper common is selling for all it is worth. (3) The

drop in American Bicycle was caused by the bankruptcy of the concern. It is in a receiver's hands. "Investor," Des Moines, Ia.: (1) It is said that Baltimore and Ohio is earning over 10 per cent. on the common shares. This is largely due to the development of the bituminous coal trade during the recent era of prosperity. I need not add that a stock which depends largely upon one line of business suffers the most inadvisabilities. (2) The very best statement in behalf of Atchison common that can be made assumes that the earnings for the current year will be between 6 and 8 per cent. On this basis the talk of putting the shares very much higher seems hardly warranted. Yet if a contest for control should arise no one knows what might happen. Recall the Northern Pacific flurry. "S." Dayton, Ohio: (1) Good crops ought to help the Soo road if rates are maintained. It is estimated that it earned 7 per cent. on the preferred and 8 per cent. on the common last year. (2) The surplus earnings of Texas Pacific last year were estimated at about 3 per cent. on the capital stock. (3) The exploitation of electric railway schemes in this country is shown by the census report. In 1890 there were 789 street railway companies in the United States, as against 871, chiefly electric in 1900. But in 1890 the funded debt and capital stock of the 789 roads, of which only 144 were then electric, was about one-fifth of the total ten years later. Many of our electric railway shares represent little more than water.

"C." Montgomery, Ala.: The Vice-President of the Northern Securities Oil and Transportation Company tells me, that in offering stock for public subscription the company has not asked anyone to buy upon its representations, but has a standing offer to send customers to Texas to personally examine the property. He incloses the reports of two gentlemen who have made the trip, and adds that no one who has gone down to Texas to investigate has failed to make a purchase. The officers and directors of the company include several well-known New York merchants and others, and six banks are given as references. If there is any question as to the stability of the company, it would be easy to write directly to any one of these banks for information. "Industrial," Elms, N. Y.: Evidence multiplies that the next great field for corporate reorganization will be among the industrials. It is not pleasant to read in the annual report of the American Smelting and Refining Co., that during the past year it had to transfer \$2,300,000 from its surplus account to metal stock and property account, because of losses sustained by the decline

of copper, lead and silver. (2) The mischief which a great independent line can cause is again shown by the rate war in the West, growing out of the Chicago, Great Western's cut in passenger rates for delegates to the Old Fellows Convention at Des Moines. The Great Western can stir up a hornet's nest at any time in its vicinity. That is the reason, no doubt, why speculators believe that it must some day be absorbed at a good round figure.

"D." Raleigh, N. C.: I do not advise the purchase of American Smelting common, although it is true that it is in the hands of astute speculators and promoters. The Attorney-General of Colorado, in his action against this corporation, declares that its plant has a value of less than \$7,500,000, and yet it dominates the mining industry of Colorado and pays seven per cent. annually on its preferred stock of \$50,000,000. (2) The appointment of a receiver for the Bicycle Trust discloses the fact that it has obligations of more than \$10,000,000 and marketable assets of less than \$8,000,000, the major portion of these being of very uncertain value. Yet this concern had nearly \$10,000,000 of debenture bonds and nearly \$27,000,000 of stock, and when it was organized its promoters gave out the most rosy account of its prospects. Is it a wonder that the public is disinclined to buy any of the industrials?

"L." Evanston, Ill.: The tract of land owned by the American Lumber Company in McKinley and Valencia counties, New Mexico. The ownership is said to approximate 300,000 acres, and the report of an expert, which the company submits, estimates that two billion feet of timber is contained on the tract and that it is superior in quality to the Arizona pine. The expert also believes that coal and minerals may be found on the tract. The strongest endorsement of the company that I have seen comes from C. H. Winchester, president of the First National Bank of Elkhart, Ind.; F. M. Stewart, president First National Bank, Hillsdale, Mich., and L. E. Replogle, president Chicago Security and Trust Company, Chicago, who write that they are stockholders, that they have visited the tract, and are greatly pleased with their investment. It would be easy, through any mercantile agency, to ascertain the standing of the investors.

"M. B." Denver, Col.: (1) Hocking Valley has many believers in its future and a decided increase in its earnings, but it has had a very substantial advance. (2) There is no doubt that the Colorado Fuel and Iron concern is a good property, but it is in litigation, and traders usually keep aloof from law suits. (3) The earnings of Kansas City Southern, as I pointed out a year ago, when it sold at about half of present prices, have been increasing rapidly, and are sufficient to pay four per cent. on the preferred. The probabilities favor the absorption of the line on a good basis by some of the great Western railways. (4) The tip to buy Railway Steel Spring has been generously circulated, but in view of the proposed competition I should be inclined to keep out. (5) North American is the mystery of the Street. I cannot enlighten you. (6) Missouri Pacific has been the favorite of a highly successful pool of manipulators. Recently it was reported that they had liquidated their holdings. Higher prices have been predicted on the expectation of a combination favorable to it, possibly one with St. Paul. Having advised the purchase of Missouri Pacific when it was around 30 and 40, it naturally looks high to me at double these figures.

"Banker," St. Paul: (1) If published statements are correct the conflict between the Gould and Pennsylvania Railroad interests grows warmer every day. This bodes no good to the much-talked-of gentlemen's agreement, by which railroad rates are to be maintained all over the country, and the end is not yet. (2) Many suspect that the Gates crowd unloaded a good many shares on the flurry before Mr. Gates's departure for Europe. (3) The complaint of British financiers that English railways are piling up indebtedness, in order to pay dividends, and thus creating a dangerous over-capitalization, is not very different from complaints made against some American railways. What explanation is offered for the issue of \$100,000,000 bonds by the Southern Pacific, or \$150,000,000 by the Brooklyn Rapid Transit? Neither of these has paid a dividend, and the latter has never earned 1 per cent. on its capital stock. Observe the prices at which these shares are selling. (4) By continuing the trusteeship of Reading and of Southern Railway, no doubt the Morgan crowd relieved themselves of a heavy load. It takes money to control the ownership of a great railway system. It requires no money to act as trustee.

"J. H. B." Pittsburgh: Four dollars received. You are on my preferred list for one year. (1) If it were known whether the plan of those who control Southern Pacific is to have a dividend declared upon it shortly, I could answer you better. The impression prevails that the stock is to have another rise and that it is booked for a dividend, but confirmation of this from inside sources cannot be obtained. The rise may be engineered to enable large holders to unload. A fair profit is always a good thing to take. On reactions you can buy the stock back. (2) The earnings of Norfolk and Western show constant increase, and if they are maintained, increased dividends are probable, which will mean higher prices for the shares. (3) Wabash preferred cannot receive dividends until the \$25,000,000 of B debentures ahead of it have been provided for. The earnings for the past year were not sufficient to pay half of the 6 per cent. on the debentures. On the basis of earnings, therefore, the preferred shares look high. Possibly purchases for control are being made by interests antagonistic to the Goulds, compelling the Goulds themselves to enter the market and buy their own shares. I have advised the purchase of the B debentures in preference to the shares. Since that advice was given the debentures have advanced over 20 points.

"Reader," Oakland, Cal.: I have read your discourse on prosperity, which does not surprise me. It is true that the country is in the enjoyment of perhaps its greatest prosperity. The question, however, is, Has not Wall Street discounted this prosperity? The prices of stocks show that it has, and the proof of it lies in the fact that gilt-edged shares now yield less than one could get at a first-class savings-bank. We have had years of depression, with great crops, when these crops did not bring good prices. If you had lived as long as I and been as closely in touch with Wall Street, you would realize that the situation is analogous to others which have preceded it. Just as certain as three or four years of prosperity and high prices have always been followed by a period of depression and low prices, just so surely will the present era of Wall Street expansion be followed by one of contraction. We may not have it this year, but, unless all signs fail, we shall have it next year. So far as the iron market is concerned, the importations of the foreign product continue. It is true that our iron and steel mills are busy and cannot meet the domestic demand, but the intrusion of the foreign seller means that he is seeking our markets, and if he obtains a new foothold he will struggle to retain it, in competition with us. The reason we found a market abroad for our iron and steel a year or two ago was because the home demand in England and Germany was so heavy that it could not be met by the domestic supply. Severe depression has now fallen upon the iron industries of Germany and England; the tide has been reversed, and foreign iron is pouring into the United States. What may happen abroad is very likely to happen at home. It is not necessary to wait until the rain falls before taking out your water-proof. Cut this out and paste it in your hat, for reference a year from to-day. I doubt if you will remind me of it at that time.

## Wealth in Lumber

An investment assuring early dividends and increased value of principal

The American Lumber Company, incorporated under the laws of New Jersey, capital \$5,000,000, owns in fee simple absolute, 22,245 acres of land in McKinley and Valencia Counties, New Mexico, bounded on the North and East by Santa Fe Railroad, and timbered with over 2,000,000,000 feet of white pine absolutely free from shake. It is the largest and finest body of white pine standing to-day, and very closely resembles the cork or white pine of Michigan and Wisconsin, which was practically all consumed ten years ago.

Facilities for cutting, hauling and marketing the timber are unexcelled and, disregarding the ever increasing demand, this timber can to-day be marketed at a conservative profit of over \$5.00 per thousand, which makes

### An Actual Visible Profit of \$18,000,000

or 900 per cent. in dividends. These figures are not based upon conjecture, but upon the result of conservative estimates of timber in sight by the best timber experts in the country. All of the stock of the

## American Lumber Co.

is Treasury Stock, full paid and non-assessable; and in order to provide a reasonable working capital for development purposes only, a portion of this Treasury stock, par value, \$10.00, is now offered for sale at \$2.50 per share, subject to advance. Your attention is called to the personnel of the Board of Directors, all of whom have paid for their stock in cash. They are successful business men of affairs that merit your confidence and will ensure a careful, conservative management of the affairs of the Corporation.

#### B. S. Rodey, Delegate in Congress for New Mexico, says:

I predict for the enterprise you mention, a market that will last for years and a profit that will exceed your most sanguine expectations. I do not know of a single enterprise that surpasses the one you are about to engage in, and I make this statement with knowing the responsibility it involves.

#### Ira B. Bennett, 1130 Majestic Building, Detroit, Mich., says:

I spent some time in the timber and found one of the largest and finest blocks of white pine that exists in one solid body. It is the finest logging country I have ever seen and I will take a large block of stock and cheerfully recommend my friends to purchase all they can of the same.

Apart from a purely lumbering proposition the value of the Corporation's holdings is enhanced by the fact that this tract is very valuable for grazing purposes and contains deposits of lithographic stone, coal, copper and other minerals.

#### The Careful Investor

In considering a lumber proposition should satisfy himself as to the following requisites: Quantity and quality of timber, Question of water, Climate and Labor, Character and Reputation of men in charge, Demand for product of mills as erected, Facility for transportation and ability to secure favorable freight rates.

Write at once and we will lay before you full details of this excellent opportunity for conservative investment and will satisfy you on every point above mentioned. We solicit a most thorough investigation of our affairs.

Address all inquiries for further information and application for stock to

## Revolutionizing River Traffic

THE AMERICAN tendency to do everything in haste and at the same time to do it well is manifested in the successful running of new-century, twenty-hour trains between New York and Chicago; the extension of rapid-transit facilities throughout New York and all our great and populous centres, and the effort to secure a speed of one hundred or more miles an hour by electric traction. It is natural, therefore, that the thoughts of navigators also should turn to some method for increasing speed on the water. It is not surprising to hear that the Central Railroad of New Jersey has placed an order with the Cramps for a steamboat which will make twenty-five miles an hour and thus cut the time from New York City to Atlantic Highlands to fifty-five minutes. Nor is it surprising to hear that swift steamboats are about to conquer time on the great highway of passenger and freight traffic, the Hudson River.

The eminent financier and banking king, Mr. Charles W. Morse, who now controls the night passenger traffic between New York and Albany and Troy, proposes also to put fast day lines in service, and is having two new fast steamboats designed. They are to have a guaranteed speed of from twenty-five to thirty miles an hour, are to be palatial in all their fittings—floating palaces, in fact; and it is Mr. Morse's purpose to make the distance between New York and Albany and Troy, by these day boats, in about five hours, or only an hour or an hour and a half longer than the run by many of the passenger trains. At present the journey consumes the entire day, and while it is delightful, because of the charming scenery, the fresh air, and the changing character of the view from hour to hour, yet many forego this pleasure trip, the finest that can be taken in the United States, or perhaps in the world, because of lack of time. Mr. Morse

CHARLES W. MORSE, THE WELL-KNOWN  
CAPITALIST.—Davis & Sanford.

has also contracted with the United States Ship Building Company for a magnificent mate to the Hudson River night boat *Adirondack*, of the New York and Albany line. This will be built by next season and will cost a million dollars; and it means the retirement of the *Dean Richmond*, once regarded as the pride of the Hudson, and which will hereafter be utilized only as a spare boat. It is interesting to note that Mr. Morse has also just awarded contracts to the United States Ship Building Company, for two steamers, to be the mates of the *Governor Dingley*, now running from Boston to Bar Harbor and St. John's. They will have a speed of eighteen knots an hour, will cost not quite a million dollars, and will be running next season.

Mr. Morse believes in doing well whatever he does, and he is impressed by the fact that a great opportunity is open on the Hudson River for fast passenger boats by day and night. Starting a steamer from New York at a reasonable hour in the morning, he believes he can arrange to connect at Albany with fast west-bound trains leaving New York but a short time later than the steamboat. This would give the traveler from abroad, for instance, an opportunity to compare the Hudson River with the Rhine and still catch his "limited" at Albany and virtually lose no time. A faster steamer on the Hudson River at night would enable a New Yorker to attend an entertainment, reach a steamer at eleven o'clock or thereabouts, and be at Albany or Troy early in the morning. The new steamers which Mr. Morse proposes to place in service will far surpass anything of the kind now running in the United States, and will embrace all the latest comforts and conveniences that this age of luxury has suggested. He is enthusiastic over the latest undertaking of his active and resourceful mind, and promises a surprise to the traveling public.

## Hints to Money-makers.

Continued from preceding page.

"C." Omaha: They have no rating.  
"B." Los Angeles, Cal.: Request complied with.  
"V." Albany: Inadvertence. You are on the preferred list.  
"G." St. Dak.: You are on the preferred list.  
(1) Not rated.  
"H." Auburn, N. Y.: I would not advise the purchase of either.  
"N. M." Greene, Ia.: Neither of the companies has any merit from the investment standpoint.  
"S." Drifton, Penn.: (1) So it claims. (2) Not rated. (3) I certainly do not. (4) Have none.  
"B." Chicago: Nothing is known of the concern on Wall Street, and there are no transactions in the shares.  
"E. S." Mapleville, R. I.: So far as I am able to ascertain the Mt. Shasta Mining proposition is not particularly attractive.  
"Extra." Helena, Mont.: Alfred M. Lamar is a commission broker, and a member of the N. Y. Consolidated Exchange, with good rating.  
"S." New York: The Brooklyn Union Elevated firsts have been selling since January 1st from par to 105, and do not look dear at 102 or 103.  
"W." Far Rockaway: A new pool has been hulling Pacific coast shares with some success, but money conditions are unfavorable to speculation.  
"L." Pittsburg: Not an investment. So far as I am able to learn there is nothing attractive about the proposition of the Vista Hermosa Sugar concern.  
"A. C. T." Gloucester: I do not recommend the purchase of the shares of the Wyoming Oil Company unless you are desirous of engaging in a speculation.  
"F." Rockville, Conn.: Metropolitan Street Railway shares declined because they were abnormally high and the recent juggling with the company's finances has not commended it to investors. I think Manhattan Elevated is cheaper and better.  
"L." St. Louis: One of the largest holders this week advised an intimate friend not to sell his holdings of American Ice preferred, but he declined to advise regarding additional purchases at present prices. Just why he did so was not explained.  
"M." Belleville, Ont.: Four dollars received. You are on my preferred list for another year. I appreciate your kind words. Jacob Berry & Co. are members of the Consolidated Exchange and do a large business. Mr. Berry was formerly a member of the New York Stock Exchange.  
"G. H. F." St. Louis: The Virginia preferred certificates, Brown Bros. Receipts, have ranged in price since January, from 8 to 104, with few transactions. It has been intimated that a speculative

movement in them might be anticipated, but I am unable to obtain the reasons for the same.

"B." Zanesville, O.: It is exceedingly difficult to get at the inside of the concern. One of the heavy owners told me it would be unwise to sell the preferred, but he did not advise the purchase at present. If his statement of the earnings was correct, I should think you might even up and hold for a long pull.

"B." Albany, N. Y.: But for unfavorable municipal and State legislation, People's Gas ought to sell much higher in order to rank with other gas and electric light properties. It seems to be strongly held, with many predictions that it will sell considerably higher. On reactions it might be a purchase.

"Tarheel." Charlotte, N. C.: I dislike to advise the purchases of any shares while money-market conditions are so unsettled. Almost any of the stocks you name is a fairly good speculation on reactions. Among the best are Great Western, Ontario and Western, Toledo, St. Louis and Western, and Corn Products.

"S." Brooklyn: It hardly seems possible that Atchafalpa common can go much higher on its merits. Absorption by the Pennsylvania would, of course, advance it, but unless money becomes easier it is doubtful if any more extensive combinations, involving large financial requirements, will be put through in the near future.

"Montana." (1) It is difficult to ascertain what the copper situation really is. Obviously, if an agreement has been reached, it will be concealed until the copper clique is ready to disclose it, after having taken advantage of their private information. Ultimately, no doubt, an agreement will be reached. (2) Whoever pays best.

"W." Ithaca, N. Y.: The American Writing Paper Company's last annual report showed an increasing surplus. I should not think there was much value in the common stock, as there is \$12,500,000 preferred stock and \$17,000,000 of bonds ahead of it. I would be inclined to take a profit whenever I had it, in the light of the history of the industry.

"B." Albany, N. Y.: One dollar received. You are on my preferred list for three months. (1) The proposition of the California-Nevada Mining Company does not commend itself to me in any way. It is all well enough to guarantee dividends, but who is back of the guarantee? (2) I think better of the Montreal and Boston copper shares, but these are also highly speculative.

"C." Providence: (1) For investment your Boston and Maine and Pullman stocks, especially the latter, had better be retained for the present. (2) I am not inclined to advise operations in such a market. (3) It is highly speculative and I would take a profit at any time. (4) No. (5) If you are looking for a speculation pure and simple, without any regard as to whether you win or lose, and with chances, as they always are in mining schemes

## EYE DISEASES

**CURED WITHOUT THE KNIFE.**  
Cataracts, Membranes, Granulations, Etc., Optic Nerve Diseases—all causes of Blindness—yield to the marvelous **ONCEAL DIAPHRAGMATIC METHOD.** Without the knife or in any way injuring the eye. Dr. Onceal, Chicago's famous oculist, has cured thousands of cases in this way; he has never failed where any sight remained and his treatment was given a fair trial. Illustrated book on eye diseases, testimonials and Dr. Onceal's advice, free. Wm. Cronbach, McConnell, Ill., cured bad case of cataracts. Write him. Cross-Eyes Straightened—a new method—without knife or pain. Over 5,000 cures.  
**ONCEAL, M. D., Suite 157, 52 Dearborn St., Chicago.**

## THE ALTA

**IT'S A MINE** in the San Juan Region, Colorado, owned by **THE ALTA MINES COMPANY.** January 1st its \$100,000 mill will be treating **One Hundred Tons of Ore a Day.** Shipments now being made to smelters. **Nearly a Mile** of developmental tunnels completed. Indebtedness of \$514,000 has been reduced to \$125,000. To pay a portion of this the Company offers full-paid stock at a low figure. No promoter stock. **Booklet Free.** Write to us. References: Du'a's, Bradstreet, or any Business Bank.  
**WIN J. MORGAN & FINCH**  
12 Fabst Bldg., Milwaukee, Wis.

against you, go ahead. (6) I know nothing about it.

"R." Shiremanstown, Penn.: (1) Not an investment, but a speculation. (2) Leave it alone. (3) The Empire State Oil and Refining Company, which offers its stock at five cents a share and speaks of it as an "investment," can hardly justify this characterization. Its prospectus claims the ownership of a number of acres of oil lands and a gusher, but when it asserts that the shares are an "investment" and not a speculation, it makes a statement which the prospectus does not prove.

"J." Wilkesbarre, Penn.: The decline in St. Paul, following the declaration of an increased semi-annual dividend, made it look as if insiders were unloading on good news. (2) The annual report of Chesapeake and Ohio shows about 1 1/2 per cent. earned on the capital stock. Hard times would hit this road severely, as a great part of its business comes from the mines. The West Virginia coal strike is responsible for the decreased earnings in June.

"W." Patchogue, L. I.: Four dollars received. You are on my preferred list for a year. Thank you for your complimentary words. (1) I think well of Central Georgia first income bonds as well as of the subordinate bonds. The earnings of this property make an excellent showing, but are largely being used for the improvement and development of the property. (2) The Fort Worth and Rio Grande also are reasonable at the prices mentioned. (3) The earnings of American Maltine are looking better. The preferred would be safer to trade in.

"S." Sanford, Me.: (1) Glad you profited by my advice. (2) On reactions, American Ice common, like United States Leather common and American Can common, presents opportunities for a speculative turn. You would be safer in dealing in Ice preferred, however. I am not recommending the stock as an investment, because of the failure of the company to frankly and honestly set forth its condition. I regard it now as highly speculative. (3) The Mexican Central and Mexican Telephone do not commend themselves to me as investments.

"Novice." Brantford, Canada: (1) The future of Metropolitan Traction Railway was regarded with greater favor before it was recently "financed" so as to virtually take away its control from the stockholders. It is a great property, but heavily encumbered. (2) No. (3) Not rated very highly, but seem to be doing quite a business. (4) The Eastern Consolidated Mining concern has been pretty well exploited, and I agree with you that the dividends do not seem to be paid on a conservative basis. I hesitate to advise its purchase. (5) Will make inquiries.

"H. A. E." New York: (1) Mexican Central first consolidated income 3s have ranged in price since January 1st, from about 31 to 36, without much activity in them. Of course they are highly speculative. (2) I hardly think there is anything in the bicycle shares at present. The condition of the company is shown by the low price of the bonds. It would be better to speculate in these if you want to touch the property at all. The plan of reorganization will probably include an assessment on the shares. (3) I am unable to advise you, as I have no statement of the earnings.

"C." Mansfield, O.: Your letter should have been addressed to LESLIE'S WEEKLY, not to Leslie's Magazine. They have no connection with each other. (1) Ultimately, Colorado Fuel and Iron ought to be a purchase, from the mere fact that great interests are rivals to secure its control; but it must also be remembered that this rivalry might in some contingencies lead to lower values, though this is not as probable as that the competition will strengthen the price. (2) I hesitate to advise purchases on margin while the money market is in its present strained condition. (3) Harrison & Wyckoff, 71 Broadway, deal in small lots on the Stock Exchange.

"St. K." Chicago: The American Exploitation Company has been organized under the laws of Colorado, to acquire gold prospects and mines and to develop the same and sell their stocks and bonds; to deal in mining shares and bonds, and in mine themselves. While it is true, as the prospectus points out, that a great deal of money has been made in mining exploitation, it is also true, and the prospectus fails to point this fact out, that for every dollar of profit taken out of a mine a hundred dollars has been spent in unpredictable and unsuccessful mining ventures. I therefore regard the proposition as purely speculative; in fact, nothing more than this seems to be claimed for it.

## Life-insurance Suggestions

[NOTICE.—This department is intended for the information of readers of *Leslie's Weekly*. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be included, as a personal reply is sometimes deemed advisable. Address "Hermit," *Leslie's Weekly*, 110 Fifth Avenue, New York.]

THE FACT that a Denver investor recently gave a check for a good sum to the Mutual Life Insurance Company, in payment of a policy for \$250,000, issued on the 3½ per cent. guarantee gold bond plan, indicates the confidence of the business world in the great and prosperous life insurance companies of New York City, including notably the Mutual Life, the Equitable, and the New York Life. The absolute solidity of these and of all the other great life insurance companies is so well established that no one who holds a policy in any of them has a single doubt that it will be met on maturity. What fraternal beneficial association, what assessment insurance concern, or experimental life insurance company, can offer inducements to the public to be compared with those offered and abundantly guaranteed by the best companies? And in what is security more essential than in life insurance? A man who sets aside from his weekly earnings a surplus for the protection of his wife and family, or for his own protection, in case of misfortune, will have little peace of mind if he feels the slightest doubt regarding the safety of his investment. I am in receipt of so many letters complaining of increasing assessments or of failure to fulfill obligations on the part of beneficial associations, that I again call attention to this most important matter. Remember that cheap insurance, in the end, is always the most expensive.

"T." Middletown, O.: Not of the highest class.  
 "T. E. C." Scotchboro, Ala.: (1) I do not regard it favorably. (2) Am told that it is very small. It is difficult to be exact.  
 "F." Hale, Mass.: There is such a concern as the American Temperance Life Association, but a request for information at its headquarters was not very courteously received. I do not recommend its propositions.

"F." Hot Springs, Ark.: The Old Wayne Mutual Life is not a very large company, and I do not regard the policy of which you speak, as having superior merit, beyond its cheapness. I should prefer one of the largest companies. (2) Yes, the Germania stands well.

"J. C." New York: (1) The better way would be for you to take the matter up directly at the home office of the Equitable and enter, if necessary, into a written stipulation, properly attested, which you can take with you when you go abroad. (2) The premium is not excessive, considering the returns you will receive. I regard the bond as in every way most advantageous to you.

"H." Denver: The Equitable Life, New York Life, the Mutual Life, the Northwest Mutual, the Prudential of Newark, N. J.; Connecticut Mutual, Mutual Benefit of New Jersey, Penn Mutual, Provident Life and Trust, the Travelers, of Hartford; and the Aetna, of Connecticut. (2) Your points are the ones first to be considered. (3) I do not see how the writing of insurance in foreign countries would militate against the high standing of a well-conducted concern. It certainly has not injured any of the great New York companies engaged in that business.

"C." Chicago: (1) There is no difference in rates or returns. In the light of experience, none better. Both are very conservative. (2) At the end of the stipulated period you receive the face of the policy, if you live, and in case of your death before the end of the period it goes to your heirs. (3) They are excellent. (4) Technically it is not a straight guarantee. (5) It depends upon your resources. If you have an income justifying an expenditure for both investment and insurance, an endowment policy would probably satisfy you best of all. If your resources are limited and you care to provide only for your family, take a straight life policy. If you are alone in the world, purchase an annuity with your surplus funds.

### The Hermit.

#### Hints to Money-makers.

Continued from preceding page.

"H." North East, Penn.: I do not recommend the acceptance of the offer.

"S." Newark, N. J.: The concern has no rating. You are on the preferred list.

"G." Detroit, Mich.: (1) It has no rating, though it does considerable business. Mostly speculative.

"M." Chicago: A man of limited means in such a market better wait for a reaction and then buy some dividend-paying stock that has not been unduly advanced.

"H. L. S." Lawrence, Mass.: I do not know anything about the scheme you present, but on its face I do not regard it favorably. If you can withdraw with a profit, my advice would be to do so.

New York, September 18, 1902. JAMES

#### How Force Was Popularized.

THE BENEFICIAL effects of liberal advertising, which has made the fortunes

WILLIAM BOGART HUNTER,  
Advertising manager of the  
Force Food Company.

of many enterprising men and firms, were never more strongly apparent than in the case of "Force," the breakfast cereal prepared by the Force Food Company, of Buffalo. "Force" was first put on the market about a year ago and it was confronted with serious competition from well-known articles of a similar kind. But, thanks to the nerve and energy of Mr. Edward Ellsworth, the guiding spirit of the company, and his liberal expenditure of money for advertising space in the newspapers, "Force" is to-day a household word, and the sales of the commodity are vast and increasing. The appropriation for advertising is estimated at \$750,000, the largest sum ever spent to boom a new product. In April last the Force Food Company engaged as its advertising manager Mr. William Bogart Hunter, who, although not yet forty years old, is one of the leading men in his line in the country. One of his chief achievements was the wonderful success which he made of the advertising department of the Lackawanna Railroad. Mr. Hunter was formerly a newspaper man in Chicago and New Mexico, making his mark in the profession, and he is a brilliant writer. He has organized a system which has already given an immense impetus to the sale of "Force," and which bids fair to place it in the front rank of breakfast foods.

AN AUTUMN TOUR VIA PENNSYLVANIA  
RAILROAD.

A PERSONALLY conducted tour, covering nine days, and including Gettysburg, Blue Mountains, Luray, Natural Bridge, Chattanooga, Lookout Mountain, Asheville and Washington, will leave New York by special Pullman train of sleeping, dining, and observation cars on October 8. Rate, covering transportation, carriage drives, hotel accommodations, and all necessary expenses during the entire trip, \$85 from New York and Newark, \$83 from Philadelphia, and proportionate rates from other points. The party will be under the direction of an experienced Pennsylvania Railroad tourist agent and a chaperon. An entire day will be spent on the Gettysburg Battlefield, another day at Chattanooga and Lookout Mountain, two days at Asheville, and two days at Washington.

Apply to Tourist Agent, 263 Fifth Avenue, corner Twenty-ninth Street, New York; or, George W. Boyd, Assistant General Passenger Agent, Philadelphia.

"How will you have your eggs cooked?" asked the waiter.  
 "Make any difference in the cost of 'em?" inquired the customer cautiously.  
 "No."  
 "Then cook 'em with a nice slice o' ham," said he, greatly relieved.

The man who had dropped in to see him was smoking a cheap cigar.  
 "I think you will find it comfortable," said Uncle Allen Sparks pleasantly, "if you'll sit over there by that open window. There is no draught from it, as you will see from the fact that your cigar smoke goes out through it."

**Stomach Trouble**

I am in possession of a scientific method of re-  
lieving stomach trouble and abdominal diseases,  
a revelation in the correct application of medical  
treatment, based on scientific knowledge, re-  
search, and experience, the new philosophy of  
stomach troubles. I claim to have the one  
method that will do the work, and my best  
recommendation is that I am successful in curing  
my patients of indigestion, dyspepsia, mal-  
nutrition, chronic constipation or diarrhoea, head-  
aches, reflex nervous conditions, etc. Nine-tenths  
of all diseases are caused by the imperfect work-  
ing of the digestive system. My specialty is the  
permanent relieving of these disorders, and I  
have so thoroughly mastered these troubles that  
I can treat patients by correspondence at any  
distance with most satisfactory results. Address  
me confidentially.

## What and When?

ARE WE to have a repetition of the granger craze of twenty-five years ago? Are prosperous business conditions to be overturned and the integrity of our industries to be undermined because of a new political scarecrow? It hardly seems credible, but those who recall the mercurial disposition of the American people, as evidenced by the ridiculous rag-money craze, the anti-monopoly fever, the populist delusion, and the free-silver whirlwind, realize how easy it is to make the masses talk and how difficult it is to make them think.

The public outcry just now is directed against the trusts. Men who do not know the difference between a trust and a truncated cone are clamoring for relief from dangers they imagine they see and from difficulties that they know not how to describe. Such a condition of the public mind opens a first-class opportunity for demagogues, and especially for those who are outside of the breastworks and want to break in. Not satisfied with assailing the speculative combinations of capital which are properly classed as trusts, the demagogue stigmatizes every great American industry as a wicked trust and caps the climax of his folly by denouncing protection as the mother of all trusts.

There would be little to fear from the demagogue or from any following he might be able to attract from those enemies of the tariff who have been properly classified by the Grand Rapids *Herald* as "the natural free-trader, the revenue reformer, the man without a party, the half-Democrat, and the half-Republican without deep political conviction or wide information," but for the fact that just at this juncture comes a demand from the Republican party, in convention assembled in Iowa and Idaho, for tariff reduction as the handiest weapon with which to slay the trusts. True, only two States have been so silly and short-sighted, but one of them is the great Republican State of Iowa, and in its party platform, by calling for a revision of the tariff schedules in all cases where they shelter monopoly, it has virtually conceded that monopolies are so sheltered. It is not surprising, therefore, that the sensational announcement is made by Speaker Henderson, of Iowa, that he cannot accept a renomination for Congress, because, as he says, "I do not agree with many of my people, that trusts, to which I am and have always been opposed, can be cured, or the people benefited, by free trade in whole or in part."

Speaker Henderson says he does not believe that for the purpose of controlling the American trusts we should make a market for foreign trusts, thereby crushing out the industries of this country. He does not believe in the free trade idea of slaughtering every industrial interest in the United States in a wild effort to provide a remedy for trusts. He believes, with Senator Platt, of Connecticut, in a tariff revision "which will not destroy our home market or take away work from our own workmen, to give it to the workmen of foreign countries." He does not believe, with the free traders, in destroying the trusts and all the business conducted by them, but rather in the Republican purpose to regulate trusts and the business conducted by them, so that no unfair advantage shall be taken of the people of the United States. Protection is not the mother of trusts but the parent of prosperity, and those who attack the protective tariff, as Senator Platt points out, have never yet proposed a plan, relating either to tariffs or trusts, which would result in the employment of one additional workman in the United States or the enhancement of the wages of a single laborer.

If we are to revise the tariff, when shall we do it and on what articles shall the tariff be removed or reduced? While McKinley lived, and while Blaine was the spokesman for his party, the forces that stood behind these sturdy advocates of protection marched in solid ranks to meet the enemy and won memorable victories. The cleavage was clear and certain. On one side was Republican protection; on the other side Democratic free trade and tariff reform. Not until the first nomination of Cleveland were party lines broken on the tariff question. The effect of that break on the Republican party was disastrous. What is to be the result now? Dissension means disaster, and that radical differences exist among Republicans on this question is plain on its face.

Think of the situation! Senator Lodge, of Massachusetts, a Republican leader and the intimate friend

and adviser of the President, proclaiming, in his eloquent speeches in the Maine campaign, that the way to destroy the beef trust is by removing the tariff on beef, and at the same time the Secretary of the Treasury, ex-Governor Shaw, of Iowa, in the Vermont campaign, declaring to the people that the removal of the tariff on beef would not hit the beef trust, but would only hurt the farmer. Massachusetts wants free hides and free meat. It is a manufacturing State. Iowa wants the protective tariff retained on hides and on beef. It is an agricultural State. Attack the sugar trust, say the Republicans of Iowa and Idaho, the only two States in which the Republican platforms have winked at the suggestion that the tariff protected the trusts. Protect the cane-sugar producer, says the Republican convention of Louisiana, and "Protect the beet-sugar interests" is the demand of the California Republican State platform. How shall these conflicts be reconciled? Let Speaker Henderson answer.

If the tariff is to be revised, and the demand of Iowa and Idaho Republicans for the removal of duties on trust-made articles is to be carried out, when shall the warfare on protection begin? We are told that the President and his advisers have decided that no attempt will be made at the approaching short session of Congress to begin the work of destruction. The resentment of the people against the trusts having been stirred up so fast and so far, does any one imagine that at the forthcoming short session of Congress the matter will not be the burning issue? We predict that among the first bills introduced will be one much like the Richardson bill of the last House, for the immediate removal or reduction of the duties on all trust-made articles. A constitutional amendment aimed at the trusts would be smothered. The South would oppose it as an infringement of the sovereignty of the States, and the West would object to it as dilatory and impracticable, if not impossible. With all the public discussion of the trusts, intensified, needlessly, as we believe, by the well-intentioned speeches of the President, by what skillful subterfuge or process of postponement and elimination can the Republicans evade the issue? Now that it has been made not only by our political opponents but also by our foolish Republican friends in Iowa and Idaho, prompt action against the so-called tariff-protected trusts will be demanded, and Republican Congressmen who are now seeking re-election on such promises as Tawney is making in Minnesota, of free lumber, and as others are making of free beef and free leather, must face the music or beat a humiliating retreat.

But Speaker Henderson's retirement opens a possible way out of the Republican labyrinth. Let Representative Littlefield, with his drastic anti-trust bill, be chosen to the speakership if the Republicans control the next House—as we expect and hope they will—and let Senator Lodge, with his free-meat bill, lead against the trusts the decisive Republican majority in the Senate. And we shall see what we shall see!

Wanted, a leader!

## Advantages of Poverty.

WITH SO many of the restless sons of Japheth given over to the pursuit of wealth, it is surprising that there is so little consideration of the discomforts and disappointments attaching to its possession. The prime object of great accumulations, at least with Americans, is to mark success. The wealthy man is the successful man, his riches representing what rank and power do in other countries. But as fortunes tend steadily to increase, it is more and more difficult to attain the highest success, and to keep it when once it is grasped. The aspirants for wealth thus often find themselves unable to gain the object of their ambition, or see it slipping from them, the result being a permanent feeling of disappointment and defeat.

To the sensitive mind, moreover, there is something humiliating in the knowledge that the man is so often lost in his fortune that his name only gives a label to it. In the popular estimate he is only Mr. Millionaire, his accumulations being held fully to express his mind and character. Not infrequently he contributes to their estimate by the manner of spending his wealth. For as he wants his success to be visible, he must spend; and though he does not shoe his horses with silver, as did the Peruvian viceroy, the objects of his expenditure do not differ greatly from those of the Roman patrician.

Moreover, as great fortunes are seldom won save by long years of toil, the habit of work has by that time generally bitten so deep that the accumulator has lost ability to use the leisure necessary to the highest enjoyment of wealth. Equally unfortunate, when he retires he falls under a popular ban; for with so much to be done, opinion will not permit a man to live in luxury without making some contribution to the welfare of the community. To these discomforts may be added the incessant care necessary to preserve a fortune, often greater than that of getting it, the frequent ill effects of wealth upon sons and daughters, the hard work of the social life of the rich; in short, in many ways the very wealthy illustrate the excellent saying of Bion, the philosopher, "No man has so much care as he who endeavors after the most happiness."

On the other hand, it is equally true that the poor have more of the pleasures of life than are popularly credited to them. To begin with, they are more contented with the conditions of their lot, the mass of mankind having little ambition to climb socially. They thus largely escape the social jealousies which so diminish the happiness of the wealthy. Besides, they command far more sympathy from their fellows, testimony as to the kindness of feeling and helpfulness of the poor toward each other in affliction being universal. Poverty, also, unless of too dire a sort, tends to increase family affection,

the community of interest and dependence upon each other necessarily being much stronger than with the wealthy. Further, it greatly modifies, if it does not destroy, the force of opinion as to mode and style of living, which, with the rich, amounts to social compulsion. There is greater independence in furnishings and dress, a wider liberty to adjust means to ends.

If the pleasures of the poor are small, in the keenness of appreciation of them they count for more. The rich buy pleasure, so to speak, in bulk. The poor, unable to purchase but one thing at a time, treble their joys. Every new piece of furniture added to their store brings all the pleasure of a general home-furnishing. Moreover, the number of poor men who have hobbies, and so get rest and diversion from their leisure, is greater than is generally believed. Just sit in the galleries during the opera season, and listen to the intelligent criticisms of the hard-working clerks and artisans there! A man with a hobby—music, carving, gardening, or what not—is never eaten up with chagrin, has, in short, a panacea against half the ills of life. No doubt the enviable state is that described by the Apostle Paul as having neither poverty nor riches. But of the two extremes, viewed from the standpoint of true happiness, the misfortunes of wealth, when summed up, serve to make fairly attractive the blessings of poverty.

## The Plain Truth.

THE ANNOUNCEMENT from Pittsburg that the advance in the prices of iron and steel has been followed by an advance in the wages of the iron workers, and that their wages are now the largest ever paid in the history of the iron and steel trade of the United States, is worth remembering. At this time, when behind the attack on the trusts stands every free trader, armed to begin a new assault on the protective tariff, it is well to recall the satisfactory situation of our wage-earners, and the fact that if the necessities of life are high, wages are high also. As a rule, when times are prosperous, they are so because both the wage-earner and the commodity-seller are receiving their best and highest profit. We need only turn back the hands of time seven or eight years to remember when prices were abnormally low, wages on the same level, and hundreds of thousands clamoring, because they could obtain no wages at all.

WE SUPPOSE we ought to have enough "patriotism" about us of the gunpowder and "old glory" variety to rejoice in the announcement from Washington that a new time fuse for armor-piercing shells has been adopted by the ordnance department of the army which will enable these shells before detonation to pierce the heaviest Krupp armor now used on any battle-ship in the world. Perhaps we might grow enthusiastic if we could be assured that the armor-plate makers would not now proceed to turn out material to meet the emergency just so much thicker than before, which will not alter the relative situation of things while it will add immensely to the expense. And then who can say that, after a million or so of public money has been spent upon new time fuses, some evolution will not take place in war engineering that will consign the device to the junk heap along with the dynamite guns and other costly trash?

WE FAIL utterly to see the justice of the recent decision of the Treasury Department to the effect that the anti-oleomargarine law passed by Congress does not include renovated and adulterated butter, under the export regulations, and that no certificates of lading in a foreign country are required for the former product. "Renovated butter" is nothing more or less than spoiled butter put through some process of boiling, coloring, etc., to make it passable in the market. Why such miserable and unwholesome stuff should be given an advantage over oleomargarine, a clean and healthful food product, when properly made, it is hard to understand. The decision seems to be of a piece with the anti-oleomargarine law, an instance of legislative favoritism which ought never to have been permitted. There is no reason why oleomargarine should be subject to a prohibitory tax any more than any other honest product of our farms and factories. It has as clear a right to free existence as any of them.

WHILE WE are heartily glad that a *modus vivendi* has been established between the warring divisions of the Republican party in Wisconsin which seems to insure the return of Mr. Spooner to the Senate, we can see no good reason why the Senator should not consent to run on the State platform on which Governor La Follette was renominated. It may not be entirely agreeable at all points with Senator Spooner's private convictions, but since the platform evidently embodies the sentiment of the overwhelming majority of his party in Wisconsin, as the action of the State convention showed, it seems to us that it would be a proper and eminently politic and graceful thing for him to waive his objections and give the platform his support. The proposed primary election law and the tax bill may, or may not, have all the merits their advocates claim for them, but they are questions of State concern and neither of them touches the great issues in which the Republican party at large, of which Senator Spooner is such an able and devoted representative, has, at present, any vital interest. If it is true, as we are informed, that the Republican opponents of Governor La Follette have dragged Mr. Spooner into the contest they are waging to secure control of the next State Legislature they are taking a great risk both for him and for themselves. Governor La Follette should be re-elected for another term with a Legislature to support him, and Mr. Spooner should be sent back to the Senate. Whatever tends to interfere or to defeat these objects is not working for the best interests of Wisconsin.

## PEOPLE TALKED ABOUT

A LITTLE RIPPLE was caused on the surface of Paris society recently which may or may not lead to further unpleasant consequences, by a personal assault made upon Maître Barboux, a well-known French advocate, by the Prince de Sagan. The encounter was not a very serious one, although the lawyer is said to have received several severe blows in the face from the prince, and thought it necessary to summon his assailant before a magistrate to answer for his action. The Prince de Sagan referred to is Helle de Talleyrand-Périgord, whose brother Baron married Miss Helen Morton, of New York. He declared that he only struck Maître Barboux lightly in order to provoke a duel because the lawyer had insulted his fiancée, Madame de Cast, in an action in court in which that lady appeared as a plaintiff while Maître Barboux was the defendant's lawyer. Whether the sought-for duel has come off or not the waiting world has not yet been informed, but as it is not the present fashion in France for duelists to do each other serious bodily harm no anxiety need be felt in this case.

PRINCE DE SAGAN,  
Who figured in a recent Paris sensation.

THE TIME is not far distant when the religious public would have been inexpressibly shocked at the spectacle of an ordinary clergyman laying aside the vestments of his profession to indulge himself in such a worldly amusement as a game of baseball, and had a church dignitary holding the exalted and dignified office of a bishop ventured to do such a thing, it makes one almost tremble to think what might have happened. But times and men have so changed that we are now able to read of a baseball match in which the opposing nines are made up entirely of bishops, deans, and rectors without so much as a tremor of protest or any thought of a heresy trial. No good reason now occurs to any reasonable person why a bishop or any other clerical personage should not play ball if he feels that way, while a number of excellent reasons will suggest themselves why men engaged in such pursuits should seek health and strength for their arduous duties in the wholesome recreation of the baseball field. A recent occasion of this sort was the annual outing of the Clerical League of Long Island, one feature of the programme being a match game of ball between the members of the League. Bishop Burgess, of the Long Island diocese, was the "short-stop" of one of the teams and distinguished himself, it is said, by fine work in the field. He also made two home runs, and his batting is said to have delighted the spectators.

ONE MIGHT think that a salary of \$50,000 a year, the sum paid the President of the United States, would be sufficient to keep the wolf from the door of almost any man, even though he held the exalted station of Governor-General of the new Commonwealth of Australia. But Lord Hopetoun, who was appointed to that office a year ago last January, when the federation under the Southern Cross began its existence, did not think so, and therefore he threw up his commission and has recently returned to England via the United States. The explanation given is that the demands upon the hospitality of the Governor-General are so great that \$50,000 a year fails to pay the bills; and as Lord Hopetoun did not feel like eking out the balance from his own income, he surrendered the job. If this is true, it would seem as if hospitality in Australia comes higher than it does in most other lands and much too high for a country just starting out on the path of political independence. Doubtless much of the expenditure was due to needless ostentation. During Lord Hopetoun's brief stay in the United States he impressed all who had the pleasure of meeting him as being a vigorous, intelligent, and capable young man. The acting Governor-General of Australia, pending the appointment of a successor to Lord Hopetoun, is Lord Tennyson, a son of the famous poet.

LORD HOPETOON,  
Who resigned as Governor-General of Australia because the salary was too small.

THE FACT that a mere lad is able to operate an automobile efficiently and safely should go far to convince people that there is less danger in the use of these vehicles than is commonly supposed. Stanley B. Arnold, of Chicago, only thirteen years old, and the youngest automobilist in the world, has acquired such mastery of his horseless wagon that he runs it with more skill than most older owners of automobiles display. He recently took part in a one-hundred-mile endurance race and made the distance in schedule time, a feat which many of the contestants of mature age failed to accomplish. In recognition of his performance he was awarded a blue ribbon. Although he is so proficient in managing the "machine," young Arnold has been refused an automobile license by the city authorities simply on account of his age. It is probable, however, that in a competitive examination he would gain a higher mark than some present holders of permits. His example is one that should find imitation everywhere, for the automobile is the coming vehicle and our boys should as early as possible be trained to operate it skillfully and prudently.

MR. LOUIS WAIN, the inimitable delineator of the domestic tabby, is forty-two years old. He is the son of a North Staffordshire gentleman, but his mother was a French lady. He first began to draw cats in 1883, and became president of the National Cat Club in 1891.

MASTER STANLEY B. ARNOLD,  
The world's youngest automobilist.—Photograph by Wright.

THE WORLD has become quite accustomed to having musical prodigies sprung upon it at intervals; and persons who compose ravishing sonatas at the tender age of six, after the manner of Liszt and Beethoven, and others who hold vast audiences spell-bound with their performance from the perch of a high-chair, as Josef Hoffman did, are not rare enough to create more than a passing sensation. But infants who "lisp in numbers" and write novels and plays are exceptional enough in literary history to make their advent worthy of special emphasis. It is such a remarkable personage who has appeared in Paris in the person of Mademoiselle Chammoynat, otherwise "Carnien d'Assilva." Only ten years old, this little girl has already presented to the world five novels, seven plays, and a volume of poems, and has actually been elected a member of the Paris "Société des Gens de Lettres." As we have not been favored with the reading of any of Mademoiselle Chammoynat's stories and verses we shall reserve our opinion as to the intrinsic merit of these productions until they have passed under our critical eye. It is barely possible, of course, that they may be up to the level of Hugo and Balzac, but we greatly fear that such is not the case.

MADemoiselle CHAMMOYNAT,  
The literary prodigy who is astonishing Paris.

A HUNGARIAN genealogist, Stefan von Michailovitch, has been inquiring into the relationship of the Kaiser with the Hungarian Arpads. He finds (says the *Kölnische Zeitung*) that the wife of Frederick III., Burgraf of Nuremberg, was descended on the female side from King Wratislav of Bohemia, who married Adelheid, daughter of Andreas I., of Hungary. The genealogist also deduces, from the fact of the marriage of an English prince with a Countess Agathe, a daughter of Stephen the Holy, of Hungary, and an ancestress of the Stuarts, a family connection between the latter and the Hohenzollerns.

IT MAY not be generally known that Senator Mason, of Illinois, made his first appearance in the political arena as a singer and not as a speaker, but such is the case. This appearance dates back to 1856, when "Billy" was at the tender age of six years. About that time the budding statesman had learned from his father, or from some of the "abolitionists" who frequented his father's wagon-shop, two songs; one of them was denunciatory of the "peculiar institution," the other was like unto it, "only more so." Next door to the "squire's" shop was "Merrill's store." Merrill was a Democrat, with all that that implied in 1856. Some mischievous, or it may be patriotic, souls thought it would be a good thing to induce "little Billy" to warble his "wood notes wild" in the publicity of Merrill's store. Accordingly a purse of twelve copper cents (cents then were of the size of the present half dollar) was made up, and the infant prodigy was lifted upon Merrill's counter and bidden to discourse sweet sounds. He did. It was a shockingly incendiary performance, too. Being encored "little Billy" followed with a verse of "Rock of Ages." Merrill was mollified somewhat by the second air, but declared that the piety of the encore did not fully atone for the iniquity of the original number, and offered a silver sixpence to the young warbler if he would "sing something better than that." Sixpences were scarce in those days; moreover, William E. Mason never was averse to a call from his fellow-citizens, and so he gave "the other," which was rather more shocking to Democratic sensibilities than the first. Merrill, however, magnanimously paid the sixpence. Five years later, when the war broke out, the irrepressible young man tried to turn his musical gift to his country's account by getting into the service as a band-boy, and for this procured a fife and made himself master of "Yankee Doodle," "Rory O'More," "The Campbells Are Coming," and "The Girl I Left Behind Me." But when he presented himself for enlistment, he was rejected as deficient in health.

THE REVUE HEBDOMADAIRE, of Paris, must have been hard pushed for a sensational story when it printed an article in which it was alleged that King Edward did not get through the whole coronation ceremonies personally, after all, but that after the actual crowning a man who is the King's double and was clad in royal robes personated King Edward. This little tale is almost as good as the story of the sea-serpent seen off Cape May a few days ago wearing green goggles and an ulster.

ALTHOUGH BOTH Englishmen and Americans, and especially the residents of towns, seem in imminent danger at times, of being "clubbed" to death, it is difficult to see how anything but good can come from the new society, or club, organized in London, to be known as the "Pilgrims" and open alike to residents of England and the United States. It is proposed to establish branch societies or clubs in all the principal cities of both countries, with headquarters in New York and London. The dues are to be only ten dollars a year. The object is to promote the spirit of fellowship and good feeling among the members. A leading figure in the movement thus far has been Mr. Harry Brittain, who is also the honorary secretary. At the initial meeting of the "Pilgrims," held in London early in August, Lord Roberts presided. Senator Chauncey Depew is one of the vice-presidents of the club, and among the members of the executive committee are such well-known men as Lord Charles Beresford, General Stewart L. Woodford, and Sir Henry Irving. Among the members already enrolled are General Joseph Wheeler, Frank Munsey, Hon. Don M. Dickinson, Mr. Charles T. Yerkes, Mr. M. H. de Young, Lord Strathcona, Mr. Egerton Castle, and Mr. Henniker Heaton. The first banquet of the "Pilgrims" is expected to take place in London this month.

SENATOR MASON,  
Of Illinois, who started in politics as a singer.

MR. HARRY BRITTAIN,  
Honorary secretary of "The Pilgrims," a new Anglo-American club in London.

ONE OF OUR FINEST INDIAN SCHOOLS—SHERMAN INSTITUTE, THE NEW SCHOOL AT RIVERSIDE, CALIFORNIA.

## How We Educate the Indian

THE POLICY of the government in past years, of selecting a few Indian youths from each tribe and removing them to distant schools, there to be given, free of cost to the Indian, all the advantages that American youths have to pay for either in money or work, seems in the end to turn out unfortunately for the Indian himself. The youth is weaned from his old associations and accustomed to a life of luxurious ease. After his education is completed there remains no course open to him but to return to his old tribal relations, the very life that his school training has unfitted him for. The government does not provide a career for him as it does for the graduates of West Point and Annapolis. All he can look forward to must come to him as a member of his tribe. He returns to the reservation, where he is not even given land in severalty in case he should wish to try to support himself by tilling the soil. He is not given any occupation or office; even his rations are dependent on his being recorded on the family ration ticket. To live in peace with the tribe, he must not appear to put on airs. If he tries to adopt the customs of civilization he becomes a subject for ridicule and ostracism until he submits and falls back into the old, filthy life of the tepee.

With a view of remedying some of the evils of the present system, which at its best confers education on a very few and that at great expense to the government, Mr. Little, of Arkansas, secured the adoption of an amendment to the last Indian appropriation bill, directing the Commissioner of Indian Affairs to "examine and decide on the feasibility and expediency of educating the Indians in schools on the reservations and in communities where such Indians reside, and to submit the best plan to accomplish this end to Congress at the next session." The establishment of adequate common schools on the reservations would, it is believed by many, benefit not only far greater numbers of the Indian children, but would also act as a civilizing leaven in the home life of the tribes. The total amount appropriated by the last Indian appropriation bill, No. 11,353, was \$8,441,505. It carried appropriations for the erection of a good number of reservation schools, and construction work is now under way on several of the reservations.

The largest appropriation for building purposes, however, was not for a reservation school, but was in line with the old policy of locating the schools at a distance from the reservations. In this case the government has entered upon a generous scheme for a co-educational institution. A school of this character was established several years ago at Perris, about thirty miles east of Riverside, Cal., with accommodations for one hundred boys and girls. The new school is located at Arlington, a suburb of Riverside, six miles south of that city. The site fronts on Magnolia Avenue, and adjoins the polo grounds and the park of the electric street railway. The corner-stone of the institution was laid July 17th, 1901, and the present group of buildings, which is to have several additions, however, was completed June 1st, 1902. The group consists of a large central assembly building,

containing an auditorium provided with stage, dressing-rooms, and footlights. The hall has a gallery and inclined floor. There are also recitation rooms in this assembly building. The buildings on either side, connected with the assembly hall by covered perambulatories, are the girls' dormitories. At the right and left of the girls' dormitories are those for the boys. In the rear of the assembly hall is the mess hall. The central room in this building is an immense dining-room with seating capacity for three hundred. At one side of the dining-room are the kitchen and pantries for the students, and on the other side similar rooms for the service of the employees. In the rear of the mess hall is the warehouse, where the supplies for this small village will be stored. The buildings are in the mission style and are all constructed of brick, plastered on the exterior with lime and cement mortar. The trimmings are of Ventura sandstone. Ample bathing facilities have been provided in the way of tub, sitz, spray, and shower baths, in the dormitories. The government has already expended \$237,000 on the institution and an additional appropriation of \$40,000 was made for more buildings. Twenty-five thousand dollars of this is for buildings on the school grounds, a hospital to cost \$5,000, a manual training school building, for boys, to cost \$8,000, and another for training girls to be domestics. The superintendent's residence will cost \$6,000. Fifteen thousand dollars will be invested in buildings at the school-farm at Alvord. One hundred acres are to be devoted to training the boys and girls in farming. All the buildings are to be of brick.

In the Indian appropriation bill passed by the last Congress, provision is made for maintaining the school this current year in the following clause: "For support and education of three hundred pupils at the Indian school at Riverside, Cal., \$50,100." Provision was also made in the bill for maintaining the Indian school at Perris, as follows: "For support and education of one hundred Indian pupils at the Indian school at Perris, Cal., \$16,700; for pay of superintendent of said school, \$1,500; for general repairs and improvements, \$500; in all, \$18,700." According to these appropriations, it costs the government \$170 a year to support and educate an Indian at these schools. The department has honored Mr. Sherman, of New York, chairman of the Indian committee, who had charge of the measure, by naming the new school at Riverside, Sherman Institute.

The miserable condition of the Indians on some of the reservations is a reproach to the American people. In some cases the school facilities are not sufficient for more than one in ten of the children of school age. No churches or missionaries are provided, and on Sundays the Indians play cards and the troops at the post play baseball as well as cards. Sometimes very anomalous conditions exist, as when a troop of infantry is stationed on an extensive reservation to keep in control thousands of mounted braves; or when a cattle company pays pasturage for 10,000 head of stock on a reservation and

actually pastures 40,000 head; or when the rations are reduced to half the quantities issued in previous years in a year of drought; or when white settlers have taken out irrigating water from above the reservation, thus depriving the Indian irrigators of the means of raising crops. Many more of the Indians are able and willing to become self-supporting if given land in severalty and provided with means of irrigating it. As common laborers on railroad construction they have proven superior to the imported laborers from Europe.

### Reform in Advertising.

THE AUTHORITIES of the city of Washington propose to adopt an ordinance directed against freak advertising on the streets and other public places. It is designed, among other things, to prohibit such nuisances as the sandwich men, the carriers of transparencies, and the distributors of dodgers. The proposition is an excellent one, and the regulation proposed cannot be put into operation too soon. The national capital is a good place to start such a reform. It has already gained the reputation of being the cleanest, best kept, and most beautiful city in the Union, and if it suppresses these advertising abominations within its borders its appearance will be still more improved.

And the reform proposed for Washington ought to be carried out in every city and town in the country. The methods of advertising mentioned are always and everywhere offensive and abominable, and with no legitimate excuse for being. Such devices as the sandwich man and the perambulating transparency are an obstruction upon the streets, and an invasion of public rights which ought not to be tolerated. If adopted by all tradesmen they would make every thoroughfare impassable and convert every street into a huge public sign-board. As a matter of fact, few reputable tradesmen resort to these sensational and clap-trap methods, their use being confined, for the most part, to the vendors of cheap and shoddy wares, to fly-blown restaurants, or places of amusement of which it is better that no one should know. No worthy and genuine business interest, in brief, would be injured in the least by the absolute prohibition of all such advertising schemes along with huge bill-boards and the street-car signs, while the pleasure and comfort of the public would be greatly increased thereby. Since a movement is now on foot to beautify New York, and develop its artistic side, an excellent beginning can be made by passing an ordinance aimed at the advertising nuisances. This would relieve the city of one of its ugliest and most offensive features at one stroke.

TELEPHONE Service saves time. Time is the stuff of life. Have telephone service at your home as well as at your office and save time at both ends of the line. Rates in Manhattan from \$48 a year. N. Y. Telephone Co.

### New York's Promising Dramatic Season

THOSE who prefer the light and trifling things of the stage will enjoy "The New Clown," which Charles Frohman has presented so neatly at the Madison Square Theatre. It is an English importation and the plot hinges about a nervous young lord, who accidentally pushed a friend into the river and thinks he has drowned him, and in his anxiety accepts the offer of a traveling showman to take the latter's engagement to appear as a clown in a circus, under the assurance that no one will recognize him in his disguise. It is easy to see that this plot affords the basis for a good deal of funny work, and Jameson Lee Finney, as the clown, gives a capital characterization of a somewhat trying part. It is not one that requires the highest abilities, but there is much cleverness in Mr. Finney's acting. A lot of circus girls and performers, an attractive representation of the green-room of a traveling show, and a glimpse of the circus itself, all make the comedy entertaining, though there is a little prolixity and dullness in the first act. The cast is not notably strong, but meets all the requirements of the play. It embraces a dozen young women, none of them strikingly beautiful, but all pleasant enough on the stage. Miss Jessie Busley, as the star circus rider, is as smart as usual, and Miss Margaret Gordon and Miss Beatrice Morgan, as two high-society ladies, carry themselves gracefully and graciously. Winchel Smith, as Thomas Bacon, the bibulous clown, does some of the best acting in an eccentric part, and the honors are shared in this respect by Ralph Delmore, as Mr. Dixon, proprietor of the circus. A feature of the entertainment is the singing by Julius P. Witmark, the jockey, and by Maud Raymond, the well-known serio-comic. The latter would make an excellent understudy for May Irwin, especially as a singer of coon songs. It looks as if "The New Clown" could stay the season out at the Madison Square.

The leading novelties of the opening months of the fall dramatic season include Sir Arthur Sullivan's last opera, "The Emerald Isle," at the Herald Square, with Jefferson de Angelis as the chief attraction; "King High Ball," with a fine company, an excellent chorus and well-selected ballet, at the New York; "Sally in Our Alley," a musical novelty well worth seeing, at the Broadway; an excellent comedy, "A Rose o' Plymouth Town," at the Manhattan; the sensational drama, "Hearts Aflame," at the Bijou; "Twirly-Whirly," well characterized as "a musical absurdity," at Weber & Fields; "Mrs. Jack," a laughable comedy, at Wallack's; "The Rogers Brothers in Harvard," perhaps the most laughable thing of its kind thus far this season, at the Knickerbocker; Mrs. Patrick Campbell, in "Aunt Jeannie," at the Garden; a delightful comedy from the French, "There's Many a Slip," at the Garrick; a fairly strong drama at the Empire, with John Drew as the star; the musical play, "A Country Girl," at Daly's, and Virginia Harned, in "Iris," Pinero's latest, at the Criterion. The revivals include some of the best things of last year, among them "Soldiers of Fortune," at the New Savoy, in which Robert Edson does exceedingly well; Mrs. Leslie Carter, in her wonderfully strong performance of "Du Barry," at the Belasco Theatre, and Lulu Glaser, in "Dolly Varden," at the Victoria. It is unnecessary to add

A NOTABLE APPLIANCE FOR THE FIGHTING OF FIRE—TESTING A NEW EXTENSION LADDER BEFORE THE FIRE CHIEFS AT THEIR RECENT MEETING IN NEW YORK.—Lazarevich.

that the continuous performance of "A Chinese Honey-moon" goes on at the Casino. It is too good a show to close.

Dramatic education will be materially helped, it would seem, by the plan outlined by the American Academy of Dramatic Arts to admit all worthy young men free of tuition. The board of trustees of the American Academy of Dramatic Arts and the Empire Theatre Dramatic School has recently passed the following resolution, to take effect October 1st, 1902: "No tuition will be charged young men for the junior or senior terms who satisfactorily pass the entrance examination and who meet the requirements and standard of the board of examiners."

The continuous performances at the leading variety houses are specially good this year. Proctor's companies, at his various theatres, are giving their best; the variety bill at Keith's cannot be surpassed, and is seldom equaled, and at the Eden Musée the latest things in wax works and cinematograph pictures are constantly being brought out.

JASON.

### Are the West Indies To Become a Continent?

THE CHANGES which are continually, though often imperceptibly, taking place in the surface of the globe have been newly brought to the notice of the public by certain recent statements of the scientists. For instance, apropos of the late violent volcanic outbreaks in Martinique and St. Vincent, Dr. Herbert E. Gregory, professor of geology at Yale University, was credited with saying:

The whole chain of islands in the Caribbean Sea is undergoing a change from island to continental structure, as in Japan. Earthquakes, volcanic eruptions, etc., will continue till this is completed. In time the whole chain will be a new continent, connected by land surface throughout.

Professor Gregory's specific grounds for his prediction were not given, but Professor James A. Kemp, who fills the chair of geology at Columbia University, in response to inquiries on the subject, explained that the islands of the West Indies were slowly rising to a higher level and thus gradually enlarging. Coral formations of comparatively recent origin had been found in Cuba at a considerable distance inland, which was clear evidence that that island had been undergoing elevation. There was similar proof, the professor remarked, in the case of other islands, and if the upheaval continued the water between the islands would eventually be displaced by dry land. This process, however, would probably require some millions of years for its completion, so that the changes to be effected were purely of scientific interest and of no practical importance at present.

From other sources it is learned that the volcanic eruptions also are to be a prominent factor in building up a connection between the islands. In the Greater Antilles there are no active craters, but the frequency of earthquakes there proves that this group is in the volcanic belt. Each of the Lesser Antilles contains an active, quiescent, or an extinct volcano. The overflows from these volcanoes have already constructed considerable portions of the islands. Two processes, therefore, gradual upheaval and eruption of land-forming material, are looked to by scientific men to fill up the gaps between the now separate small bits of land. Volcanic action of the kind mentioned would, of course, accelerate the movement toward physical union. On the other hand, there are intimations that the volcanic disturbances may result in the final collapse and elimination of some of the islands.

Should a West Indian continent ever be formed, in the ages to come, it would be simply a restoration. Geologists maintain that the islands, about 1,000 in number, extending from near the coasts of Florida and Yucatan in a wide curve down to and along the northern coast of Venezuela, are but the remnants of a once extensive prehistoric continent, the greater part of which was submerged. Should a new continental formation be effected, it would comprise the Greater and Lesser Antilles, the islands near Venezuela, including Trinidad, and possibly the Bahamas, the combined area of which at present is 92,641 square miles of actual land, with such increments as would be yielded up by the sea, which would doubtless be very extensive. The Gulf of Mexico and the Caribbean Sea would then be merely great salt lakes. So serious a geological rearrangement would obviously have a remarkable influence on the climatic, geographical, and political conditions of that section of the world.

# Why We Must Have a Greater Navy

By Captain A. T. Mahan

AT THIS time, while our naval manœuvres are attracting so much attention, it is pertinent to point out that it is commonly, but mistakenly, supposed that the present necessity for naval enlargement rests upon the acquisition of the over-sea territories by the United States, as a consequence of the war with Spain. The mistake is natural, for undoubtedly the war convinced our people of the advantage—nay, the necessity—of a great navy, and so led to the increase we are witnessing; but the necessity was approaching unobserved, and would have come upon us unawares and unprepared, but for the fortunate intervention of the war, and its demonstration of the usefulness of navies.

We have the highest military authority for saying that the best and only sure form of defense is to take the offensive, or at least to be evidently ready so to do at brief notice. The navy is essentially and pre-eminently a force that thus acts, in virtue of the mobility which is its prime quality; and it is scarcely necessary to argue that the more widespread the interests open to attack, the more valuable in this sense the navy is, and the more numerous and powerful must it be. So long as we had no external possessions, it was comparatively easy to blind people to the usefulness of a navy, or to the necessity for it. A navy for coast defense only was then a plausible, though deceitful, cry; and it was a very easy further step to say that fortifications, stationary land defenses, were cheaper and more effective. On the narrow ground of passive defense, that is true; therefore, ignorance of military principles being characteristic of mankind generally, and of Americans perhaps particularly, the need of a mobile force to act offensively could not obtain recognition.

It is not the least of the advantages we have derived from our new possessions that this condition of the public mind can exist no longer. It was very soundly argued, by the opponents of the expansion which has been realized in the last decade of the nineteenth century, that transmarine acquisitions would be so many new exposed points, to be supported by sea only, not by land, as our continental territory can. They were very right, and this is very true; the flaw in their argument, as well as the beam in the eye of the American public, which prevented it from seeing clearly, was the failure to note that, even when not possessing a square foot of territory without our borders, we had manifold interests abroad, assailable by a superior navy, and only to be protected by such display of force on our part as should make it not worth while to arouse us to action.

The argument of the opponents of territorial expansion, even within moderate limits, and with due regard to locality and consequent utility in the positions acquired, was thus plausible, and was deplorably successful; but it was fallacious. It adduced a sound military reason—the increased exposure—but wholly ignored qualifying considerations of the most serious character, reverse of conclusions. It may with much more certainty be now alleged, and the assertion can be supported to the point of demonstration, that the acquisitions of recent years, despite the additional requirement of their defense imposed upon us, have not necessitated any increase of our naval force beyond that which would have been imperatively demanded at the present time, had they never passed into our hands.

Even more, they have lessened the burden of purely naval increase, which but for them would have been necessary; for by the tenure of them, and due development of their resources, the navy itself receives an accession of strength, an augmented facility of movement, by resting upon strong positions for equipment and repair,—upon bases, to use the military term,—in several parts of the world where our interests demand naval protection of the kind already mentioned; namely, readiness to take the offensive instantly.

Facilities of this character add a percentage of value to a given mobile force, military or naval, for they by so much increase its power and its mobility. This percentage may be difficult of precise definition as to amount, but it none the less exists. That coal can be obtained near at hand, plentifully, and with certainty; that ships can remain in readiness, and in security, near the possible scene of operations; that they can be repaired there, instead of returning to the United States; all these conditions, which our new possessions will afford, enable the work on the spot to be done by fewer ships, and diminish by their storage facilities—by their accumulated and natural resources—the immediate dependence upon home by a long chain of communications, which is the great drain on all military operations.

Thus, according to the particular conditions, one ship may do the work of two, or three ships of five, or perhaps nine of ten; but, be the proportion more or less, the gain in efficiency means, as such gain always does, smaller numbers and therefore less expense. When a battleship in war time runs upon an uncharted rock, as the *Oregon* did a year ago in the China Seas, it makes an immense difference to an admiral, and to the operations in hand, whether she can be repaired at a distance of five hundred miles, or of five thousand. The case is the same with minor repairs, and with the renewal of coal, one of the greatest of naval anxieties. For instance, it would be difficult to exaggerate the value of Guantanamo, only fifty miles from Santiago de Cuba, to the American fleet off the latter port, which otherwise had to coal in the open, or depend upon a base many hundred miles away.

CAPTAIN A. T. MAHAN,  
The eminent authority in naval affairs.

This is not, in itself, an argument for large annexations, or indefinite territorial expansion. These, if desirable, rest upon reasons other than military. We are dealing here with a purely military consideration, and supporting it by military argument, which, however, cannot be pressed to the extent of supporting an action political in origin. The military argument amounts simply to this: that a moderate number of such bases, suitably chosen in view of their position and resources, strengthen a military or naval situation, and thereby enable fewer men or fewer ships to do the necessary work; but it must be at once qualified by the other perfectly familiar military maxim, that the multiplication of such bases, as soon as you pass the limits of reasonable necessity, becomes a source of weakness, multiplying exposed points, and entailing division of force. It is not even a matter of indifference that you have too many; it is a positive injury. Consequently, the necessity of naval bases to efficient naval action cannot by itself be made into an argument for indefinite expansion.

Such over-sea expansion as the United States has so far made has not been primarily for military purposes. Incidentally, it has contributed to naval power, and it has not as yet transcended the limit of utility to that end. What we so far have is useful, either directly or indirectly; the increase of exposure, as yet, does not equal the increase in strength. It is, of course, very possible that considerations of political or commercial expediency—or even necessity—might lead to acquisitions, the exposure and burden of which would find no compensation in increase of naval strength, or general national military security. The justification of such measures, if taken, must rest on other than military, or naval, reasons, and would not concern this argument; but in fact no such undue expansion has yet occurred.

The march of events, not in the United States only, but over the world at large, not of military or naval events chiefly, but of political events, events economical and commercial, has brought about the necessity, which is now universally recognized, for large navies; navies much increased over the standard of twenty years ago. Of this course of events in those two decades, and their result to-day, our war with Spain, which led directly or indirectly to the acquisition of every foot of insular territory possessed by us, is simply one incident; and that an incident rather disconnected, something of a side issue, though one most timely for the welfare of the country.

Had that war not occurred, there is no reason to believe that the mighty events which have transpired in Africa, Egypt, the Levant, and China would not have happened; still less that there would not have been the immense commercial developments, which, if less striking, are even more momentous, and more influential at this moment upon the policy of nations. The difference would have been, had we not had that war, that events and conditions which are moving the world would have been as they are, but that we should have been without Porto Rico, Hawaii, and the Philippines; without reserved rights in Cuba, the key of the West Indies and Gulf of Mexico; and that we should not have received the impulse, which the war and our consequent acquisitions most timely gave, to the building of our navy toward a point necessary to meet the demands of a political and commercial future, which in any case would have arrived, and, but for that war, have found us unprepared.

The general strenuous impulse of the great civilized states of the world to find and to establish markets and commercial relations outside their own borders and their own people has led to multifold annexations, and to commercial and naval aggressions, in which the United

States has had no part, but which have constituted a political situation that immensely increases our political and commercial anxieties, and consequently our naval responsibilities; for, as interests of this kind are outside our continent, it is upon the navy that their support rests. This external impulse of the commercial nations is of two-fold character. First, there is the perfectly legitimate and unobjectionable form of commercial competition, in open field and without favor; but there is, besides, the effort to extend and sustain commercial advantage by the extension of political power, either by controlling influence or by actual annexation, under cover of either of which the commercial system of the particular country obtains favored conditions, injurious to others, from special privilege all the way up to a practically exclusive market. The history of the past twenty or thirty years abounds in such instances, reverse of the course of trade even to the destruction at times of a well-established commerce.

Much of this politico-commercial movement has occurred in regions where the United States has been compelled, by her recognized traditional policy, to abstain from intervention, or even remonstrance. The politics is none of our business, and the resultant commercial inconvenience, if it touch us, has to be accepted. This applies to Europe generally; to Africa, which, both by position and now by annexation, is an appendage of Europe; and probably also to those parts of Asia commonly known as the Levant, which by juxtaposition are European in interest. The case is very different in South America, in eastern Asia, and in the Pacific. From interest in none of these are we excluded by the Monroe doctrine and its corollaries, by which we simply define our policy to be hands off in matters of purely European concern; while by our express declaration political interference in South America, of a character to intrude European political control, will be resented as directly injurious to us.

As regards the Pacific and China, the movement there, and especially in the latter, has been lately so much before the public that it is unnecessary to recall details. It is obvious, however, that where the commercial interests at stake are so great, and political conditions so uncertain, the desire to secure commercial opportunity will lead countries that possess force into a dangerous temptation to use it for the extension of their influence. Therefore, unless prepared to maintain our rights, either singly or in combination with others, backed by force at hand, we may find ourselves excluded, more or less, by the encroachment of rivals.

The case in South America is even more serious; for political interference there not only may injure us commercially, but would certainly dishonor us, in face of our clearly avowed policy. It must be remembered that this extension of commerce by political pressure is a leading element in the spirit of the times; and when such a spirit is looking watchfully for a field in which to act, one so fruitful and so promising as South America can secure exemption only by a display of power to resist, which South America itself does not possess, and which the United States alone can supply.

These are among the less favorable conditions which necessitate the creation of a powerful United States navy, and they are quite independent of our relatively small possessions, most valuable though these are from the naval point of view. We are confronted, in short, by a general movement of the nations, resting upon a spirit spread among their peoples, which seeks to secure commercial advantages in all quarters of the world; peaceable, if may be, but, if not, by pressure. In this collision of interests, force will have a determining part, as it has in all periods of the world's history; and force, in such remote localities, means necessarily naval force. It is upon the spread of this spirit and the action ensuing from it that the necessity for a great navy lies, and not upon the fact of our having assumed over-sea burdens. Porto Rico, Hawaii, the Philippines, and if there be any other acquisition at present, have not created the necessity; on the contrary, they have relieved the extent of the burden, by contributing to support it.

## The Value of the Historical Novel.

THE PRESENT-DAY historical novel has reached but the first of its possibilities, but even for this it deserves our gratitude. It has added some heroic and otherwise interesting types of character to those with which all readers of fiction are acquainted; and with them it has given a new lot of scenes, which, with the historic characters, compel much increase and variety of action. Great men of other days have been presented with fair deference to history and biography—some of them in pen-pictures absolutely brilliant, and in scenes that have prompted thousands of readers to their first search of pages more serious than fiction. Of most of these great characters it must be said that their appearances in the novels have been, like angels' visits, few and far between, but there is something inspiring and ennobling in even a momentary glimpse of a great presence.

### The Coming of Duse.

I WISH I had a collection of all that has been surmised, intimated, or boldly asserted about the "relation" which exists between Eleonora Duse and her great countryman, D'Annunzio. Who of us failed to read "Il Fiore" and enjoy our own little private thrill at the thought of the marvelous but deplorable love of the two great Florentines? Did Eleonora Duse carry a wicked little stiletto concealed about her person for months, awaiting her opportunity to slay D'Annunzio for thus exposing to public view her life's great passion? I fancy not, since D'Annunzio spent a great many mornings in the workroom at the Duse villa about that time, discussing with the great tragedienne the plans for the production of "Francesca da Rimini," which took place at Rome not so long after the circulation of these wonderful stories anent the murderous enmity existent between the two.

When we heard that Duse was coming to America this year the first question which agitated our minds was, "Is D'Annunzio coming, too?" How eagerly we awaited the answer, and how disappointed we were to find he was not. Indeed we were. We wanted to lower our voices and say "Duse and D'Annunzio" behind our fluttering fans. The names blend so euphoniously. Too bad that most of us pronounce D'Annunzio as if it were spelled with a ch instead of a musical Italian z.

But he isn't coming over—at least not now. He and Duse fought all their difficulties and differences about stage business and interpretation of his play long before she thought of producing it in America; and now she will be rid of an exacting playwright for a while, and he will be free from the vexations of a self-willed, erratic star.

No, D'Annunzio is not coming to America. Alas! for our itching tongues. But somebody else is. The beautiful daughter of the Duse, the beloved daughter for whom she toils, hopes, suffers, and strives; the beautiful daughter upon whose ebony-crowned head she has cast all her laurel wreaths with a mother's prayer of thanksgiving that she has won them to that end; her beautiful daughter, now verging on womanhood, of whom the world has heard so little, but who is all in all to the great tragedienne—she is coming over with her illustrious mother, and we will have to find somebody else to talk about.

But the Duse! Should we not lower our eyes before that sad, womanly face, which bears the stamp of struggle and toil and years of bitter trial, but through which shines a soul so great as to be above the reach of the earth stain we would blacken it with? Our great ones of earth, why should we not burn incense to them in thanksgiving for the mind life they have given us, instead of enveloping them in the murky, dun smoke of sensual gossip? We are iconoclastic when we should be makers of idols, and so we retard our own development.

So D'Annunzio is not coming, while the beautiful signorina is, and those Americans who are fortunate enough to catch a glimpse of this exquisitely moulded young Florentine will not wonder that her countrymen repudiate, with true Italian vehemence, the insinuations, speculations, and assertions that smirch the soul of their idol, her lovely mother.

ELEANOR FRANKLIN.

The famous Italian tragedienne, who re-visits America this season.

### A Novel Political Rally in Chicago.

THE BIG scale on which things are done in the West was exemplified by the opening rally of the Republican clubs of Chicago held recently in Sans Souci Park. More than 100,000 men, women and children were in attendance, by far the greatest number of persons that ever gathered at a political meeting in the West. The speaking was good and there were some unusually attractive features. The afternoon was set apart especially for women and children, although thousands of men were present. Each child was given a small purse and ten new cents fresh from the mint. Thousands of valuable and useful presents were distributed among the women. These included almost everything imaginable, from a house and lot to a bottle of perfume. Everything was free, and enough lemonade was drunk to float the Oregon. One thousand gallons of ice-cream and countless thousands of cakes and sandwiches were eaten, and yet there was not enough for all, the attendance having surpassed all expectations. For their ingenuity in devising methods to interest the people and bring out the crowd the Republicans of Chicago must be accorded the palm.

### Oregon's New Law-making Scheme.

THE INITIATIVE and referendum, an exercise of popular suffrage on which many civic and political reformers place large hopes, is to have a practical test in Oregon. At the recent election in that State a constitutional amendment was adopted, applying the initiative and referendum to State legislation. According to the provisions of this new amendment, whenever eight per cent. of the voters of the State shall petition for the passage of a specific piece of legislation, it must be submitted to the popular vote, and shall become a law if approved by a majority of those voting on the proposition. An enactment by the Legislature may be referred to the popular vote for approval by the Legislature enacting it, and must be whenever five per cent. of the legal voters of the State shall petition for such referendum, and the law shall not take effect unless approved by a majority of those voting on it. The Governor's veto power does not extend to measures submitted to the people under the initiative and referendum. It remains to be seen to what extent the people of Oregon will take advantage of the opportunity thus offered them to secure legislation to their liking. It is beyond question that the initiative and referendum is a method with large possibilities for good, having the effect, as it does in operation, of giving the people more direct power in legislation than any other law-making system ever devised and freeing them absolutely from the dictation and influences of cliques, factions and bosses. In brief, it is designed to make "a government of the people, by the people, for the people" more of a reality than ever before.

### Curious Story of the Cunning Filipinos

TWO MOST interesting Filipino images are now held up at the San Francisco custom-house awaiting a decision as to whether duty must be paid on them or not. The carvings represent a famous black Christ and a white Virgin Mary, carved by Filipinos and used by them to extort money for war funds. The images are intended for the museum at West Point, but the officers of the Eighth United States Infantry, who brought them in, are unwilling to pay duty and there the matter stands. The story of the black Christ is interesting. It was the duty of the Eighth Infantry, as part of its work in the southern provinces, to suppress the gathering of a war tax in support of the insurgent cause. Word came to the command at Pagsangan, a town of 1,500 people in Laguna province, that 10,000 pesos, or Mexican dollars, had been secretly gathered there for the rebel fund cause. This was in the district occupied by a religious sect called the "Calorum." Captain M. B. Stewart, of the Eighth Infantry, started out to search for and confiscate this insurgent war fund. In one of the buildings indicated he discovered 400 pesos and seized that amount, but that was all he secured of the reported 10,000.

The small sum was found in a peculiar place. The money was secreted under the robe of a black image of a man worshiped by the sect. Near this image was one of a white woman. They consisted of wooden heads and hands affixed to a small upright standard, over which the robes were properly draped to hide the lack of bodily form. Hempen locks made into wigs were used for hair. These images were not further disturbed by the soldiery, but the officer took the money back to headquarters and reported its discovery as part of the hidden war fund. Later on, the following explanation was received of the manner in which the images had been utilized by the insurgent chiefs in extorting money from the natives.

When the various war-revenue schemes had been suppressed by the vigilant soldiery of the United States, some shrewd Filipino devised the idea of a black Messiah. The color would be a novelty and its effect telling upon the superstitious natives. It was called "The Coming Messiah." To heighten the effect and add to the awe of the thing the image was further endowed with speech. José Zaide, a much-traveled native Filipino, who had been valet for an Englishman in many parts of the world and had learned several languages and the art of ventriloquism, was the hidden voice power of this image. Screened himself, Zaide would throw his words so that they seemed to emanate from the mouth of the black image. This voice exhorted the natives to give of their money to the end that the white man might be swept from the land. When this whole story was reviewed in the headquarters of the Eighth Infantry it was decided

THE BLACK CHRIST—CURIOUS IMAGE USED BY INSURGENTS TO EXTORT MONEY FROM SUPERSTITIOUS FILIPINOS.

BARE CARVED HEADS OF THE TWO PECULIAR FIGURES.

that the scheme should be suppressed and the image confiscated. Accordingly, Captain Stewart, accompanied by First Lieutenant J. F. James and a detail of men, returned to the place where the money had been found. The images were gone, and with them the cheap vestments. A bribe to the old native woman in the house secured her personal services as guide to a little neighboring village, where, in one of the houses, she pointed out a plain Filipino trunk. In that trunk the officers found the wooden heads, the double pair of hands, and the wigs and garments. The trunk was taken to regimental headquarters, and thence to Manila. Then

came the question what to do with the images. No disposition could be made of them. It was not expedient to return them to the schemers who had used them with the ventriloquist's help. As the Eighth was about to embark for America the officers decided to bring the heads along with them.

The carvings give evidence of having been made within the last two or three years. The face and hands of the black image had been smeared with blood, into which, for added effect, had been sprinkled the fuzz from some red woolen garment.

### The Elephant as a "Plow-horse."

THE USE of a sledge-hammer to drive a tack would appear scarcely more incongruous than the occasional practice of the Hindu husbandman of having an elephant draw his plow. Employment of this powerful and sagacious animal in important work where heavy lifting is required does not seem to detract from his dignity, but plowing appears a petty task for so noble a beast. That he does his duty, here as elsewhere, when well trained, need not be asserted. Neither stump nor stone in the way of the plowshare could stop him, though the implement itself might give way. The latter, as it is in India, is a peculiar device, with a single handle and a very long beam. The farmers of the United States would utterly scorn it. The area which can be turned up in a day with an elephant as a "plow-horse" is large, and he is remarkably handy in one respect. At the close of the day's labor he picks up the plow and carries it home in his mouth.

### A Puzzling Problem in Meteorology

THE FACT that the past summer in the Northern States of the Union was an abnormal one, both as regards temperature and precipitation, presents a puzzling problem in meteorology. In June, July, and August the weather averaged cooler than for many years, with comparatively few days of excessive heat. While August was not an over-moist month, June and July, in most localities, were wetter than the mean for several decades. During the latter two months not only was the rainfall frequent and heavy, causing widespread discomfort and damaging the crops, but also the storms were marked by unusually severe electrical disturbances. Various theories have been advanced to account for these phenomena, but none of them has been verified.

The notion that the influence of the planets or of the serious seismic and volcanic happenings of the year had a bearing on the peculiarities of the weather is discredited by so eminent an authority as Astronomer William R. Brooke, of Geneva, N. Y. But a more ingenious explanation of the electrical storms of the summer is the one suggesting a connection between them and the artificial creation of electricity by machinery, now proceeding on an extensive scale throughout the civilized world. It is questioned whether this vast diversion of electric currents from their normal channels or reservoirs may not have destroyed the equilibrium of the natural forces and thus have bred atmospheric conditions which occasioned the storms. Scientists generally do not approve of this theory. President Olcott, of the American Institute of Mining Engineers, indeed almost completely refutes it by showing that the most violent of these storms occurred in sections such as the upper lake region, Upper Canada, and the Northwest, where very little electrical energy is being produced by artificial means. There were, it is true, very angry storms in the vicinity of the greatest electrical plant of the world at Niagara Falls and in New York City, where there is an immense artificial production of electricity. But Mr. Olcott says the storms in New York this season have not differed essentially from those of previous years, and the amount of electrical energy artificially developed is insignificant compared with that evidenced in a storm.

This scientific argument is reinforced by a historical one. The year 1816 is known as the "summerless year," because snow fell and ice formed during every month of the summer season and the crops were almost totally ruined. These wintry storms certainly were in no wise the effect of any displacements of electricity due to the agency of man, for there were at the mentioned date no important efforts made in that direction. The basic causes of meteorological phenomena are no better understood now than they were then, and the advent of a great discoverer in this field is likely to be long awaited.

THE MARCONI WIRELESS TELEGRAPH STATION AT GLACE BAY, N. S., AS SEEN FROM THE ATLANTIC.

MR. VYOYAN, MARCONI'S FRIEND, AND SUPER-INTENDENT OF THE STATION.

## Two Remarkable Inventors Experimenting in Nova Scotia

Marconi Keeping His Latest Wireless Telegraph  
Invention a Secret—Professor Bell  
Devising a Flying-machine

By Everett Wilkes

HALIFAX, N. S.,  
Sept. 21, 1902.

**T**WO EMI-  
NENT in-  
ventors have  
during the past  
summer been  
making Nova  
Scotia the scene  
of their experi-  
ments, aiming

to effect things that shall revolutionize the world. At his station at Glace Bay, Mr. Marconi has been striving to perfect his wireless telegraphy apparatus, while at his summer home on Bras d'Or Lake, Professor Graham Bell, the deviser of the telephone, has been dabbling in the possibilities of a flying-machine. Two such inventions as these, if made to be of practical use, would obviously have a profound influence on the destinies of mankind.

In view of the wide interest taken in Mr. Marconi's invention, I recently visited Glace Bay, with the object of securing photographs of the station and the instruments it contains. The station is situated on a rugged part of the Cape Breton coast, at almost the extreme eastern bound of the island. It comprises some suitable, but not very costly, buildings, including a receiving house, and there are four lofty towers of steel, from the summits of which overhead receiving wires are yet to lead to the receiving house. One of these towers is 210 feet high. Similar structures will exist at other stations, and it is from the level of the tops of these that the electric vibrations will proceed from one station to another. The site has been selected with good judgment and the work done there is expected to be decisive as to the practical avail of wireless telegraphy.

Mr. Marconi was absent at the time of my visit, but his personal friend and chief of staff, Mr. Vyoyan, to whom I presented my letters of introduction, received me cordially and talked freely on the great subject which he and his employer have nearest at heart. I was allowed to take pictures of the exterior of the station, but not of the interior of the receiving room, the most important part of the plant. During Mr. Marconi's absence nobody is permitted to enter this apartment except Mr. Vyoyan. It appears that the new instruments installed there embody some novel processes, one of which enables the transmission of a message which can be received only by the station to which it is directed. These instruments are not yet perfectly adjusted, and they will be carefully guarded from prying eyes until they have been tested and made thoroughly adequate and patents on them have been granted. Should Mr. Marconi succeed along this line, he will have cured a defect that threatened to be fatal to the commercial value of his system. Secrecy in the transmission of dispatches by wireless telegraph has not hitherto been possible. Any receiver adapted to the purpose, within the radius of the sender's efficiency, has been able to catch the message as well as the instrument for which it was intended. Mr. Marconi has been endeavoring to specially "attune" senders to receivers, so that communications can pass only between instruments fitted to each other. It is supposed that he has now hit upon the correct method and is simply trying to improve his mechanism.

In response to my questions, Mr. Vyoyan stated that the delay in commencing operations was due to Mr. Marconi's anxiety to have his system thoroughly tested before offering it to the public, and to the experiments he had been conducting in his efforts to preserve the integrity of individual messages. Mr. Vyoyan said that these experiments had been most successful and the last serious objection to the wireless system would have been over-

come when a public test was made. Mr. Vyoyan would neither affirm nor deny the rumor that messages had already been exchanged between his station and the wireless station at Cornwall, England, but in view of the experiments which have been conducted it is safe to assume that the rumor is correct. He gave an emphatic denial to the statement that the delay in the completion of the station was intentional, or that operations were being suspended until such time as the Marconi Wireless Telegraph Company's stock could be unloaded on the public. He did not think that there would be any public exchange of messages across the Atlantic until late in the present year. The Glace Bay station, he informed me, is subsidized to the extent of \$80,000 by the Canadian government, and for this concession Mr. Marconi contracts to convey transatlantic messages for the public at the rate of ten cents a word and government and press messages at five cents a word. The new instruments are expected to receive and transmit at the rate of at least one hundred words a minute.

Asked as to what actual proof there existed beyond Mr. Marconi's own assertion that a message had been sent by the wireless system from England to Newfoundland, Mr. Vyoyan stated that Mr. Marconi had an assistant with him at the time and that this assistant as well as Mr. Marconi himself affirms that the letter "S" was received distinctly several times. He instanced besides the recent exchange of messages between the steamship *Philadelphia* at sea and the station at Cornwall, a distance of 1,551 miles. At that distance messages regarding the condition of the weather at the respective points were distinctly exchanged. A greater achievement, however, he claimed, was the exchange of messages (at the time of the King of Italy's visit to Russia) between the Italian war-ship *Carlo Alberto* at Kronstadt, Russia, and the Cornwall station, a distance of 1,400 miles, 800 of which was over land. This, on account of the land resistance, was held by Mr. Marconi to be equivalent to 1,000 miles over sea. Mr. Vyoyan also called attention to the fact of the late exchange of "marconigrams" directly across Spain, between the Italian war-ship *Carlo Alberto*, which is at Cadiz, and the wireless station at Poldhu, Cornwall. He said it was anticipated that a commercial line would before long be in operation between Italy and England. King Victor Emanuel has placed the *Carlo Alberto* entirely at Mr. Marconi's disposal for conducting experiments between England and America. Mr. Marconi has been on board that vessel himself for some time and will sail on her to Glace Bay and later to Cape Cod, where he will make tests of wireless telegraphy with Italian stations.

A late dispatch from Rome stated that Mr. Marconi declared that he had completely solved the problem of sending wireless messages over a distance of more than 1,500 miles, and that he was confident that communication would be established between Europe and America in the near future. Mr. Vyoyan made a still more emphatic statement, saying: "So confident is Mr. Marconi of the complete success of his wireless telegraph system, that he contemplates erecting at once another station in Cape Town, South Africa, and that messages will be exchanged between that point and the Canadian station direct as easily as between the Canadian station and England." It is evident that if the inventor's full expectations are realized there will be no use for, at least, any additional ocean cables.

I called Mr. Vyoyan's attention to the recent Associated Press dispatch alleging that Mr. Marconi was not the inventor of the system that bears his name and that the man to whom the credit belonged was Marquis Luigi Solari. Mr. Vyoyan said the report was grossly exag-

CLOSE VIEW OF AERIAL TOWER, SHOWING THE METHOD OF CARRYING RECEIVING WIRES FROM THE RECEIVING HOUSE TO A HEIGHT OF 210 FEET.

gerated. Mr. Marconi never had laid claim to the discovery of wireless telegraphy, but he did claim the credit of putting it to practical use. He meant unquestionably to give Solari credit for a minor invention, patented under his own name, but beyond that there was no truth in the press dispatch. Solari was a warm personal friend of the inventor's and had been associated with him in his early experiments, but he had nothing whatever to do with the discovery of the Marconi wireless telegraph system.

My visit to the Marconi station was supplemented by a call on Professor Graham Bell, which required a not very long journey from Glace Bay. The summer residence of Professor Bell is situated on a neck of land running into the beautiful Bras d'Or Lake, about seven miles from the pretty village of Baddeck, Nova Scotia. If the professor's idea was to seek seclusion he has certainly found it there, among the hills of Cape Breton Island and out of the beaten track of the ordinary tourist. There, for the last five years, during the summer months, he has been experimenting, and the goal to which he is looking forward is the construction of a dirigible flying-machine. There are two large laboratories erected on the grounds, and the impression one has on first entering them is that they are big play-houses for boys, for they are both filled with hundreds of kites of all shapes and sizes and in all stages of construction. A glance, however, at the air current diagrams on the walls and the complicated models on the tables soon convinces one that behind all this is a scientific brain that is slowly, but surely, solving the problem set before it.

Professor Bell's theory of a flying-machine differs from that of modern aeronauts, inasmuch as he claims that the kite principle is the only one by which the air can be successfully navigated, and it is along this line that he is conducting his experiments. It was the appearance of one of these combinations of kites (constructed in cylindrical shape, about ten feet long and five feet in diameter at the centre), flying in the air and apparently rising and falling at the will of the operator, that gave rise to the rumor that Professor Bell had at last completed the construction of his flying-machine. This, however, is not the case. The inventor's plans are very little advanced beyond the initiatory stages, and it is understood that three or perhaps four years more will elapse before the results of his experiments are given to the public.

It is perhaps an unfortunate thing for science that Professor Bell is now a wealthy man; otherwise he might work a little harder at this project of his. At present he appears to devote to it but a little of his spare time. The professor guards his models with the utmost care and will not permit the picturing of them at present. He is apparently a firm believer in the eventual success of aerial navigation.

### Summer Weariness.

HORSFORD'S ACID PHOSPHATE

relieves the languor, exhaustion, and nervousness of summer. It strengthens and invigorates permanently.

### An Adapted Food

for infants is a scientifically-prepared cow's milk—just the right percentage of fats and proteids. For forty-five years Borden's Eagle Brand Condensed Milk has been the leading infant food of the world. Use it in tea and coffee.

### The Fair Women of St. Louis

ST. LOUIS is famed the world over for her beautiful women. To designate the belles of the Mound City is not an easy matter, as marriage in early life is quite the fashion, the young matron in many cases having made her debut but a few months before her nuptials, and thus it is that the most attractive of St. Louis's young women are equally divided amongst the maids and matrons. A very popular social leader is Mrs. Dr. Otto Forster. She is a woman of rare culture, having traveled extensively in foreign lands. Her collection of paintings by famous artists is a valuable one. Mrs. Forster is well known for her extensive charities, despite her propensity to "hide her light under a bushel." Mrs. Ralph Orthwein, of Orthwein Heights, is one of the young matrons who are the pride of St. Louis. She was formerly Miss Neva Andrum, and, although born in the southwestern part of Missouri, she was reared in sunny Tennessee. She is tall and fair, and an ideal complement to her tall, dark, athletic, good-looking young husband. Mrs. Orthwein is a charming hostess and is never happier than when entertaining her friends, except when she is responding to some call for aid, and many a "God bless her!" is echoed at the mention of her name. The champion saddle horse of the Western country, "Rex McDonald," is among the roadsters in the Orthwein stables, and Mrs. Orthwein is an expert horsewoman, riding astride.

Miss Lucille A. von Overstolz, a daughter of Mrs. Dr. Otto Forster, is one of the most admired belles of St. Louis. She is a descendant of a celebrated German family, was born in St. Louis and educated at Miss Annie Brown's school in New York. She has a voice of exquisite sweetness and marvelous power. She is petite and dainty, and her brown eyes elicited the admiration of Baron Bodenstedt, the great German poet who wrote "Mirza-Schaffi." Last winter New York added to the coterie of St. Louis's handsome women when Miss Marie Whitmore, daughter of Dr. Whitmore, editor of the *New York Medical Journal*, became the wife of David Randolph Calhoun, vice-president of the Ely-Walker Dry Goods Company. Mrs. Calhoun is a woman of remarkable beauty, and the interior of her mansion on Lindell Boulevard bespeaks the traveled hostess. She is an accomplished musician, a fine linguist, speaking French and Italian with fluency, and is as much at home in the water as on dry land, having won four prizes for long-distance swimming. She ranks among the leading horsewomen of St. Louis, her favorite mode of driving being a tandem four-in-hand.

A very lovely little woman of the Dresden-china type is Mrs. Walter Edmund Grayson, of McPherson Avenue. She has golden hair, blue eyes, and perfect features, and was born and bred "in Missouri." She is an ideal hostess and prides herself on being an excellent housekeeper. She is the devoted mother of a two-year-old son. Miss Marietta Dwyer, of Lindell Boulevard, is of an unusual style of beauty, having bewitching brown eyes and a wealth of golden hair. Her complexion is of a richness which bespeaks plenty of outdoor life. She is said to be one of the best-gowned young ladies in St. Louis. She is a gifted pianist and possessed of a voice of unusual sweetness. In her delightful home, near the entrance to Forest Park, are many pieces of decorated china and other paintings, testimonials to her ability with brush and palette. She is a graceful dancer and a capable whip. Horseback riding is her favorite exercise. Miss Dwyer is a member of the Alumni Association of the Georgetown Convent, Washington, D. C.

Another young and fascinating matron is Mrs. A. W. Lawnin, of West Pine Boulevard, daughter of the late Benjamin Chouteau Sandford, one of the pioneer settlers of St. Louis. Mrs. Lawnin was married August 4th and as Miss Virginia B. Sandford she held sway among the leading belles of St. Louis. She is an heiress in her own right. Miss Juliana Frieda Werth is the daughter of G. Louis Werth and the granddaughter of Henry Christian Werth, who, in 1850, founded the first German Presbyterian Church, now located at the corner of Tenth and Rutger Streets. Miss Werth is descended from Jean de Werth, who was one of the greatest generals of the seventeenth century, and the only one to whom the great old fortress, Ehrenbreitstein on the Rhine, ever capitulated. He was made general-in-chief of the imperial army by Emperor Ferdinand II., and in 1648 earl of the empire. Miss Werth was for three years in Europe, where she gave most of her time to the study of music and languages. She is the possessor of a highly cultivated voice of great sweetness, and has, in a number of instances, taken part in light opera and concerts for charitable purposes. On her mother's side she is also descended from a noble family, the Luderus von Ludetrum. Another handsome and popular young matron is Mrs. Crawford Duncan, of West Pine Boulevard. She is among the leading horsewomen of St. Louis and is noted for her fearless riding. She is of the brunette type of beauty, of a sympathetic nature, and possesses a charming personality. She is an ideal hostess. One of the most winsome beauties of

"THE AISLES ARE QUIET REACHES."

### GOD'S CATHEDRALS

WE DO not know;  
We only go  
Our way—  
We who live within the wood.  
Each day  
We feel the presence of the Everlasting Good.  
The woods are God's cathedrals—hospitable  
churches  
Whose pillars are the pearl-white birches  
And the rugged hemlocks green;  
The chancels are agleam with the balsam's  
tender sheen;  
The aisles are quiet reaches  
With domes of golden beeches;  
From Nature's leafy organ-loft  
Mystic harmonies swell marvelously soft—  
Offertories tremulous and sweet, floating down-  
ward from the height  
Where the choristers of the forest stay their  
flight;  
Everywhere—from the mountain's rocky peak  
down to where the golden-rod  
Bends above its mossy sod—  
Everywhere the breath of God.

F. G. BARRY.

St. Louis is Mrs. May Maguire, of Bartmer Avenue. She is a brunette with vivid coloring, has an animated manner and an exceptionally sweet voice.

DOLLY KENNEDY YANCEY.

### The Great Value of Cotton Seed.

IN NO direction have modern processes for the utilization of so-called waste material produced larger or more gratifying results than in the conversion of cotton seed into a valuable commodity. Forty years ago there was no use for cotton seed, the decaying accumulations of which were a menace to the health of Southern communities. In 1900, when 53 per cent. of the seed produced was utilized, the planters received \$28,632,000 for seed sold to the oil mills, and the value of the products of those mills was \$42,411,000. Half (46,902,000 gallons) of the oil made in that year was exported. To thus change the value of an article which could only have been represented forty years ago by a minus quantity into many millions is certainly an achievement worthy of a place among the miracles of modern times.

### Millions in Montana Wool

MONTANA HAS this summer again demonstrated its great importance as a wool-producing State. The Great Falls (Mont.) Wool Exchange closed August 9th, the actual sales having amounted to 9,846,000 pounds, and this being twenty per cent. greater than ever before. Billings (Mont.) was a close second with 9,108,000 pounds. Each claimed to be "the greatest initial wool market in the world." The average price at Great Falls was 15.54 cents per pound, at Billings 13.42 cents. The highest price at Great Falls, and in any market in the world for that matter, was 17½ cents. The largest company clip was that of Bower Brothers, of Fergus County, 270,000 pounds.

The Escallier Sheep Company, of Shelby, sold 3,500 fleeces from French merino ewes at 15½ cents, the fleeces averaging thirteen pounds each, or \$2.01½ per fleece. This is a record for Montana on a fair-sized clip. J. Sturgeon & Co., of Dupuyer, sold 23,000 pounds, averaging eleven pounds to the fleece, at 16½ cents, or \$1.80 per fleece. These were from Spanish merino ewes, some going a few ounces over twenty-one pounds per fleece. The total amount of wool baled and shipped from Billings was 13,261,000 pounds, while the wool sold at Fort Benton (1,500,000 pounds), Malta, Chinook, and other outside towns was all handled in Great Falls. The wool sheared in Montana in 1901 amounted to 29,796,080 pounds, and the total for 1902 is estimated at 33,000,000 pounds.

Hand shears are fast giving way in Montana to the machine clippers, though the record is still held by a hand shearer. The best record ever made in Montana was by Dick Marquis, who sheared two hundred and ninety-six sheep in one day with a machine, but worked fourteen hours. The average price paid was eight cents per fleece, the shearer paying one-fourth of a cent to the gatherer. The men at the Long Nelson sheds, running twenty-four machines, struck for nine cents clear, or a raise of one and one-fourth cent per fleece, but the strike failed. The shearers of the State have since organized a union and hope by another season to have enlisted most of the shearers in the United States. The field work of the wool buyer is over for this season, Great Falls being their last market, the circuit starting in Texas in April and following up through California and the Northwest as the season advances. For the rest of the year he may be found in the Eastern warehouses, sorting his purchases and selling to the consumer, while the stockmen, herders, and freighters have already returned to their routine work, and the freight clerks, though still in the midst of their shipping, are planning annual vacations before returning to their normal every-day business. The range never was in better condition at this season of the year, and the stockmen, though well satisfied with the past season, hope for even better returns in 1903. Northern Montana is certainly an ideal sheep country.

### Chinese Superstitions

#### Regarding Foreigners.

THE STATE of affairs in China continues to be one of great unrest, to which there appears at present to be no end. Apart from sporadic rebellions, the constant ill-feeling there toward foreigners threatens the peace of the country, and may yet embroil it with other nations bent on vengeance. The existing disagreeable conditions are clearly revealed in the following letter, written by one of his employes to a distinguished American now living in China and having business connections there, and which we have been permitted to print for the first time.

YIN-TAO-LING, July 28th, 1902.

There is great excitement among the people here at present, caused by the fact that rumors are prevalent that we—the foreigners employed by the mine and railway—have hired a lot of bad men to come here to kill small Chinese children and cut out their eyeballs and some other parts. The idea is that we ship these things abroad where they are used by foreigners to make medicine. About six weeks ago two children were killed and mutilated near by, and I think two more were killed near another town. Since then several Chinese peddlers, travelers, and other strangers have been seized in the villages up and down the line, tortured, and done to death. Strong proclamations have been issued and several hundred more troops have been sent here to re-enforce our guard. A few nights ago Mr. — came to my camp to spend the night, because a mob of six hundred people (as Mr. — was told) were burning a suspect to death in plain view of his camp. About three days ago one of our mail coolies was seized and beaten nearly to death near Lao-Kwan. He was rescued by soldiers or probably would have been killed. The reason given by the mob for attacking him was that he was carrying foreign letters, probably containing matter relating to the subject of eye-cutting. Night before last the head office in — was besieged by a mob, but I hear this was because one of the gentry inside struck a man. The situation may get better, but you need not be surprised at any time to hear that we have cleared out to wait until order is re-established.

MR. JAMES LANE ALLEN,  
The Distinguished Author of "The Choir Invisible."

IT IS said that no living American author has such an intense dislike for newspaper fame and for being "written up" for any purpose as James Lane Allen. Nevertheless, since Mr. Allen has brought popularity upon himself by such books as "The Choir Invisible" and "The Reign of Law," he cannot well escape the penalty which attaches itself to all successful men and women in these days of the interviewer and the camera. When a person has achieved the real distinction which Mr. Allen has won in literature he becomes public property, in a certain sense, and must submit with all the grace he may to being discussed in public print. Mr. Allen was born on a farm near Lexington, in the very heart of the blue-grass region of Kentucky, where the Allens had been gentlemen farmers for three generations before his birth. They were originally Virginians of English ancestry, and by blood and by marriage were related in Virginia, and afterward in Kentucky, to the Madisons, Paynes, Johnsons, Lanes, Conyers, and Clays, all historic families. On both sides the author comes of Revolutionary stock; his maternal great-grandfather, Daniel Foster, was killed in the Revolution, and the widow, Mary McCullough, drew a pension until 1833. Mr. Allen's mother, Helen Foster, was born in Mississippi, married at fifteen, and lived the greater part of her long life in Kentucky. Mr. Allen's novels have had almost as large a sale in England as in this country, and the demand for them both here and there keeps up steadily.

THAT THE new and marvelous features of African life and scenery have not as yet been exhausted by writers on that country is evident in the work on "The Uganda Protectorate," by Sir Harry Johnston, which is announced for immediate publication by Dodd, Mead & Co. The Uganda region is very extensive and affords the most striking contrasts both in the character of its people and its scenery. It contains the highest snow peak in Africa, the largest extinct volcano, Elgon, and a hundred square miles of perpetual snow and ice. In the Upper Nile valley is one of the hottest places on earth. In the same region are the strangest human contrasts, from the ancient pigmy nation, living naked, like forest animals, to the scrupulously clothed Buganda, who insist that the wild tribes who do business with them shall wear trousers or an equivalent; and besides these wonderful men are the strange beasts, "the okapi, the chimpanzee, the five-horned giraffe, the rhinoceros with the longest horn (the white rhinoceros, extinct in the south, but rediscovered in Uganda), and the elephant with the longest tusks." The book gives the best account extant of the pygmies. Sir Harry rescued a number of these from a German trader, who had kidnapped them and was taking them to the coast, and first kept them about his camp and then restored them to their homes. They became his devoted friends, and were full of cleverness, sympathy, and imagination. Perhaps the most extraordinary fact about the race is that it appears to have been the primitive one of central Africa, and still remains widely scattered among the large agricultural races, the language of which the pygmies invariably adopt, though they never copy their way of life. They generally have a friend or two in the big negro villages, and if this friend goes out into the forest and shouts to them the little people will appear silently, as if sprung from the earth or trees, come up, and be friendly. They are naturally very fond of music, but are not good at inventing instruments. They greatly admire the more elegant string and other instruments of the big negroes, and when they make friends with these one of the first things they do is, like children, to borrow their fiddles and drums, which they twang and thump with ecstasy, and immediately improvise an elaborate piece of orchestration.

WE OBSERVE that the London *Spectator* heads its review of Professor John C. Van Dyke's "The Desert" (Scribner), "An American Prose-Poem," a truly apt and just characterization. The volume furnishes a striking illustration of the fact that one who has a cultured and well-stored mind and an imaginative temperament, who has trained his eyes to see and his ears to hear, can find things that are marvelous and beautiful in nature at any time and everywhere; that through his trained observation even the wilderness and the desert places may be made to blossom as the rose. Professor

Van Dyke's enthusiasm is so contagious that it gives one, for the first time, a notion that, after all, these vast spaces on the map that are labeled "desert" may have a good purpose in the scheme of things. French engineers talk largely about the possibilities of irrigating and fertilizing the Sahara. English engineers think that one day, when the coal is all burnt up, the world may derive its heat from the "leagues and leagues and leagues of desolation," where the school-books tell us that an egg can be cooked by simply laying it on the sand. Mr. Van Dyke has found a simpler and cheaper use for our great American desert—that of gratifying the nature-worshiper who thinks that our effete old Europe is too much "clammed up" with man and his handiwork. It is there that he urges us to find the ampler ether and diviner air of which poets always dream.

OF LATE years there has been much complaint to the effect that the art of spelling has been neglected in our public schools. With a view to the correction of the deficiency Mr. Eugene Bouton, Ph. D., has produced a text-book, entitled "Spelling and Word Building," which appears to have much merit. It contains a vocabulary

MRS. EDITH WHARTON,  
Author of "The Valley of Decision," one of the successes of the season.

of 2,300 words, which pupils in primary grades are required to learn. The words are presented on the same page, both as individuals and arranged in columns according to phonic laws, and suggestive illustrations aid the children in fixing the meanings in their memories. (University Publishing Company, New York City.)

WE HAVE only words of sincere and hearty commendation for the little volume on "Maternity" recently issued by the Vir Publishing Company, of Philadelphia. The author, Mrs. Emma F. A. Drake, is a wife and mother, as well as an eminent and successful physician, and her counsels to women are based on personal knowledge and experience as well as wide study and research and extensive practice. Like all the books issued by the Vir Publishing Company, this volume is pure in tone as it is plain in diction and practical as it is wise and helpful.

WE HAVE heard nothing yet as to the feelings of Mr. Alfred Austin, Mr. Watson, and some thousands of other gentlemen who wrote odes for the coronation that did not coronate on schedule time. As most of them who were lucky enough to get early in print were probably paid for their efforts "on receipt of manuscript," it may be supposed that they are not feeling very badly about it. If there is one thing that the average poet likes better than getting his verses printed it is to be paid for them in advance of publication.

BISHOP HENRY C. POTTER, of New York, is the author of "The East of To-day and To-Morrow," which the Century Company will soon bring out. It is the result of the bishop's recent visit to Japan, China, India, the Hawaiian Islands, and the Philippines, dealing with the religion, traditions, class prejudice, method of living, and politics of each of these countries. Bishop Potter's visit to the East was made just after the close of serious hostilities in the Philippines and the quelling of the Boxer movement in China.

IT WILL be pleasing news to many that the Messrs. Scribner are about to issue a one-volume edition of Edith Wharton's "Valley of Decision." Two-volume novels have never been popular in America and never less so than at the present time. It speaks highly for Mrs. Wharton's story that, in spite of the form in which the first edition appeared, it has been one of the best selling novels of the present year, and has been in constant demand at the public libraries ever since it appeared.

"LUCAS MALET" (Mrs. M. St. L. Harrison), author of "Sir Richard Calmady," which is one of the few powerful novels of recent days, did not publish a book until she was thirty years of age, although, being a daughter of Charles Kingsley and a niece of Henry Kingsley, she was born and reared in a literary environment. "Sir Richard Calmady" itself was a labor of years—of five years, in fact, Mrs. Harrison continuing steadily at work upon it for that period.

#### Millionaire Lawson Prints a Book.

WHATEVER ELSE may be said of "The Lawson History of the America's Cup," which Mr. Thomas W. Lawson, the Boston millionaire and yachtsman, has given to the world, the volume will be accorded universal praise as a fine specimen of the bookmaker's art. An octavo of more than four hundred pages, beautifully printed, illustrated, and bound, it would have been a fit repository for the best and noblest things in literature. It is but rarely in these days that so handsome and sumptuous a book issues from the press. Mr. Lawson evidently spared no expense in making attractive the vehicle of the message he had to deliver. The work was printed for private distribution only, and the edition was limited to three thousand copies. It comes from the publishing house of Winfield M. Thompson, of Boston, to which establishment its make-up and appearance do great credit.

As for the contents of the book there will be little or no dispute regarding the merits of that part of "a record of fifty years" which was prepared by Mr. Winfield M. Thompson. This is a careful, adequate, and in the main an impartial story of all the contests for the famous trophy since American yachts first participated in them. Every lover of yachting will find Mr. Thompson's competent recital both entertaining and useful for reference. Mr. Lawson's contribution to the history, however, being inspired by a grievance, will necessarily arouse more or less criticism and controversy, the more so as it is written vigorously and ably. The author bitterly assails the officials and the membership of the New York Yacht Club, under the auspices of which the cup contests have all taken place, because the entry of his yacht, the *Independence*, as a possible competitor of *Shamrock II.*, was not permitted. The club managers took the ground that only yachts flying the New York Yacht Club's flag had a right to qualify for the great race. Mr. Lawson was not a member of the club and claimed that any American yacht was eligible to the speed trials, and that the fastest boat, irrespective of the club connections of her owner, should be deputed to meet Sir Thomas Lipton's craft. Mr. Lawson's desire to state his side of the case fully and strongly was the motive for this publication.

In behalf of the New York Yacht Club it may be stated that its position was supported by the custom of half a century and by weighty technical reasons. Mr. Lawson's charges of unfairness against a body of sportsmen of such high standing would have been more effective if he had not resorted to personal strictures. The latter are, to say the least, unsportsmanlike and tend to discredit his attitude. It is not likely that the majority of yachtsmen will take his vengeful remarks seriously.

# Side Scenes of a Brutal Bull-fight

MATADOR PRAYING TO VIRGEN BEFORE HE ENTERS THE ARENA.

THE MAIN features of that barbarous species of entertainment, so popular with the Spanish race, the bull-fight, are tolerably familiar to most newspaper readers, and are justly regarded by the more advanced peoples with horror. But there are incidents connected with this cruel pastime that are not so widely known. The side-scenes of the main show have also a gruesome interest.

In a niche of the hall reserved for the matadors at the bull-ring there stands an altar, decorated with wax tapers, before an image of the "Virgin of the Toreros," the patron saint of the bull-fighter. Her protection the matador invariably and piously entreats before each fight, deeming a calling held in such high honor as is his deserving of supernatural sanction. His prayers, however, do not always avail to ward off injury, and so a rude hospital is always an adjunct of the bull-ring. It usually contains two beds, an operating table, and a sinister-looking litter, and often one or more patients. The matador, who fights on foot, is more liable to come to grief before the onrushes of the bull than is the picador, who rides a horse. The enraged bull sometimes overthrows the steed and his mount, but

MATADOR BADLY INJURED BY A BULL.

the picador is rarely hurt, whatever may happen to the horse. He, however, may become covered with the blood of bull or horse, and then he hastens to a water-pipe near the stables and sponges himself off before he returns to the arena and bestrides another broken-down old nag.

The miserable horses fare worse in the conflict than do the human brutes. The most repulsive spot in the enclosure devoted to bull-fighting is the so-called charnel-house of the horses. In Seville, for instance, there is a court-yard to which the badly wounded steeds are dragged and there dispatched. It is no uncommon thing at the close of a lively day to see there heaps of fifteen to twenty-five dead horses. The carcasses are finally hoisted into carts with the aid of a windlass, and are then carried away for burial. The mangled bodies of the poor beasts, the pools and streams and odor of blood, the cries of young vagabonds who gloat over the spectacle, and the rough behavior and the oaths of the men engaged in handling the equine remains combine to form a disgusting scene, which long haunts the memory.

HORSE RACING THE YEAR ROUND—THE FAILURE OF ATHLETIC CLUBS—THE CLOUD ON THE NATIONAL GAME

J. H. WRIGHT.  
A very promising young athlete, dual winner of the A. A. U. athletic championship.

**RACING NEVER ENDS.**—Horse racing comes nearer to perpetual motion in the sporting world than any of the other forms of recreation and pastime. As soon as the sport ends in the metropolitan district about New York the owners and trainers move on to Washington, and from the capital they go either to New Orleans or to California, where the merry game goes on right through the winter, moving north and east again in April. While some of the millionaire owners frown on winter racing, still the great majority of owners run their animals, when they are fit to run, whenever they think they can pick up a rich purse or stake, no matter what the season of the year. One hears much about the baseball-club owners paying ruinous salaries to players, yet the stupendous compensation paid to jockeys and track officials causes no comment. This is simply because the club owners must depend on the gate receipts alone, while the tracks receive enough money for privileges and from the bookmakers to make the outlay of thousands nothing to them. Of course, if bookmaking were permitted at baseball games there would be no limit to the salaries ball-players might be paid. Still the game could not stand it and baseball is better off as it is. A wise old turfman went to a baseball match one day. Betting had become second nature to him, and he could not get thoroughly worked up until his friend consented to bet \$5 on the result of the match. The team the horseman bet on was in the lead, but in the last inning the second baseman made one of those amateurish muffs and his team was beaten. "That's a lesson to me," said the horseman. "No more betting for me on anything that talks." While much nonsense has been printed this year regarding the fabulous sums won on the race-tracks, it is nevertheless true that more money has been wagered at them this season than in any previous year in the history of racing in America or England. A sportsman at the recent meeting at Saratoga had in previous years paid frequent visits to Monte Carlo. He said more money was staked at Saratoga on the tracks and in the gambling houses in one day than would be seen at Monte Carlo in a week, and I believe that he came pretty close to the truth.

**RELIEF IN SIGHT IN BASEBALL SQUABBLE.**—There is relief in sight in the undignified fight being waged between the two major baseball associations of the country. One hears much about what each rival organization intends to do next season, but most of the talk is silly twaddle which will be forgotten before the snow flies. A financier will ultimately settle the fight, which has been drawn out entirely too long for the best interests of the game. The players have profited hugely by the conditions and will continue to demand and receive salaries out of all proportion to what the club can afford to pay, just so long as those conditions prevail. The club owners realize that they are at the mercy of the players, and while they talk much about extermination for publication they are seeking wildly some way out of their troubles. The baseball fight simply comes down to a business basis, and it will be settled on that line. The club owners realize that they cannot afford to pay the salaries they are compelled to pay to-day, and they will find a way out of their troubles before another season comes around. As soon as the mag-

nates get their heads together all that will remain to be done will be a redistribution of territory and baseball will again be upon a sensible and paying basis. It is all very nice to say that wealthy men purchase baseball stock for sentimental reasons, but in reality they do nothing of the sort. The old New York club of several years ago came nearer to this ideal condition than any other team has ever done in this country. Unfortunately for the game, however, there are no Talcotts, Van Cotts, and McAlpins in the game at present.

**WHY ATHLETIC CLUBS FAIL.**—The passing of the Knickerbocker Athletic Club of New York will be sincerely regretted by every follower of track and field sports in the country. Under its original title of the Manhattan Athletic Club it flourished and the "Cherry Diamond" was known throughout the civilized world. The healthy rivalry existing between the New York Athletic Club and the Manhattan Athletic Club kept the interest up and helped athletics generally. Then the Manhattan club tried to follow in the footsteps of the New York club, having a club-house requiring the expenditure of many thousands of dollars, and went to the wall. Now its successor, the Knickerbocker, has followed suit. It is simply the old problem of careful business management. The New York Athletic Club, the Crescent Athletic Club, the Duquesne Country and Athletic Club of Pittsburgh, and kindred organizations succeed because they are more or less exclusive. The Knickerbocker admitted to membership on the presentation of the stipulated dues, and naturally failure was the result. The lesson is so plain that it is scarcely necessary to say that the exclusive clubs have long waiting lists and have had them for years. And yet the Knickerbocker came closer to being a real athletic club than does any of the more pretentious clubs with thousands in their coffers.

**FOOTBALL TO BEGIN EARLY.**—Unless the warm weather should hang on to an unusual length this year the chances are that the football players will take the field earlier than usual. With the formal opening of the colleges and universities the hardy athletes who survive the struggle and play on the 'varsity teams will have plenty to do from now to November, when the big games are played. At Princeton confidence is felt that Old Nassau will turn out an excellent eleven. Yale defeated Princeton last year and surrendered to Harvard. Trainer Murphy, at New Haven, thinks he has a good chance this year to win both of these games with the sons of Old Eli. Murphy did wonders with a green baseball team this year. A better trainer never lived.

**A NATION OF FADDISTS.**—Roller skating, bicycling, and other sports seem to Americans to be merely "fads." The day of the rink is past; the bicycle is now used as a means of transportation for workmen rather than as an enjoyment, and it remains to be seen whether the automobile will not follow the path of its slower predecessor. Golf seems to have maintained its popularity in this country, and tennis has increased in favor this year, owing largely to the international tournaments at Newport and at the Crescent Athletic Club. Football and baseball will continue to hold their popularity among the American patrons of sport, especially in the matches played between the teams of the different colleges. In most other sports the enthusiasm is at fever heat one day, only to cool off the next.

**WALTHOUR IS PACED KING.**—"Bobby" Walthour, the sunny-haired bicycle rider from Georgia, has again demonstrated that he is the fastest paced rider in this country, if not in the world. Like Kramer, the unpaired champion, Walthour is simply waiting for a suitable guarantee to go abroad and demonstrate his right to be called the international champion. Kramer ought to beat any sprinter abroad, and the chances are that Walthour will be able to more than hold his own with any of the pace followers

in France or England, where the best men are to be found. Elkes, Bald, Zimmerman, and "Jimmy" Michael are abroad at present, but too much should not be expected of any of them. Walthour and Kramer could ride them all off their feet in their present condition.

**YACHTS GOING OUT OF COMMISSION.**—The yachting season is over, and while no international contests have been held, outside of the Seawanhaka-Canadian struggle, still the sport has flourished. Next season Lipton will send over another boat to compete for the America's Cup, and yachtsmen will again occupy a large place in the public eye. Sir Thomas is laying his plans and talking little—unlike the Sir Thomas of two years ago. If the cup is to leave these shores yachtsmen would rather see Lipton take it than anybody else, for he has shown himself to be a thorough sportsman in all that the term means.

J. J. MCGREW,  
The Harvard 'Varsity crew's newly elected captain.  
Sedgwick.

## Sporting Queries Answered.

G. L. K., BOSTON.—A good wash to soften the skin is composed of borax, glycerine, and rose water.  
J. L. C., LOUISVILLE.—The game laws differ in nearly every State. Better make inquiries before starting.  
M. E. A., CHICAGO.—Complimentary tickets are not issued to bookmakers in the East. The layers of odds must pay their way into the tracks each day.  
G. E. S.

## The Harvard Crew's New Captain.

**THE UNEXPECTED** change in the captaincy of the Harvard crew gives the leadership in the rowing system for next year at Cambridge to J. J. McGrew, of Cleveland, stroke oar in the 'varsity eight last June. William James, Jr., son of the eminent psychologist at Harvard, was elected captain for next year after the Yale-Harvard race on the Thames, but he has changed his plans and has decided to study abroad next year. He resigned the captaincy recently, and a mail vote was taken of members of the crew. Their choice was Stroke McGrew, who assumed direction of the work in rowing at the beginning of the fall term. Mr. McGrew prepared for Harvard at the University School, Cleveland, and captained and stroked the Harvard freshmen eight two years ago, which left the Yale 1903 oarsmen six lengths in the rear. Last year he rowed No. 2 in the 'varsity eight, and was this year moved back to his old position at stroke.

## A Great Educator Favors Slang.

**BEFORE** A recent summer assembly the deliberate opinion was expressed by President G. Stanley Hall, of Clark University, the well-known expert in child study, that "during the period of adolescence the use of slang is essential and ought to be allowed free play." It helps boys and girls to acquire fluency, he says. Many parents will read this, no doubt, with a great sigh of relief, since they have never been able to stop the practice any way, try as they might. It would be an additional relief if President Hall would specify the kinds of slang which are particularly conducive to fluency. Do "gosh darn," for instance, and "too awfully sweet" belong to this category?

A KEEN STRUGGLE IN THE PUSH-BALL MATCH BETWEEN THE ENGLISH AND AMERICAN TEAMS.

# Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *LESLIE'S WEEKLY*. No charge is made for answering questions and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *LESLIE'S WEEKLY* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jaeger," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.

**THE NEW** spirit of adventure in Wall Street comes from new men. They are mostly young men who have come into the Street in the last five or ten years, full of the hope and enthusiasm which add so

much to the charm, buoyancy, and freshness of youth. They know no such word as fail. It is a word they have still to learn by bitter experience. As an illustration, my esteemed friend, the Hon. James H. Eckels, recently issued a fifty-page pamphlet containing a digest of the opinions of nearly three hundred bankers in the South and West on the business situation. Their expressions led Mr. Eckels to conclude that the crop conditions of the country indicated a great yield of all the leading crops, that general business conditions were to continue at high-water mark in the agricultural communities, that there would be no unusual money stringency and no extraordinary requirements for crop movements, and that the banks would be amply equipped to care for all demands made upon them.

This opinion of the young financier was printed on the first of this month. Before the middle of the month frost had stricken the corn crop in several of the greatest States in the West and Northwest, the wheat crop had shrunk to 100,000,000 bushels less than that of a year ago, and the cotton crop to 2,000,000 bales less. Call money had reached 20 per cent. on Wall Street, the Secretary of the Treasury had been compelled to offer aid to relieve the embarrassment of the financial situation, and the banks were looking in all directions for additional funds and threatening to call in loans on every side. So much for one young Western prophet. Had Mr. Eckels witnessed the ups and downs of half a century's experience in American finance, he would have realized clearly that the continuance of a boom for more than five or six years is unprecedented and that every boom is as certainly followed by a period of depression as sunset follows sunrise day by day.

At home and abroad the most conservative and observant financiers realize that we have reached the height of the boom period in the United States. That fact is indicated not only by the attainment of the highest record average price for the leading railway securities, but also by the highest prices for nearly all domestic commodities. It is indicated also by the rise in money and the excess of the borrowing over the lending capacity of our fiscal institutions. Two of my predictions have come true: one made six months ago, of tight money, with a tendency to greater stringency, and the other of a decided decrease in the balance of trade, which has been so conspicuously in our favor during the past few years. With the Secretary of the Treasury besought to set aside all precedents and to accept other security than government bonds in exchange for deposits in national banks, and with our excess of exports for the past eight months less by over \$150,000,000 than that of a year ago, and the smallest balance since 1897, with financial schemes halted on every side and more men anxious to get out of the market than to get into it, we are a good way off from the long-predicted fall bull movement, and we are just so much nearer to the end of our financial spree.

The appearance of an able and daring bear leader at this juncture is all that is necessary to completely change the trend of events in Wall Street. Whether he appears or not, the rapid movement of circumstances is working out its own results and these will not be helpful to a continuance of the reckless buying which has prevailed so long. The condition of the banks is revealed by the weekly reports of the clearing house. It is shown that their reserves have been more than wiped out, but the real financial distress is not disclosed because the newly organized trust companies are not compelled to report, and no one knows how critical their condition may be, or how much of the load of the banks they may be bearing. That it is very heavy is known by all who appreciate the close intimacy between some of our greatest trusts and some of our strongest banks. Just how the financial situation is to be relieved no one seems to know. Gold imports would furnish the easiest and quickest method. But foreign bankers, realizing how reckless we have been borrowing, are not inclined to extend their loans, and foreign governments are carefully guarding their gold reserves in many instances to meet unusual conditions, or for special purposes.

If it were not for the fact that some of

the greatest interests in the country are compelled by force of circumstances to prevent a panic, stocks could not have escaped a heavy break as long as they have. This unity of purpose among the leaders is the salvation of the bull market. If some of these financiers, instead of wildly appealing to the Secretary of the Treasury for relief, would withdraw their numerous schemes for the exploitation of new issues of stocks and bonds at the expense of the public, we would see plainer sailing ahead. That such withdrawals may be compulsory is evidenced by the rumor that the United States steel trust may find it convenient to utilize its surplus earnings to the amount of \$50,000,000 for the purpose of discharging certain obligations and carrying out contemplated improvements, instead of adding that amount to its bonded indebtedness in addition to the \$200,000,000 proposed to be issued for the retirement of that amount of the preferred stock.

It has not escaped observation that public appetite for some of the new issues of bonds and stocks is not as keen as it was a year ago, and that even the Morgan proposition to the numerous Southern Railway shareholders, in favor of an extension of the trust which has been in control of that property, has raised many serious objections. The stockholders, who know that the money has been earned with which the dividend on the preferred shares could be paid and the property turned over to the real owners, naturally object to the non-payment of the dividend, apparently for the sole purpose of compelling an extension of the trusteeship. If the stockholders of the Southern Railway would combine to go into the courts and demand the payment of this dividend and the discontinuance of the trusteeship, there is little doubt that they would win. The purpose of Mr. Morgan in asking the stockholders to give their written consent to the five years' extension of his trusteeship is no doubt to prevent such legal action. If stockholders are foolish enough to give this consent they deserve to suffer. They can lose nothing by withholding it, and they will have much to gain by standing out.

"D." Warren, R. I.: The change has been ordered.  
"M." Fairhaven, Mass.: One dollar received. You are on my preferred list for three months.  
"B." Duluth, Minn.: I will make inquiries regarding the proposition of the Mutual Rubber Production Company. The offices of the company are at 96 Milk Street, Boston, Mass.  
"G." Cincinnati: The Butterick Company is the leading maker of paper patterns in the world, and one of its prominent officers told me recently that its earnings were very large.  
"W. M. E." Logansport: (1) Dougherty & Albers do a very large business and are financing the Standard Lead and Smelting Company's stock. It is highly speculative. (2) Will make inquiries.  
"N." Chicago: (1) There ought to be a substantial asset remaining for the American Bicycle Company, but the purchaser of the shares must be ready to pay an assessment, if it is levied, under the coming plan of reorganization. (2) Toledo, St. Louis and Western ought to be good for a long pull. (3) Talk of a rise in Chicago Terminal has been renewed of late. It is a fair speculation on reactions.

Continued on following page.

## The Clock That Keeps Wound

THE Clock Without the Key—the clock that needs no winding—the clock that is right, goes right, and stays right—and the price is right—was gradually perfected until it was a complete mechanical success, and at once gained public approval. This clock wonder is appropriately called the

### "KEYLESS" (TRADE MARK) CLOCK

and is made only by

The United States Clock Company of New York

It goes for one year without attention, and it keeps time—the best of time. It's a beautiful clock—a novel clock—a safe clock—an economical clock—a clock that causes no trouble.

The "KEYLESS" CLOCK is made for public buildings, business purposes, home use. For any one, everyone, for everywhere and anywhere.

The "KEYLESS" CLOCK is not sold at clock stores, but only at the offices of THE UNITED STATES CLOCK COMPANY, which are being established everywhere.

Parties living in New England can now see and purchase clocks at our BOSTON BRANCH, at 9 Broadfield Street. Go and see the "KEYLESS" CLOCK.

### "KEYLESS" CLOCK SHARES ARE NOW \$7.50

Par value \$10.00, full paid and non-assessable

The stock of the "KEYLESS" CLOCK Company sells as rapidly as the clock. If you want an investment that is absolutely safe, constantly profitable, sure to increase in value, send your subscription. Full Telephone book used from nothing to \$4,000. UNITED STATES CLOCK stock will be a bigger investment in the very near future.

More orders at 50 per cent. profit are now on hand than the manufacturing department can turn out.

REMEMBER: This is not a scheme or project, but an established, profitably running company, with factories in full operation, goods in great and growing demand, no debts, mortgages, or other obligations, and with a big deposit and surplus in National banks in New York. WRITE OR CALL.

A. E. Siegel, Secretary, The United States Electric Clock Company

Main Office, 407 Broome St., New York.

Boston Branch, 9 Broadfield St.

### Hints to Money-makers.

Continued from preceding page.

"C." Washington: I am making inquiries about the Standard Mining and Milling Company.

"M. B." Denver, Col.: I am not an expert on the grain situation, or I would be glad to comply.

"T." Anacostia, Md.: One dollar received. You are on my preferred list for three months. Answer by letter.

"G." New York: (1) Not an investment, but the firm is well known. (2) I will make inquiries about the East Dewey Mining Company.

"W." Wilkes-Barre, Penn.: Nothing is known about it on Wall Street. The shares are not dealt in on any of the exchanges with which I am familiar.

"M." Battleboro, Vt.: (1) The annual report of the Missouri, Kansas and Texas is rather bullish. Some believe it was purposely made so, to shake out small stockholders. It would be well to watch the earnings. (2) Glad you made your profit on my suggestion.

"L." Holly Springs, Miss.: (1) All the New York bank stocks look somewhat high and do not pay returns at present prices. Still, they are a favorite with investors. (2) That has been the intention, I am told, but money market conditions and the general business outlook must be considered. (3) I know of no such publication.

"G." Chicago: (1) I find no report of its earnings. Little is known about it on Wall Street. (2) St. Joe and Grand Island first preferred sold last year as low as 55 and as high as 78. On reactions I think well of it, if business conditions continue favorable. (3) This is hardly a time to sacrifice a stock which has had a heavy decline.

"Banker." Des Moines, Ia.: (1) I think well of the Pennsylvania 34 per cent. convertible bonds, which are convertible after 1904 into the company's stock, at 100. (2) There is no confirmation of the reported amalgamation of the Greene Consolidated and several other outside copper concerns, though something has been going on in Greene which is not revealed to the public.

"Norris." Bradford, Can.: Wiser & Co. tell me that they are ready to verify all their statements and are willing to stand the expense of a trip to any one of their properties if an investor desires to make it, on the understanding that he will agree to purchase a reasonable amount of stock if the investigations bear out their claims and statements. This certainly is a fair proposition.

"C." Yonkers City, Miss.: One dollar received. You are on my preferred list for three months. I know of no industrial of a speculative character which is not highly inflated. The common stock of nearly all of them represents water. A little booklet which will give you a complete list of them and their capitalization is entitled, "The Organization of Industry." A copy will be sent you free of charge, if you will inclose a 2-cent stamp and mention LESLIE'S WEEKLY, by John Moody & Co., 25 Nassau Street, New York.

"R." Newark, N. J.: The Don Luis Copper and Gold Mining Company has a capital stock of \$1,500,000. Par value of the shares is \$5 each and they are non-assessable. The mining property is in Mexico and covers 111 acres, upon which the management reports that much development work has been done. The officers include a number of prominent business men of New York, and Newark and Trenton, N. J. A. J. Peyton & Co. are the fiscal agents and they make very encouraging reports of the condition of the property.

"S." Excelsior Springs, Mo.: Four dollars received. You are on my preferred list for one year. (1) No rating. I am not favorably impressed by the promises of the concern. (2) Amalgamated Copper has been picked up on the decline, I am told, by insiders who sold it at top prices. Considering the relative condition of the copper and iron markets Colorado Fuel looks safer. (3) Glad you profited by my hint regarding Toledo, St. Louis and Western. (4) I do not believe that we are to have a bull market of any proportions of a lasting character this year.

"R." Springfield, Ill.: (1) A recent sworn statement of one of the largest oil producers in the Beaumont field was to the effect that there are not more than 150 producing oil wells in that district and that their average daily capacity does not exceed 300 barrels per well. This is of interest to speculators in oil shares. (2) The recent accounts again appearing about the earnings of the United States Steel Corporation are intended to help maintain the price of the shares of a corporation which, while claiming to be earning an enormous surplus, is in the market to add \$50,000,000 of bonds to its obligations and willing to pay a commission to Morgan & Co. of \$10,000,000 to secure the loan.

"G." Hagerstown, Md.: The annual report of the Western Union shows that over 8 per cent. was earned on the capital stock last year. The stock would look cheap were it not for the fact that investors regard it as less stable than railroad properties showing the same earnings. They look upon it rather as an industrial. There is no doubt that its plant could be duplicated for half its capital, and that its contracts with the railroads, as they end, may not be renewed. The action of the Pennsylvania shows how the Western Union might be made to suffer. Of course, if the Western Union should make a close combination with the Bell Telephone Company or the independent long-distance companies, this would be advantageous.

"G." Cobleskill, N. Y.: The latest statement of the American Ice Company reports that of the \$5,000,000 of collateral bonds just issued, \$2,300,000 cannot be sold until the retirement of certain underlying bonds within a few years. The remaining \$2,700,000 has been taken voluntarily by Mr. C. W. Morse, the former president, by the Drexels, and other bankers. With so small a debt ahead of the preferred stock, the latter ought not to be sacrificed. (2) The rise in Wabash common and preferred has gone so far that some suspect that the Pennsylvania may be trying to get control of the property and thus checkmate the Gould attempt to get into Pittsburg. On the earnings, the common and preferred shares certainly look high enough.

"P." Helena, Mont.: (1) The prediction of the London Times was that financial trouble in the United States may be anticipated within the coming year, perhaps within eight or nine months. (2) It is said that the provision to permit the directors to use the surplus funds of the Rock Island to deal in the company's shares has been eliminated from the new charter. A similar scheme, it is said, is embodied in the charter of the United States steel trust. Perhaps this accounts for the latter's need of \$50,000,000 additional funds. The surplus may have been used to sustain the price of shares in the market. If it can be utilized for such a purpose why is it necessary to pay the Morgan syndicate a commission of \$10,000,000 to do what the board of directors have the power to do?

"W." Watertown, N. Y.: (1) You should not have waited so long before buying the Wabash B debentures. The facts you recite are not new. A year ago I pointed out the value of these bonds, based on the fact that they were entitled to 6 per cent. ahead of the preferred shares and that they had a voting power. This really makes them a first preferred stock, and there was every reason why they should sell higher, as long as the common and preferred shares were mounting upward. Hence my advice to purchase was given. These bonds have since almost doubled in value. (2) The quarterly report of the Stone-Island Steel Company for the past quarter showed only \$35,000 charged off for depreciation, repairs, and renewals. This is about 10 per cent of the net profit, and is altogether too little.

"H." Brooklyn: (1) Munroe, Rogers & Haynes of 20 Broad Street, New York, who are selling the stock of the White Horse Mining Company, of Arizona, are all interested financially in the company, and individually, and have good reputations. They act as fiscal agents for several mining companies, including an undeveloped copper property, the Verde Chief, and a gold mine, the White Horse Company. The commercial agency speaks well of them. (2) The Mexican Securities Company was organized last April and made extensive promises to its patrons. The capital was \$2,000,000, but the sheriff has just attached the furniture of the concern. It was claimed that a former Governor of Sonora was its president, that it owned sixty-four mining claims, and had valuable charter rights.

"I. C. R." Hudson: (1) Chicago and Great Western paid 4 per cent. during the past year on the debenture stock and 5 per cent. on the preferred A. (2) Ontario and Western does not pay dividends, and last year earned scarcely 1 per cent. on the \$58,000,000 outstanding stock. It has suffered severely from the coal strike, but will profit, if that strike ends, by the anthracite combination, in the usufruct of which it shares. (3) The Chicago Great Western debentures look like the best investment, but Ontario and Western like the best speculation, if held for a long pull. (4) Wisconsin Central, like Chicago Great Western, expects to profit by its absorption or combination with one of the great railroad properties eventually. It is not a dividend payer, but has speculative possibilities.

"C." Rochester, N. Y.: (1) The fact that some of the big packing houses are buying cotton-seed mills in the South suggests that the cotton-oil trust

## Purity is Free

Schlitz beer costs the same as common beer, so that purity is free to you.

Yet purity costs us as much as the beer itself.

It requires absolute cleanliness. It compels us to filter even the air that cools the beer. Then we carefully filter the beer, and sterilize every bottle after it is sealed.

And the beer must be aged for months in a temperature of 34 degrees, for otherwise the beer would cause biliousness.

Don't let your dealer decide which beer you shall drink, for he makes most on the common kinds.

Ask for Schlitz, for purity means healthfulness, yet that purity is free.

Not a beverage known to man is more healthful than beer, if it's pure.

Barley-malt and hops—a half-digested food and a tonic.

Your doctor says the weak must have it. Why not the strong?

But don't drink a germ-laden beer, when Schlitz is sold everywhere.

Ask for the brewery bottling.

Seven Months Ago I Sold Stocks at \$2—Now Worth \$6 and \$8.

I can give you the benefit of my vast experience in stock values in Kentucky oil and make money for you as I do for my regular clients.

FORTUNES WILL BE MADE IN KENTUCKY OIL.

Invest now in these great producing wells. Let me tell you what I can do with a small amount of your money. I handle only stocks of reliable companies.

Twenty-year Gold Bonds that will net 6 per cent.

A. G. MORGAN, Stock Broker, 41 Chesapeake, LEXINGTON, Ky.

References: Phoenix National Bank and Second National Bank, of Lexington, Ky.

may be about to have more lively competition. I am not advising the purchase of American Cotton Oil for investment. (2) The annual report of the Standard Rope and Twine showed over \$300,000 profit, as against a deficiency of nearly that amount last year. The company says it will make a more favorable new contract with the Union Selling Company, which disposes of its goods. This company received nearly a quarter of a million dollars last year as its commission on sales. Why should not the company enjoy this profit instead of turning it over to the members, who, it is said, constitute the selling company, and who have been growing rich on their monopoly, while the stockholders have been growing poorer? A stockholders' suit might shed light on this interesting situation.

"S." Providence, R. I.: (1) A late estimate of the copper market gives the surplus on hand as nearly a quarter of a billion pounds. It is said that the production is increasing, and the consumption not decreasing. If this is the real condition, the price of copper should decline. (2) The fight of the American Tobacco Company for control of the English markets has apparently failed, and has only stimulated the Imperial Tobacco Company of London to carry hostilities into this country by establishing factories at Richmond and Chicago. This has led the authorities to move against the American Tobacco Company as a trust. All this, in view of the fact that the American Tobacco common stock has

been virtually quadrupled in its exchange for Consolidated Tobacco bonds, does not look as if the latter were particularly desirable from the investment standpoint.

"J." Kansas City: The annual report of the Missouri, Kansas and Texas Railroad for the past year is a singular document. It points out that in spite of the increased earnings of the year the prospects of the road are not very good, that many improvements are necessary, that competition is growing, and that valuable auxiliary lines have been purchased by opposing interests. All this reads as if the insiders were anxious to lower the price of the shares in order to buy them in. We do not forget the report of President Mellin, of the Northern Pacific Railway, regarding the bad outlook of the road just before the Northern Pacific had its enormous rise over a year ago. Really these tricks of the trade are detestable. The Missouri, Kansas and Texas report says that "through a subsidiary corporation" the company is building the Oklahoma extension. Why does not the company do this work itself? The only reason is because, by doing it through a subsidiary corporation a good opportunity is given for some of the insiders to make a handsome profit at the expense of the corporation, which means at the expense of the stockholders. It is too bad that some of the latter cannot bring this case into the courts, to test the right of speculative officials to thus take advantage of their position.

### Hints to Money-makers.

Continued from preceding page.

"K." Roxbury, Mass.: Not an investment.  
"S." Concord, Mass.: I regard Consolidated Mercantile as highly speculative, not an investment.  
"B." Brooklyn, N. Y.: (1) Have nothing to do with it. (2) Keep your money. (3) Worthless.

"C." Washington: They have no rating. I do not advise the purchase of the stock of the Standard Mines and Milling Company.

"C." Washington: Note prefatory lines at head of this article regarding preferred list. It explains why you are not on it.

"D." Allentown, N. J.: Monroe, Rogers & Haynes are spoken of favorably by the mercantile agencies. I have no personal knowledge of the mine.

"S." Atlanta, Ga.: All my information is favorable and his business standing is good, but, to satisfy yourself, secure a rating on your own account.

"M. F. K." Chicago: The shares of none of the three companies you mention are dealt in on either the exchanges or the curb in New York. They are regarded as highly speculative propositions.

"C. B." Pottsville, Penn.: The Butterick stock has been recently listed, but I am unable to obtain a report of its earnings. Some of the American Ice promoters are prominently identified with it.

"S. S." New York: (1) Nothing later than was given in my last article. (2) If you mean the Kansas City, Fort Scott and Memphis refunding general issue, selling around 91, I think well of them, though I do not call them gilt-edged.

"C." New Haven: Douglas, Leary & Co. are members of the Consolidated Exchange and deal mostly in mining securities. (2) It is speculative, but well spoken of. It is not an investment, of course. (3) Nothing is known about it on Wall Street.

"A. F." Brooklyn: (1) Answer by letter. (2) British Columbia Copper is selling at a low figure, compared with its price in boom times. I have never believed very much in the cheap copper shares, but once in a while one turns out to be a good speculation.

"W." West Superior, Wis.: (1) Will make inquiries regarding Bruce & Seymour's co-operative investments. (2) I would rather have the Union Pacific convertible bonds than the common shares, because the former practically give you a three years' option on the latter.

"H." Newark, N. J.: Two dollars received. You are on my preferred list for six months. (1) Haight & Freese are not members of the New York Stock Exchange. I know little about them. (2) Those that are purely speculative, that pay no dividends, and that have enjoyed a great advance.

"MeV." New York: (1) Not gilt-edged, but a fair investment. (2) The earnings of the constituent company after the payment of fixed charges. (3) Surplus earnings of the Tobacco Company, after the payment of bonded indebtedness and interest on the preferred. The bonds are really a second preferred stock.

"F." Cripple Creek, Col.: One dollar received. You are on my preferred list for three months. (1) I should be afraid to do so because of the unexampled support which it is compelled to receive by force of circumstances. I cannot believe that the price of United States Steel common can be maintained. (2) The situation changes so radically from day to day that I cannot advise a week in advance.

"McN." Battle Creek, Mich.: One dollar received. You are on my preferred list for three months. (1) Spencer Trask & Co., 27 Pine Street, have a high standing as bankers and brokers. (2) As an investment I would prefer the Kansas City Southern 3 per cent. bonds to the Norfolk and Western preferred or Kansas City Southern

preferred. Speculatively, the preferred shares would be in favor.

"W." Brooklyn, N. Y.: I certainly do not advise the purchase of the shares of the Black Diamond Anthracite Coal Company. Better keep your money in a savings-bank. (2) Stocks are quoted at their selling price, regardless of their par value. Standard Oil, for instance, selling at about \$700 a share, has a par value of 100. (3) The purchaser of the shares, whether bought on a margin or not, is entitled to all dividends that may be declared, after he has made the purchase.

"M. O. P." Cincinnati: When M. O. P. sold at less than half of the prevailing price, I persistently urged its purchase. There has been much liquidation of it around 120, and its future is conjectural, depending somewhat upon what the insiders have up their sleeves. I should not prefer it to Union Pacific common with the present speculative outlook. As to the dividend on the latter, no one is yet ready to speak. The rise in Missouri Pacific was due to the great increase in its earnings and the extension of its business during the past few years of good times.

"H." Schenectady, N. Y.: The earnings of the Ohio Plantation Company, to which you refer, you will observe by the statement you submit, are estimated, and the basis of the estimate seems to be fairly and conscientiously given. The location of the property appears to be very favorable, and the management, I am assured by those largely interested in the concern, is in the hands of experienced men. The prospectus makes a far more favorable showing than is made by the other propositions to which you allude and some of which I should by no means consider favorably.

"W." New York: Two dollars received. You are on my preferred list for six months. Shares like Union Pacific preferred and Manhattan Elevated, bought for investment, might well be retained, especially the latter, though of course a

**Olds Motor Works**

Dept. 14 Detroit, U. S. A.

decided slump in the market might come if the money stringency grows worse and business depression ensues, and in that event all stocks would share in the decline. A tight money market will probably put a damper on a good many proposed new deals. Union Pacific common would be more likely to profit by the combination you suggest than the preferred would be. If I held United States Steel and the bond conversion scheme went through, I would make the exchange for bonds as far as I could and sell the balance of the stock. Glad you profited by my suggestion.

"L." Concord, N. H.: (1) The report that the beef trust will seek to control the leather trade shows one of the elements of danger to the industrialists. That element is free competition by large interests. Of course, if the beef trust should absorb existing leather companies, at good prices, the latter would not suffer. I would not sacrifice my United States Leather preferred. (2) A big corn crop ought to help Corn Products shares. (3) It looks very much as if the Old World proposed to hang on to its gold, and that a rise in money rates abroad will interfere with heavy imports of the precious metal to the United States. (4) Rumors of important developments in Chicago Terminal, involving an expenditure of \$5,000,000 for the development of its tracks, are again circulated, but it is highly speculative.

"R." Peoria, Ill.: (1) The report is one that emanates from the company, which has a strong speculative element in it. (2) The insiders predict that it will, but no one knows when they will begin to sell out. (3) I hesitate to advise short sales of such high-priced stocks as General Electric, Missouri Pacific and St. Paul, which are closely held and carefully safeguarded by leading financial interests. The settlement of the Northern Securities suit would no doubt lead to the prompt carrying out of other proposed combinations. That of Mr. Gould in the Southwest, it is believed, would be helpful to Missouri Pacific and probably to St. Paul. (4) The effort to get control of Colorado Fuel and Iron is being continued by the Gates crowd, and while higher prices for the stock are predicted many speculators hesitate to buy into a lawsuit.

"W." New York: Four dollars received. You are on my preferred list for one year. (1) The Butterick Pattern Company is a closely organized corporation, dealing in paper patterns, and has a capital of \$12,000,000, which looks excessive. It is a business in which any one can engage, so that it is no monopoly, but the Butterick Company at present is earning a great deal of money and is paying 4 per cent. on the common shares, exactly what American Ice common paid before it was almost wiped off the face of the earth. (2) Duluth, South Shore and Atlantic common sold last year as low as \$5 a share. At four times that figure it looks pretty high, even for a speculation. (3) Iowa Central is selling at over double the price of a year ago. It is occasionally a favorite speculative security, but I am not advising the purchase of any shares at present.

"Prudence." Indiana, Penn.: Four dollars received. You are on my preferred list for one year. (1) I am inclined to regard Philadelphia United Gas Improvement stock with favor, having advised its purchase when it was selling at par and also before the last Scrip dividend. It looks high at 112 or 115 for a stock the par value of which is only \$50, and which pays only 4 per cent. a year, but the franchise is enormously valuable,

### Life-insurance Suggestions.

ONE OF the risks that members of fraternal associations assume when they join such orders is the risk of being called upon to meet their liabilities if anything should happen to them. Over a thousand good citizens of Pittsburg, including some prominent men, are being sued, or are to be sued, to recover over \$80,000, required to pay the death claims of the bankrupt Odd Fellows' Endowment Association of Pennsylvania. This fraternal insurance order was apparently very successful when it started out in 1901, but, as its death claims increased, it was necessary to increase the assessments. Old members began to drop out, new members would not come in, and finally nothing was left but bankruptcy. Under the rulings of the court the responsible members of the association were held liable for its debts, and these gentlemen, after having paid their assessments, honestly and fairly, and after having received no benefits from their membership, are now called upon to pay about \$80,000 to wipe out the death claims of a defunct concern. In every association of this character, where there is no stipulation waiving personal responsibility, the same thing may occur. It is all very well to swim with the tide while the death rate is low and assessments moderate because of the constant increase of new members, but the wise man will think of the day of adversity, which will surely come with the increasing age of the members and the constantly increasing death rate and larger assessments. In an old-line company the older the membership the more valuable the policy, and, in many instances, the less the cost of insurance, because of the dividends credited to the policy. It is better to take less insurance in an old-line company at the same price and be safe than to take a large policy at a low rate in a fraternal order and never know what will happen to it or to you.

"C." Stockton, N. Y.: If it shares the same fate as other organizations of its character, it will not be long-lived.

"F." Newport, Penn.: The company is certainly not one of the strongest or best, but if you are not insurable elsewhere, it will do.

"R. W." Louisville, Tex.: The Hartford Life is an old company with a fairly good record. There is no occasion to change your policy at present.

"T." New Orleans: (1) There is little difference between them. All are first-class. (2) Yes. (3) If your income is limited the ordinary life would be the best.

"K." Scranton: I think the policy in the Mutual Life is not too large, considering your circumstances, if you are in good health. It certainly gives you excellent results.

"J." Baltimore: All the largest companies issue the policies you speak of. The time of payment is very often a matter of arrangement with the agent, with the consent of the company.

"B." Lancaster, Mo.: The company is still young and small, but pushing for business. I would much prefer an older and a stronger company, as safety is the first requirement in life insurance.

"M." Donaldsonville, La.: I do not think the policy is negotiable or acceptable as collateral. The Mutual Reserve Fund Life has abandoned the assessment plan on which it was founded, and claims to be doing well as a regular old-line company.

"W." Gering, Neb.: The Provident Savings Life makes an excellent report, showing a largely increasing business, and is in the hands of a very practical and experienced officer, at the head of which is E. W. Scott, president, a successful insurance leader. I regard your policy as good.

"J." Fall River, Mass.: (1) My preference would not be the Metropolitan Life. (2) Yes, the New York Life, the Equitable, the Mutual, the Prudential, and the Travelers all issue excellent policies. (3) I think very little of the form of insurance of which you speak. The insurance of one's health is somewhat risky.

"New Orleans": You could afford a ten, fifteen, or twenty-year endowment policy, and ought to be able to carry a considerable amount, depending upon what your surplus income is. Or you could put your surplus, year by year, in an annuity, which would constantly add to your income and make increased provision for you, year by year, as you grow older. This, of course, would leave nothing for your heirs. If you care to enter into particulars, I will give you a personal answer confidentially.

### The Hermit.

When you go out fishing, a few bottles of Cook's Special Extra Dry Champagne will relieve the monotony.

Advice to Mothers: Mrs. Winklow's Sorethroat Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

The universal favor with which the Scherer Piano is meeting is the result of its tone and structure, which are not excelled by any in the world.

## EAT COOK'S FLAKED RICE

### DON'T COOK.

1. Pour the dry flakes from the package into a colander.
2. Put a liberal amount of salt into a little boiling water.
3. Pour the boiling salted water on the rice, through the colander.
4. Drain, shake slightly, and turn out on a hot dish; serve with sugar and milk. That is all—and the rice is perfectly prepared in less than a minute.

SEND ONE COUPON AND 10 CTS. FOR OUR DOLL.

### FOR BABY TOO.

NEW BORN INFANTS—One cup of Cook's Flaked Rice, one quart water, boil ten minutes, add a pint of milk, pinch of salt, and a very little sugar, and strain.

THREE MONTHS OLD CHILD—Use double the quantity of Cook's Flaked Rice (two cups) and do not strain.

COOK'S FLAKED RICE CO., 1 Union Square, New York.

CRUSHING MELONS BY HORSE-POWER IN ORDER TO EXTRACT THE SEEDS.—C. H. Harger.

### Thrashing Watermelons for Seeds.

A NOVEL industry has grown up in the West, where irrigation and sunshine combine to make the production of watermelons very successful. In the upper Arkansas valley melons are grown for their seed, and great fields are now covered with the luscious green shapes, destined never to tickle a palate. The melons grow to large size and great perfection. When they are fully ripe they are harvested with as much precision as are the wheat and corn crops of the plains. The thrashing machine with which the melons are handled is simple. It consists chiefly of a cylinder driven by horse power or by a traction engine. Great wagon loads of melons are brought to the side of the machine, and one by one they are thrown with great force into the hungry mouth to break against the whirling teeth below. The whole is ground to a fine pulp and run out through a sieve, the rinds be-

ing thus separated from the inner portion of the melon. The rinds are left to rot on the prairie, and the juicy mixture stands in large vats until the process of fermentation takes place, separating the seeds from the pulp. The seeds are then spread out on boards to dry and are ready for the market.

The poorer farmers have hand thrashers that perform practically the same operation, but are dependent on hand-turned cranks to manipulate the cylinder. The melons are left until they commence to decay, then are thrown against projecting spikes in the bottom of the machine, breaking the melon to bits. Farmers sell the seeds to the seed-firms of the East and in good years clear from twelve to fifteen dollars an acre for their labor. The harvest time is in late summer and early autumn and attracts much attention because of its odd character.

MR. CARNEGIE AND THE EARL OF ELGIN ENTERING VOLUNTEER HALL TO RECEIVE THE FREEDOM OF THE CITY.

### Carnegie Honored by a Scotch City.

THERE WAS great stir in St. Andrew's, Fifeshire, Scotland, one day recently. That was the day on which the much-talked-about Scots-American multi-millionaire was to be made a freeman of the ancient cathedral city and far-famed golf town. There are many professional golfers in the States to whom the mere mention of St. Andrew's calls up the old, old gray town by the North Sea, and the far-stretching sweep of sandy links, with the dreaded Swilcan Burn in the foreground, and that Mecca of golfers, the Royal and Ancient Clubhouse in the rear. Mr. Carnegie is Lord Rector of St. Andrew's University; he gave two millions for the freeing of students from fees at the four Scottish universities. Along with him to receive the honor of the city's good-will were the Earl of Elgin and Kincardine, ex-Viceroy of India and chairman of the Carnegie Trust, and Lord Balfour of Burleigh, the Secretary of State for Scotland and Chancellor of St. Andrew's College.

But Mr. Carnegie was a more talked-of man than either of his distinguished colleagues, and his every movement was followed with keen curiosity. He presided over a meeting of the university court, stayed over night at Principal Donaldson's residence of Scores Park, and next day drove round the city prior to the ceremony in the afternoon. There was an enormous gathering in the Volunteer Hall, where

the three notable men were to sign the Burgess Roll, and Mr. Carnegie arrived in Principal Donaldson's carriage with Lord Elgin. A handsome silver-bound oak casket contained Mr. Carnegie's freedom roll of parchment; it bore views of the college and Skibo Castle. After the speeches a procession was formed along the quaint Old World High Street to the town hall, where cake and wine were served.

"My boy," said the old gentleman, in a kindly tone, "there's only one thing that stands between you and success."

"And what is that?" asked the youth. "If you worked as hard at working," explained the old gentleman, "as you do at trying to find some way to avoid working you would easily acquire both fame and fortune."

Your money back if you're not satisfied. Do you suppose that a company with a capital of \$500,000.00 paid in full, and the proud reputation of thirty-six years of continuous success, would make such an offer and not carry it out to the letter? Do you suppose we would jeopardize our standing with the public and our chances of still greater success by failing to fulfill any promise we make? Do you suppose we would make such an offer if we did not have the utmost confidence in the satisfying quality of our goods? We know we can please you and save you money, for Hayner Whiskey goes direct from our distillery to you, carries a United States registered distiller's guarantee of purity and age, and saves you the big profits of the dealers. Read our offer elsewhere in this paper. The Hayner Distilling Co.

## Uncle Sam says it's all right

Uncle Sam, in the person of ten of his government officials, is always in charge of every department of our distillery. During the entire process of distillation, after the whiskey is stored in barrels in our warehouses, during the seven years it remains there, from the very grain we buy to the whiskey you get, Uncle Sam is constantly on the watch. We dare not take a gallon of our own whiskey from our own warehouse unless he says it's all right. And when he does say so, that whiskey goes direct to you, with all its original strength, richness and flavor, carrying a UNITED STATES REGISTERED DISTILLER'S GUARANTEE OF PURITY and AGE, and saving the dealers' enormous profits. That's why HAYNER WHISKEY is the best for medicinal purposes. That's why it is preferred for other uses. That's why we have over a quarter of a million satisfied customers. That's why YOU should try it. Your money back if you're not satisfied.

**Direct from our distillery to YOU**  
Saves Dealers' Profits! Prevents Adulteration!

## HAYNER WHISKEY

PURE SEVEN-YEAR-OLD RYE

**4 FULL \$3.20 EXPRESS  
QUARTS PREPAID**

We will send you FOUR FULL QUART BOTTLES of HAYNER'S SEVEN-YEAR-OLD RYE for \$3.20, and we will pay the express charges. Try it and if you don't find it all right and as good as you ever used or can buy from anybody else at any price, send it back at our expense, and your \$3.20 will be returned to you by next mail. Just think that offer over. How could it be fairer? If you are not perfectly satisfied, you are not out a cent. Better let us send you a trial order. If you don't want four quarts yourself, get a friend to join you. We ship in a plain sealed case, no marks to show what's inside.

Orders for Ariz., Cal., Col., Idaho, Mont., Nev., N. Mex., Ore., Utah, Wash. or Wyo. must be on the basis of 4 Quarts for \$4.00 by Express Prepaid or 20 Quarts for \$16.00 by Freight Prepaid.

Write our nearest office and do it NOW.

**INFORMATION ABOUT GOAT LYMPH.**

In response to a large and constantly increasing demand for information about the Goat Lymph treatment, we have issued a booklet that covers this subject in a comprehensive manner. It tells all about Goat Lymph; what it is, how it is obtained, how it is administered, what ailments it cures, and how it differs from any of the distressing ailments in which the use of this remedy is indicated may obtain it. Why Goat Lymph cures such ailments as chronic articular rheumatism, locomotor ataxia, epilepsy, paralysis agitans, hemiplegia, melancholia, hysteria, neurasthenia, primary dementia, senility, mental and nervous prostrations, and premature old age, is fully explained.

The subject is thoroughly discussed in an interesting way by physicians and former patients. The booklet will be sent free on application to the **GOAT LYMPH SANITARIUM ASSOCIATION**, Saline 25 and 27, Ardmore Building, Chicago. DR. GILBERT J. WHITE, Medical Director.

## The Banker and His Calling.

WHILE THE oversight and management of banking institutions are not included among the regular professional pursuits, the degree of skill, experience, and special knowledge required to insure success in this vocation is second to none demanded in any of the so-called learned professions. And in dignity and prestige the banker's calling stands deservedly on a level with the highest of them. In certain respects, and for certain obvious reasons, the man intrusted with the control of a great financial institution, the custodian of funds public and private, is held to a higher standard of character and conduct and to a more rigid accountability than that set for any other class of men in business life.

He must be a man who commands the confidence of the people to an unwonted degree; he must walk more circumspectly than other men; like Caesar's wife he must be above suspicion. So complex and delicate are the duties, obligations, and responsibilities involved in his position, so sensitive to all influences, good or ill, is the business in which he is engaged, that the slightest breath of doubt or distrust as to his honesty and integrity, or even as to his soundness of judgment, is often enough to precipitate disaster and ruin upon him and upon the interests confided to his hands. A slip that with other men of affairs might pass almost unnoticed, or be easily retrieved, for him becomes a fatal error, with consequences to himself and others of the direst sort.

Such being the conditions and requirements of the banker's calling, it might naturally be expected that the business would gradually bring to the front by selective process a choice body of men, those ranking above the average in character, intelligence, and acumen. And such a body we believe the bankers of the country to be. Taking them man for man the country over, we do not believe that any other calling or profession can equal them in integrity, in conscientious dealing, in honorableness of life, in fidelity to duty. In all the points which go to the making of exalted and unblemished reputation they stand at the highest mark.

And this belief does not rest alone upon observation or on mere opinion; it has the support of facts and figures adduced by statistical research. These show that acts of malfeasance, betrayals of trust, and other criminal deeds, are of less frequent occurrence, proportionately, among the heads of banking institutions than among any other class of business men. A contrary impression might be created from the fact that when an exception to the rule does occur, when a bank fails or is wrecked through the misconduct of its official head, it causes a deep and widespread sensation and looms up larger in the public eye than any ordinary crime.

Considering the fact that there are in the United States over four thousand national banks alone, with a capitalization of over six hundred and fifty-five millions and a surplus of nearly a half more, and the number of actual lapses among bank officials reported each year, and the losses incurred by this means, sink to a comparative trifle. It remains true, therefore, that no branch of modern business enterprise is in the hands of finer men, of men worthy of the confidence and esteem of their fellows than our banking institutions. The conditions surrounding transactions in industry and commerce at the present time are such as to make the banks more and more the mediums of exchange and interchange, and to throw upon them an increasingly heavy burden of trusts and responsibilities. That they will prove equal to all these added duties and justify the faith reposed in them, there cannot be the slightest doubt.

## Making Free Traders on the Docks.

WHILE WE are confident that Secretary Shaw is disposed to do all within his power to mitigate the nuisance of baggage examination for returning passengers from Europe, and has already accomplished much in that direction, it is evident that further reforms are needed before our custom-houses cease to be institutions justly dreaded and abhorred by every self-respecting American citizen who chafes to make a journey abroad. The latest order of the secretary, which is, in substance, that customs inspectors are not to make too minute inquiries into the articles which a returning American may bring home,

provided they are personal effects and do not exceed \$100 in value, is excellent as far as it goes; but why not go farther and make a rule that it shall be sufficient for such passengers to make a sworn statement to the effect that their holdings come within the class designated, and have this take the place of the inquisitorial paper which they are now required to sign. This would be open to no more abuses than the other plan, and would be much simpler and more convenient all around. Our previous system of inspection seems to have gone upon the assumption that every man is a rascal until proof to the contrary is forthcoming, and we need to get away from that false and vicious idea as far as possible. The practice of pawing over the baggage of men and women in a search for dutiable articles is petty business, and as offensive as it is petty, and the government ought to find some more decent and civilized method to collect its dues. More free traders of the influential class are made on the steamship docks of New York than anywhere else in the United States, and Republican officials are doing the work.

## Religion Is Not Dying Out.

WE FEEL impelled to record an emphatic dissent from the despairing and pessimistic views recently set before the world in a pamphlet by Rev. Dr. L. W. Munhall, an "evangelist" connected with the Methodist Episcopal Church, in regard to the spiritual conditions prevailing in that denomination and in the churches generally. According to Dr. Munhall, Methodism is rapidly losing its power and vitality through increasing "worldliness," the substitution of showy formality for simple faith and worship, and, most of all, through the destruction of belief in the Bible wrought by the "higher criticism" inculcated in Methodist theological schools, Methodist papers, and from many Methodist pulpits.

A number of the editors, college presidents, and other educators are mentioned by name, who are charged with teaching dangerous and heretical doctrines and poisoning the minds of youth. The writer also sees much to deplore in the fact that the ejaculatory and emotional displays which formerly marked the services in his church are now seldom heard and that "class-meetings" have nearly died out. The Bible is not read nor circulated as much as it used to be, it is declared, and faith in the Scriptures as the revealed Word of God is passing away. We believe that there is little or no basis for this jeremiad, this sweeping indictment of the churches. Dr. Munhall evidently belongs to that class of men who hold religious doctrine in the form in which it was cast centuries ago, a field of thought and research in which all progress and change have not only ceased, but in which even a suggestion of new light and difference of view is a mark of infidelity. It is this type of men who would, if they could, have held astronomy back to the Copernican theory, and who would have roasted Harvey as "a child of the devil" for daring to discover the circulation of the blood.

Blinded by ignorance and fanaticism, they cannot see that the world moves forward in matters of religious belief, as in everything else; that it is not the spirit but the form of things which is outgrown and left behind; that much of what they call degeneracy and infidelity in the life and work of the churches is but a change of method and practice inevitable as the world advances to higher levels of intelligence and knowledge. They cannot see, for example, that the religious feeling and enthusiasm which formerly found expression in incoherent cries and hysterical outbursts, now manifests itself in practical service for the poor, the helpless, the outcast, in a thousand noble ways unknown to the older times, and a thousand times saner and more helpful to suffering and sinning humanity.

For a truer, more just and reasonable view of the conditions prevailing in the churches we have an article by Rev. Dr. C. W. Heisler, recently published in the *Lutheran Quarterly*, in which the writer asserts, and proves by a wealth of incontrovertible facts and figures, that the religious resources of this country were never so great as they are now; that religious influences were never so powerful in public and private life, and the progress of religion never so marvelous. He says that "we now have a church membership in the United States equal to that in all the world at the end of the seventh century." He shows that the evangelical church-membership in our country has risen in one hundred years from 1 to every 14.5 of inhabitants in 1800, to 1 to 4.2 inhabitants in 1900. There are 160,000 clergymen in this country, and Dr. Heisler computes that eighty per cent. of our 12,000 college professors and from sixty to sixty-five per cent. of the 160,000 students in our higher educational institutions are professing Christians. As to the question of a decline in spirituality, over which Dr. Munhall mourns so loudly, we have the situation thus summarized by Dr. Heisler:

With over twenty-eight millions naming the name of Christ among us; with religious devotion flowering out in a host of 10,000 young Christians in the Student Volunteer movement; with the multiplied Christian activities of our Young People's Societies; with such organizations as the American Bible Society, the American Sunday-School Union; with such a spirit as made possible that most remarkable Ecumenical Missionary Conference in New York City two years ago; with larger Christian giving and purer Christian living among us, we may well rejoice for the apocalyptically spiritual side of these Christian resources. Certainly we may venture to maintain that never has there been such true-hearted consecration and profound personal loyalty to the Lord Christ in this land as there is to-day. Never have our Christian resources been so pronounced, so conspicuous, as at the present.

This is an excellent summary and true as far as it goes. But it does not sum up all the things which make the present time brighter, better, and more promising than any past; it would require a volume to do that. The spirit of Christian altruism was never so strong and pervasive as it is to-day. Vastly more time, money, thought, and energy are given to-day to the service of the poor and unfortunate than in any age which the world has

known. Statistics show that the amount of money given last year to foreign missions and to the founding of schools, libraries, asylums, homes for the aged, and other beneficences was larger by many millions than had ever been given before. All the world is at peace now, except in South America, and the great international court of arbitration is holding its first session at The Hague. We therefore hold that the world is a very good place to live in just now, in spite of Dr. Munhall and all his brother Jeremiahs.

## The Plain Truth.

AN INTERESTING comparison is made in a recent publication of the census bureau between the potential saving in the cost of human labor for producing the seven principal crops in 1899, owing to the utilization of improved implements, machines, and processes in place of the hand labor and the processes of many years ago. The amount saved is stated, in round numbers, as \$4,681,471,827. Yet it will be remembered that the introduction of these labor-saving machines was heralded in several instances as ruinous to the interests of the working classes, and not a few riots were occasioned by their appearance.

THAT MAYOR LOW can act with promptness and vigor whenever circumstances demand such action has been shown by his dealing with the case of the outrages perpetrated upon the Jews at a recent funeral of a distinguished New York rabbi. Instead of dismissing the matter with a perfunctory expression of regret and, perhaps, some vague promise of reparation in the future, Mayor Low showed a determination to go to the root of the difficulty at once and to administer just and adequate punishment to all the guilty parties. It is the mayor's evident intention to make an end for all time, if possible, of the brutal and outrageous treatment accorded to our Jewish fellow-citizens by the hoodlums of the metropolis and their sympathizers on the police force, a course of treatment which has been going on for years past and which has made the situation of these people in certain parts of New York but little better than that of the Jews in Roumania, concerning whose welfare our State Department has just been exercising itself. Those who cherish the notion that Mayor Low is lacking in "backbone" have discovered their mistake in this case, and they will be treated to a good many other surprises of the same kind before his term is over.

ALL RIGHT-MINDED Americans, native or foreign born, will share in the feeling of deep and righteous indignation running through the note of protest sent by Secretary Hay to the European Powers, reciting the cruel wrongs heaped upon the Jews of Roumania and calling for united action in their behalf. The sufferings of the Roumanian Jews have been known to the world for years and many efforts have been made, chiefly through private sources, to ameliorate their hardships, but thus far the Roumanian government has been impervious to all appeals in behalf of its Jewish subjects, being apparently incited, instead, to imposing still more oppressive laws and heaping fresh indignities upon them. Now that the United States government has made a clear and emphatic demand that these people shall be treated in accordance with the dictates of common humanity, a demand endorsed by England and other European Powers, it seems impossible that Roumania can fail to hear and heed. It detracts nothing from the noble and humane spirit pervading the action of our government to have it stated that we have been moved in this matter partly by a desire to free ourselves from the burden of caring for a host of these same persecuted people who have sought a refuge in America from the intolerable conditions thrust upon them in their native land. Under fair and just laws most of these Roumanian Jews would be better off in their own country than they can be here, more prosperous and contented, and in Roumania they should remain.

WHILE THE postal system of the United States has been steadily improving most of the time since its inauguration, and is now vastly better than it was thirty years ago, our postal officials have been unaccountably slow in adopting improvements found practicable, popular, and valuable in European countries, although we pride ourselves in being ahead of all the world. Thus rural delivery, which we are just now introducing, has been in operation in the British Isles, in Norway, Sweden, and other European countries for many years. All these nations, too, and Japan besides, have had a parcel-post system for the transmission of small parcels at a moderate cost to domestic and foreign points. But our postal department has not only refused to adopt the parcel system in co-operation with England and other countries, but is actually throwing obstacles in the way of its introduction here by imposing a fee of twenty-five cents upon each package from abroad passing through the customs office. Our postal department seems to proceed upon the assumption that it should never do anything to interfere with the parcel business of the private express companies, but should allow the latter to enjoy a monopoly of this branch of the carrying trade. We fail to see the justice and good sense of this idea, or why the American people should be longer denied a privilege freely granted to the citizens of most other civilized lands. It seems to us that our postal officials have been altogether too solicitous to prevent alleged abuses of the mails in matters of weight and bulk, while they have neglected methods for the extension of the postal business and the accommodation of the people whose servitors they are.

## PEOPLE TALKED ABOUT

**B**ETWEEN THE pulpit and politics there exists, in most men's opinion, a pretty wide chasm, but it is occasionally bridged by an energetic minister. The

THE REV. HERBERT S. BIGELOW.  
Democratic candidate for Secretary of State in Ohio.—Bingham.

most recent instance of the preacher seeking political office is that of the Rev. Herbert S. Bigelow, who has been nominated for Secretary of State in Ohio by the Democratic convention which Mr. Tom Johnson so completely dominated. Mr. Bigelow is an unusually young candidate for that high position. He is a graduate, of not long standing, of Lane Theological Seminary, and he has been pastor of the Vine Street Congregational Church at Cincinnati since 1896, when he was ordained. He began life as newspaper reporter in Cleveland, has been a successful preacher, and has been widely known as a lecturer. Mr. Bigelow is an advocate of the doctrines of Henry George, and his socialism is said to be ardent. He is an eloquent speaker and his address accepting the nomination roused the enthusiasm of the delegates. Many have compared him, in his capacity for speech making, with the free-silver orator of Nebraska. Mr. Bigelow's participation in the campaign will doubtless infuse life into it, and he will be able at least to gather from his experience materials for future sermons.

**I**T IS an interesting fact, recorded in John Russell Young's "Men and Memories," and not elsewhere stated, so far as we know, that the famous women's club in New York, known as Sorosis, owes its origin to a dinner given to Dickens at the time of his second visit to America by the newspaper men of the metropolis. When the arrangements for the feast of reason and the flow of soul had been perfected, it was discovered that no provision had been made for any women guests; that, in fact, there was no room for them at the banquet hall. America was favored at that time, as well as at this, with a number of gifted women who seemed fairly entitled to a place in such a gathering, where men of letters as well as newspaper writers were to do honor to the great English novelist. Among these were Fanny Fern, then at the height of her glory, and Alice Cary, whose sweet and gracious presence was welcome always and everywhere. All efforts to secure admission of ladies to the banquet failed, however, and as a result, to use the words of Mr. Young, the rejected ones, "under the leadership of Alice Cary, Mrs. Croly, Miss Kate Field, and others, resolved to form a club of their own; to exclude men from their festivities, as they had been excluded; and when Dickens or some other of relative fame came to the United States, they would honor him in their own sweet and gracious way." The club was named Sorosis.

**G**OLDEN JUBILEES in the editorial profession are as rare as in most other callings, but they have been known to occur, and they excite general wonder and respect in the craft. The proud record of fifty years as an editor has just been achieved by Captain William Parker, who is now at the head of the Rock Falls (Ill.) News.

CAPTAIN WILLIAM PARKER,  
Who has been an editor for fifty years.  
—Bingham.

The captain, who is a cousin of Rear-Admiral "Fighting Bob" Evans, is seventy years old and is a native of Kentucky. He has edited newspapers in many States and has thus had a very varied experience. He was acquainted with Abraham Lincoln, and one of the features of his career was the reporting of several of the Lincoln-Douglas debates for a Chicago paper. The genial captain probably holds the record for the large number of boys turned out from his various newspaper offices during his long reign as printer, publisher, and journalist. Graduates from his school of experience are filling good positions as practical printers, writers, and editors in New York, Washington, and other cities. He was an officer in the Civil War, is past commander of his home post Grand Army of the Republic, and is making preparations to visit the coming Grand Encampment at Washington. The captain retains much of the vigor of youth and is an able and fearless writer.

**A**S WELL as being fond of riding, the young King of Spain is devoted to bicycling. He takes to games of every kind, and plays almost every day in summer at tennis or croquet; football has also a fascination for him. He takes an interest in art and in science, but his chief delight is in his military studies, for he is a born soldier, and is fond of reading military works in all languages. He speaks English, French and German fluently, and is particularly interested in German and English literature.

**O**NE OF the rarest possible distinctions is that which belongs to Mr. Jeremiah Haselton, of Franklin, Mass., and his twin sister, Mrs. Hannah Haselton Southwick, of Pawtucket, R. I., who are eighty-seven years old and who are believed to be the oldest twins in the United States. The aged twins come from Revolutionary stock, their father having been with Washington at the latter's famous crossing of the Delaware and having been the first man to get on shore. Mr. Haselton was a ship carpenter until he retired at the age of eighty, and he helped build the ill-fated battle-ship *Maine* and other naval vessels, he having been employed in the Brooklyn navy yard for a number of years. In 1838 he was active in the suppression of the Dorr rebellion in Rhode Island. Mr. Haselton is the only member of his own family left alive, his wife and his seven children having died years ago. He is still hale and active and travels about a good deal. Mrs. Southwick reads and writes without glasses.

MR. J. HASELTON AND SISTER.  
Who are believed to be the oldest pair of twins in the Union.

and is a remarkable pedestrian for one of her age, taking long walks daily. It will interest students of heredity to learn that two of Mr. Haselton's grandchildren are twins.

**O**F ALL the notable men gathered from every section of the Empire State at the recent Republican convention at Saratoga Springs, none attracted more attention and none received greater homage than the undisputed Republican leader of the State, Senator Thomas C. Platt. Wherever he went he was received with acclamation, and whenever he entered the convention hall the delegates rose to cheer the slim-framed, bright-eyed, firmly-set leader who had kept the Empire State in the Republican column for a longer period than any other party general in the State's history. The guiding hand and the master mind of the convention were Senator Platt's. His tactful mastery was revealed in the organization of the body, in its official expression, in the platform, and, finally, in the selection of its candidates. And when the work was done the Senator was congratulated on the result by all the leading men of the party, from the Governor down. The discussion over the choice of the second place on the ticket resulted in the selection of the first choice for the Lieutenant-Governorship that

SENATOR THOMAS C. PLATT.  
The indomitable leader of the New York Republicans, from a snap-shot taken at the recent Republican State Convention.—Buggles.

Senator Platt had indicated. It left no scars on Mr. George R. Sheldon, who unselfishly retired in the interests of the party which he has served so long and faithfully. The convention was not only enthusiastic and harmonious, but it was also representative, in the sense that the delegates embraced the very best men in the party.

**I**T IS a significant fact that two eminent Republicans, Speaker Henderson, of Iowa, and Senator Spooner, of Wisconsin, are not in full accord with their party in their respective States. Notwithstanding this, Mr. Spooner will certainly be returned to the Senate, where he has displayed remarkable talents and rendered distinguished services, and there was every indication that Mr. Henderson, who was renominated by acclamation, would be re-elected. Mr. Henderson, however, has unexpectedly seen fit to decline to be a candidate for Congress for the eleventh time, his reason being that many members of the party in his district disagree with him on the subject of tariff changes. The speaker is a firm protectionist and opposed to any reductions in the Dingley tariff rates, while the Republican State platform virtually pronounced for tariff revision as a means of checking the power of the so-called trusts. Mr. Henderson's withdrawal emphasizes that rupture between the friends and opponents of protection in the Republican party which may yet have far-reaching consequences. It is to be regretted that a public man of so high ability and integrity, who has been so exceedingly useful in the national legislature, should have deemed it his duty to retire from the people's service.

SPEAKER D. B. HENDERSON,  
Whose refusal to accept a renomination has caused a sensation.—Gilbert.

**T**HE PROSPECTS of a restoration of Palestine to the Jewish people are not very promising, if we may judge the situation as it is outlined by Mr. Israel Zangwill, the novelist, who has been accounted also a leader of the Zionist movement. There are two ways, he states, in which the Jews may regain the Holy Land—by conquest or purchase. The first is absurd; the second, by reason of the dearth of money in Turkey, is feasible. The Jews are abundantly supplied with money, and if they would expend it freely they might secure for their fellows the land of their fathers. This, he thinks, might have been accomplished during the past quarter of a century by the political power of Lord Beaconsfield, the financial power of Baron Hirsch, and the literary power of George Eliot. But the power of these was not so used, and the outlook for the Jews in the presence of more materialistic days and punier souls is not promising. Certainly if anything could render the Zionist cause a hopeless one it would be such discouraging talk as this. The first element in a true leader in any enterprise is absolute confidence in himself and in the ultimate success of his cause. The spirit of assurance is half the battle and in this spirit the world is conquered. Zionism may indeed be a vain hope and a delusion, but it ill becomes its assumed leaders to say so.

**T**HE SUGGESTION has often been made that every President of the United States should be entitled to a seat in the Senate,

where his knowledge of public affairs would make his presence of great value to his colleagues and the nation. To a great extent the same argument would apply in the case of an ex-member of a President's Cabinet. It is, therefore, a satisfaction to observe that ex-Secretary of War Alger, has been appointed by Governor Bliss to be United States Senator from Michigan, to succeed the lamented McMillan, after the Republican State convention had endorsed his Senatorial candidacy. General Alger was subjected to a great deal of adverse criticism during and after the Spanish-American war, but the second thought of even his critics is now bringing them around to the conclusion that he acted a great part commendably at a trying and critical time. That war found the country but poorly prepared for it, and only General Alger's remarkable business ability could have enabled the War Department to make a showing that, under the circumstances, was most excellent. It is a significant fact that the people of his own State have never in the least lost confidence in him. The general is a man whose public and private life is above reproach, and his talents and wide experience will add strength and efficiency to the Senate.

EX-SECRETARY OF WAR ALGER,  
Who will be elected Senator from Michigan.

**S**EVERAL OF the younger royalties of Europe have fallen victims to the craze for collecting picture postcards, and during their visit to London during the coronation ceremonies are said to have added largely to their stock. King Edward sent cards to his grandchildren when he was on the continent. The Prince of Wales has now one of the finest and most complete collections in the country.

A. D. BISSELL,  
President of New York State Bankers'  
Association.

STEPHEN M. GRISWOLD,  
Vice-President of State Bankers' Association.

J. EDWARD SIMMONS,  
Chairman of Executive Committee of Group 8,  
State Bankers' Association.—Saratoga.

LEWIS E. PIERSON,  
Secretary of Executive Committee of  
Group 8.—Albany.

## Great Gathering of Eminent Bankers.

ONE OF THE most important and influential bodies of business men in the United States is the New York State Bankers' Association, which was organized at Saratoga in August, 1894, and with which all the leading bankers of this State are connected. The moving spirits in the organization were Messrs. James M. Donald and James G. Cannon, of New York City, William C. Cornwell, of Buffalo, and Charles Adsit, of Hornellsville. The association was designed to promote the general welfare, and usefulness of the banks and banking institutions of the State, and to secure uniformity of action, together with the practical benefits to be derived from personal acquaintance and from the discussion of subjects of importance to the banking and commercial interests of the State, and especially to secure the proper consideration of questions regarding the financial and commercial usages, customs, and laws which affect the banking interests.

The organization was effected under what is known as the "group plan," whereby the State is divided into eight geographical groups or districts, comprising from six to nine counties, with one central city as a meeting place. Meetings of the various groups are held quarterly. Each group is controlled by an executive committee of five. The chairman of each group and the officers of the general association constitute a council of administration, which directs the affairs of the whole association. The chairmen of the various groups come to the council meetings thoroughly informed as to the needs and interests of their particular sections, and in this way the affairs of the association are both localized and centralized, its scope is broadened and its usefulness extended.

Probably the most important achievement of the association during its existence was its work in securing the passage of the bill which taxes banks and trust companies at a uniform rate of one per cent. This tax applies to the capital, surplus, and undivided profits of all banking institutions and trust companies, after deducting the assessed value of real estate. The committee having the work in charge was headed by Mr. Charles Adsit, of Hornellsville.

At the meeting of the association in 1901, at Buffalo, there was a total membership of 451 banks out of 537 national and State institutions in the State. The officers of the association, selected at that meeting, are as follows: Mr. Arthur D. Bissell, vice-president of the People's Bank, Buffalo, president; Mr. Stephen M. Griswold, president of the Union Bank, Brooklyn, vice-president; Mr. Frank E. Howe, cashier of the Manufacturers' National Bank, Troy, treasurer; Mr. T. Ellwood Carpenter, president of the Mount Kisco National Bank, secretary.

The meeting of 1902, which is now being held in New York, promises to be one of the most interesting as well as most profitable in the history of the association. The entertainment of the delegates, which is being provided by Group No. 8, is of that elaborate and substantial kind which characterizes the best efforts of the bankers of the metropolis. The programme of this gathering of the banking magnates comprises business meetings at the New York Clearing House; addresses by the comptroller of the currency, the Hon. William B. Ridgley, and William A. Nash, president of the Corn Exchange Bank, this city, the subject of the latter being "Branch Banking"; the entertainment of the bankers at the Casino theatre by the executive committee of Group No. 8, and a banquet and vaudeville entertainment at the Waldorf-Astoria. The arrangements for the convention were made by a committee of which Mr. Henry P. Davison, a vice-president of the First National Bank, is chairman. The executive committee of Group No. 8 is headed by the eminent banker and financier, the Hon. J. Edward Simmons, president of the Fourth National Bank, with Lewis E. Pierson as secretary.

The following is a list of the banks which are members of the association, with the names of the presidents:

### GROUP No. 1.

CATTARAUGUS COUNTY.—Bank of Cattaraugus, H. C. Rich; Bank of Gowanda, Frederick J. Blackman; Exchange National Bank, Olean, F. L. Bartlett; First National Bank, Olean, J. E. Dusenbury; State Bank of Randolph, John N. Cowen; First National Bank, Salamanca, R. O. Wait.

CHAUTAUQUE COUNTY.—State Bank of Brocton, Ralph A. Hall;

Lake Shore National Bank, Dunkirk, A. H. Marsh; Merchants' National Bank, Dunkirk, C. D. Murray; Fredonia National Bank, R. H. Hall; First National Bank, Jamestown, F. E. Gifford; State Bank of Sherman, J. L. Thayer; National Bank of Westfield, Edward W. Skinner.

ERIE COUNTY.—Bank of Buffalo, E. C. McDougall; Buffalo Commercial Bank, H. H. Persons; Citizens' Bank, Buffalo, Joseph Block; Columbia National Bank, Buffalo, E. B. Jewett; German-American Bank, Buffalo, George Sandoz; German Bank, Buffalo, E. A. George; Manufacturers and Traders' Bank, Buffalo, R. L. Fryer; The Marine Bank, Buffalo, S. M. Clement; Merchants' Bank, Buffalo, W. H. Walker; People's Bank, Buffalo, Daniel O'Day; Third National Bank, Buffalo, Charles A. Sweet; Union Bank, Buffalo, John Strootman; Bank of East Aurora, H. H. Persons; Bank of Hamburg, D. C. Pierce; Bank of Holland, Wm. B. Jackson; Bank of Lancaster, Charles W. Fuller; Farmers' Bank, Springville, S. R. Smith; Bank of Batavia, D. W. Tomlinson; First National Bank, Batavia, Samuel Parker; Bank of Le Roy, William F. Huyck; Citizens' Bank, Le Roy, W. F. Smallwood.

NIAGARA COUNTY.—National Exchange Bank, Lockport, Timothy E. Ellsworth; Niagara County National Bank, Lockport, C. W. Van Valkenburgh; Bank of Niagara, Niagara Falls, H. C. Howard; Bank of Suspension Bridge, Niagara Falls, James Law; Electric City Bank, Niagara Falls, Jerome B. Rice; Power City Bank, Niagara Falls, Arthur Schoelkopf.

ORLEANS COUNTY.—Citizens' National Bank, Albion, Perry Church; Orleans County National Bank, Albion, Charles E. Hart; State Exchange Bank, Holley, M. Kennedy; Medina National Bank, Earl W. Card; Union Bank of Medina, G. A. Newell; State Bank of Tonawanda, North Tonawanda, T. E. Ellsworth.

WYOMING COUNTY.—James H. Leomin & Son, Attica; Bank of Castile, Citizens' Bank of Perry, Milo H. Olin; First National Bank, Perry, Eliza D. Page; Wyoming County National Bank, Warsaw, L. H. Humphrey.

### GROUP No. 2.

LIVINGSTON COUNTY.—State Bank of Avon, Aaron Barber; Citizens' Bank, Danville, George A. Sweet; Merchants and Farmers' National Bank, Danville, William Kramer; Genesee Valley National Bank, Genesee, J. W. Wadsworth; Bingham Brothers, Mount Morris.

MONROE COUNTY.—First National Bank, Brockport, Luther Gordon; Bank of Hopewell Falls, A. M. Holden; Alliance Bank, Rochester, H. F. Atkinson; Central Bank, Rochester, Benjamin E. Chase; Commercial Bank, Rochester, C. H. Babcock; Flour City National Bank, Rochester, C. C. Woodworth; German-American Bank, Rochester, Frederick Cook; Merchants' Bank, Rochester, P. R. McPhail; Traders' National Bank, Rochester, H. C. Brewster.

ONONDAGA COUNTY.—Canandaigua National Bank, F. H. Hamlin; Hamlin & Co., East Bloomfield, J. S. Hamlin; First National Bank, Geneva, A. L. Chew; Geneva National Bank, S. H. Ver Planck; S. Southworth, Geneva.

SENECA COUNTY.—Exchange National Bank, Seneca Falls, Milton Howe; First National Bank, Waterloo, Francis Bacon.

WAYNE COUNTY.—Bank of Wayne, Lyons, O. F. Thomas; Savoy & Davis, Lyons; First National Bank, Palmyra, Pliny T. Sexton.

YATES COUNTY.—Baldwin's Bank, Penn Yan, Mason L. Baldwin; Citizens' Bank, Penn Yan, John H. Johnson.

THE NATIONAL CITIZENS' BANK BUILDING, NEW YORK.

### GROUP No. 3.

ALLEGANY COUNTY.—University Bank, Alfred, W. H. Crandall; Andover State Bank, James Owen; A. M. Burrows, Andover; State Bank of Belmont, E. A. Willets; Cuba National Bank, J. C. Leggett; Citizens' National Bank, Friendship, S. M. Norton; Citizens' National Bank, Wellsville, Elmore A. Willets; First National Bank, Wellsville, W. F. Jones.

BROOME COUNTY.—City National Bank, Binghamton, J. B. Van Name; First National Bank, Binghamton, W. G. Phelps; B. H. Nelson & Son, Binghamton.

CHEMUNG COUNTY.—Julius Bank, Greene, Joseph E. Julius; Chemung Canal Bank, Elmira, M. H. Arnot; Merchants' National Bank, Elmira, E. R. Barker; Second National Bank, Elmira, Seymour Dexter.

SCHUYLER COUNTY.—Farmers and Merchants' Bank, Watkins, W. H. Wain.

STEUBEN COUNTY.—First National Bank, Addison, S. V. Lattimer; First State Bank, Canastota, L. D. Whiting; First National Bank, Corning, J. A. Drake; Q. W. Wellington & Co.'s Bank, Corning, Q. W. Wellington; Bank of Hammondsport, D. Bauder; Citizens' National Bank, Hornellsville, Charles Cadogan; First National Bank, Hornellsville, Charles Adsit.

TIOGA COUNTY.—First National Bank, Owego, George Freeman; Owego National Bank, D. M. Piteber; Tioga National Bank, Thomas C. Platt; Citizens' Bank, Waverly, J. T. Sawyer; First National Bank, Waverly, F. E. Lyford.

TOMPKINS COUNTY.—First National Bank, Groton, Frank Conger; First National Bank, Ithaca, George R. Williams; Tompkins County National Bank, Robert H. Treman.

### GROUP No. 4.

CATTARAUGUS COUNTY.—Cattaraugus County National Bank, Auburn, George H. Nye; Edwin R. Fay & Sons, Auburn; National Bank of Auburn, E. H. Avery; William H. Seward & Co., Auburn; First National Bank, Mayville, Terry Everson; S. W. Treat & Co., Weedsport, S. W. Treat.

CHEMUNG COUNTY.—First National Bank, Earlville, N. L. Douglas; Chemung National Bank, Norwich, C. R. Martin; National Bank of Norwich, T. De W. Miller; First National Bank, Oxford, J. H. Van Wageningen.

CORTLAND COUNTY.—First National Bank, Cortland, E. Keator; National Bank of Cortland, Stratton, S. Knox; Second National Bank, Cortland, G. J. Mager; Homer National Bank, W. H. Crane; First National Bank, Marathon, J. H. Tracy; Muller & Son, Truxton.

DELAWARE COUNTY.—Sidney National Bank, J. A. Clark; First National Bank, Walton, George O. Mead.

HERKIMER COUNTY.—First National Bank, Herkimer, Henry Churchill; Herkimer National Bank, Charles S. Millington; National Herkimer County Bank, Little Falls, W. G. Milligan.

JEFFERSON COUNTY.—Citizens' National Bank, Adams, John H. Frostman; Farmers' National Bank, Adams, I. P. Wodell; City National Bank, Watertown, C. R. Remington; Jefferson County National Bank, Watertown, J. C. Knowlton; National Bank and Loan Company, Watertown, G. C. Sherman; National Union Bank, Watertown, W. W. Tuzzart; Watertown National Bank, George W. Knowlton.

MADISON COUNTY.—First National Bank, Canastota, Le Grand Colton; Canastota National Bank, Henry Barden, 2d; De Ruyter Banking Company, De Ruyter, B. S. Bryant; National Hamilton Bank, Hamilton, William M. West; Farmers and Merchants' State Bank, Oneida, Loring Munroe; National State Bank, Oneida, A. J. French; Oneida Valley National Bank, Oneida, H. H. Douglas.

ONEIDA COUNTY.—Farmers' National Bank, Rome, W. J. P. Kingsley; First National Bank, Rome, W. R. Huntington; First National Bank, Utica, C. B. Rogers; A. D. Mather & Co.'s Bank, Utica, Jacob Agne, Jr.; Oneida National Bank, Utica, W. S. Walcott; Second National Bank, Utica, Thomas R. Proctor.

ONONDAGA COUNTY.—Baldwinsville State Bank, Otis M. Bigelow; First National Bank, Baldwinsville, W. F. Morris; National Bank of Skaneateles, B. F. Petheram; American Exchange National Bank, Syracuse, M. C. Palmer; Commercial Bank, Syracuse, Hendrick S. Holden; First National Bank, Syracuse, E. B. Judson; Merchants' National Bank, Syracuse, Hiram Plumb; National Bank of Syracuse, J. Dunn, Jr.; New York State Banking Company, Syracuse, R. A. Bonta; Salt Springs National Bank, Syracuse, William H. Stansfield; State Bank of Syracuse, A. K. Hiseock; Third National Bank, Syracuse, Henry Lacy.

OSWEGO COUNTY.—Citizens' National Bank, Fulton, E. H. Readhead; First National Bank, Fulton, A. Emerick; First National Bank, Mexico, Nellie T. Peck; First National Bank, Oswego, J. T. Mott; Second National Bank, Oswego, George B. Sloan; Pulaski National Bank, Ella M. Clark.

ST. LAWRENCE COUNTY.—First National Bank, Canton, L. W. Russell (vice-president); Bank of Gouverneur, Newton Aldrich; National Bank of Ogdensburg, James R. Bill; Ogdensburg Bank, F. Chapman; People's Bank, C. E. Sanford.

### GROUP No. 5.

ALBANY COUNTY.—Albany City National Bank, George H. Thacher; Albany County Bank, Albany, J. R. Cornell; First National Bank, Albany, G. A. Van Allen; Mechanics and Farmers' Bank, Albany, Dudley O'Leary; Merchants' National Bank, Albany, Frederick Tillingham; National Commercial Bank, Albany, R. C. Pruyn; National Exchange Bank, Albany, J. D. Parsons, Jr.; New York State National Bank, Albany, Ledyard Cogswell; The Park Bank, Albany, Grange Bank; Spencer Trask & Co., Albany; Manufacturers' Bank, Cohoes, John Clute; National Bank of Cohoes, J. L. Newman; National Bank of West Troy, T. A. Knickerbocker.

CHEMUNG COUNTY.—First National Bank, Bainbridge, Erwin Ransdell.

CLINTON COUNTY.—First National Bank, Plattsburg, E. G. Moore; Merchants' National Bank, Plattsburg, A. Guilford; Vilas National Bank, Plattsburg, H. A. Newton.

COLUMBIA COUNTY.—State Bank, Chatham, George L. Morris; Farmers' National Bank, Hudson, Smith Thompson; First National Bank, Hudson, Charles W. Macy; National Hudson River Bank, Hudson, C. B. Evans; National Union Bank, Kinderhook, G. S. Collier.

DELAWARE COUNTY.—First National Bank, Franklin, E. S. Hudson.

ERSEX COUNTY.—Citizens' National Bank, Fort Henry, J. W. Wyman; First National Bank, Fort Henry, George T. Murdoch.

FRANKLIN COUNTY.—People's National Bank, Malone, N. M. Marshall; Adirondack National Bank, Saranac Lake, R. H. McIntyre.

FULTON COUNTY.—Fulton County National Bank, Gloversville, A. D. L. Baker; Manufacturers and Merchants' Bank, Gloversville, W. H. Pace; Johnstown Bank, John G. Ferris; People's Bank,

# Guarding Wall Street Against Thieves

By John Mathews

IT HAS been more than a quarter of a century since Wall Street has known a great robbery—so long ago that the story is told like a legend—yet there is no district in any city of the country, perhaps of the world, so constantly and vigilantly guarded as the financial centre of New York. Special detectives, city detectives, and policemen unite to keep the thieves from Wall Street and to prevent one who becomes a thief there from escaping with his booty. I observed at the corner of Wall and Broad streets, on the sidewalk opposite the office of J. Pierpont Morgan & Co., a group of men, square-built men with big jaws, who seemed to have met there casually and were engaged in friendly conversation. They were city detectives. A block farther down Wall Street, at the corner of William Street, two other men of the same stamp were lounging against a building, talking and laughing with a newsboy. They, too, were city detectives. A little farther away, at the corner of Exchange Place and New Street—narrow, dark streets, between towering walls of buildings—were three men who seemed to have more leisure than the multitude of others who were concentrating their energy into the short hours of business. These three were detectives also.

Aside from these eight whom I had seen were twelve other men from the city detective force, and all of them the oldest and most experienced of the force, patrolling the small district where the great financial business of the country is done—east of Broadway and between Fulton Street and the East River. A part of this squad of twenty men gives its attention to Maiden Lane, where every building is filled with diamonds and the richest gems and jewelry, and the others guard Wall Street and its short tributaries, where the offices of banks and bond houses and stock brokers' offices occupy every inch of space inside the sidewalk line. These twenty men from the city detective bureau are selected for one particular qualification, and that is their knowledge of thieves and their ways.

These men have made a study of the faces of the most important thieves of the world. As soon as one of these noted criminals appears in Wall Street he is sure to be recognized by one or more of the twenty. Even though he may not have committed a crime for which he has not been punished, his very presence in the precinct where money and valuable securities are the only commodities at hand is a suspicious circumstance and he is quickly driven outside the sacred limits. The dead line on the north is Fulton Street and on the west Broadway. The thief must stay beyond the dead line.

There is a branch station of the detective bureau in

the Wall Street district which is entirely distinct from the police precinct headquarters.

This station is in the basement of the new Stock Exchange building on Broad Street, near Wall. Every morning at nine o'clock the twenty detectives report there for duty after they have left police headquarters. Then they scatter about at will through the streets of the financial centre. About 4:30, when all the financial business of the day is over, they leave Wall Street to the care of the large force of patrolmen. The posts in this district are not more than a block long. In the block on Broad Street between Wall Street and Exchange Place two patrolmen are on duty at night. One of them walks back and forth over the short block on the east side of the street, the other walks the same distance on the west side.

Aside from the city detectives and patrolmen in the financial district each large bank and financial institution has one or more special officers of its own. In the office of J. P. Morgan & Co. there are six. Other large banks have the same number. These are not the only safeguards against robbery in Wall Street. It is customary, when any cash or valuable securities are taken through the street from one financial house to another or between a bank and a safe-deposit vault, for two men to carry the valuable property in a tin box. The box is swung between them, and sometimes, though not frequently, these two men are each handcuffed to the handle of the box. Then behind them walks one or more of the special officers. Sometimes there is only one officer and he follows the men with the box, never allowing them to be more than a yard ahead of him as they walk rapidly through the street. Sometimes there are two officers. Then the second man will walk about six feet behind the first, both of them keeping their eyes on the tin box that may contain millions of dollars in securities.

These special officers are, of course, armed and ready on the instant for a fight. Sometimes they carry their revolvers in the side pockets of their coats, sometimes in their sleeves. For several weeks the Seaboard National Bank, while its own vaults were being repaired, kept its most valuable securities in the safe-deposit vaults of the Produce Exchange, across Beaver Street. The papers and money were carried in four or five boxes, and these were fastened together by a small chain, the boxes being about two feet apart. On each side of each of the boxes, as they were carried across the street morning and night, was one man, and both in front and behind the procession was a special officer. It was an interesting procession.

Perhaps it is all of these safeguards against a successful robbery in Wall Street that has baffled the thieves so

long; but there is, besides, another reason. Money is seldom carried in the street. It is different now from the old days, when all payments were made in gold and thousands of dollars were carried through the streets from one financial house to another. The most valuable property that is taken through the thoroughfares of the financial district now consists of bonds of various kinds. Even should a thief successfully steal a quantity of bonds, he would have difficulty in disposing of them. He would be obliged either to sell them or borrow money with the stolen bonds as security, and there are few places where he could do either without identification. So the thieves have let Wall Street alone.

The greater part of this extreme vigilance is the result of the robbery of Mr. Lord, owner of the Lord Court Building, a robbery which occurred about twenty-five years ago. The story of the crime was told as follows by one of the oldest members of the police force: Mr. Lord, who was an elderly gentleman of immense wealth, was sitting one afternoon reading a newspaper in his office in the building which bears his name. Any one from the street could walk directly into it without meeting opposition or inquiry. The system was different from what it is now, for a man of Mr. Lord's position would now be hidden within an interior room and guarded by snap locks, and a private secretary, and cold and inquisitive office-boys. For several days two men had gone frequently into Mr. Lord's offices—although not in his private office then—and while they had not been suspected they had made themselves thoroughly familiar with the "lay" of the rooms. They must have learned something, too, of the safe in Mr. Lord's private office and of what it contained. On the afternoon of the robbery Mr. Lord was sitting reading when one of the strangers walked into his office and engaged the wealthy man in conversation.

The two talked earnestly together for several minutes, and while Mr. Lord's back was turned the other robber hastily swung open the great safe door, pulled out some drawers and took from them securities worth \$1,800,000! A little later the two men quietly walked out. It was some time afterward that Mr. Lord discovered his loss. He was almost overcome by the shock of it. The thieves had gone and to this day they have never been found. A part of the securities stolen were found. A great many years later some of them appeared in London, where they were offered for sale. But the robbers have always been a mystery. The great theft created a stir throughout the country. And from that day to this thieves have not dared to return to Wall Street.

## Cuba to Create a Public Debt.

IT HAS often been asserted that a nation, unlike an individual, is benefited rather than injured by a public debt of reasonable size. It is evident, at all events, that the new republic of Cuba does not propose to worry along without such a helpful accessory to the ship of State. There may be some question, however, as to the reasonableness of a loan of \$35,000,000. Even national pleasures have their limitations.

## Colony Life.

EFFECT OF CLIMATE OVERCOME BY PROPER FOOD.

The necessity of pleasant, nutritive, and proper food is highly appreciated in the Philippines, particularly by Americans unused to climate and native custom in cooking.

One of our soldier boys writes: "In this land of bad food and disordered stomachs, a nearly fatal attack of malaria left my digestion for many months in such a state that food of any kind distressed me terribly. I suffered from the effect of drugs, but dared not eat. It was simply misery to live. The so-called remedies only seemed to aggravate my sufferings."

"Some friend suggested Grape-Nuts Food, and I gave it a trial. To my surprise and pleasure, it did all and more than was claimed for it. I am now, after using the food for eighteen months, in good health; my digestive apparatus in perfect order, and I have long lost all feeling of pain or discomfort after eating. In fact, I live again. I would not be without Grape-Nuts for the world. It is not only the excellent effect of your food that renders it valuable, it is also delicious to the taste, possessing flavor of its own, and can be prepared in many ways to suit many palates." Name given by Postum Co., Battle Creek, Mich.

# Five New Forces in Wall Street

FROM OBSCURITY TO WEALTH AND FINANCIAL LEADERSHIP

THE MEN who at any time dominate Wall Street rank among the chief financial powers of the land. So long as they retain their footing they are characters of national note, whose every move is deemed of moment and is watched by the public with keen interest. Leadership in that great arena of mingled solid business and daring speculation is, however, subject to much rotation. Many "Napoleons of finance" have there run brief meteoric careers, ending in failure and oblivion. An occasional giant, like the late Jay Gould, may long endure the "storm and stress" of the Wall Street life, but most of the leaders who now and then arise show but a limited staying capacity.

JOHN W. GATES.  
Copyright, 1902, by Falk.

During the past few years there has been a complete change in the forces predominant in the world's now chief financial mart. The old "powers in the Street," such as the Wizard and his strenuous associates and rivals, and also numerous successors, have passed wholly away, and new, and comparatively young, men have gained the upper hand. These latest leading financiers have come from the aggressive West, and they exhibit in their operations all the boldness and skill which characterized the ablest of the old-timers. The new comers, who had scarcely been heard of until recent years, have had unusually rapid rises to prominence and wealth. This has been due chiefly to their inborn abilities, for they are all self-made men, who learned the early lessons of success in the school of necessity and were graduated from the "University of Hard Work." These present leaders in Wall Street, five in number, are Edwin Hawley, ex-Judge William H. Moore, John W. Gates, Isaac L. Elwood, and George W. Perkins. Each is a powerful man in his way and, excepting Gates and Elwood, who work in concert, each pursues a distinct line of action in a separate field. The qualities of the men appear to assure them long terms of influence and good fortune.

Edwin Hawley's method of making money is to get control of railroads at low figures and then improve them and make them more valuable. He buys the roads as investments and for operation, and does not speculate. Mr. Moore is an organizer of railroads for

EDWIN HAWLEY.

speculative purposes, securing the roads in order to sell them again at a profit. Mr. Gates is an out-and-out speculator in stocks, and Mr. Elwood is his backer and adviser. Mr. Perkins is said to be the greatest manipulator of men that has ever appeared in Wall Street, and it is through this gift that his successes have been achieved. Each of these men some twenty years ago was an obscure individual, working hard for only a moderate salary; now each is a millionaire, whose riches are constantly increasing. Even the barest sketch of the business careers of this brainy and forceful quintette contains matter to set the ambitious American to thinking.

Mr. Hawley was formerly one of a number of merely ordinary clerks in the office of the Southern Pacific Railroad. In some manner, however, he attracted the favorable notice of the late President Collis P. Huntington, and this led to his promotion. After a series of additional promotions, earned by excellent service, Mr. Hawley became assistant traffic manager and member of the executive board of the Southern Pacific. Mr. Huntington died, and Mr. Edward H. Harriman, president of the Union Pacific, secured through Mr. Hawley's aid the control of the Southern Pacific. Mr. Hawley remained in the executive board, but the duties of that position did not suffice to keep him busy, and so he formed an alliance with George Crocker, the millionaire, and proceeded quietly to buy control of the Minneapolis and St. Louis Railroad, the stock at that time being very low. Mr. Hawley bettered the road and managed it so profitably that the stock rose from \$10 to \$112 and was in public demand. Later Mr. Hawley purchased the Iowa Central from Russell Sage, and next got possession of the Colorado and Southern. Mr. Hawley's latest exploit is said to have been the purchase of the Wisconsin Central, and it is hinted that he is on the lookout for additional lines. This lately enthroned railroad king has established himself in a palace in this city. The financiers of the metropolis consider him a safe, conservative, and constructive business man.

William H. Moore, who is said to be a man of the same type as Jay Gould, was, not so very long since, practicing law in Chicago and making no special stir. He captured a nomination for judge of the probate court and, after an aggressive canvass, won the election. At the expiration of his judicial term he launched out as a corporation lawyer, displaying much ability in that line. In course of time he organized the Diamond Match Company, known as the match trust, and speedily became a man of millions. Subsequently he consolidated the principal cracker manufactories of the country under the title of the American Biscuit Company. This company eventually went into the hands of a receiver, and Mr. Moore failed for \$9,000,000. Having reorganized the corporation Mr. Moore left the baking business and organized the American Tin Plate Company, the American Sheet Steel Company, and the American Steel Hoop Company, and sold them out to the United States Steel Corporation. Later Mr. Moore got control of the Chicago, Rock Island and Pacific Railroad, to which he is now devoting his attention. Judge Moore's present wealth is estimated as high as \$12,000,000.

John W. Gates in his more youthful days was a successful hardware salesman in the West. During his journeying he fell in with Isaac L. Elwood, who had invented a barbed wire for fencing purposes. The two men formed a company for manufacturing the wire, and later Gates organized the Steel and Wire Company, by the combination of several firms. In the process Gates and Elwood were made millionaires several times over.

They sold out to the United States Steel Corporation, making still more millions. Mr. Gates afterward began to speculate on a large scale and became known as a plunger. In the Northern Pacific corner of last year he was admittedly hit hard, although he has not stated the amount of his loss. He subsequently went to Europe, where, it was reported, he won large sums at baccarat and on the horse races. He is also supposed to have made millions in his recent manipulation of Louisville and Nashville, having practically cornered the stock. Mr. Elwood, as silent partner, of course shares in Mr. Gates's profits.

George W. Perkins, now a member of the potent firm of J. P. Morgan & Co., is only about forty years old. At the age of thirteen he entered the office of Curran & Perkins (the latter being his father), general agents of the New York Life Insurance Company at Chicago. At the age of nineteen he was a manager in the office, and later he became cashier of the company's Cleveland agency and afterward a solicitor and inspector of agencies for the Western department. In Mr. Perkins's territory, during 1891, \$46,000,000 in new business was placed on the company's books. For this fine showing he was, at the suggestion of President John A. McCall, elected third vice-president of the company and summoned to New York and put in charge of the agency force. He pushed business in phenomenal style and was appointed second vice-president. His duties required of him an occasional call at the office of J. P. Morgan & Co.

Mr. Morgan became impressed with the young man's business sagacity and offered him a partnership, which was at first declined and afterward accepted. Mr. Perkins has taken an important part in the firm's financial transactions. It is his task to execute the plans decided on by the firm, and he has been so successful in winning over men affected by the plans that he has been called "Mr. Morgan's right arm." Mr. Perkins is one of the most genial and magnetic of men. He is thoroughly business-like, his mind works with great rapidity, and his decisions are quickly formed. He is a tireless toiler and exacts hard work of his subordinates, but he is perfectly fair and is very popular among those who work under him.

ISAAC L. ELWOOD.

GEORGE W. PERKINS.  
Macdonald.

## "Old Post One"—Origin of the G. A. R.

WHEN THE veterans of the Grand Army at the National Encampment in Washington swung into line, many of them to march for the last time with their comrades, four men were in the ranks whose names are familiar to every wearer of the blue from Maine to California. They are the survivors of the men who founded "Old Post One."

The State of Illinois cherishes many buildings and monuments, but perhaps none more than the little old structure which stands near the centre of the city of Decatur—the birthplace of the Grand Army of the Republic. In a back room in the second story of this building a few men met on the night of April 6th, 1866, and took the first step in creating the organization which in a few years was to number over 300,000 men on its muster-rolls. Later Old Post One enlarged its membership to over 100, but the charter members were twelve only. They consisted of Colonel I. C. Pugh, Lieutenant Joseph M. Prior, Dr. B. F. Sibley, M. F. Kanan, R. N. Coltrin, George R. Steele, J. T. Bishop, J. W. Routh, John H. Nale, George H. Dunning, Christopher Reibsame, and A. Toland. Of the original twelve it is known that "taps" have been sounded over the graves of eight. Of the living, Mr. M. F. Kanan, still a resident of Decatur, is president of the society which was formed in 1891 to perpetuate the memory of Old Post One. J. T. Bishop, when last heard from, was a resident of New York State. Christopher Reibsame is residing at Bloomington, Ill., while Mr. Coltrin is also living and a member of the executive board of the memorial society.

When "Father" Stephenson considered his plan for an association of the men in blue which should not only aid each member but provide for the fatherless and widows

of deceased comrades he little thought that another great army would be formed—by far a larger body of veteran soldiers enrolled for peaceful purposes than the world had ever seen. Before the last scene of the war was enacted at Appomattox, the originator of the Grand Army of the Republic had his plans fairly matured, and when he made them known to his intimate friend, Chaplain Rutledge, they were heartily approved by the latter. The city of Springfield would have had the honor of being the cradle of the Grand Army of the Republic had it not been for a trifling circumstance. Dr. Stephenson knew that a number of old soldiers had gone back to their type-setting cases at Decatur. Believing that their printing office was the appropriate place to set up the constitution and by-laws of his organization, he arranged to have the work done in Decatur. The veteran compositors, with others in the town determined to enroll themselves. The result was the creation of the first post in Decatur. The founder was honored with the title of first department commander. The charter read as follows:

GRAND ARMY OF THE REPUBLIC, Department of Illinois.  
To all whom it may concern—Greeting:

Know Ye, that the Commander of the Department of Illinois, reposing special trust and confidence in the patriotism and fidelity of M. F. Kanan, G. R. Steele, George H. Dunning, I. C. Pugh, J. H. Nale, J. T. Bishop, C. Reibsame, J. W. Routh, B. F. Sibley, J. N. Coltrin, Joseph Prior, and A. Toland, does by the authority in him vested, empower and constitute them as charter members of an Encampment of the Grand Army of the Republic, to be known as Post Number One of Decatur, District of Macon, Department of Illinois; and they are hereby constituted as said Post, and authorized to make by-laws for the government of said Post, and to do and perform all acts necessary to conduct and carry on said organization in accordance with the constitution of the Grand Army of the Republic. Done at Springfield, Ill., this sixth day of April, 1866.

B. F. STEPHENSON, Commanding Department.  
ROBERT M. WOODS, Adjutant General.

The Illinois regiments made up the majority of members of Old Post One, Messrs. Kanan and Steele being members of the Forty-first Infantry, Messrs. Bishop and Reibsame members of the One Hundred and Sixteenth, Mr. Coltrin a private in the Sixty-eighth, and Dr. Sibley in the Twenty-first; Colonel Pugh was connected with the Forty-first Regiment, Lieutenant Prior with the Sixty-eighth, Private Routh with the Forty-first, Private Dunning with the Twenty-first, Private Nale also with the Forty-first, the only charter member enlisted in a regiment outside of the State being Private Toland, who at different times was a member of the Seventeenth and One Hundred and Thirtieth Ohio regiments. Father Stephenson, who was an honorary member of Old Post One, lived to see but a portion of his plans carried into effect, as he passed away over thirty years ago. Although it was his desire to have the pioneer organization of the Grand Army located at his home, he took the deepest interest in the Post at Decatur.

The interior of this noted landmark of Illinois has been changed considerably since Old Post One held its session on that April night in 1866, but the outside is unaltered. To distinguish it from the other structures which front Central Park, a large sign has been placed across it containing the words, "Birthplace of G. A. R.," while from a staff upon the roof the stars and stripes fly daily in the breeze, a most appropriate symbol of the purpose to which the building was devoted in its earlier days.

In need of a tonic? Take Abbott's, the Original Angostura, the king of tonics. At grocers and druggists.

NEW \$3,000,000 STOCK EXCHANGE BUILDING, NOW IN PROCESS OF CONSTRUCTION.—*Luckey.*

PRODUCE EXCHANGE BUILDING, WHERE THE STOCK EXCHANGE IS HOUSED TEMPORARILY.—*Luckey.*

IMPOSING FUTURE HOME OF THE STOCK EXCHANGE AS IT WILL LOOK WHEN COMPLETED.—*Plans by Underhill.*

## New York's \$3,000,000 Stock Exchange To be One of the World's Finest Buildings

THE NEW home of the New York Stock Exchange, which is nearing completion, will be one of the notable buildings of the world. Its cost, exclusive of the ground which it occupies, is about three million dollars. It has been predicted that the building would be ready for occupancy at the first of the coming year, but members of the building committee of the New York Stock Exchange say that it will not be finished until next spring. It is an immense structure, a block in length, extending from Broad Street, on which it fronts, to New Street, and it is 138 feet in width. It has a height of five stories, with a cornice. The effect of magnitude is enhanced by the architectural design of the building, for across its front are six immense Corinthian columns, guarding, as it were, the grand portico and supporting a broad pediment. All the exterior construction of the building is of white Georgia marble, and the interior is of white South Dover marble.

Aside from the beauty and magnitude of the structure there are two other features of it which are of special interest. One of these is the "floor," where the trading will be done, and the other is the safety deposit vault in the basement, which is one of the finest in the world. The trading floor is to be a vast room 140 feet long from the inner face of the columns, 110 feet wide, and 80 feet high. It will afford a better opportunity than was ever given before to observe the beating of the financial heart of the country, for there are to be two broad galleries for spectators, one

PRESIDENT KEPPLER, OF THE NEW YORK STOCK EXCHANGE.—*Gambrell.*

at either end of the room. The vault in the basement is already used by many banking and brokerage houses for depositing their securities.

It is a long room, in the walls of which are hundreds of safety deposit boxes of a variety of shapes and sizes. In the centre of the room is a long steel cabinet and in both sides of it more boxes and lockers. The outside wall of the vault is fourteen inches thick. The exterior is a steel coat. Next to it is a wall of fire-proof material, and inside of that a thick burglar-proof plate of steel. Between the outer wall and the wall in which are the safety deposit boxes is a narrow passage extending entirely around the vault. In the centre of each end and each side of the passage-way are watchmen's signals. At night two men guard the vault. They pace continually around it through the narrow passage. They are required to "ring up" at each one of these signal boxes every fifteen minutes. This keeps the watchmen active. A further safeguard is the time-lock at the front of the vault. It contains the finest and most elaborate lock mechanism made. The immense "strong box" is proof against all the destructive agencies of man or nature.

The majestic New York Stock Exchange is half a block away from Wall Street and occupies the ground on which stood the old Exchange building, and also the site of the former Western Union Telegraph building, which was demolished to make room for the new structure.

### Wall Street Reminiscences.

JAMES B. COLGATE, the oldest member of the New York Stock Exchange, the only one of that large body of men who remembers the famous panic of 1837, was sitting in his office in Wall Street reading the reports of a financial news agency when I called to see him. Mr. Colgate is nearly eighty-five years old. He became a member of the New York Stock Exchange in 1853. Only one other of those who were in the exchange then is now living. That is William Alexander Smith. He is, however, younger than Mr. Colgate. When these two men first met in what was then, as now, the financial centre of the country, there were about one hundred and fifty active members of the exchange. Each man knew the other personally and well. Most of them were young fellows together, and many of them

JAMES B. COLGATE,  
The oldest member of the New  
York Stock Exchange.  
*Gambrell.*

were called nicknames. Mr. Colgate was known familiarly to the jolly young comrades on the exchange as "Beef-steak" Colgate, because of his exceedingly ruddy complexion. In those far-off days the exchange had not only a much smaller membership than now but the number of stocks listed was very much smaller. It was an easy matter then to keep on the track of the changes that took place. Many of the brokers carried all their transactions "in their heads," never keeping any accounts or making any memoranda.

"I was sick in that panic of '37," said Mr. Colgate. "It was a sort of nervous collapse. I worried myself ill over the affairs of the concern I was working for. I was nineteen years old then and was employed by Baldwin, Johnson & Co. I wasn't a member of the firm,

but I knew all the time what was going on and I saw the danger. When firms all around us began to fail I was afraid we couldn't stand it. There were days of uncertainty and anxiety, and although we held together and weathered the storm, the strain was too much for me, and I had to go to bed.

"I was born in New York," continued Mr. Colgate, "and I remember when we were a town of about 120,000 people. In those days the hogs used to run loose on the streets. They were excellent scavengers," laughed the venerable broker, "and about the only street department we had. I used to go to school right over here on John Street, and every day on my way home I would cross Wall Street with the other school children, running and laughing and shouting with our books under our arms. School children would look rather odd on Wall Street now, wouldn't they? Although Wall Street was even then the street of banks, it wasn't exactly as it is now. The presidents of some of our largest banks used to live over their offices. I remember the Mechanics National Bank was on the street, and the president resided on the floor above the bank."

In the days when Mr. Colgate was in his youth the Bowery was a great retail street like Sixth Avenue is now. The promenade of the town was on Broadway below Fourteenth Street—for that street was the northern limit of the business district. In the afternoons, when the Stock Exchange was closed, the young brokers would brush up their clothes and go out for a stroll up Broadway, where the youth and beauty and fashion of the city were on parade. It was the Fifth Avenue of those days. Between Wall Street and Fourteenth Street on Broadway—now what a difference! There are scores of office buildings, and wholesale houses predominate. It is no longer a gay parade-ground. H. B.

panic of '73. There had been a period of inflation. Banks had loaned money to concerns that did not have much collateral. Suddenly, without any warning, the Ohio Trust Company failed. That brought people to their senses and frightened them. Banks were unable to collect their loans and many of them failed. There were runs on many of the banks, and Wall Street was filled all day with a wild mob. I have never seen such excitement.

"In 1873, nearly the same condition prevailed as before the break of 1857. Values were inflated, and when the storm started it kept up until everything was swept away."

"Conditions in the market at present are not unlike those existing before the two historical money disasters. Values are inflated now. One of the causes of this is the fact that the great financial leaders sometimes pay big prices for stocks in order to control certain interests. This raises the price above the intrinsic value of the properties which the stocks represent. If it should happen that these manipulators were forced to sell, there would be trouble. A man is not safe in buying stocks now unless he is on the inside where he can get an honest report on the earnings of the concern and its real condition."

Mr. Smith no longer goes on the floor of the Exchange, but still actively transacts business at his office.

WILLIAM ALEXANDER SMITH,  
Who has been a member of the  
New York Stock Exchange  
longer than any other man.

MR. JAMES STILLMAN,

MONEYED MAGNATES OF THE AMERICAN METROPOLIS.  
HEADS OF SOME OF THE FINANCIAL INSTITUTIONS IN NEW YORK CITY.

# A Forgotten Financier—Robert Morris

PATRIOT, BANKER, AND FINANCE MINISTER OF REVOLUTIONARY DAYS—OTHER ILLUSTRIOUS TREASURY CHIEFS

By Charles M. Harvey

AT THE dinner held in New York City by Group 8, the New York group of bankers, a year ago the following committee was appointed at the suggestion of the Hon. J. W. Beck, of Pennsylvania, to arrange for the erection of a suitable memorial in honor of Robert Morris, banker, patriot, and the Confederation's finance minister during the American war for independence: V. P. Snyder, president Western National Bank; Charles H. Fancher, president Irving National Bank, and the Hon. A. B. Hepburn, vice-president Chase National Bank, all of New York. In the yard of Christ Church, on Second Street, Philadelphia, there is a vault whose entrance is in a rectangular brick inclosure, which has a slab lying horizontally upon it, bearing this inscription:

"The Family Vault of William White and Robert Morris. The Latter, Who Was Financier of the United States During the Revolution, Died the 8th of May 1806, Aged 73 Years."

Tens of thousands of people pass up and down the streets in that vicinity every secular day in the year, yet probably only a few score of them have ever seen Robert Morris's resting-place. Not many of the 1,300,000 residents of Philadelphia know that he is buried in their city. To the vast majority of the 88,000,000 of his fellow-countrymen of to-day Robert Morris is not even a name. How little he deserves to be forgotten!

Republics are sometimes ungrateful. They are oftener forgetful. In the rush of events and the flitting of big and little personages across the public stage many great characters drop out of the popular recollection immediately after they vanish from the physical sight. For the last ten years of Robert Morris's life he was in private station.

CHARLES H. FANCHER,  
President Irving National Bank,  
Gessford.

President Western National Bank.

HON. A. B. HEPBURN,  
Vice-President Chase National Bank.

render was only two-thirds of a year distant, but nobody on either side of the Atlantic at that time could foresee that eventuality. In fact, Morris's appointment was the chief factor in bringing that outcome. Moreover, when Cornwallis's capture did come nobody in America felt any certainty that this would end the war.

Despondency pervaded the colonies—the army, Congress, and private life—at the time when Morris entered office. The treasury was empty. The army was clamoring for pay long since due, but which could not be given, and was without food and clothing. A few weeks before Morris was appointed, 2,000 Pennsylvania soldiers mutinied on account of their ill treatment by Congress, broke camp at Morristown, and marched on Philadelphia, the capital of that day. A New Jersey brigade, for the same cause, rose in revolt. Order was at last restored by Washington, and the laggard Congress was spurred into action for the relief of the soldiers. There was but little gold or silver in the country. The continental paper currency, which floated at par at first, had by this time dropped to about a cent on the dollar, which meant a rise in the price of commodities of all sorts to that extent, as measured by that currency.

Hamilton, a few months before Morris's appointment, said that our envoys in Paris must tell our ally, France, that unless she made a further loan to us we would have to come to some accommodation with England, and therefore France would be deprived of the physical and moral gains to herself which she had expected as a result of a successful issue of the war. France herself, about the same time, was making proposals to England looking toward peace on the basis of England's retention of Georgia and South Carolina, and her evacuation of New

eration in the early part of 1781, and held that post until the latter part of 1784, more than a year after the final treaty of peace with England, which acknowledged the independence of the United States; was then successively a member of the Pennsylvania Legislature, a delegate to the convention which framed the Federal Constitution, and one of Pennsylvania's first Senators under the government which that instrument created; was offered by President Washington the post of Secretary of the Treasury in the government under the Constitution; entered into partnership with Gouverneur Morris, of New York (no relative of his), in the China trade; engaged in land speculations which swept away all his fortune and placed him in a debtors' jail in Philadelphia for three and a half years, and died in that city in 1806. Here, in bald outline, is a summary of the chief events in Robert Morris's career.

Several considerations suggested Robert Morris as the proper person for head of the Department of Finance when the government of the Confederation went into operation in March, 1781. He was the controlling spirit in the largest mercantile house at that time in the United States. Funds had frequently been raised by him when in Congress for the support of the armies. He was one of the organizers of the leading financial institution of the country. Pelatiah Webster, Alexander Hamilton, and others urged the appointment of single heads for the Treasury, War, and Marine Departments under the Confederation, in place of the committees which had mismanaged them under the preceding régime. Imperious necessity compelled Congress to adopt this plan.

Hamilton said "Robert Morris would have many things in his favor for the Department of Finance." Congress was of the same opinion, and he was selected. He declined at first, urging advanced age (he was in his forty-eighth year) and his desire for ease, which his incessant labors for many years entitled him to, and in which his wealth would permit him to indulge. At length, however, he was prevailed upon to accept the post. The Finance Department was by far the most important of all the executive and administrative divisions of the government. Without money, either present or prospective, the military and naval operations would cease. Then, as always, it was the money changers who opened and closed the gates of the temple of Janus.

The time in 1781 when Morris was appointed Superintendent of Finance (which, popularly shortened to that of Financier, was his designation) was the darkest hour of the war for independence. True, Cornwallis's sur-

CHRIST CHURCH, PHILADELPHIA, IN WHICH ROBERT MORRIS  
WORSHIPPED.—Jennings & Sawyer.

At the beginning of that time he was the wealthiest person of his day in the United States, but a succession of business calamities reduced him to poverty. Then for three and a half years, under the operation of the barbarous laws of that age, he was in a debtor's cell, apparently forgotten by everybody except Washington, Hamilton, Gouverneur Morris, and a few others who had been associated with him in the days of his ascendancy.

Yet Robert Morris deserved well of the United States. An Englishman by birth, he came to this country in 1747, at the age of thirteen; entered a mercantile house in Philadelphia, and eventually became a partner in it; espoused the cause of the colonies in the troubles with England; was a delegate from Pennsylvania in the Continental Congress, and a signer of the Declaration of Independence of 1776; helped to organize the Bank of North America, the first extensive financial institution in the United States; was Superintendent of Finance on the establishment of the government under the articles of confed-

York, but George III., providentially obstinate and blind to the end, rejected the proposal, saying he would have the whole of the colonies or none.

Even Washington, who clung to hope in the midst of disasters and discouragements which would have crushed any other chieftain, began to despond at the outlook. Writing to John Laurens, one of America's agents in France, in January, 1781, a few weeks before Morris's selection as head of the Department of Finance, Washington said: "The period [end] of our opposition will shortly arrive if our allies cannot afford us those effectual aids, particularly in money and in naval superiority, which are now solicited. . . . Without an immediate, ample, and efficacious succor in money, we may make a feeble and expiring effort in our next campaign—in all probability the period of our opposition." About the same time Franklin, in Paris, told Vergennes, Louis XVI's foreign minister, there was danger that, unless monetary aid from France was

# Russell Sage, the Most Unique and Interesting Character in Wall Street

By Harry Beardsley

AT THE age of eighty-seven years, after a career of sixty-five years in the money centre of the United States, Russell Sage, probably the oldest, the most conservative, and one of the wealthiest of American financiers, has sounded a note of warning. The present high prices of stocks, the roseate condition of the market, he declares, cannot last. Russell Sage has been one of the most active men in Wall Street for the last half century. He was in "the Street" in the panic of 1857 and during that of 1873. No one knows better than he the cause and the effect of the ups and downs in the financial world. There is no shrewder manipulator nor more astute trader than the venerable broker. He has long been known as the "King of Puts and Calls." He has been recognized as one who possesses a sterling common sense, born of natural ability and long experience in the field of finance. Twenty years ago he was known to be the possessor of a fortune of twenty million dollars. Now his wealth is three times as much, or more. In the building of his immense fortune he has had few reverses. His progress under his conservative policy has been steady. Forty years ago Russell Sage was recognized as the government's right arm in all matters of financial policy. At that time he was in Congress and a member of the Ways and Means Committee of the House. The opinions of no man in Congress were more respected than those of Representative Sage, of Troy, New York. His judgment was followed by the authorities of the government. So when Russell Sage expresses the opinion that there is danger in the present industrial condition the statement is worth consideration.

"Things have been running at a pretty high rate," he said. "It's not safe to buy on the market now. There is danger of a collapse, and then the prices of everything will go down. What I am afraid of is the constant formation of inflated securities, which are sold to the public with a good brand on them. Such securities have been made in large quantities and sold at high prices, because it has been pointed out that the money saved by combination of industries gives to the combination greater earning capacity than the combined earnings of the separate industries would be. This theory has been carried too far. It's going to cause a collapse, and the public will be the greatest sufferer. The control of all the large industries of the country by five or six men is dangerous and is producing the condition which will lead to a reaction."

"After the collapse," continued Mr. Sage, "if the crops are good and general conditions are favorable, then will be the time to buy; for the prices of stocks are apt to fall below their intrinsic values, and then they will rise until they equal that value. But don't buy now, not now," he repeated.

Some of the same opinions which he expressed to me were given by Mr. Sage in the newspapers recently and printed conspicuously throughout the country. Mr. Sage was much gratified by this. Some of his friends had called him up by telephone and had congratulated him on the stand which he had taken. The next morning he received several letters of commendation. Men had stopped him on the street and had told him that they

RUSSELL SAGE, ONE OF THE MOST WIDELY KNOWN OF AMERICAN FINANCIERS.  
Photograph Copyright, 1902, by Rockwood.

were glad he had spoken out and that he was exactly correct in what he had said.

"I hope it has saved the public some money," said Mr. Sage, in speaking of this,—then he added, reflectively, "Well, I think I am the oldest man in Wall Street. I have a standing of sixty-five years. When people have given me their money they have gotten value received. That's the thing. During those sixty-five years I have always been conservative, and I have done pretty well, so people naturally have confidence in me."

"Is the opportunity to make money in Wall Street as good now as it was twenty-five years ago?" I asked.

"There is," Mr. Sage replied, and then reiterated his statement, pointing out the danger of purchasing stocks on the present market.

Russell Sage is one of the most picturesque characters in Wall Street. He is picturesque because he is different from all the others. Among the bankers and brokers of the financial centre are scores of millionaires, and they

are men who usually give evidence of their well doing in their personal appearance. There is about them almost invariably the air of prosperity; an air of assurance and self-confidence; the manner of the man who is accustomed to command—the man who has gotten the best of the world. None of this appears in Russell Sage. His modest apparel, always scrupulously neat, gives no evidence of his great wealth. Mr. Sage's manner is very kind and pleasant. He does not say what he has to say with the declamatory manner of the orator. He spoke in low tones, leaning toward me and smiling as though he were taking me into his confidence.

He walks on the street with a cane, slowly, and in a manner abstracted. He pays no heed to sidewalk throngs through which he passes, while he himself is a great object of interest. A third of those who meet him recognize him. Their faces brighten and they tell their companions, "There comes Uncle Russell Sage." After he has gone by, many of them stop and stare. The news-boys all know him. Frequently one of them will follow him persistently, running along by his side, looking up at his face and begging, "Please buy a paper, Mr. Sage." But the financier does not heed any of them; he walks steadily along, looking straight ahead. The elevator men all know him and step back with great deference to allow him to enter their cars.

When he reaches his office a crowd is waiting for him in the vestibule, for this man of eighty-seven years, who wears the plainest clothes and walks with the heavy brown stick, is a power in the world of Wall Street.

And the retention of his unusual faculties to such an advanced age is not the least remarkable fact about him. He transacts his business with the same ability and celerity that he did in the years which are usually called the prime of life. He may have lost some of his initiative, but none of his mental balance. He is at his desk every day, arriving in the morning at ten and remaining until three in the afternoon. His private office is bare and plain. It is no more pretentious than the man who sits at the simple, flat desk in the corner. The room gives the impression of the headquarters of an attorney, not the private office of a man worth many millions.

Russell Sage has been a money maker since he was fourteen years old. He earned his first money then in a country store. That was in his birthplace, at Oneida, N. Y. Later he removed to Troy, N. Y., secured a position in a store there, and before he was twenty years old he bought out his employer. He began his political career in the Troy board of aldermen and ended it in the national Congress in 1857. At one time he was the political leader of the Whig party in New York and consequently one of the foremost in the affairs of the country. He headed the delegation from his State to the convention which nominated Zachary Taylor for President, and it was Russell Sage who named the Vice-President, Millard Fillmore. And all these events belong to a generation which is gone. How long this remarkable financier, active and vigorous at eighty-seven years, will continue his activity, is an interesting bit of speculation in itself. He has never yet intimated that he would retire from business.

## How Rothschild Profited by Waterloo.

THERE IS probably no more picturesque and unique bit of financiering in history than that by which Nathan Rothschild made six million dollars as a result of the battle of Waterloo. The story is told by Mr. Henry Clews in his book, "Twenty-eight Years in Wall Street." Rothschild had followed Wellington during his campaign against Napoleon, and at Waterloo the "man of money" sat like a soldier in a shower of rain and bullets, watching the battle. As soon as he observed the arrival of Blücher and the rout of the French, Rothschild set spurs to his horse and rode swiftly to Brussels. A carriage whirled him to Ostend and the next morning he was at the Belgian coast. The sea was so rough that he had to pay \$500 to a boatman to carry him across the channel, and he landed at Dover in the evening. The next morning he was in London before the opening of the Stock Exchange. It was known that he had come direct from Wellington and must have the latest news. He had outstripped all the couriers and messengers of the nation. There was no telegraph then. In answer to the anxious inquiries for the news of Wellington, Rothschild discreetly said nothing of the battle of Waterloo. Instead, he sighed, and told of Blücher's previous defeat at Ligny, and said that as a result there could be little hope for Wellington. The gloomy report caused a panic on the exchange, and when the market had reached the bottom, Nathan Rothschild bought everything that he could find money for—all being done quietly through his brokers. Then came the news of the battle of Waterloo, England's victory, the final defeat of Napoleon. Securities of all kinds went up with a rush, and Nathan Rothschild, being well stocked at small cost, made great profits—about six million dollars. He was one of the five sons of the original Mayer Anselm Rothschild, who began his career in a little money-lending shop in Frankfurt, Germany, and founded the richest family in the world.

## Origin of "Watered Stock."

THE EXPRESSION "watered stock," which describes so well the expansion of the stock of a company beyond the value of the property, originated, it is said, in connection with Daniel Drew, who was once the wealthiest and most unique manipulator in Wall Street. Drew had been a drover in his younger days, and it was said of him that before selling his cattle in the market he would first give them large quantities of salt to make them thirsty and then provide them with all the water they could drink. In this way their weight was greatly increased and the purchaser was buying "watered stock."

## Vast Increase of People's Savings.

NO BETTER or more faithful index of the prosperity which this country has enjoyed during the past few years can be found than the figures showing the recent enormous increase in savings banks and savings-bank depositors. Five years ago there were 5,200,000 savings-bank depositors in the United States; now there are 6,400,000, an increase of 1,200,000, or at the rate of nearly a quarter of a million a year. Five years ago the amount on deposit in the savings banks of the United States was \$1,940,000,000; it is now \$2,640,000,000, an increase of \$700,000,000 in five years, or at the rate of \$140,000,000 a year. Massachusetts has proportionately the largest number of depositors and Texas the smallest. Pennsylvania has a much smaller number than might be expected in so large and prosperous a State, a fact partly accounted for, perhaps, by the number and popularity of building and loan associations in Pennsylvania—a method of saving which appeals to many. Among the Southern States generally savings banks are few in number, South Carolina leading all in this respect. A movement has recently been started to promote the growth of these institutions.

## Commodore Vanderbilt's Axiom.

COMMODORE VANDERBILT, the first of the Vanderbilt family and founder of its fortune, used to say this: "Never tell anybody what you are going to do till you do it."

## Wanderers.

TRAVEL THOUSANDS OF MILES AND FIND IT AT HOME.

WE GO about from one place to another in search of something we desire, without success, and finally find it right at home awaiting us. A mining engineer out in Mansfield, Mo., tells of his experience with coffee.

He says, "Up to the year 1898 I had always been accustomed to drinking coffee with my breakfast each morning. In the summer of that year I developed a severe case of nervous prostration and I took several courses of treatment for it in Toronto, Buffalo, and New York City, without obtaining any permanent benefit."

"One of the most trying manifestations of the malady was a condition of nervous excitement in which I found myself every day during the forenoon. It never occurred to me to attribute this to coffee until I read an advertisement of yours last fall describing a case similar to my own which had received benefit from the use of Postum Cereal Food Coffee. I at once changed my breakfast beverage from Java and Mocha to Postum and the effect was nothing short of marvelous. After using it less than a week I was free from morning attacks and in six months all my nervous symptoms had disappeared."

"I have demonstrated the fact that by following your directions in making Postum Food Coffee any one can obtain as rich a cup of coffee from Postum as from any of the imported brands, and may rest assured that they will escape the injurious effects of coffee and experience much benefit from the use of Postum." Name given by Postum Co., Battle Creek, Mich.

# New York the Financial Centre of the World

By Edward White

FOR TWO hundred years the finances of the world were dominated by the city of London. From the founding of the Bank of England, in 1694, to the beginning of the twentieth century, it was the recognized centre of monetary exchange—the world's financial capital. Within five brief years, however, the "Old Lady of Threadneedle Street" has been dethroned. Her sceptre has passed to the lusty giant of the American metropolis, and Wall Street, backed by the undisputed commercial rule of the nation which it represents, has become the imperator of the monetary world.

The growth of New York's banks during the past five years has placed the city far in advance of every other municipality on the globe. Half a decade has witnessed the practical doubling of the capital, surplus, deposits, and total resources of the organized institutions of the city, while the great private banking houses have made giant strides in volume of business, in net earnings, and in the public utility of their operations. The aggregate resources of the national, State, and savings banks and trust companies reach the stupendous total of \$3,300,000,000, which is about \$400,000,000 in excess of the or-

It will be seen that New York's lead is so strong that no untoward event or series of events can restore London's sway. During the first two years embraced in the table both cities gained substantially. In 1900 occurred the presidential election in the United States and the consequent silver scare, and New York's clearings dropped back six billions, and London's went down in sympathy one billion. The fourth year, the great business year, London's totals went up to forty-six billions, while New York's leaped to the enormous amount of seventy-seven billions.

Important as these comparisons are, they do not reflect all the difference between the two cities as financial centres. The operations of New York's moneyed men and institutions within the past few years have been of greater magnitude and farther-reaching in their effects than those of all Europe combined. The financing of extensive corporate enterprises, the reorganization of old ones, and the bringing together in useful combination the scattered remnants of non-productive ones, have involved the handling and interchange of sums aggregating many billions of dollars. These transactions have not only

ties in store for the city and the nation under a thorough awakening, and began a work of expansion which ushered in the greatest era of prosperity the world ever knew, and made New York the controlling financial and commercial power of the universe. The full limit of honor and glory is their due.

## GROWTH OF THE NATIONAL BANKS.

Probably the most striking feature of this marvelous latter-day history of financial New York is the rapid yet substantial growth of the national banks of the city. The following table shows the relative increase in capital, surplus and profits, individual deposits, and aggregate resources of the national banks of New York City and the United States for the five years ending September 30th, 1901:

	Capital.	Surplus and Individual Profits.	Deposits.	Resources.
N. Y. 1896	\$50,450,000	\$30,974,000	\$274,373,233	\$577,882,338
N. Y. 1901	70,550,000	81,391,000	567,161,088	1,227,016,982
Increase	40%	26%	107%	112%
U. S. 1896	648,546,325	336,342,000	1,597,891,058	3,263,685,313
U. S. 1901	653,311,880	430,362,107	2,937,753,213	5,095,347,294
Increase	10%	28%	83%	68%

This table, in conjunction with the following compar-

BROAD STREET, LOOKING UP TO WALL.—Copyright, 1902, by Fair.

ganized banks of London, and only \$500,000,000 less than the combined resources of the banks of the entire United Kingdom. The totals of a dozen of New York's leading institutions added together make a sum equal to the total resources of the Bank of France, which is \$1,075,000,000, and considerably in excess of those of the Imperial Bank of Germany, the footings of which amount to \$920,000,000.

It must be borne in mind that none of the two hundred private banking houses of the city is included in New York's totals. Many of these firms employ capital equal to some of the largest organized institutions, carry lines of deposit reaching far into the millions, and have practically unlimited resources. If the figures of these concerns were available and were added to those of the organized banks and trust companies, the total banking resources of the city would undoubtedly be swelled to the almost incomprehensible sum of \$4,500,000,000.

The most noteworthy advantage of New York over her chief rival for financial supremacy is seen in the following comparative statement of bank clearings for the five years ending October 31st, 1901:

Year.	London.	New York.
1897	\$35,000,000,000	\$31,000,000,000
1898	38,000,000,000	39,000,000,000
1899	43,000,000,000	57,000,000,000
1900	42,000,000,000	51,000,000,000
1901	46,000,000,000	77,000,000,000

exceeded in extent and importance everything else in the financial history of the world, but they have inaugurated an industrial development that has placed the United States in advance of every other nation on the globe, and established a prosperity which blesses mankind wherever the sun shines.

The central figures in this magnificent development are New York's Captains of Finance—the controlling elements of the large private banking houses of the city and the executive heads of the organized institutions. To these men of courage, sagacity, and intelligence is due not only the credit of the city's dominant power in the business world, but in a great measure the marvelous development of the country at large and the consequent universal prosperity. An immutable law of commerce long since decreed that New York should ultimately become the world's monetary centre, yet it never appeared within the range of vision of even the most optimistic that the American metropolis would reach that supreme position ere the twentieth century had fairly dawned upon creation. That was an attainment only thought possible through the slow process of evolution, and was based upon a New World development much greater than could have been vouchsafed inside of another quarter of a century. But these financial leaders, grasping the full meaning of a stable monetary standard and comprehending the American spirit of progress, saw the possibi-

lities in store for the city and the nation under a thorough awakening, and began a work of expansion which ushered in the greatest era of prosperity the world ever knew, and made New York the controlling financial and commercial power of the universe. The full limit of honor and glory is their due.

MR. "GUS" ROGERS.—Hall.

## The Rise of the Rogers Brothers The Funniest of Fun-makers

By Eleanor Franklin

MR. MAX ROGERS.—Hall.

VERY FEW people realize how much "art" there is in a characterization such as is given by the Rogers Brothers, Weber and Fields, Mr. Louis Mann, Mr. David Warfield, and other eccentric com-

the limelight—no matter how meteoric his career may seem to an onlooking public, has a history to relate of times to him "away back," when he struggled with unkind fortune, which always held that longed-for "golden opportunity" just a bit beyond his eager grasp. And so with the clever Rogers Brothers. It was "away back" in 1889, and they had been engaged for a two weeks' run at Austin & Stone's Museum in Boston. Austin & Stone's was the first of the dime museums and was opened in an old empty store building on Tremont Street.

Previous to this the Rogers Brothers had been doing for a couple of years what is called a "neat song-and-dance act" in all the variety houses in the country, and they were so particularly "neat" that the idea of making themselves grotesque was not an attractive one to them. But at Austin & Stone's the same "act" could not be used two weeks in succession, and especially if it were one of those in small letters near the bottom of the list. Hence the Rogers Brothers, with a two weeks' engagement ahead of them, found themselves face to face with the necessity of preparing a new "turn" for their second week.

During the first week they played four performances daily of their song-and-dance act, which didn't leave much time for rehearsals and study on another, but they managed it and went on at the beginning of the next week.

Pleasure" at the Knickerbocker. Mr. Rogers tells a most interesting story of how this came about. "We were doing our German act down at Koster & Bial's," he says, "and one night Mr. Klaw came down with

IN CONVERSATIONAL CONTACT.

edians of their class. Coming out of the Knickerbocker Theatre the other evening I heard three different people say, "I wonder if those boys talk that way all the time," or something to that effect, and knowing the Rogers Brothers to be cut on a most up-to-date pattern, with tongues ironed out as smoothly as anybody's, it struck me as rather interesting and amusing. To give a casual glance at the result of years of constant practice and patient ambition and then wonder if they grew that way! If that isn't sincerest flattery, then what is?

No, the Rogers Brothers didn't grow that way, and it is a curious fact that they became Dutch dialect comedians purely by accident, or rather as the easiest means of overcoming an aggravating condition in a vaudeville contract. Actors are born and not made, testimony recorded in catalogues of dramatic schools to the contrary. Notwithstanding you don't manufacture actors, you discover them, like most other rare and precious things; and Messrs. Max and Gus Rogers discovered themselves some fourteen years ago, when they were both stripling youths just out of knickerbockers.

"It was away back in 1889, at Austin & Stone's Museum

in a rough-and-tumble knockabout German dialect act, "just to try," as Mr. Rogers, Sr., says. "If we perpetrated the same thing on Broadway now," he continued, "an indignant public would rise up and call us blessed." But, much to the surprise of the Rogers Brothers, they were a success as Dutch comedians, and a little later in the

same season made an engagement to give a single trial performance at Tony Pastor's in New York for the benefit of vaudeville managers and booking agents, with the result that they signed contracts next day with Mr. Harry Kernell for thirty straight weeks in the best vaudeville houses in the country.

Here was sudden and unexpected success for two modest youths who thought themselves utterly impossible in the eccentric characters they hesitatingly sought to portray, and since then their rise has been swift and steady. During the season of 1897-8, while playing a long run at Koster & Bial's music hall, they were engaged by Klaw & Erlanger for "A Round of

longest step upward in all our career." Next day the Rogers Brothers called at the office of Klaw & Erlanger and were engaged to do their "turn" in "A Round of Pleasure," but their new managers a little later signed contracts with them for a five-year starring venture, which has been thus far a marvelous financial success.

in Boston," says Mr. Gus Rogers in a reminiscent tone. When a very young-looking actor prefaces a professional anecdote with "It was away back" one feels inclined to smile. "Away back" has such a "befo' de wah" sound about it, somehow, but just the same every successful actor—and by that one means every actor who has climbed into the glare of

"THE ROGERS BROTHERS IN WASHINGTON."—Byron.

They were first presented as stars in "The Reign of Error," then in "The Rogers Brothers in Wall Street." This "locality" idea proved a successful one and has been followed with "Rogers Brothers in Central Park," "Rogers Brothers in Washington," and this year "Rogers in Harvard." This latest success is now running at the Knickerbocker Theatre.

"THE ROGERS BROTHERS IN HARVARD."—Byron.

# Fortunes Found in Copper

By Oliver Shedd

**D**URING THESE times of enterprise and great commercial activity in the United States, there is no industry that is receiving more attention or is producing better results than mining. It is interesting and a little astonishing to know that more money is made in the United States from mining than from banking. Every city has its great banks with millions of capital and millions of deposits, paying millions in salaries to their officers and millions in dividends to their stockholders. And every town and village has its banks, too, and these in the same ratio are paying salaries and dividends. Yet all these millions of profit do not equal the value of the product of the mines of the country. In an article recently published in the *National Banker*, E. Rich, a prominent banker, comparing the mining industry with banking, said:

"There is yearly as much invested in mining as there is in banking, but banking does not prove as safe or as profitable as mining. In a time of prosperity the average banking dividends seldom exceed eight per cent. a year. That the number of dividend-paying mining companies is larger than all other combined industries is fully sustained by statistics. That mining produces quicker and greater profits than any other industrial pursuit is evidenced by the scores of our multi-millionaires. That there are risks in mining as well as in other pursuits is well known to all reasonable minds, but that the immense fortunes of the Mackays, the Fairs, the Fields, the Sharons, the Baldwins, W. S. Stratton, and hundreds of others, are due to mining cannot be denied. According to the census there is less than one-hundredth part of our industrial population engaged in mining. If other industries were as productive of wealth as mining we would have a yearly product of twenty-two times as much as the estimated circulation of gold and silver money in the entire world. The yearly product of gold, silver, lead, and copper alone, if distributed among the miners engaged in the different mining States producing these metals, would average from \$1,000 to \$3,000 per man, or twenty times as much as the per capita of products of all other combined industries. Mining products, with the exception of coal, which is consumed, are increasing our solid natural wealth, without being destroyed, like the vegetable or animal products."

And the most valuable products of mines to-day are gold and copper. Formerly a silver mine was second in value to that which produced gold, but the white metal has been superseded by copper in the public demand. This is accounted for by the decrease in the demand of silver for coinage and the increase in the demand for copper in the arts, the result of its growing use in the appliances of electricity and in other fields of mechanical energy where metal comes in contact with moisture, for copper does not rust. Silver brings comparatively small prices in the market when it is sold for use in the arts—for ornaments and for table ware, for instance; and the result is that all through the West hundreds of silver mines have been closed. But the total mining output of the country has not suffered on account of this, for copper has risen until now it stands next to gold in practical commercial value. We do not hear nowadays of "silver kings" in speaking of miners who have become wealthy. It is the "copper king" now, and the "gold king," too, of course, and always will be.

A large part of the mining intelligence and enterprise which was formerly devoted to the digging and refining of silver has now been directed toward the production of copper. It is this fact that has brought Montana into such great prominence among the States of the Union during the last few years, for Montana is the copper queen of the world. It is a remarkable fact that half of the beautiful brown metal mined in the United States is produced by Montana. The annual output of the copper mines at Butte, Mont., alone amounts to seventy-five million dollars.

Like the gold of California, the copper of Montana has made some of the world's wealthiest men and has been the source of some of the country's most interesting bits of personal history. It was twenty years ago that Marcus Daly, a poor prospector, struck the Anaconda mine, and the word "Anaconda" has become almost a synonym for copper and millions. He drove a shaft down a thousand feet and then "went broke," as the miners say. For a time the mine had to be abandoned, and then Daly secured enough financial aid to permit him to carry on his work, and the result was the opening of one of the richest veins of copper in the world, creating one of the greatest personal fortunes. A young man

named William A. Clark was keeping a grocery store in the little town of Boseman, Mont. He saved up enough money to start a little bank. Then he got hold of a copper mine, the Calansa, in the Butte district, and his fortune was made. He moved to Butte, a larger town than

PARTY OF MINE-OWNERS AND PROSPECTORS IN THE DEPTHS OF THE MONTANA VERDE COPPER COMPANY'S PROPERTY.

Boseman, and started another bank, and soon afterward with the money obtained from this Montana copper mine he bought the United Verde in Arizona, which added greatly to his already enormous wealth. Daly, too, had

TUNNELING UNDER A MOUNTAIN FOR GOLD ON THE MONTANA VERDE COPPER COMPANY'S PROPERTY.—Hawes.

grown wealthier; and since he died another copper monarch has arisen in Montana. He is F. Aug. Heinze, who was a mining engineer, a graduate of Columbia University, N. Y., who went to Montana with his only

source of income a comparatively small salary as an engineer. Now he is worth at least sixty million dollars at the age of thirty-six, and he has made it out of copper. The State of Montana has lost none of its capacity to make copper kings, and the fortune of young Heinze is the latest illustration. And there are two reasons why this is true.

In the first place there seems to be no limit to the depth of the copper veins, and the deeper the shafts of the mines the richer the ore. After the shaft has been sunk several hundred feet, sometimes a thousand or more, the miners "drift," that is they follow the veins in a lateral direction, making subterranean tunnels in different directions from the main shaft. It is through this process of mining that the earth hundreds of feet beneath the city of Butte is "honeycombed" with mines, for Butte, with its 50,000 people, is a mining camp in reality, and the greatest in the world. The other reason for the continuation of the tremendous output of copper from Montana is in the new milling machinery and modern methods of smelting. By these means large profits are realized from ore which was formerly thrown aside as too low a grade to be smelted. The low-grade ore mines are indeed among the most valuable in the State because of the immense quantity of the ore and the ease and small expense with which it is mined.

And through the modern ideas which permit nothing to go to waste a large income is derived from the water which sometimes flows into the copper mines and which was formerly viewed with consternation, for it meant pumping, and pumps cost money. However, the water which fills a copper mine is itself pregnant with the metal held in solution in such quantities that the liquid is a poison. When this water is pumped out of the mines it is treated with iron. The iron is the scrap and waste, old rails, old machinery and the like, which are always found around a mining mill; and when it is put into the copper water, a chemical action ensues and the pure copper is precipitated. Enough is obtained in this way to more than pay the cost of the pumping, and besides, the mine, emptied of the flood, is ready to be worked again.

Another interesting problem of copper mining which has been recently overcome is the former impossibility of mining copper when the pure metal alone was found not mixed with any rock. Solid masses, of great size and bulk, of the pure metal would frequently be found. Yet, paradoxical as it may seem, this metal was of no value; and the simple reason was that nothing could be done with it. It could not be cut or broken or moved, and the rich metal had to lie unmoved. This difficulty has been overcome, like the others, by modern ingenuity expressed in the form of effective drilling machinery which cuts and breaks the metal into a form that can be transported.

In fact, the business of mining has now practically become a science, so that a mine is not as it was—a speculation. Engineers and experts are able to determine just what the extent and nature of any given mine are, and then the miners have only to figure the cost of getting out the ore and hauling it to smelters to determine what their profit will be. In the Butte district there has never been a failure of a copper mine. And it is in this district that the latest methods of organization and machinery are producing the largest profits. The greatest gains in copper mining are made by the large concerns which unite several properties under one company, for combination in mining, as in other industries, saves expense and makes larger profits. Several of the richest copper mines in the Butte district near the Anaconda and twelve miles from the city have recently been combined under one company, the Montana Verde Company, which in order to conduct its business has offices in New York City, in the Park Row Building. This company has combined several of the richest mines: the Pearl H., Sparrow, Nellie Ryan, Belle, North Extension of the Pearl H., Eureka, Gold Hill, Gold Eagle, Copper Queen, Rose, Rose Extension, Copper King, Alice, Ella, Ajax, and Gopher. Along with the copper of Montana occur frequently large quantities of gold, but it is on copper, and copper alone, that the State depends for its reputation. There is money in the gold, too, but Montana is for copper, and yields half the product of the whole United States. The development to enormous proportions of the copper mining industry of the country has come about in the last twenty years, the demand having grown with the perfection of methods of applying electricity.

## In the World of Sports

ATHLETIC CHAMPIONS HOLD THEIR OWN—QUEER DOINGS ON THE TURF—GREAT CYCLE RACES

**PERPETUAL ATHLETIC CHAMPIONS.**—In no other field of sport do the champions maintain their prestige so long as they do in track and field athletics, and this is particularly true of field sports, such as throwing the weights. Flanagan, Mitchell, Sheldon, Gray, and Henneman have been coming out first in the weight contests for many years, and the manner in which these veterans held their own at the recent athletic championships at Travers Island, near New York, would indicate that they will continue prominently in athletics for several years to come. George R. Gray is the veteran of them all and is probably one of the most remarkable athletes that ever lived. Born in Toronto, he has spent much of his life in the United States. As a shot-putter we have never seen his equal in this or any other country, and while beyond forty years of age, with more silver than raven in his locks, he is a man of remarkable physical powers. Weighing one hundred and eighty pounds, with ruddy cheeks and an eagle eye, which the average man of twenty-five would envy, he is the perfect picture of what healthful outdoor sport will do for the average human being. In eighteen years he has never been beaten in the shot-put. J. C. Mitchell is another marvel in a way, and had been out of the hospital, where he was treated for stomach trouble, only a few days when he competed for the championships. "Bob" Fitzsimmons, the prize-fighter, is another athletic marvel whom age does not seem to wither. I have seen such specimens in the mountains of the Blue Ridge, but we seldom meet them in city life except on the field of sport. De Witt, of Princeton, is a coming man with the weights, and some of the best judges believe that in another year he will make the veteran champions look to their laurels. Of the youngsters who showed in the championships, J. H. Wright seemed to have a future before him. He captured the half-mile run in both the junior and senior championships, and ran so cleanly and with such power that the critics were astonished. He has plenty of bone and muscle and is sure to be heard from later. Nobody need be surprised if he turns out to be one of the best long-distance runners in the country. The victories in the Canadian championships of Grant, Moulton, Walsh, and Baxter, of New York, were anticipated.

**TRACK FOLLOWERS CONFUSED.**—It does really seem that the officials of the Jockey Club will have to take

cognizance of the in and out running of thoroughbreds on the Eastern tracks this year. Both meetings at Sheepshead Bay and those at Gravesend and Saratoga showed reprehensible and unaccountable changes in form, and those who follow race-horses and bet on their chances on the form they have made in previous races have simply become confused and will follow any blind rumor they may hear in preference to betting on the animal whose previous performances warrant him in being the favorite in the race. While nobody would think of criticising adversely such men as W. C. Whitney and August Belmont, there are many who are not so particular about saying harsh things about those who send horses of millions to the post. The recent case of Mr. Whitney's mare Smoke, a favorite in the betting, going to the post lame after thousands of dollars had been wagered on the mare; the fact that Mr. Belmont's Fire Eater won his only race on the day that a well-known professional plunger wagered thousands on the colt; the peculiar running of Madden's Colonel Bill and The Rivals are responsible for opinions among horsemen and track followers which will do the turf no good unless such cases are promptly investigated by the stewards and the Jockey Club. The turf has received this year its greatest boom. Turf prosperity has never before been so pronounced in this country. The stockholders in the tracks are not worrying whether coal is ten cents or ten dollars a ton nor whether beef sells for ten cents a pound or brings its weight in gold. Would it not be good business policy to keep the platter clean with so much prosperity in sight? Had obscure trainers been guilty of such practices their licenses would have been revoked long ago. But most of the high-class trainers are now millionaires themselves, and that may account for their boldness. A wealthy owner was not long ago approached by a friend who remonstrated with him about the conduct of his chief jockey, who had been riding some very bad-looking races recently. "Oh," said the owner, "I am sure you are wrong. Why, the boy can't read or write. He has not sense enough to be a schemer."

**KRAMER, HURLEY, AND WALTHOUR ARE BEST.**—As predicted in these columns, Kramer, Hurley, and Walthour have proved themselves easily the superiors in the cycle-racing ranks this year, Kramer winning the profes-

sional sprinting championship and Walthour capturing the paced championship. Singularly enough, Walthour was not seen about New York, restricting himself to the New England circuit almost entirely. Kramer, on the other hand, won most of his points in and about New York, as did Hurley, who retains the amateur championship without much trouble. When the finals were reached in the amateur contests Hurley was clearly out of sorts and did not do himself justice, with the result that Root, of New England, managed to tie him for the championship. When they met a week later Hurley was himself again and he defeated Root easily, as his friends were confident that he would do. With the introduction of team racing this year the champions who have not taken advantage of the scheme have had a hard proposition to meet. Hurley, knowing his speed and staying power, generally went it alone in all the important races, and that fact itself accounted for several defeats of the strongest amateur since the time of Kramer, three years ago. Billington belongs to the New York Athletic Club, but, although a club-mate of the champion, never tried to help Hurley. In fact, Billington, who is about No. 2 in the amateur ranks, really teamed against Hurley, and managed in one day, at the Vailsburg track, near Newark, N. J., to twice beat his club-mate by forming a team with Glasson, a New Jersey rider. By pacing each other judiciously, Billington managed to win one race and Glasson the other, Hurley finishing second in each contest. Teaming was so apparent that it was the duty of the referee to disqualify both men in each case, but track officials are sometimes lax in their duty when a home rider commits an offense, and nothing was done in either case. Kramer and Walthour are ready to go to France as soon as the foreign promoters offer them a suitable guarantee. They will astonish the foreigners if they do go, for they are the strongest pair America has ever had ready to send abroad for international competition on the cycle track. GEORGE E. STACKHOUSE.

## A Forgotten Financier—Robert Morris.

Continued from page 348.

furnished, Congress would lose its influence over the people and the American government would collapse.

### II.

This was the situation when, in March, 1781, Morris was chosen to be head of the Department of Finance. He soon changed all this. His plan of operations comprised chiefly these features: Retrenchment, taxation, loans from France, Spain, and Holland, all of which countries were at war with England, France being America's actual ally, and Spain and Holland her quasi-allies; loans from French officers in this country and from wealthy Americans; the emission by Morris of his private notes and the use of his personal credit. By remonstrance, argument, and appeal Morris stirred up the lagging energies of Congress, and combated the apathy and inefficiency of the Governors. He tried, and with some effect, to arouse a national sentiment, which was entirely lacking in the country at large except for a short time in 1775-76, under the spur of Lexington, Bunker Hill, and the Declaration of Independence.

Through a secret agent Morris furnished funds to Greene's army in the South. He supplied cash to Washington's forces. Flour was furnished by him to most of the soldiers, and lead for bullets to many of them. Through the work of the Bank of North America, of which he was one of the most influential stockholders, the public credit was strengthened. He promptly made it known to the world that, though the outstanding debts of the country could not be paid off at that time, all future obligations would be promptly met. Moreover, for a time Morris was also the virtual head of the departments of War and the Marine. Now comes Morris's greatest single exploit, the furnishing of funds for the campaign in which Washington, Rochambeau, Lafayette, and the combined American and French armies captured Cornwallis.

Morris was at Dobbs Ferry one day in the summer of 1781, where Washington's army was encamped, with Count Rochambeau and his French troops near at hand, preparatory to an attack on New York, as was expected. Conceiving the chance of capturing Cornwallis in Virginia by a swift march of the Americans and the French upon him, before Sir Henry Clinton, the British commander in New York, could either re-enforce him or apprise him of his peril, Washington asked the head of the Department of War what he could do in the way of furnishing supplies for the army in the campaign.

"With money I can provide you everything," he said; "without money nothing."

"Let me know what sum you want and I will furnish it," responded Morris.

The money was provided, and Washington and Rochambeau quietly crossed the Hudson, still keeping up, even to their own soldiers, the pretense that they were preparing to attack New York, so as to delude Clinton. Then they pressed rapidly through New Jersey and Maryland and down into Virginia, where, by the aid of the French fleet under Admiral de Grasse, which beat off the British ships that attempted to re-enforce Cornwallis or to take him away, they shut up that commander in Yorktown. After one of his lines of intrenchments was taken by storm by the Americans and French, Cornwallis laid down his arms, and the most active and able British general who participated in any part of the war and the most effective British army which, was on this side of the Atlantic at any time during the conflict, were in American hands. This was on October 19th, 1781.

A swift courier dispatched by Washington to Congress at Philadelphia to tell the news of the Yorktown triumph reached that place about midnight on the 23d, and immediately the watchmen throughout the city were proclaiming "Twelve o'clock. All's well and Cornwallis is taken." Lights instantly were seen burning in every window. The people, hurriedly dressing, rushed from their houses and filled the streets. Bonfires blazed all over the city, cannon boomed, and at sunrise the old Liberty Bell rang out the glad tidings which quickly came to mean that the promise of 1776 had been achieved. When the fatal news reached England on November 25th Lord George Germaine hurried to inform Lord North, the British premier, at his office in Downing Street. "How did Lord North take it?" Germaine was asked afterward. "Like as he would have taken a ball in the breast. He opened his arms, exclaiming wildly as he strode up and down the apartment, 'Oh, God! it's all over.'"

George III., less wise than his minister, wanted to continue the fight, and to hold New York and Charleston in any case. He even said he would abdicate and go to his ancestral domain in Hanover rather than surrender to the Americans. But even that obdurate heart had

to bow to events. The Whigs under Rockingham were put in power, a treaty of peace was signed (a preliminary treaty on November 30th, 1782, and a definite treaty on September 3d, 1783), and American independence was established. The man who, next to Washington himself, did most to organize victory at that supreme crisis in America's life in 1781 was Robert Morris.

### III.

Soon after peace came Morris resigned, but he was induced to remain in office until the latter part of 1784, for the stimulating effect which his presence at the head of the finance department would have on the public credit. He served his country afterward as a member of the convention of 1787 which framed the Federal Constitution, and as one of Pennsylvania's first Senators under it. Then came business reverses, poverty, imprisonment for debt from 1798 to 1803, and death in 1806.

By an odd but easily explained coincidence, Hamilton suggested Morris for head of the Department of Finance

the public credit and it sprung upon its feet. The fabled birth of Minerva was hardly more sudden or more perfect than the financial system of the United States as it burst forth from the conceptions of Alexander Hamilton."

Morris and Hamilton have had many worthy successors. One of these was Albert Gallatin, statesman, financier, diplomat, and scholar, who was Secretary of the Treasury for a dozen consecutive years under Jefferson and Madison. Another was Salmon P. Chase, who, from 1861 to 1864, held his post when the loans and disbursements were greater than were ever made in the same length of time by any government in the world before or since. Still another was John Sherman, who had the double honor of initiating and shaping in Congress the resumption act signed by President Grant in 1875, which he, as Secretary of the Treasury in President Hayes's Cabinet, put into operation in 1879. At the beginning of that year Sherman brought every dollar of currency in the United States up to the one-hundred-cents line, as measured in gold, and made it comparatively easy for his successors to keep it up to that level ever since. Much success also was achieved by Hugh McCulloch, who served under Lincoln, Johnson, and Arthur; by William Windom, who held the office under Garfield, and by Daniel Manning, Cleveland's first and greatest Treasury chief.

The achievements of many of America's financiers in private life have dazzled the world. Huntington, Jay Gould, and William H. Vanderbilt, with a greater than Prospero's magical power, have raised and stilled monetary and industrial tempests. With more than a Midas's touch, Morgan, Vanderbilt, Rockefeller, Gates, Sage, Hariman, Schiff, and their associates and rivals concentrate and direct vast enterprises and turn their product into gold. Robert Morris, America's earliest monetary king, to whom the bankers of the country are to raise a memorial, has been followed by a long and brilliant line of masters of finance.

## How To Succeed in Banking.

A GREAT deal of public interest centres in the question "In what way can a man become a successful banker?" This question was recently put to a number of the prominent bankers of this city. Among the responses made were the following pithy and noteworthy declarations:

President J. Edward Simmons, of the Fourth National Bank: "By being able, honest, progressive and conservative."

G. G. Williams, President of the Chemical National Bank: "The way to succeed in banking is to be constantly faithful to your duty. That is the cause of my success, for I have tried to follow that motto ever since I went into the bank as an assistant to the paying teller. I was fifteen years old then, and that was fifty years ago. To a young man I would say, first get your position and then do your work faithfully."

President Nash, of the Corn Exchange Bank: "To succeed in banking a man should get acquainted with the 'big fellows,' the men who have money. They will soon pick out a man who is alert, active, and attends to business, and when once they are tied to him, they don't let go. It is not hard for a young man to get started; but he wants to be careful not to get a 'big head.' During the last four years a good many young men have come to the front, because it has been comparatively easy to succeed. It is a time of panic that tests a man's sinews, and panics are sure to come."

Frederick B. Schenck, President Mercantile National Bank: "My success as a banker, as in other previous positions in life, I attribute to the constant endeavor to be worthy of the fullest confidence of my employers, the stockholders, directors, depositors and the public generally."

## Complexion Bad.

at its organization under the confederation of 1781; and Morris in 1789, when Washington asked him to become head of the Treasury in the government under the Constitution which began in that year, recommended Hamilton. From long and intimate association Morris was an excellent judge of Hamilton's knowledge of finance and economics. Washington, on whose staff during the war Hamilton served for several years, was himself in a position to bear testimony to Hamilton's ability, and promptly gave him the post. The success with which he met the exacting requirements of that post at that time justified this tribute extended to his memory by Webster at a public dinner in New York in 1831: "He smote the rock of the national resources and abundant streams of revenue gushed forth. He touched the dead corpse of

### The South and "Leslie's Weekly,"

(From the New Orleans Times-Democrat.)

LESLIE'S WEEKLY, though ardently Republican in politics, refuses to share the intense hostility toward the south so brutally manifested by not a few of its neighboring contemporaries. In paraphrasing the injunction uttered by Horace Greeley more than fifty years ago, LESLIE'S WEEKLY, under the significant caption, "Go South, Young Man!" sets forth the actual conditions and the actual possibilities of the south clearly, comprehensively, and in a manner that carries conviction even to the most prejudiced mind. The facts

illuminating this editorial of LESLIE'S WEEKLY present to investors everywhere an argument more powerful than could be made of the most finished rhetorical phrases. Through this comment of our New York critic may be had a glimpse of what the south is to-day and of what the south is to be in the quick-coming years. More fortunate for the south than the wealth of the Indies is the concluding paragraph of the LESLIE'S WEEKLY editorial, "If the south prospers, we of other sections will rejoice and prosper with her," is the true note to be sounded everywhere in this country nowadays; for the time has surely come when the American people should realize that the good of all insures the welfare of each, and that the prosperity of every section is best secured in the prosperity of the nation. "All for one and one for all!" is to be the motto that is henceforth to rally the industrial army of the United States.

### Special Prizes for Amateur Photographs.

LESLIE'S WEEKLY offers a special prize of \$10 for its amateur contest in the Christmas number. Also for the Thanksgiving number, both contests to close November 1st. The pictures should, of course, be appropriate to the holidays and especially interesting to children, for Christmas is above all things the festival of childhood. A special prize of \$10 is also offered for the best cat picture submitted before November 20th.

LESLIE'S WEEKLY was the first publication in the United States to offer prizes for the best work of amateur photographers. We offer a prize of five dollars for the best amateur photograph received by us in each weekly contest, the competition to be based on the originality of the subject and the perfection of the photograph. Preference will be given to unique and original work and for that which bears a special relation to news events. We invite all amateurs to enter this contest. Photographs may be mounted or unmounted, and will be returned if stamps are sent for this purpose with a request for their return. All photographs entered in the contest and not prize-winners will be subject to our use unless otherwise directed, and one dollar will be paid for each photograph we may use. No copyrighted photographs will be received, nor such as have been published or offered elsewhere. Many photographs are received, and those accepted will be utilized as soon as possible. Contestants should be patient. No writing except the name and address of the sender should appear on the back of the photograph except when letter postage is paid, and in every instance care must be taken to use the proper amount of postage. Photographs must be entered by the makers. Silver paper with a glossy finish should be used when possible. Mat-surface paper is not suitable for reproduction. Photographs entered are not always used. They are subject to return if they are ultimately found unavailable in making up the photographic contest. Preference is always given to pictures of recent current events of importance, for the news feature is one of the chief elements in selecting the prize-winners. The contest is open to all readers of LESLIE'S WEEKLY, whether subscribers or not.

N. B.—Communications should be specifically addressed to "Leslie's Weekly, 110 Fifth Avenue, New York." When the address is not fully given, communications sometimes go to "Leslie's Magazine," or other publications having no connection with LESLIE'S WEEKLY.

CURIOUS OLD LOCOMOTIVE IN NEVADA WHICH HAS TRANSPORTED BILLIONS IN GOLD AND SILVER

**Old Style Engine with a History**

THE ENGINE shown in the picture has carried more gold and silver bullion than any other in the United States. It was built in 1875 and has been running ever since, on the line known as the Virginia and Truckee Railway, from Reno, Nev., to Virginia City, the famous Comstock Lode mining town; thence to Carson

City, the capital of Nevada. Of the millions of dollars that have come from the Comstock Lode, by rail, this engine has hauled the greater part. It is exceedingly gaudy and at the same time old-fashioned in its construction, as the smokestack shows. All the trimmings are brightly polished brass. The wheels are painted a deep red.

FAN-TORCHON LACE PRODUCED BY NEW MACHINE.

LACES OF DIFFERENT PATTERNS WOVEN SIMULTANEOUSLY.

**Fine Lace Made by a Machine.**

THE DISPLACING of the work of human hands by that of machinery, which has been going on so steadily in the various departments of industry, is expected eventually to extend to the creation of so fine and almost artistic a product as lace. This is a matter which should be of especial interest to our feminine readers, for should the mechanical method prove a success the price of lace, without any sacrifice of quality, will undoubtedly decline. Several different machines for lace manufacturing have been devised, but while the results of their operation have been encouraging they have not hitherto been entirely satisfactory. The devices have been generally somewhat too crude. For the latest lace-making machine, invented by Herr A. Matitsch, of Vienna, however, claims are made of superiority to all previous ones. It is asserted that this contrivance will produce lace so closely resembling the hand-made article that experts alone can detect the difference. The machine will also make laces of different patterns simultaneously. The inventor has secured patents in the United States and in Europe, and has been for years developing his invention at Nottingham, Eng., a great lace-making centre,

where it has been inspected and reported on by the American consul, S. C. McFarland. Calculations made regarding the capacity of the machine show that a yearly profit of 101 per cent. in its use is possible. While the machine is looked upon skeptically in certain quarters, it being there still considered imperfect, in others it has been hailed as "epoch-making in the lace industry." Pictures of samples of its products are herewith displayed. The defects in the samples are said to be due to poorly regulated tension, while the coarseness of the texture was intentional.

**How To Sell Axes in Brazil.**

OUR CONSUL at Santos, Brazil, Mr. J. H. Johnson, writes: "A gentleman told me here recently that the axes manufactured in the United States were greatly preferred to any other, but that, on account of inferior packing, they were covered with rust when they arrived here, and hence were unsalable; that the Germans wrapped each axe in oil paper, and thereby protected them from the damp, salt atmosphere while in transit."

## Jasper's Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *LESLIE'S WEEKLY*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *LESLIE'S WEEKLY* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," *LESLIE'S WEEKLY*, 150 Fifth Avenue, New York.

THOSE WHO, for the past six months, have been laughing at the mere thought of a scarcity of loanable funds on Wall Street now realize how rapidly financial conditions sometimes change. It is but a little while ago that money on call was offered in unlimited quantities around 2 and 3 per cent. Then came a deficit in the legal reserves, and almost in a night the rate jumped up to 20 and 25 per cent., and banks would loan even at this rate only on choice selected collateral. As it is in the financial world, so it is also sometimes in the commercial and industrial field. For instance, up to last April all the producing potash mines of Germany were running to their full capacity with Sunday and night shifts and such a demand for their products that it could not be supplied. Now in this industry the severest depression imaginable exists, so severe that the discharged workmen have been holding mass meetings to protest to the government against further dismissals. A wet season, which interfered with the work of the farmers and left them with but little profit, obliged them suddenly to economize, even in fertilizers, the basis of which was largely potash salts. Hence the sudden depression in one of Germany's greatest industries.

There are those who recall, not many years ago, when a similar depression suddenly visited the iron and steel market of the United States. Continuous high rates for money in this country would certainly prejudice industrial enterprises in all branches and call a sudden halt in many contemplated building operations, in which iron and steel are largely employed.

The depression in Germany, which began in 1900, and which was caused by precisely the conditions that are now operating here, still continues. As one of the dispatches puts it, "Germany is slowly recovering from the debauched and speculative activity, which was brought to an end when one of the most heavily embarrassed banks suspended business. For two years there has been a general liquidation, and it is now about half finished. The banks, which have been financing electrical, industrial and building enterprises, are still heavily loaded with unmarketable securities; but they have changed their methods of business, and are now conducted with caution and conservatism. During the inflation period industrial promoters formed their projects, and banks eagerly took them up and recklessly financed them. There are abundant reserves of capital, and money has been cheap for a long time; but the banks, warned by recent experience, have required securities of unquestioned value before making advances to companies new or old. The times have changed since the speculative period, when few questions were asked, and the capital was supplied for every fresh undertaking. German bankers have learned caution and self-restraint, and with adequate safeguards they are enabling the legitimate business interests to right themselves. When the process of liquidation is completed by the survival of the fittest industrial companies, Germany will have a greatly reduced plant for doing her own and the world's work; but it will also have a banking system conducted with English caution and sobriety of judgment."

After two years of commercial depression in Germany, it is calculated that two years more will be required before the country can recover from the fever of over-speculation in industrial properties. It is time to sound a warning in this country regarding the manner in which the organization of trolley lines, all heavily over-capitalized, has been going on. In this field, as well as in the development of electrical com-

panies, speculation in Germany was rampant until the break came, and scores of schemes for electric plants at high prices, financed by capital from the banks and by the credit of individuals, are being compelled to wind up their business. Germany expects deliverance from its trouble by the extension of its export trade, and especially of its trade with the United States. Its increasing shipments of pig iron and steel to this country, at low prices, have, therefore, great significance. Those who are agitating for the removal of duties on iron and steel should bear in mind that they are playing into the hands of the German manufacturers, and that they are aiming a deadly blow, not only at the steel trust but at every one of its 150,000 employees.

A significant political upheaval in the fall elections and an effort to smash the tariff and the trusts at the approaching session of Congress, both would tend to unsettle business and hasten the evil day which is gradually drawing nearer and which everyone expects must come, the only difference of opinion being as to the time of its arrival. My advice to my readers of late has been earnestly in favor of keeping out of the stock market and preparing for an approaching storm. That is still my advice, and those who will follow it and keep their money safely in hand, to use when the crisis comes, will turn a handsome profit. Don't be in a hurry.

"R." New Orleans: Not an investment for good and bad times.

"W." Chicago: The Butterick concern is largely over-capitalized.

"E." Boston: I think very little of them. Not until the market has had a substantial reaction.

"H. S. A." Minneapolis: Peoria and Eastern first consolidated four, around par, look like a purchase.

"F." Hoboken: The fact that the shares can be bought now for 70 per cent. less than they were offered a year ago is enough.

"R." Allentown: I would hardly call American Bicycle shares "an investment." An assessment would seem to be the natural outcome.

"Z." Milwaukee: It is obviously impossible to say how low stocks will go in case of a serious reaction. On reactions, the high-class stocks you mention ought to be a purchase.

"H." Newark, N. J.: I take little stock in the information regarding the Thunder Mountain Gold

Mining Co. exploited by J. E. Morhardt & Co., and of the offer to sell the shares at thirty cents apiece.

"F." Scranton: (1) Haight & Freese are not members of the New York Stock Exchange. Harrison & Wyrkoff, 71 Broadway, are members, and deal in small lots. (2) No. (3) 50 per cent. is small enough.

"A. B. C." Cincinnati: (1) I am told that he is doing a large business. (2) I know little about the Western traction shares. (3) While the money market is tight, shares are not likely to advance. (4) It accumulates until paid.

"B." Zanesville: I am not advising purchases until market conditions develop more clearly. Western Union is a dividend-payer, but highly capitalized. Ontario and Western is scarcely earning a dividend, and its future depends upon the anthracite situation.

"M." Minneapolis: (1) I do not advise the purchase of the stock, unless you have reason to believe in your adviser. The shares are not dealt in on Wall Street. The broker's firm has a good rating. (2) Cannot name them under constantly changing market conditions.

"C." Providence: (1) It would not surprise me if it did. (2) Opposition to American Telephone is constantly being developed, but the stock privileges it is giving and the fact that it dominates its field give the stock an investment character. A general decline in the stock market would affect unfavorably all stocks. (3) Not at present.

"J. H. S." New York: (1) The preliminary note at the head of this department explains. (2) Spencer Trask & Co., 27 Pine Street; Rhodes & Richmond, 20 Broad Street; Hurlbut, Hatch & Co., 71 Broadway, and Calhoun, Cragin & Co., 60 Broadway. (3) Some, of course, are much better than others. (4) No rating. (5) Many think so, but the largest operations are on the older exchange. Car and Foundry pays 2 per cent., Buttrick 4 per cent., National Biscuit 4 per cent., Pressed Steel Car 4 per cent., and United States Steel 4 per cent. per annum.

"X." Montana: Two dollars received. You are on my preferred list for six months. (1) I do not advise you to put your money in the hands of a broker and then allow an "advisory agent" whom he appoints to manage your account. The parties you mention have no rating. (2) The name is similar to that of a company with another location that has a fair reputation. (3) Have nothing to do with the "financial bureau." (4) Both have an excellent rating. (5) William Townsend & Brother, Produce Exchange Building, and the two other firms you mention, all stand well. I doubt if any first-class broker would accept such a discretionary deposit. (6) Not an investment.

"W." Chicago: (1) I should be inclined to sell almost anything in which I had a profit. Rutland Railroad preferred has considerable merit. (2) American Type Foundry stock is selling at between 43 and 46 for the common, and 98 to 102 for the preferred. I think better of the preferred. (3) American Car and Foundry preferred is not a permanent investment. A relaxation of prosperous conditions would affect it unfavorably. (4) I would take the bonds and sell the balance of the stock if it did not entail a loss. (5) American Child has had such a tremendous advance since I recommended its purchase that I hardly regard it as a prize at present. (6) On reactions it ought to return a good profit, because of its investment character.

### Jasper's Hints to Money-makers.

Continued from preceding page.

"M." Philadelphia: I find nothing to commend in the offer of the National Barrel and Package Company. It seems to be highly capitalized and somewhat speculative. The other two corporations are also speculative. Do not recommend them.

"L." Wheeling, W. Va.: If you have a profit in International Silver, why not take it? The advance in the stock is accounted for by the proposal of the new United States Silver Corporation to take over the International Silver and other competing plants. International Silver common represents nothing but water.

"L." Quebec: The action against the Railway Steel Spring Trust was instituted by a large railway supply concern. It is charged with attempting to maintain a monopoly and with the violation of a contract. The Steel Spring Trust has been promising an advance in its shares, based on the expectation that it would control the railway steel spring business. The common shares are largely water.

"G." Philadelphia, N. Y.: The Southwestern Zinc and Lead Corporation is a Delaware company. It has fifty thousand shares at a par value of \$10 each, and its purpose, I am told, is to secure zinc and lead properties, particularly in northwest Arkansas, where extensive developments in this line of mineral industry are being made. Some good men seem to be identified with the property.

"G." Boston: Inquiry leads to the conclusion that there is nothing in the Virginia Deferred Debts certificates. West Virginia has declined to settle this long-standing contention. I am assured that the State authorities will utterly oppose every effort to fasten any part of this debt upon that State. With this view of the matter, the so-called certificates are not cheap at the present price of \$10, or for that matter, at any price.

"D." Brooklyn: Chicago Union Traction preferred sold last year as low as \$5. It will be seen that it has been approximating its former price. Last year it earned a surplus of only \$8,500. There is \$12,000,000 of the preferred which was subscribed for at par with a bonus of fifty per cent of the common. If business conditions continue good, the purchases of preferred on reactions or on a decided slump would look like a fair speculation.

"C." New Haven: (1) J. L. McLean & Co. are members of the Consolidated Exchange, appear to be doing a considerable business, but have no high rating. (2) It is difficult to say at what price Ontario and Western can be safely bought. It sold last year as low as \$24. Around that price many believe it was picked up by insid. interests. (3) Atchafalpa common at 92 looks high, in spite of its excellent earnings, when we recall that it could be bought about a year ago at half that figure.

"Cashier." Montreal: The bankers, or rather the promoters, have suffered quite as much as any other class from tight money. It is said that one great operator has found his plans seriously interfered with by existing conditions. A London report says that the delay in completing the purchase of the White Star line for the Atlantic shipping combine cost Mr. Morgan a forfeit of \$50,000 weekly, which is the amount of interest upon the purchase price he agreed to pay until the purchase was completed.

"L." Portland, Me.: The suit against William L. Russell, the organizer and promoter of the Sand Fork Petroleum Company and a number of other similar propositions, charges him with obtaining money on false representations as to the financial condition of the Kickerbocker Crude Oil Company, of which Russell is president. The developments in this suit show how easily the public are deluded into gambling operations. If my readers have followed my advice, they have none of the Sand Fork securities in their possession.

"Thoughtful." New Orleans: You are right. The largely increased wages of railroad men marks the end of the increased earnings of our railways, in the judgment of many. President Ramsey, of the Wabash, in his recent annual report, said: "Should there be any check in the present tide of prosperity, and the earnings of railroads decrease, without any accompanying decrease from the present rates of wages and prices of materials, many a railroad company now showing a fair surplus will find it very difficult to make both ends meet."

"T." Trenton, N. J.: Four dollars received. You are on my preferred list for one year. The struggle between great financial interests and against the natural forces operating in the market, the former to sustain it and the latter to depress it, is such that no one can predict the immediate outcome. Heretofore our financial interests have been strong enough to make short sales exceedingly dangerous, especially for the trader on a margin. I should act with caution, though I believe prices have generally been too high.

"R." Duluth: The Mutual Rubber Production Company, in its prospectus, says it has 6,200 acres of land in the State of Chiapas, Mexico, which it is developing into a rubber orchard, and offers shares or acres in this orchard, to be paid for in small monthly installments. The president of the company is Charles A. Cox, who is engaged in the wholesale rubber business in Boston, and the general manager is Mr. B. M. Graves, who presents good credentials. I have no personal knowledge of the company's condition.

"H." Albany, N. Y.: If you were on my preferred list you would get the first papers mailed. They would probably reach you quicker than from other sources. To be entitled to personal answers you must be on the preferred list. The Cuban bonds I regard as little more than a gamble. New England Gas and Coke bonds look to me like a safer proposition. (2) The Brooklyn Suburban Firms have still to demonstrate their value. I would not be inclined to sacrifice them until the market was more settled, but you paid all they were worth. (3) I do not understand your last inquiry.

"S." Jacksonville, Fla.: (1) The ruling of the Stock Exchange that Southern Railway shares, stamped for extension by Morgan & Co., are not a good delivery for Southern Railway contracts, should be borne in mind by those who deal in the shares. It probably will help to maintain the price, as it shortens the supply of stock available for trading purposes. This may help Morgan & Co. (2) The annual report of the Brooklyn Heights Railroad Company, part of the Brooklyn Rapid Transit system, shows a decrease in net earnings last year of over \$800,000.

"W." Baltimore: Wisconsin Central is one of the cheap stocks that has had a substantial advance, the price of the common having more than doubled since 1901, on the expectation that the road would be absorbed by some stronger line. My own impression is that the market will have to suffer substantial liquidation, but everything depends upon the ability of the leaders to obtain the necessary funds to sustain the market. I hesitate to advise you to sell at a loss, but unless the money market is speedily relieved greater losses may be anticipated.

"V." Conake, N. Y.: I have repeatedly given my opinion of Wabash preferred and Missouri, Kansas and Texas common. There are \$26,000,000 Wabash Debenture B bonds ahead of the preferred and no interest has ever yet been paid on them. It looks, therefore, as if the preferred, on its merits, is selling high enough. A contest for control sometimes gives a stock a higher price than it would obtain on its earnings, however. The earnings of Missouri, Kansas and Texas show nothing for the common stock last year and little for dividends on the preferred.

"J." Lansing, Mich.: The Grass Valley Con-

solidated Gold Mining Company is an Arizona corporation with a million shares of the par value of \$1 each, 600,000 of which shares are in the treasury. Its president is George W. Root, clerk of the Supreme Court of California, and its officers are mostly San Francisco business and professional men. The mine of the company is a short distance southeast of Grass Valley, Cal., and the superintendent reports the sinking of a number of shafts, and the completion of a ten-stamp mill, run by electric power. Kaye, De Wolf & Co., Taylor Building, New York, are the fiscal agents.

"Highlands." N. J.: (1) Your proposition would lead you into a little more than ordinary gambling, and you would deal with those who have the cards stacked against you. (2) I see nothing about the proposition of the Standard Mines and Milling Company to commend. Companies that offer shares at three cents apiece are usually good companies to avoid. (3) The (Lao and California Refining Company makes a better report than many companies of its character. "The Hidden Fortune" is by many regarded as a valuable property. The location is known to be in the vicinity of very rich territory. (4) I have no personal information regarding them.

"G." New Haven, Conn.: The Isthmus Rubber Company of Ulster is a Delaware corporation with a capital of \$3,500,000. Its officers include a number of prominent New York business men and its president is the president of several rubber companies. The statement it submits is favorable and the references of the highest class. You can obtain further information from the booklet, issued by the company, the best of which I regard as Ambassador Romero's "Coffee and India Rubber Culture in Mexico," originally issued by C. P. Putnam's Sons, at fifty cents per copy. You can receive an excellent abridged copy if you will send ten cents, to cover mailing, to the Isthmus Rubber Company, 29 Broadway, New York, and mention Leslie's Weekly.

"D." New York: (1) I doubt if you can find an instance where I have ever homed a stock. I have simply repeated the best information obtainable. It is not my rule to advise purchases, but only to state facts and let my readers exercise their own judgment. (2) The officers of the American Ice Company, at their last annual meeting, made a report which seemed to indicate that the dividends on the preferred and the common had been earned. It was utterly misleading. For that reason it would seem as if the stockholders would be justified in going to the courts and demanding some sort of satisfaction. What they can do as for a lawyer to advise. I am not a lawyer. (3) As a rule, it is not wise to sell a stock after it has had its heaviest decline. The managers of American Ice have been so notoriously deceptive in their statements that whatever they say will hardly be believed. I should be inclined to leave the shares of such a corporation severely alone.

"Banker." Boston: (1) It looks as if tight money would interfere with some of the proposed granite railroad deals. It is not surprising that Mr. Morgan is reported to have abandoned the notion of a Southern securities company. This is coupled with the report that he has disposed of his Louisville and Nashville elephant to the Atlantic Coast line. (2) The proposition to increase the capital of St. Paul, a little belated, it is true, also signifies the efforts of those who are loaded up with these shares to get out of them. The report of Atchafalpa, showing apparently over 95 per cent. earned on the common stock last year, and the report that the American Tobacco Company has absorbed its foreign rival, and numerous other favorable reports, put in circulation while the money stringency is on, show how anxious the big leaders were to sustain the bull feeling in the market, if possible. (3) The lack of money is due, as Russell Sage puts it, "to the people's lack of foresight." If we have a panic, it will be a Wall Street, or rather a speculators', panic. It may not result in an industrial panic, in view of our fairly good crops, which are expected to bring remunerative prices, but it is unsafe to predict how far a financial upheaval will go.

### The Clock That Keeps Wound

THE Clock Without the Key—the clock that needs no winding—the clock that is right, goes right, and stays right, and the price is right—was gradually perfected until it was a complete mechanism. This clock wonder is appropriately called the

### "KEYLESS" (TRADE MARK) CLOCK

and is made only by

The United States Clock Company of New York

It goes for one year without attention, and it keeps time—the best of time. It's a beautiful clock—a novel clock—a safe clock—an economical clock—a clock that saves no trouble. The "KEYLESS CLOCK" is made for public buildings, business purposes, home use. For anyone, everywhere, for everywhere and anywhere. The "KEYLESS CLOCK" is not sold at clock stores, but only at the offices of THE UNITED STATES CLOCK COMPANY, which are being established everywhere. Putative living in New England can now see and purchase clocks at our BOSTON BRANCH, at 8 Bromfield Street. Go and see the "KEYLESS CLOCK."

### "KEYLESS CLOCK" SHARES ARE NOW \$7.50

Par value \$10.00, full paid and non-assessable

The stock of the "KEYLESS CLOCK" Company sells as rapidly as the clock. If you want an investment that is absolutely safe, unusually profitable, sure to increase in value, send your subscription. With Telephone stock near from nothing to \$4.00, UNITED STATES CLOCK stock will be a bigger investment in the very near future.

More orders at 50 per cent. profit are now on hand than the manufacturing departments can turn out.

REMEMBER: This is not a scheme or project, but an established, profitably running company, with factories in full operation, goods in great and growing demand, no debts, mortgages, or other obligations, and with a big deposit and surplus in National banks in New York. WRITE OR CALL.

## Jasper's Hints to Money-makers.

Continued from preceding page.

"H." Buffalo: I do not regard it as an investment.

"G. L." Syracuse, N. Y.: It is purely a speculation.

"A. X." Newton, Kan.: I do not regard it as an investment.

"W." Huntsville, Ill.: (1) It is largely over-capitalized. (2) No.

"R." Philadelphia: I will send the party your letter and he can decide for himself what he may choose to do.

"R." Brooklyn, N. Y.: I would not advise the purchase of stocks until the market has had a substantial reaction.

"H." Gettysburg, Penn.: I do not advise regarding speculation in grain. I treat only with Wall Street matters.

"Inquisitive." Oil City, Penn.: It is preposterous for any corporation to promise to give you such returns for your money.

"Cecil." Baltimore: (1) I should not be inclined to buy Wisconsin Central unless the stock had a greater break than two points.

"C." Monson, Mass.: One dollar received. You are on my preferred list for three months. Will make inquiries about the Graham County Mining Company.

"R." Albany: While the company is heavily capitalized, many believe that in time the stock will have an investment value. It is hardly an investment stock now.

"S." Germantown, Penn.: Two dollars received. You are on the preferred list for six months. Buy when the market has a substantial reaction and liquidation.

"W." West Superior, Wis.: I do not believe in the Bruce & Seymour co-operative plan. It is one of many so-called syndicate concerns, none of which I regard with favor.

"F." New York: Barring the strained condition of the money market, appearances indicate that you may get out of your United States Steel common without a loss, a little later on. I would not wait too long.

"R." Zanesville, O.: On reactions I believe that Corn Products preferred and United States Leather preferred may be purchased for a profit. The common shares of both are speculative favorites with a good many, however.

"D. P. B." Milwaukee: The letter of Rowland & Co., urging everybody to buy stocks and telling why the market must have a still further rise is a curious contribution to current literature. The logic of events is absolutely against it.

"H. N." Wlota, Wis.: I do not advise the purchase, unless you are prepared to gamble on the possibilities of a mine, with the chances decidedly against you. Manipulation may temporarily advance the price, but I speak of the shares as a permanent investment.

"A. H. C." Ogdenburg: (1) I do not advise the purchase of Western Union or anything else until money market conditions are more settled. (2) I have spoken of the Butterick Company's proposition before. It is speculative and looks over-capitalized. (3) The condition of the market has answered your question, and the end is not yet.

"B." Washington, D. C.: (1) The Electric Air-brake, and Car-heating shares seem to be about as high as they should be. A couple of years ago Electric shares in Germany had a great boom, but they are now suffering from severe depression. With the advent of hard times, our electric concerns would go through the same experience. (2) This is not a good time to launch new industrial enterprises. I am not favorably inclined toward the shipbuilding shares at present. The annual reports of most of the great corporations you will find in the Financial Chronicle, of New York.

New York, October 2, 1902. JASPER.

## Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of LESLIE'S WEEKLY. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "The Hermit," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.]

A READER, in a letter of a complimentary character, thanks "The Hermit" for having indicated the way of safety in life insurance. My correspondent tells me that a year ago he was solicited to join a fraternal order, and was inclined to accept the invitation until he happened to read a comment made in my department. A short time ago this fraternal order failed and all the substantial members are now being held accountable for its heavy liabilities. My correspondent says that if those who contemplate taking out life insurance would look upon the matter more seriously, and not enter upon life-time contracts as if they were merely buying a cigar or purchasing an excursion ticket for an outing, the masses would be infinitely better off. I need not say that I thoroughly agree with him.

"L." White Plains, N. Y.: It is a fairly prosperous company, but not one of the best, and in life insurance the best is none too good.

"G." Wheeling, W. Va.: The Phoenix Mutual of Hartford is one of the oldest of the New England companies and makes an excellent statement.

"H." Cincinnati: I do not regard it as one of the strongest companies. Think you would be better satisfied with an endowment policy in one of the best of the old-line companies.

"H." Baltimore: I am perhaps too conservative about such matters. While the company you speak of is doing better than it was, it is not regarded by any means as one of the best.

"R." Lancaster, Penn.: The bonds are not alike, but I prefer those of the New York Mutual to the proposition of the Des Moines company. In such a matter I regard absolute safety as the most important element.

"T. E. C." Pittsburg: I would advise you to continue the 20-payment Life in the Equitable. It is an excellent policy and your friend's advice regarding the Western company is not good, nor to your best ultimate advantage.

"N." Wlota, Wis.: The Central Life of Iowa was organized only about six years ago. It is a small company, doing a limited business. Its report indicates a healthy condition, but I would

prefer a policy in an older company and one of higher financial rating.

"C." Portland, Ore.: (1) I regard the company as sound, but you would do better, I believe, with a company that conducts insurance on a different plan. (2) Any of the agents of the Equitable, the New York Life, or the Mutual Life will be glad to give you figures or an estimate.

"A. D. M." Fort Wayne, Ind.: The proposition of the Fraternal Assurance Society of America is not dissimilar from others that have had their day. I do not see that it gives you any advantage over insurance in a strong old-line company. Ultimately, the fraternal insurance will be the more expensive. A wise man, when he insures his life, will not count the present, but the future cost, because, in the majority of cases, advantages come late in life. A policy in an old-line company has increasing value from year to year. That is its chief merit.

ALL MODERN APPOINTMENTS. MODERATE TARIFF.

## A UNITED STATES WALL MAP

**FREE** This handsome county  
map, 48x34 inches, is  
mounted on rollers, ready  
to hang on the wall. It is printed in colors,  
is thoroughly up to date and is particu-  
larly interesting and valuable, as it shows  
in colors the different divisions of territory  
in America acquired since the Revolution.  
The original thirteen states, Louisiana  
purchase, the Texas annexation, the  
Golden purchase, the cession by Mexico  
and the Northwest acquisitions by dis-  
covery and settlement. It will be sent to  
any address on receipt of 15 cents in post-  
age to pay for packing and transportation.  
P. S. EUSTIS, Passenger Traffic Manager  
C. B. & Q. Ry. Co., 209 Adams St., Chicago.

## Stomach Trouble

I am in possession of a scientific method of re-  
lieving stomach trouble and abdominal diseases,  
a revelation in the correct application of medical  
treatment, based on scientific knowledge, re-  
search, and experience, the new philosophy of  
stomach troubles. I claim to have the one  
method that will do the work, and my best  
recommendation is that I am successful in curing  
my patients of indigestion, dyspepsia, mal-  
nutrition, chronic constipation or diarrhoea, head-  
aches, reflex nervous conditions, etc. Nine-tenths  
of all diseases are caused by the imperfect work-  
ing of the digestive system. My specialty is the  
permanent relieving of these derangements, and I  
have so thoroughly mastered these troubles that  
I can treat patients by correspondence at any  
distance with most satisfactory results. Address  
me confidentially.

Dr. A. H. SWINBURNE  
Dept. W, St. Clair Bldg. MARHETTA, O.

## New York in National Politics.

FROM THE beginning of the government New York has been a factor of decisive importance in politics. It has also been one of the most uncertain of all the States. Here are two points which the people of New York and the country should bear in mind in the canvass which is now under way, and which is watched with great interest all over the United States.

When, in May, 1800, in the election for the Legislature in New York, the Republicans (or Democrats) received a majority, the defeat of President Adams, Federalist, and the election of Jefferson, Republican, was foreshadowed. In a majority of the States at that time, New York among the number, the presidential electors were chosen by the Legislatures; and as New York, which gave its electoral vote to Adams in 1796, the year in which he was elected, turned against him in 1800, his defeat in that year was seen to be certain long before half of the States had voted. The activity of Burr, Tammany's first political boss, in that and preceding canvasses got him the vote of the Republicans, which tied him with Jefferson, and sent the contest to the House, in which Jefferson was made President and Burr Vice-President.

In 1844 the break in New York among the anti-slavery men against Clay, the Whig presidential candidate, on account of concessions which Clay had made to the slavery sentiment in the Texas annexation question, gave that State's electoral vote and the presidency to the Democrat, Polk. In 1848 New York had another political feud, the revolt of the Barnburners, on the slavery question, in which ex-President Van Buren, who was nominated by the Free Soilers in that year, split the New York Democracy in the middle, and, throwing that State to Taylor, the Whig nominee, sent him to the White House.

When Maine went against the Republicans in the September election of 1880, the country, including the most optimistic supporters of Garfield and Arthur, believed that the national tide was in favor of the Democrats, but Grant and Conkling were drafted into the service, a herculean effort was made by their side, New York was saved, and her vote defeated Hancock and put Garfield in the presidency. New York turned the scale in the other direction in 1884, putting Cleveland in the White House. Four years later New York turned Cleveland out and put Harrison in.

But New York's vote is just as uncertain as it is decisive. When John A. Dix, Republican, one of the most popular of New Yorkers, beat Francis Kernan for Governor by 53,000 in 1872, everybody thought his re-election in 1874, when he accepted the candidacy in that year, was assured, but he was beaten by 50,000 by Samuel J. Tilden. The Republicans never gave any governorship candidate, whether successful or not in the election, a renomination afterward until that of Odell, in 1902. The election of Cleveland as Governor of New York in 1882 by a plurality of almost 193,000 was followed a year later by the election of Carr, Republican, as Secretary of State by over 18,000. When New York by 13,000 in 1888 gave its electoral vote to Harrison, Republican, and sent him to the White House, it gave, on the same day, a plurality of 19,000 to Hill, Democrat, for Governor.

McKinley's plurality in New York in 1896, 268,000, was monumentally sweeping, but Parker, Democrat, carried the State for chief judge the next year by almost 61,000. Roosevelt's plurality in 1898 for Governor in New York was a little less than 18,000, although the Spanish war had just ended, he was the most picturesque hero of that conflict, and his opponent, Van Wyck, was one of the weakest candidates whom the Democrats could have selected.

Political prophets would do well to be shy about making any hard and fast forecasts about New York for 1902. The canvass in it is anybody's contest until after the votes are counted. Republicans should remember this and get and keep to work!

## Secretary Shaw's Action Illegal.

THE ACTION of the Secretary of the Treasury in permitting banks to substitute other acceptable securities for United States bonds as collateral for government deposits seems to be clearly illegal, though perhaps the

urgency of the circumstances justified it, if an illegal act is ever justifiable. The law provides that government bonds alone shall constitute security for public funds deposited with the banks, the phraseology of the statute being, in part, as follows: "By deposit of United States bonds and otherwise." Mr. Shaw interprets the words "and otherwise" as in effect giving him power to substitute other choice collateral in place of government bonds. But the words "and otherwise" are not subject to the interpretation the secretary has given them. There can be no question on this point. We propose to quote from the official record.

According to the *Congressional Globe* the National House of Representatives on April 24, 1864, in committee of the whole, considered House Bill No. 333, to provide for a national currency and to provide for the circulation and redemption thereof. The object of this measure was to improve the national banking system. The proceedings of the day included the following:

Mr. Hooper—I move to amend the forty-fifth section by inserting, after the word "bonds" in the eleventh line, the word: "and otherwise," so that the clause shall read: "And the Secretary of the Treasury may require of the associations thus designated satisfactory security by the deposit of United States bonds and otherwise, for the safe keeping, etc."

Mr. Holman—I would inquire of the gentleman what the effect of that amendment is. The security now required of these depositories is the bonds of the United States; the gentleman proposes to insert the words "or otherwise" after the word "bonds"; that is to say, the security shall be either bonds of the government or such other security as the Secretary of the Treasury may require. What other security does the gentleman from Massachusetts refer to?

Mr. Hooper—By the present arrangement or rules of the department the secretary requires a personal bond in addition to the deposit of United States stock, and it was to cover that point that I offered the amendment.

Mr. Stevens—The words are "and otherwise," not "or otherwise."

The amendment was agreed to.

The forty-fifth section of the bill, as would naturally be inferred from the foregoing, was the one relating to the selection of national banks as depositories of government funds. Mr. Hooper's amendment was adopted without further reported question, comment, or explanation, and without opposition. The apparent understanding of all the members of the House was that the amendment did not empower the Secretary of the Treasury to decrease in the least the amount of government bonds furnished by the banks to secure deposits of public money, or to substitute other securities for any part of the bonds, but did authorize him to exact additional security in the shape of a personal bond and perhaps in other ways. The distinction drawn by Mr. Stevens between "and otherwise" and "or otherwise" is significant and emphasizes the view accepted by the lawmakers present.

It is a recognized canon that in construing the meaning of an ambiguous statute the intention of its framers and the interpretation of it by those who enacted it shall, if ascertained, be the determining factor. In view of the record there can be no doubt as to the significance attached by the Congressmen to Mr. Hooper's amendment. There is no possible ground for asserting that it gave the Secretary of the Treasury any warrant for releasing the depository banks from the obligation to supply the security of government bonds up to the full sum of the moneys entrusted to them.

It is true that House Bill 333 failed of passage, being on April 6th laid on the table on motion of Mr. Stevens, whose substitute measure had been rejected, but it is also a fact that on April 11th Mr. Hooper introduced substantially the same bill as it had been amended in the House, and that this second measure, House Bill 395, was passed on April 18th. On April 8th Mr. Sherman had introduced the amended House Bill 333 in the Senate and on May 10th the Senate passed House Bill 395, with some amendments. That part of section forty-five amended by Mr. Hooper was not altered further by either House or Senate, and it forms a portion of the national banking law to-day, with the words "and otherwise" signifying nothing more nor less than Mr. Hooper specifically declared them to mean. Clearly they are not elastic enough to sanction Mr. Shaw's radical departure, and if he has no other authority for his act the latter is undoubtedly illegal.

## "Old Men" Who Are Not Too Old.

MUCH HAS been said during the past few years about the importance of young men as leaders in finance, industry and politics, and the impression has been cultivated that only young men were fitted to do the great work of the world in these progressive days. Some have gone so far, indeed, as to draw the "dead line" at fifty years for men engaged in the ministry, and others have declared that men above that age ought to retire from all public activities. But when we take a look around at the men who are actually in the lead to-day in literature, science, politics, religion and business, we find much to disprove this idea that old age is a sign of weakness and inefficiency.

In our own strenuous land we have such men as Edward Everett Hale, Theodore Cuyler, and Russell Sage still at the forefront in a multitude of activities, although all three of them have left eighty years behind some time since. In the sphere of national politics we have such commanding figures as Senators Hoar and Hawley, both of whom must plead guilty to the age of seventy-six, while the two illustrious Senators from Maine, Messrs. Hale and Frye, are both men of many years, the first-named being sixty-six and the other seventy-one. Our present gifted Secretary of State, Mr. Hay, is far from being a youthful person, having sixty-four years to his credit,

while Secretary Wilson is older than that by three years, and Postmaster-General Payne is nearly sixty. White-law Reid, of the *Tribune*, is sixty-five, yet no one ventures to intimate that his powers are waning, nor would any one be rash enough to suggest such a thing in connection with Drs. James M. Buckley and Lyman Abbott, the veteran religious journalists, both of whom are over sixty-six.

If we turn our gaze abroad, we find equally strong testimony to the fact that the greatest responsibilities and the heaviest burdens are resting on men who have gone far beyond the so-called "dead line." It is Sir John Aird, verging on seventy, who has built the great Nile dam. It is Lord Marnham, verging on ninety, who has just appended to the English government to overhaul the fiscal system, and heads his appeal: "Who's Afraid?" Who can believe, either, that Henry Labouchere, "Labby," the brilliant editor of *Truth*, is a man of seventy? The keenest debater in the House of Commons is still Sir William Harcourt, in active opposition at seventy-four. Mr. John Morley is sixty-three and Joseph Chamberlain is only four years off seventy.

Italy, Germany, and Russia have young men to reign over them, but Francis Joseph of Austria was seventy-two last August, Oscar of Sweden is seventy-three, Leopold of Belgium is sixty-seven, and King Christian of Denmark is eighty-four. The world's foreign relations are in the hands of men over sixty and seventy. Lord Currie is sixty-eight, Sir Edmund Monson is sixty-seven, Sir Charles Scott sixty-four, and Sir Frank Lascelles sixty. Lord Cromer, young enough to make another Egypt, is sixty also, and at the other end of Africa a man of seventy reigns as prime minister of the Cape.

Men of thought have always been distinguished for their age. Solon, Sophocles, Pindar, Anacreon, and Xenophon were octogenarians. Michael Angelo and Titian were eighty-nine and ninety-nine respectively. Harvey, the discoverer of the circulation of the blood, lived to be eighty. Many men have done excellent work after they have passed eighty years. Lander wrote his "Imaginary Conversations" when eighty-five. Izaak Walton wielded a ready pen at ninety. Hahnemann married at eighty and was working at ninety-one. Michael Angelo was still painting his giant canvases at eighty-nine, and Titian at ninety worked with the vigor of his early years. Fontenelle was as light-hearted at ninety-eight as at forty, and Newton at eighty-three worked as hard as he did in middle life.

"A man is as old as he feels, and a woman as old as she looks."

## The Plain Truth.

IT IS extremely gratifying to note that the rule laid down by President Cleveland in July, 1896, relative to the influence of Federal office-holders in political primaries and nominating conventions, has been formally and officially declared to be still in force. The civil service commission has recently issued an order to that effect to all the executive departments of the government. The act in question was one of the most creditable of all in the record of Mr. Cleveland, and it might go without saying that President Roosevelt would desire to see the rule emphasized and heeded also.

ANOTHER FINE exhibition of stupidity and extravagance, or something worse, on the part of some one or more of our Washington officials is brought to light in the case of the steel floating dock at Havana, Cuba. Congress was prevailed upon to appropriate \$275,000 for the purchase of the dock from Spain two years ago, and \$25,000 more was afterward set aside to pay the expense of towing the thing to some point where it might be of service. Recently the structure was broken where it lies at Havana and now it is declared to be useless and practically worthless. This means that it will probably be consigned to the junk heap soon, along with the million-dollar dynamite cruisers, guns, and other expensive stuff on which public funds have been squandered during the past few years. It is high time that some ordinary business sense was introduced into the government departments responsible for all this shameful waste and extravagance.

ENGLISH RAILWAY management has generally been considered by the English themselves as quite the best of any in the world, so far, at least, as the financial feature is concerned, and it was not supposed that anything could be learned under this head from the American system. It has suddenly been demonstrated that this is the reverse of the truth. The English railway companies, it appears, have charged repairs to capital account and have continued paying dividends, until now, with a vastly increased capital, by this method they cannot longer pay them. The American system is to charge these expenditures to expense account and to withhold dividends until the road has been perfected and a surplus against future contingencies has been secured. Commenting upon the two systems, the *London Times*, in whose pages the revelations have been made, remarks that, "it is not too much to say that the policy pursued is a profligate one, and the end must be that the railways of the United Kingdom will go further and further behind the times in economical equipment and up-to-date transportation methods, in addition to being handicapped with a rapidly accumulating capital debt, to gain any return upon which it will be necessary to charge unreasonable rates and fares, instead of continually reducing charges, as is done in the United States." Such an indictment, backed by incontrovertible proof, may well alarm the richest country in the world, and it is a hopeful sign that the English financial public is promptly showing its recognition of the peril.

## PEOPLE TALKED ABOUT

AMONG THE men who have recently become prominent in the political world Mr. John Lewis Bates, of

MR. JOHN LEWIS BATES,  
Who will be the next Governor of  
Massachusetts.

Boston, the Republican nominee for Governor of Massachusetts, looms up large. In securing the nomination, which is equivalent to an election, Mr. Bates scored a triumph over usage and tradition. The Governors of the Bay State have usually been men of wealth or learning, or both, and of high social connections. Mr. Bates, however, is not rich, erudite, nor of the aristocratic set, and he has had to win his way by native force. That he is a man of marked ability with a genius for politics is proved

by his unusually rapid rise. A graduate of Boston University and a lawyer, Mr. Bates was at the outset of his political career chosen to the Boston Common Council, in which he served two years. In 1894 he was elected a State Representative and was re-elected four times. Two years after entering the House he was chosen speaker, was re-elected and could have continued in that office had he not had higher aims. It was in 1899 that he began a campaign which led to his election as Lieutenant-Governor, which office he now holds. Mr. Bates is described as a magnetic man, brainy, quick, and strong in debate, wise in counsel, dignified, affable, and hearty.

HOW IN many things the late Amir of Afghanistan clung to the customs and traditions of his predecessors on the Afghan throne is illustrated by the following anecdote, which Dr. J. A. Gray relates in his book "At the Court of the Amir": "There had once been brought to his Highness as a present a very beautiful shield inlaid with gold. Every one in the Durbar Hall feasted his eyes upon this beautiful thing, and the courtiers edged anxiously nearer the royal chair in the hope the Amir Sahib might perhaps, as he sometimes did, bestow the present upon a faithful and deserving slave. The Amir slowly cast his eyes round the ring, and each heart beat high as the ruler's eyes rested a moment on this man or that. Suddenly the Amir called out, 'Nassir, Pesh bier, come forward!' Out of a far corner came Nassir. The Amir turned to the anxious circle and said: 'Look upon this man. He was with me in Samarcand.' The hearts of the courtiers sank; Nassir, then, was to be the recipient of the shield. 'He was with me in Samarcand, and for a little thing he turned and cursed me. These were his words,' and the Amir repeated the curse. 'Is this thing so?' he said to Nassir. 'The old man hung his head in shame. 'He cursed me; he half drew his sword on me, his master. What is this man worthy of?' There was a dead silence. The shield was forgotten, for behold! Nassir's day had come. It had, but not in the sense anticipated. 'Give him the shield,' said the Amir; 'he was with me in Samarcand.'"

AMONG THE special envoys to the coronation of King Edward VII. who were honored with marked official attention was Ras Makonnen, the representative of so small and as yet undeveloped a country as Abyssinia.

RAS MAKONNEN,  
One of Abyssinia's greatest and  
most progressive men.

Diplomatic reasons known to the initiated were the cause of the gracious treatment accorded to this eminent Abyssinian, who was one of the few admitted on board the royal yacht when the English sovereign lately reviewed the navy. The Ras is, however, personally a most interesting character. He is a cousin of Emperor Menelik, a king of one of the Abyssinian states, a valiant and able general, the holder of high civil office, and a wise and devoted adviser to his imperial chief. He commanded a part of the army which so disastrously routed the Italian forces several years ago and put an end to the aggressions of Italy in Africa. A gentleman of this city who recently met him describes Ras Makonnen as a sort of Bismarck in statecraft and in loyalty to his Emperor.

Although he is next in succession to the throne, he does not desire to become his country's ruler, and it is probable that Menelik will be succeeded by one of his sons. Ras Makonnen is progressive in his ideas and fully appreciates the advantages of Western civilization, which he hopes will in time be extended to Abyssinia. He is about forty-five years of age, slender of frame, a good keeper of his own counsel, and is one whose appearance commands general respect.

THE OWNER of the yacht *Ariane*, on which M. Waldeck-Rousseau went cruising in Norwegian waters during the past summer, has published in the *Figaro* a lively account of their meeting with Kaiser Wilhelm in the Soffjord. During his visit to the French yacht the Kaiser charmed every one by his simple, courteous ways, his fluent French, his abounding gaiety. He inspected the yacht with the utmost interest—looking at the engines, even questioning the cooks, praising the Breton sailors, and afterward engaging in a long conversation "on a thousand things that concern the navy, philosophy, social and foreign questions." On the same evening the Kaiser entertained the French party on board the *Habensollern*. "Rhine and Bordeaux wines were drunk, and only French music was played—Auber, Gounod, Bizet, Delibes." The Kaiser talked with Madame Waldeck-Rousseau throughout dinner about the theatre and Parisian fashions. Afterward he showed his visitors his yacht, "astonishing M. Menier by his intimate knowledge of what French constructors have done for the development of pleasure yachts," and even allowed them to inspect the bureaux where four secretaries were engaged in reading and sorting telegrams. Finally, when the *Ariane* sailed on the following day, the Kaiser shouted "Au revoir" and "Bon voyage" from the bridge.

A WEDDING to which large space was given in *The Sketch* and other organs of London society and fashion, was that of the Duke of Westminster's young sister, Lady Lettice Grosvenor, to Lord Beauchamp, the youthful English peer who, though scarce over thirty, has already had a distinguished public career. Lady Grosvenor, the young bride, has had a very interesting and well filled life. Her mother has often been styled the most wholly charming and popular woman in the great English world. The

LORD BEAUCHAMP,  
Who recently wedded Lady  
Lettice Grosvenor.

Grosvenor home is at Saigh-ton Towers, or Saigh-ton Grange, as it is sometimes locally called, a picturesque mass of buildings, in old days the country house of the Abbots of Chester. Lord Beauchamp, the bridegroom, is thought by many people to have before him a very great political career. At Oxford he was noted as a good speaker and as one of the most able presidents of the Union. At an age when most young men of his rank are interested in sport and kindred matters, Lord Beauchamp was studying blue books and accepting the governorship of New South Wales.

WHILE THE Austrian empire does not rank with either of its neighbors, Germany, or Russia, in power

A ROYAL AUSTRIAN FAMILY.  
Children who may yet wear crowns.

influence, and territorial area, it is a highly important member of the family of nations, with a voice that commands respect when heard on questions of international policy. The Austrian Emperor Joseph is now well on in years and the oldest sovereign among the rulers of great nations, and in the nature of things it cannot be long before some one must succeed him on the Austrian throne. In all probability none of the little people who appear in the accompanying picture will come next, but it is more than likely that a crown will rest on the head of one or more of them some day. They are the children of the Archduke Charles Stephen of Austria.

The archduke is the grandson of the Austrian Emperor's grand-uncle (Albert), and therefore his children have a chance of succession. He was born in 1860 and is an admiral in the Austrian navy. He married in 1886 his kinswoman, the Archduchess Maria Theresa, and has three sons and three daughters.

MR. JOSEPH BLETHEN, the young Seattle writer who won immediate recognition with his excellent short stories, was born in 1870 in Farmington, Me., to which State his parents and their people for the two preceding generations were native. When he was ten years of age his family "went West," and Mr. Blethen's life has been spent so far in Kansas City, Minneapolis, and Seattle. He was graduated from the University of Minnesota in 1891, being at that time but twenty-one years of age.

JOSEPH BLETHEN,  
The popular young Western  
author.

About this time Mr. Blethen wrote several short stories, not one of which was accepted. Then he tried his hand at plays. One of these he sold for \$150, and it is still played under the title of "The Chinook." In 1896 the Blethens moved to Seattle, where they have made an almost phenomenal success with the *Times*, which they own, and of which the subject of this sketch is managing editor, his father being editor-in-chief. They have one of the most beautiful and luxurious homes in the city. In 1899 Mr. Blethen was married to Miss Genevieve Swadley, and that winter, at his wife's request, undertook to write six short stories. He wrote five. Four of these were at once accepted and published in leading magazines. Since that winter eight other stories by Mr. Blethen have been published. His work in this line finds ready sale and has attracted a great deal of attention. It is distinguished for a fresh, vigorous, moving quality. His characters "do things," and are, for the most part, distinctly and faithfully Western. There are no failures in these stories; they might almost be called "stories of success." If a young man desires a certain girl for his wife, he wins her; if he sees no way to do it, he makes a way. If he wants an office, or a position as cashier of a bank, he gets it. If he seeks to overcome himself, he does it. And all this means that however high Mr. Blethen may in time set his ideals in literature, he will be able to rise to them. He does not know the meaning of the word fail.

AS A PERSON of a strenuous life Mrs. Alice B. Gossage, of Rapid City, South Dakota, is almost on a par with our good President. She can edit and print a newspaper, and has frequently shouldered the work of the *Rapid City Daily Journal*, which her husband edits. She is an expert typesetter, and as a writer has a crisp, epigrammatic style. She is also a fine cook, an active worker in the Woman's Christian Temperance Union, vice-president of the *Current Events Club* in her city, and for early twenty years has been primary Sunday-school superintendent of Rapid City. It must certainly be allowed that, in keeping up with all these activities, Mrs. Gossage is true to the name of her town. Where should such a rapid woman live but in Rapid City?

THE ANNOUNCEMENT that Admiral von Diedrichs has resigned his post as chief-of-staff of the German navy has something more than a passing interest for Americans, since it was

the bumptiousness of this officer that came near bringing us into hostile collision with Germany at the time our fleet under Commodore Dewey was operating against the Spaniards in Manila Bay. While we are inclined to believe that more has been made of that unpleasant incident than the facts warranted, there would undoubtedly have been a clash between our warships and those of Admiral von Diedrichs had it not been for the tactful and conciliatory efforts of Captain Chichester, the commander of the English fleet present at the time. That the admiral has been a faithful and efficient servitor of Germany is evident from the fact that in accepting his resignation Emperor William referred to him in highly flattering terms and immediately appointed him honorary

ADMIRAL VON DIEDRICHS,  
Who has resigned as chief-of-staff in  
the German navy.

admiral of the navy come.

BERMUDA'S NEW GIGANTIC FLOATING NAVAL DOCK.

ENGLAND IMPROVES THE ISLAND'S STRATEGIC VALUE BY PROVIDING MEANS FOR REPAIRING BIG WAR SHIPS.

Photograph by Lusher, Hamilton, Bermuda.

### Bermuda's \$5,000,000 Dry-dock

SHAKESPEARE WROTE of "the still vexed Bermoothes." Tom Moore found them "a heaven for love to sigh in, for bards to live and saints to die in," and wrote many verses descriptive of their enchanting beauty. George Washington, with the vision of a prophet, saw the strategical importance of the Bermudas and advocated their purchase for the future protection of the new republic. However, the practical British government has continued the erection of fortifications and immense dock-yards there until Bermuda is truly a Gibraltar. Many million pounds sterling have been spent in perfecting the defenses.

The most recent addition to the defensive equipment is the magnificent floating graving dock constructed at Wallsend-on-Tyne at a cost of five millions of dollars. It is to replace the old dock anchored here since 1809, which has been of wonderful service in His Majesty's dockyard. The old dock is 381 feet long, 124 feet wide, and has a lifting power of 8,000 tons. Illustrating the great advancement in the art of war, is the wonderful difference in the sizes of these docks. The new dock is 545 feet long, and has a total lifting power of 17,500 tons, almost twice that of the old dock. It was designed to lift battle-ships of 15,000 tons displacement and having a bearing keel of 383 feet. Then it is fitted to hold ocean greyhounds 500 feet long. Towing the monster from England was successfully accomplished by two powerful Dutch tugs for the sum of \$175,000. Despite head winds almost the entire voyage and a few days at the Azores, the contract consumed but fifty days.

As the great structure stands nearly sixty feet out of water a station costing \$3,000,000 is being completed at His Majesty's dockyard. Twenty massive chains will so anchor the dock that it is believed it will never be swept from its moorings. It is interesting to conjecture whether the next several decades will witness so great a change in the equipment for naval warfare.

EDWARD E. ABRAMS.

### The Drama in New York.

THE LONG-HERALDED production of Pinero's original five-act drama, "Iris," at the Criterion, was preceded by the announcement that its moral tone was very bad. The same criticism followed its first production and, as a result, the Criterion has been crowded to the doors every night. I say, "as a result," because I am sure that on its merits as a play it would not attract large audiences for any extended period. The noticeable absence of enthusiastic applause indicates that the play does not touch a very high note at any point, excepting in the very last of the long-drawn-out five acts. The plot is simple enough. It revolves about the inexplicable misconduct of a woman with a poor young lover, whom she adores, and with an older millionaire lover, whom she despises, but whose favor she in the end accepts, reaping the consequent harvest of remorse and disgrace, being cast off by her real lover and then thrust into the street by her temporary protector and care-taker. What becomes of *Iris* in the end is left for the imagination. A more satisfactory conclusion would have been her reclamation and reformation by one or the other of the two men who entered so deeply into her life. The play in its conclusion leaves none of the principal characters in an enviable light. Not a smile is provoked during the entire performance. Managers have often remarked on the unaccountable freaks in the taste of theatre-goers. The unquestioned success of "Iris" at the Criterion is another evidence of the public's incomprehensible judgment. Virginia Harned, in the title role, hardly does it justice in the distressing emotional parts, of which there are too many. Miss Hilda Sponer, in a character not at all up to her accomplishments, is as artistic and admirable as ever. The painstaking work of this young woman cannot be too highly commended. Oscar Asche, in the difficult character of the villain, is easy, earnest, and sincere. Of the others very little need be said. The scenery, by Unitt, is fine.

A bit of unexpected character-acting in the second piece at the special matinee of the Stanhope-Whitcroft school provoked a storm of applause. Rachel Crothers,

the author of the play, and also a teacher in Mrs. Wheatcroft's school, took the part, in place of a young woman who was to assume the role. The moment Miss Crothers appeared, walking across the stage with the humpy walk of a German servant girl, the audience broke out into smiles, but when she recited the story of why she had cried "for five days," the house was hushed until she paused at its finish. A simultaneous clapping of hands from every corner of the house followed, during which Miss Crothers picked up the tray of dishes she had set down, and in the stolid German character of the part walked away. It was very effective—an ideal exhibition of artless art.

The newest things in New York are "The Ninety and Nine," an elaborate production at the Academy of Music; Miss Crozman in Ronald McDonald's comedy, "The Sword of the King"; Ethel Barrymore's charming new comedy, "A Country Mouse," and the curtain-raiser, "Carrots," at the New Savoy; Charles Frohman's excellent company at the Madison Square, in the lively play, "The Two Schools"; the opening of the Princess Theatre, by the Shuberts, introducing Mr. Weedon Grossmith and his London company in a laughable production, and two first-class animal shows, Bostock's at the St. Nicholas Garden, and Hagenbeck's at the New York Theatre. The successes that continue include popular John Drew in "The Mummy and the Humming Bird," at the Empire; "There's Many a Slip" and the sensational little play "At the Telephone," at the Garrick; Mrs. Patrick Campbell, in her elaborately mounted and well-produced performances at the Garrick; the always popular "A Chinese Honeymoon," at the Casino; "The Emerald Isle," in its closing days at the Herald Square; the lively musical play, "A Country Girl," at Daly's; the laughable "Rogers Brothers in Harvard," at the Knickerbocker; Brandon Tynan, the romantic actor, in "Robert Emmet," at the Fourteenth Street Theatre; Weber & Fields' chopped-off and sawed-off performance, "Twirly Whirly," which is still being improved; Mrs. Leslie Carter at the delightful Belasco Theatre; and the comical compound, "Sally in Our Alley," at the Broadway. Annie Irish's new play, "An American Invasion," follows "Hearts Aflame" at the Bijou. In the vaudeville houses, variety appears to be the spice of life. If one is not satisfied with the regular playhouses, he can find any quantity of new attractions at the best continuous performances, including Keith's and Proctor's.

JASON.

### Saving the Country's Forests.

AS AN asset in our national account, a factor among the wealth-producing agencies of the nation, and the individual States as well, there is nothing worthy of more serious consideration than our forests and timber lands. Ignorance and neglect of these interests, in the past, have cost us dearly not only in the loss of the forests themselves, but in the still more serious results following denudation in the shape of dried and shrunken water-courses and the lessened valuation of large areas of land. But both the national and the State governments now seem to be thoroughly awake to the situation, and much effective work is being done to save forest lands everywhere from further wanton spoliation. In the Southern States the movement for forest-preservation has made slower progress than elsewhere, but it is gratifying to learn that in this section also a widespread interest in the subject has been aroused. According to a report of the Bureau of Forestry at Washington, the owners of 1,534,000 acres of pine and hard-wood lands in the South have applied for working plans for conservative forest exploitation, and its representatives are kept busy giving advice and assistance where it is being followed. Under proper care the valuable hard-wood lands of the Southern States may become still more valuable in the future and a source of wealth of practically inexhaustible extent.

### Increasing Travel in the West.

AN official of the Chicago, Burlington and Quincy Railroad made the statement recently that 70,000 people had gone to Colorado on tourist tickets during the season just passed. Thousands of others have made the Yellowstone Park trip, and the prospects for an unusually heavy California business this fall and winter are remarkable.

### The War on the Isthmus

THE PRESENT civil war in Panama, the northern State of the South American republic of Colombia, would have attracted little attention but for the fact that it endangers the security of the route across the Isthmus of Panama. Otherwise it would have been regarded as one of those ordinary outbreaks whereby changes of government are effected in Latin-American countries. The threat, however, of the rebels, or Liberals, under General Herrera, to attack the cities of Panama and Colon and to fight for possession of the Panama railroad has caused the United States to intervene. Our government prevented the bombardment of Panama by revolutionary vessels, and American marines have recently been landed in force and have taken charge of the railroad. Under the treaty of 1846 the United States obligated itself to preserve a safe and open way across the Isthmus in case of war in Colombia, and it is now effectually fulfilling that duty.

The revolutionists have been warned that they must not attempt to seize the railroad or carry on military operations along its line. Even government troops are now compelled to pass over the road without arms, the latter being carried in separate and locked cars. Marines from the United States cruiser *Cincinnati* travel on every train to guard against interference with traffic by either side in the conflict. An armored car for each train has been prepared, and in this a detachment of the naval soldiers is carried. The car is equipped with a quick-firing Colt gun and displays the American flag. The intervention of the United States caused some irritation in Colombian official circles.

The neutrality of the isthmus is of great importance to the United States, since it is possible that we may yet purchase the partially dug Panama Canal. It has been alleged that one object of the revolutionists, whatever their avowed pretenses may be, is to so damage the water-way as to make it valueless. This scheme, it is hinted, was instigated by Nicaragua, with the hope of forcing us to select her interoceanic canal route. The Nicaraguan government has been accused of secretly aiding the revolting Colombians for that reason, and it is certain that many of the insurgents made their way to the State of Panama from Nicaragua.

The American intervention will directly aid the government of Colombia, since it thwarts the plans and limits the field of action of the revolutionists. The war, however, will probably continue for some time longer, and it is not yet clear which faction will win. The government recently suffered a bad reverse at Agua Dulce, the garrison there surrendering to the rebels. The Colombian troops are poorly equipped and trained, compared with those of our own army, and many of them are without shoes. But as their opponents are no better off in these respects the war may well be a protracted one.

### The American Soldier's "High Pay."

THE STATEMENT is frequently made that military service in this country offers a poor and unpromising field for intelligent and ambitious young men, since the pay accorded specially to private soldiers is so small, being thirteen dollars a month at the start and never rising above eighteen dollars. Those who regard these wages as meagre and insufficient will be surprised to know that in a recent debate on army reorganization in the English House of Lords, General Wolseley, former commander-in-chief of the British army, quoted the wage rate in the American army as an example of the most generous treatment and "high pay." So, indeed, it seems, in comparison with the shilling a day paid to the British private. It was in this same debate that Lord Wolseley alluded to the American army as the "best in the world."

### Feeding to Fit

is the problem with infants. The growing child has ever changing needs, but a perfect milk can never go amiss. Borden's Eagle Brand Condensed Milk is the acme of substitute feeding. Send 10 cents for "Baby's Diary." 71 Hudson Street, New York.

# Naval Strength at Home and Abroad

By Sidney Graves Koon

THE RECENT naval manœuvres of the North Atlantic squadron near the eastern end of Long Island were in many ways the most interesting, as well as the most extensive and instructing, which have ever taken place in American waters. Their chief value depending almost wholly upon the exactness with which actual war-conditions were simulated, it is only fitting that the latest and most powerful ships which have been added to our navy should have borne a part. The whole atmosphere of the manœuvres suggests the possibility of our being some day under the necessity of carrying out much the same programme in deadly earnest; it becomes pertinent, therefore, to ascertain, as nearly as may be, what our position would be in such a struggle, and in what ways it might be improved.

In a consideration of the strength of the principal navies of the world, in ships built and building, it is proper to rule out of the comparison all vessels which fail to reach a definite standard of size and speed, and all such as are too old to be classed as essentially modern in character. In a comparison between the fleets of the various Powers such a course should have no bearing on the general result, as every navy carries on its lists a considerable number of such vessels, and the exclusion of all alike does not affect the relative strengths of the fleets in question. With this idea in view, the writer has seen fit to omit from consideration all vessels of under 3,000 tons displacement, as being of insufficient force to be included in the nation's active fighting line; all vessels incapable of maintaining a speed of at least ten knots per hour, or, if other than coast-defenders, thirteen knots; and all vessels belonging to obsolete types, and now largely used for receiving- and training-ships. As no two nations classify their ships according to the same standard, a common basis has been chosen for all, which may or may not conform with what experts might consider the best practice, but which has at least the advantage of being uniform.

Under these restrictions and conditions, tables have been prepared covering the ships of the eight principal navies, under six heads, as indicated. These have been supplemented by tables showing the relative standing of the three great international alliances. It may be noted in passing that, on all Eastern questions at least, Japan will be found standing side by side with the Anglo-Saxon, with a consequent increase in the fighting strength of that combination. It should always be remembered, however, in instituting such a comparison, that it is impossible to take into account the personnel manning the various fleets. Long experience having shown the great superiority in fighting ability of the Anglo-Saxon and the Teuton over the Latin races, the real position of the Anglo-Saxon combination is much enhanced over the figures shown. Again, racial similarities and a common tongue add enormously to our strength.

The Anglo-Saxon (tacit) Alliance is seen to have a very substantial lead over either the Dual Alliance of France and Russia or the Dreibund of Germany, Austria, and Italy, in both battle-ships and cruisers. In the latter we are far ahead of both the other alliances combined, but in the former class of vessels we show a deficit of 255,000 tons, which may be partially offset by Japan's 94,000 tons. In this connection it may be remarked that in a similar article, published by *LESLIE'S WEEKLY* on April 21st, 1900, the writer pointed out that at that time the Anglo-Saxon combination alone was fully on a par with the other two together, the superiority of our opponents in battle-ships (7,000 tons) being far more than fully compensated for by our great lead in cruisers (247,000 tons). Our excess in cruisers has now been increased to 374,000 tons, but our (relative) loss of 248,000 tons of the heavier fighting vessels has been unfortunate, to say the least. This has been caused partly by the great activity lately manifested by Germany, and partly by the failure

the American 5-inch, the French 6.4-inch, and the German 3.4-inch; but the similarity above mentioned holds good to a surprising degree within the ranks of each separate combination.

England's enormous individual preponderance in all types of ships mentioned, save coast-defenders, is immediately apparent. Her fleet of first-class battle-ships is equal to the combined French, Russian, and Italian squadrons; in second-class battle-ships she has a force exceeding that of Russia and Germany combined; her armored cruisers form a heavier unit than do those of France, Russia, Germany, and Italy combined; in first-class protected cruisers she has nearly twice as much of a force as have all the other Powers together, and almost exactly twice as much as those assumed to be hostile, while in second-class protected cruisers she has more than any two others, and more than the total Franco-Russian-Dreibund combination. The American fleets, with which we are more directly concerned, are, on the whole, not far from either the Russian or the German in strength. In general it may be said that we stand a little behind the former, and somewhat ahead of the latter, though our superiority here is based wholly upon the cruiser element, as the German battle-ships are considerably more numerous than ours, due to their great preponderance in the smaller types of such ships. One of the greatest elements of our strength is seen to be in our armored cruisers, which are far ahead of those of Russia and Germany combined. In this particular field France and England are the only nations within reaching distance of us. This is a direct reversal of the state of affairs noticed in the previous article mentioned, where attention was called to our extreme weakness in this type of ship, Austria alone being in our rear.

Especially attention is invited to the high speed and great size of the Japanese battle-ships, and, in a still more marked degree, of the American armored cruisers, and to the extreme speed of the Japanese and American first-class protected cruisers, albeit the latter are so few in numbers. These features are so closely allied with those of the individual ships that a glance at the leading features of the latest ships of the various Powers may be of interest.

## BATTLE-SHIPS NOW BUILDING.

	NAME.	Tons.	Horse Power.	Speed.	Coal.	Armor, inches.	Battery, inches.	Muzzle Energy per minute.

								895,204 502,010 61.7

of the second session of the Fifty-sixth Congress of the United States to authorize the construction of any vessels whatever. These causes have allowed the "opposing" forces to make a total gain of 398,000 tons, compared with our 277,000, or a net gain of 121,000 tons. This latter figure is nearly equal to the entire force of ships (of the character herewith considered) with which we entered the war with Spain.

We may, however, approach this subject from a slightly different basis, by including in one list all the armored ships and in the other the unarmored cruisers. This is accomplished by simply transferring the armored-cruiser class from the cruiser list to the battle-ship list. The result shows the Anglo-Saxons to have 147 armored ships, amounting to 1,592,632 tons, at an average of 10,836 tons and 18.50 knots; the Dual Alliance 109 ships of 988,702 tons, at an average of 9,071 tons and 17.43 knots; and the Dreibund 86 ships of 734,222 tons, at an average of 8,538 tons and 17.67 knots. This leaves their combined forces a surplus of 130,000 tons, as against the former 255,000 tons. In protected cruisers, the Anglo-Saxons have 97 ships of 530,950 tons, or an average of 5,474 tons and 20.05 knots; the Dual Alliance 42 ships of 204,223 tons, or an average of 4,862 tons and 20.86 knots; and the Triple Alliance only 17 ships of 77,666 tons, or an average of 4,569 tons and 19.43 knots. This gives us a surplus of 249,000 tons, leaving our total net surplus at 119,000, as before, but depending wholly, as before, on the cruiser class for any surplus at all.

In guns, the figures for which include only those carried on the ships listed, our lead on the total has been cut down from 562 to 375, while our superiority of 39 guns of 8-inch calibre and upward has been replaced by a deficit of 94 such guns. The addition of the Japanese navy to our forces would not overcome this loss. A curious feature of this gun question lies in the fact that the English, Americans, and Japanese all use largely the ordinary English units of measurement, and to a great extent the same calibres of guns, and therefore their ammunition would be more or less readily interchangeable, while the five other Powers all use the metric system for their guns, resulting in their possessing a like similarity of ammunition. Of course each nation represented carries on its ships a large number of guns which have no counterpart on the ships of the other fleets in the combination, as, for instance, the English 9.2-inch,

The two American battle-ships listed are seen at once to be far superior to any of the others. In speed they are second to none except the Italian, whose designed 21 knots is largely problematical, and at best exists only "on paper." They are well ahead of all in the coal capacity of their bunkers. The French ship is the only one ahead of them in the thickness of the armor-belt, and this advantage is gained at a sacrifice of a knot in speed. But it is in their enormous offensive powers that our ships show their true value over their foreign rivals. The mere number and calibre of the guns is alone good evidence of this superiority; but when analyzed, and reduced to a basis of foot-tons of energy of the projectiles which can be discharged in one minute, their preponderance is even more marked. The proportion of this energy which can be directed from one broadside is also shown. The "Factor" represents the quotient obtained by dividing the muzzle energy by the displacement of the ship, and indicates the relative battery power of the design per ton of displacement. The construction of the *Vermont* and her sister ship, *Connecticut*, authorized at the last session of the Congress, has not been begun, hence they are not included in the lists of ships, but are here introduced for comparison.

If the American battle-ships have shown a great superiority over their European contemporaries, our armored cruisers have not failed to maintain our splendid traditional rank in this respect. We have always aimed to make our vessels, ship for ship, better and more powerful than the corresponding ships of other nations, and in the present instance have well carried out our intentions to that effect. It is true that our ships are larger than the others, but the conditions surrounding the determination of the "Factor" eliminates that item from the comparison, and still leaves us far in advance. The only ship designed to steam faster than ours is the *Engelshim*, which has a very thin armor-belt and a weak battery. Our large size makes possible the heavy coal supply shown. As in the case of the battle-ships, the two "new ships" have not been begun, and they are not counted in the list of armored cruisers of the several Powers.

In no case but the last can the muzzle-energy figures of the armored cruisers be fairly compared with those of the battle-ships mentioned, because of the fact that the latter contain results from guns of the most powerful

## Naval Strength at Home and Abroad

Continued from page 362.

character, which could send their shells through and through the armored cruisers, while the heaviest guns of the latter would be able to penetrate the armor of the battle-ships only under the most favorable conditions. The 10-inch guns of our new cruisers, however, could pierce any armor carried by the latest ships, and were it not for the relatively thin armor-belt, which protects the vitals of these cruisers from injury, they could well take their place in the list of battle-ships, while their high speed would enable them to accept or refuse battle at will. As it is, many first-class battle-ships carry armor no less vulnerable, and batteries far less powerful; and these fine ships could attack, with the highest confidence, any but some half-score of the very most formidable battle-ships afloat. It is not putting it too strongly to say that one of them ought to be able to defeat, in fair fight, any battle-ship in the German or the Russian navy; while there are very few ships in the Japanese, Italian, French, or English navies which could meet her on equal terms, and none could afford to underestimate her. The long-heralded confluence of the battle-ship and armored cruiser types is here seen in its latest development, in a class of ships which might with the highest propriety be termed "battle-cruisers."

All of the Powers mentioned, with the single exception of Japan, are building new war-ships with great energy. England endeavors to maintain her building programme at such a point that she adds a ship for every one added by her two most formidable rivals—now for some time conceded to be France and Russia. The two latter are straining every nerve to keep ahead of the Dreikund, and incidentally to overtake England. Germany is rapidly pushing forward her great eighteen-year programme, adopted in 1890, and subsequently reduced to eight years. This contemplates an enormous increase to the striking strength of the "mailed fist," and is probably the largest single programme ever attempted. Italy is building as fast as her depleted treasury will allow; while Austria is struggling to catch up with her more progressive neighbors, having witnessed with no little envy the immense strides in naval force taken by them during the past decade and a half. The United States ambles along, almost "from hand to mouth," for no long programme has ever been undertaken, the Congress being always content to authorize, from year to year, a few ships, almost invariably less than those asked for by the executive department of the government, and occasionally, in a fit of parsimony, or as the result of a political deal, refusing to authorize any whatever. In this precarious way has our compact little force made its gradual appearance, and it is due to the excellent talent displayed by those responsible for the designs that the results have been so well adapted to carry American prestige abroad. Few mistakes have been made, the ships being nearly always a little ahead of anything foreign in the same class, and, as we started with almost a "clean slate," we retain on our lists a very small number of obsolete vessels, such as form so large a proportion of European forces.

Aside from second-class battle-ships, of which we are not likely to build any more in the near future, if ever, our greatest deficiency, as compared with the other Powers, is in the line of large protected cruisers. To place ourselves on a par with the average of the five other Powers possessing ships of this class, we would have to build ten, of an average displacement of about 7,500 tons and a speed of 21 knots. These, however, are not of such strategic importance as the heavy armored vessels, and should be allowed to wait rather than to delay the continued construction of the latter. The Congress has this year authorized the building of two first-class battle-ships and two large armored cruisers, as already noted. This may be taken as a very fair estimate of our annual needs in this particular line, but it should always be accompanied by smaller vessels—the "eyes of the fleet," as cruisers are called—in sufficient numbers to maintain our relative position undisturbed.

## How Cabmen Fleece Foreigners.

IF THE New Yorker himself is sometimes victimized by greedy drivers of conveyances, how much oftener is the green countryman taken in. It is, however, the poor person of foreign birth, unable to speak English, and ignorant of the value of our money and of the fact that the rates are fixed by law, who is the dishonest cabman's most profitable prey. Those conversant with the facts relate incidents that stir the listener's pity and indignation.

It seems that there are many Hungarians, Poles, and people of other nationalities, who have already been admitted to the country and have lived in it for a time, who have occasion to move from one locality to another. A considerable number of these pass through New York City on their way and are quickly snapped up as "fares" by the hawk-eyed drivers. When the destination in the city, a depot or a wharf, is reached the cabman demands excessive pay and most always receives it. In numerous instances this leaves his passengers without means to travel farther. The unhappy people, unable to understand or to make themselves understood, are either intimidated into payment or cheated in the change. In one case a cabman collected five dollars from a woman for carrying herself and babe from Jersey City, across the ferry, to the Grand Central station in Manhattan. The woman then had but forty cents left, and she was on her

way to a town in Massachusetts and had no ticket. A cabman recently compelled a man to give him \$2.50 for a ride from the Twenty-third Street ferry to the Grand Central station, when the legal rate is only fifty cents. The passenger's funds were thus so depleted that he could not buy the ticket he had planned on. Sometimes, for similar reasons, whole families are stranded at the great station.

These are but random samples of the way in which the "cabby" of a predatory turn of mind serves more or less willing patrons. There are tales, however, of cabmen and their friends bundling dazed and dumfounded foreigners into their vehicles literally by force and hurrying them off to be plucked at the end of the ride. While most of the victims are out-of-towners, occasionally an alien, newly released from Ellis Island, is subjected to this swindling process. It is a fortunate thing for the passenger, it is declared, if he is really carried at once to the place he desires to reach and is not landed in some vile grogery, induced to drink drugged liquor, and then robbed and cast helpless into the street.

The Grand Central station is the stranding ground of numerous victims of the cabmen. Those kind-hearted attendants at the station who can speak several languages

## They're All Working Now

IN the field the busy farmer's getting ready for the spring,  
And the plow is turning furrows till it fairly seems to sing;

In the barn the boys are husking all the yellow ears of corn,  
While the cider-mill is chanting from the very break of morn.

And the demagogue who rises to orate of woe somehow  
Finds a lot of empty benches, for they all are working now.

IN the bank they're counting money—all the massive vaults will hold;

And the stream is growing bigger with its greenbacks and its gold;

For the merchant's days are busy, and his goods are selling right,  
And he finds he has to fill his empty counters every night.

"But calamity is coming!" cries the one with fevered brow—

Yet he lifts his voice unheeded, for they all are working now.

THEY are working in the forests, in the fields, and on the hills;

They are stepping to the clanging of the music of the mills,

Where the singing of the whistles and the wheels' incessant hum

Thrill them like the happy rhythm of the bugle and the drum.

And the men who shout disaster get no answer from the plow,  
Lure no fingers from the levers—for they all are working now.

W. D. NESBIT.

have to listen almost daily to stories of woe told by these ill-used travelers. They have protected the latter from extortion in a thousand cases and have occasionally forced the cabman to disgorge his unlawful levy. Sometimes in the rush and bustle of business at the station, the swindled and almost penniless people are overlooked for long hours before their plight is discovered. By that time they are hungry and despairing. Usually, when their trouble becomes known, a purse is made up for them by generous passengers, but not infrequently they have to be taken in charge for the night, or even a day or two, by some benevolent society, which looks after persons of their race, until money can be raised to send them on.

The hardship entailed by the action of the unscrupulous cabbies is especially severe on the luckless women and children. It would seem that in view of this glaring abuse the benevolent societies should have an agent constantly on duty at the Grand Central station, at least, to care for the hapless victims of the cabmen and to bring the offenders to justice. The meanness of the offense is unspeakable and it should be punished as severely as the law will permit. Where are the police? Is it true that some of them share in the cabman's spoils? Instances of this abuse could not have become so frequent had the guardians of law and order been proportionately on the alert.

Get strength of bone and muscle, purify the system with Abbott's, the Original Angostura Bitters. Druggists.

## Security the First Essential

SECURITY AND unquestioned reliability are the imperative essentials of a life insurance contract, for in it the individual during the activity of his life places as a sacred trust in the hands of the insurance company, in some measure at least, the happiness and welfare of his family when he is gone.

It is impossible for cheap insurance to be safe insurance, for the cheapness of the policy creates a doubt as to the integrity of the contract. The rates of investment in all the large companies are about the same, being based on the prime consideration of absolute security, which means the certain and prompt payment of claims. This is placed above all else.

Among the safe and progressive companies which have attracted attention by their strong and rapid growth, the Provident Savings Life Assurance Society ranks among the very best. Under the practical and conservative management of its able president, Mr. Edward W. Scott, it has made great strides. During the past five years the income of the company has doubled, its assets more than doubled, its reserve more than trebled, while its excess of income over disbursements has increased more than tenfold. The total payments to policy-holders and amount now held for their benefit exceed \$26,000,000. Coupled with this is the important fact that the company has not a single death loss due and unpaid.

The Provident Savings has recently received many tributes from prominent persons residing in various sections of the United States and Canada, who hold policies in the company or who are the beneficiaries of deceased policy-holders. Some of these letters have been published in a booklet just issued by the company.

It is a pleasure to add a good word for a company which exhibits so much enterprise, strength, and probity as the Provident Savings. This satisfactory state of affairs is brought about by building up its own business without attempting to destroy the business of its competitors. It has won its substantial success solely on its own merits.

As a result the Provident Savings possesses the friendship and support of its policy-holders and beneficiaries, as is evidenced by the booklet referred to. Among the number of interesting letters that may be found in it one may be noticed from Hon. William E. Werner, now holding the highest judicial office in the State of New York, that of Judge of the Court of Appeals. The letter from Judge Werner to President Scott says: "As a policy-holder in the Provident Savings, it gives me pleasure to be able to say that, after comparing the policy which I hold in your company with other policies which I hold in various other companies, I am satisfied that your contract is not only a most liberal one, but is also most satisfactory in the important feature of pecuniary returns to the policy-holder. This, together with the excellent financial standing of the Provident Savings, with its conservative yet progressive management, makes it one of the best companies and brings to it the success it so richly merits."

Another letter may be noticed from ex-Governor P. C. Lounsbury, president of the Merchants' Exchange National Bank of New York City, who writes in answer to a recent inquiry: "It gives me pleasure to state that the Provident Savings Life Assurance Society ranks among the very best and soundest of life insurance companies. I have full confidence in its safety, strength, and solvency. The company is conservative and steadily growing. Its officers command the respect of the business community, and their ability, integrity, and fair dealing have given them as well as the Provident Savings a place in financial and business circles generally that few possess. I unqualifiedly recommend the company."

The recent death of the famous and daring leader in the war of the Rebellion, General Franz Sigel, attracted wide attention, and the letter of his widow to the Provident Savings, under date of September 5th, 1902, is peculiarly interesting. She writes to President Scott: "I wish to express my grateful acknowledgments for the immediate payment of policy No. 10,477, issued by your company on the life of my late husband, General Franz Sigel. This policy was the only insurance upon his life, and had been carried by the general for nearly twenty years. Your courteous treatment in the preparation as well as in the payment of the claim, which has been made so very promptly and also without the slightest technicality, is deeply appreciated by me. The proceeds of this policy will be of material benefit and is practical proof of the very great advantage of life insurance and the good it brings to the family."

## Country with Twenty-Eight Languages.

LANGUAGE AND religion were never more awkward factors than in India. Twenty-eight languages are spoken in the dependency which sent out its princes to do homage to King Edward at the coronation, and none of these is spoken by fewer than four hundred thousand, while the most general is the mother-tongue of eighty-five and a half millions. There are, in the remotest parts of the country, dialects spoken by half a thousand people, which none other than themselves can interpret. Vastly important, also, to a governing body are the religious tenets of the people over whom it is set. India has nine great creeds, numbering their followers from the two hundred and eight millions of Hindus, down to the nine and a quarter millions of Animists, and the innumerable sects included in the forty-three thousand "others."

## David Belasco and the Belasco Theatre

An Impression by an Impressionist

THE SUN was standing still over the western bank of the Hudson River, a bit south of the centre of Forty-second Street. It hung there expectantly, uncertainly, as if it paused an instant before taking the final plunge into the deep purple smoke that lined the Jersey shore. It was dull red and seemed to blink at me. I walked westward from Broadway and stopped in front of the new Belasco Theatre. It was surrounded by scaffolding, and everywhere were old lumber, shavings, and plaster dust. Men, standing near a scaffolding, were gesticulating nervously and talking in desperate earnest about something. Finally one of them left the group and walking deliberately to where I was standing on a small bundle of old laths, waited for me to speak:

"Mr. Belasco?"

"Yes, yes—Belasco!"

"Well, Mr. Belasco, your press representative, Mr. Cook—"

"Yes—yes—See, they have to take it down. Beautiful sign. Put together as delicately as a watch—tin workers—electricians—stone masons—mosaics—see? Beautiful. Did you ever have neuralgia?"

"Your press representative, Mr. Cook—"

"They've gone on a strike again. Strike regularly every day. My head aches—neuralgia! They made me angry. Come inside. I used to be entirely in sympathy with the down-trodden working man, Fallacy!—down-trodden employer. Can't call your soul your own. Should be ready to open in a week. Two delays already. See, the men are all out. Tapestries not up yet. Ever see a walking delegate?"

"No; what is it?"

"Sent around by the labor unions to see that employers don't reserve any rights to themselves. Come in with their hats on, smoking bad cigars; expectorate on my beautiful new upholstery, like as not. Call all the men off their jobs if any little thing happens to displease them. Want to kick 'em out. Don't dare. Do you enjoy self-control?"

"Not particularly."

"Gives me neuralgia. My beautiful sign. Cost me one thousand dollars—all for nothing. Tin worker infringes upon the rights of a stone mason and the stone masons call a strike—ruin the job. Don't dare say too much. Mrs. Carter opens soon. Down-trodden laboring man! Dear me!"

All this was said in a voice so gentle and low as to be almost a caress.

"Isn't the coloring beautiful?"

"The theatre?"

"Yes. Over there on the side, where the recess is, will be a pretty little niche to rest the eye upon—a drawing-room theatre. Just like sitting at home enjoying the play. Pardon me, I didn't ask if I can do anything in particular for you—you wanted to know—?"

"Yes; your press representative, Mr. Cook—"

"Do you like the tapestries? Nice effect—unusual and soft—all autumnal colors. You see—deep greens and browns and bronzes and russets—Mrs. Carter has good taste."

"Her idea?"

"Partly."

He didn't know I was there. He was merely audibly admiring the effects produced in his new theatre, but so gently, withal, that I did not mind.

"Mrs. Carter didn't like all the little naked Hammerstein Cupids and the white and gold trimmings. Neither did I. The theatre was the Republic, you know."

"Yes, I know. Mr. Cook—"

"All those lights in the back there will be cut out. All to be covered with tapestries, and candelabra put in all the niches and available spaces. Regular drawing-room effect, you see. Can't tell much about it now, with all the lumber and trappings about."

"Are you going to redrape the boxes?"

"Redrape?—boxes?—Wh-a-t!"

He didn't raise his voice. Merely his inflection and eyebrows. "You think that deep rose goes badly with the green, don't you? Not at all. Beautiful! Our lovely new draperies! My dear young lady, that material cannot be duplicated. It was made to order to decorate a palace recently erected just outside of Paris. It is called 'Du Barry rose.' I heard of it and made a trip to Paris to see it. Beautiful! But the makers were under contract not to make any more like it. Fortunately there was just enough left to drape those boxes, and I bought it of the decorator who did the work. Extortionate price! Didn't have quite enough at that. See how it skimps at the corner, there. But the color! Exquisite! Redrape? Dear me!"

"Pardon me. Everything in a green tone, you know—"

"Not at all! Tapestries. See the purples and deep reds and bronzes. Lights up beautifully! Oh!—ever have neuralgia?"

"No."

"Terrible! Have it every season. Break down regularly once a year. Nerves. That's it—and those fellows made me angry."

This was said ever so gently, and then he paused as if to think pleasantly of something.

"Your press agent, Mr. Cook—"

"Yes, I know. Have you seen my new entrance? Simple and elegant. Come on out, let's look at it. Careful! You may step on a carpet tack. Careless, those fellows, leaving things like this. Pretty shade of green? How do you like the bees?"

"Are they bees?"

"Of course; can't you see? Mrs. Carter's idea. 'A bee embroidered in white cotton in the upper left-hand corner of each chair,' she said. Pretty, isn't it? Whole swarms of them when you look at them from here."

"Will you be ready to open on the date announced?"

"I wrote a play once called 'In It Was a Line.' Still, I'm afraid we won't, unless the men do a little more work and worry a little less about union rules. Feel like telling them to go to—watch out; that's fresh paint!"

"Oh, I like your new entrance!"

"Yes, of course. Cozy, isn't it? It was all in white marble, you know, with the box office on the side. No art! No inviting atmosphere! Plainly said, give up your money and go on in and sit down. You like to linger here, you see. Seats on either side. Comfortable, too. Better than a smoking-room, and the box office in the middle helps to keep the street noises out. Has a solid put-here-to-stay air, don't you think?"

"How about the smoking-room for ladies?"

"Ha! Yes. It's down those little marble steps. Prettiest feature of the new theatre. Will you go down? No? Well, the decorations are not complete yet. Those men! I'll make all the concessions, I suppose, and they'll go back to work to-morrow. Come inside and sit down again. See what a nice entrance here on the side. The 'man on the door' will stand right here to take the tickets and it will be just like walking through a draped doorway into a softly lighted drawing-room. None of the stiff conventionality of the play-house. Be seated—"

"What comfortable chairs!"

"Are they not? How much better that hard surface material is than the time-honored plush upholstery!"

"Yes, and prettier."

"Did you want to see me about something?"

"Well, yes; but never mind. I'd forgotten."

"No, tell me. You said something about my press representative, Mr. Cook."

"No, did I? Well, I'm a newspaper woman and—"

"Oh, I knew that!"

"I fancied you did, but I want you to talk about yourself a bit."

"Myself?"

"What about me? I have a headache and am on the ragged edge of my annual nervous breakdown, that's all." His tone was smoothly restful and quiet, but he tugged ungently at the iron-gray curl which hangs over his left temple.

"Is that really all?"

"Yes, really. I can talk, you know. Really a good talker—love to talk. But I can't talk about myself. What's to say? I've done nothing—yet—maybe—one always anticipates. There's Mrs. Carter and my new theatre and Miss Bates."

"When does Mrs. Carter open?"

"The 29th. This is to be Mrs. Carter's home, you know. If I can always patch up my yearly nervous collapses I'll produce a new play for her here every season. She continues this year in 'Du Barry.' When she goes on the road Miss Bates comes in here with a new play."

"Is Miss Bates's play to be meat for the gushy journal and scrofulous-minded critic, as 'Zaza' and 'Du Barry' have been?"

He smiled indulgently. "I cannot announce Miss Bates's play yet."

"Your plays have been characterized as decadent and demoralizing and—"

"Yes!—y-e-s—and all the rest of it. That's why we are able to make expensive productions and have a beautiful theatre of our own. One must cater to public taste to a certain extent, you know. You may talk about art enlightening the world, but the dynamo is in the box office, you know. See my new trap-door in the middle of the stage? We excavated under there and made room so all the scenery can be let down out of the way as soon as an act is finished, and at the same time the next act is sent up. Dear me, that's really a terrible pain over my eye!"

"Well, you shouldn't be sitting in this damp theatre. It's really cold and draughty."

"Is it? Yes, I suppose it is. Excuse me a moment. I'll close that door on the stage."

David Belasco! American actor, manager, playwright, dramatist, adapter, architect, decorator, stage director, unexcelled teacher, and indefatigable worker! Why should he not execute great plans and achieve startling triumphs?

He has.

Mr. Belasco, gentleman. Even when consigning aggraving stone masons to places unpleasant, his voice is almost plaintively gentle. And that iron-gray curl over his left temple. Nobody ever sees him when he is not gently stroking it or ungently pulling it with his long, thin, nervous hand. It calls one's attention continually to his splendid head with its thick crop of hair, black and close-cropped around the back, but long, gray and rumpled in front. In watching the hand, I could not escape the scintillating black eye that holds one.

"There, I've shut that stage up. Cuts off all the draught, you see."

"Well, good-bye, I must be going. I'm sorry about the neuralgia."

"Nice of you. It isn't so bad. Oh, look at the Du Barry rose tapestries from here! That's a streak of light falling on them from the window in the far corner of the gallery. Beautiful! Good-bye. Come and see me again."

"Thank you. Good-bye." Turning my face westward, I saw the sun sinking into a deep bed of purple smoke lined with Du Barry rose.

CUTTING PEAT IN ONE OF THE MOST EXTENSIVE BOGS OF IRELAND.

SHETLAND ISLANDERS CARRYING HOME BASKETFULS OF THE PRODUCT.

## Shall We Burn Peat Instead of Coal?

By M. P. Haskell

THE TOTAL suspension, for more than five months, of coal mining in the anthracite region of Pennsylvania, owing to the general strike of the miners, with the consequent scarcity and dearness of a most needful product, has naturally turned the thoughts of the people to the procuring of substitutes for "black diamonds." It now looks as if we might become, at least temporarily, a peat-burning people, for there are vast and inexhaustible beds in the United States of this natural fuel, and it is being widely suggested that it would be a wise thing indeed to have them in working order to resort to in times of high coal prices, resultant upon strikes and other things.

There is but one place in this country where peat has been burned exclusively in years past, and that is Block Island. This island since the Revolution has been treeless, and had it not been for its inexhaustible beds of peat it would have been abandoned. This peat is formed from vegetable matter washed down the hill-sides into the ponds. One peat bed on the island, which is near the shore, can be traced into the ocean a quarter of a mile from high-water mark, and furnishes excellent fuel, which burns with a clear, steady glow, making a serviceable fire for broiling or baking. For over a hundred and twenty-five years the Block Island people have burned peat, and Whittier makes mention of it in his lines on Block Island in his poem on "The Wreck of the Palatine":

Dreary the land when gust and sleep  
At its docks and windows howl and beat,  
And winter laughs at its fires of peat.

Considerable peat was formerly cut in the bogs at Barnstable, Mass., and used during the winters in Boston. There is at "The Hub" to-day a coal merchant who sells New England peat to such as want it. The Canadians, who have large beds to draw from, have already, in spite of the abundance of wood in their country, begun to burn peat, and a factory at Toronto is running night and day to supply the demand at \$4.25 per ton, which is considered a better bargain than coal at \$15. A company, formed

SCOTTISH WOMEN GATHERING THE DRIED BELLETS FOR STACKING.

at Passaic, N. J., is to work peat bogs in that State and announces its expectation of selling the product at only \$2.50 per ton. Chicago, also, is beginning to see light through the clouds of the coal strike. Peat has been found in great quantities in the swamps of South Chicago, and the people are preparing to use it.

Peat, though in itself a good combustible, may be artificially improved for burning purposes. A company has been organized to utilize the enormous deposits of peat at Lewiston, Me., in the manufacture of a composite fuel, which is called "synthetical coal." By the process which this company employs the peat is freed from coarse material, has much of the water in it pressed out, receives a drying addition of lime, is dried in a hot air cylinder, is mixed with petroleum and bituminous pitch, and is then put through a machine which fashions it into cylindrical briquets. This compound should certainly possess much calorific power.

There are, in all, thousands of peat bogs in the various parts of this country. Cape Cod, Massachusetts, is rich in them, and in all the New England States there are bogs of peat extending for acres. In fifty towns in Massachusetts it is estimated there are 200,000,000 tons of peat to be had. In Falmouth, Mass., the peat bogs surround the salt lagoons and ponds and extend along the salt rivers for miles; the peat is springy and elastic when walked upon and very easily detected. This land is of no use whatever for agricultural purposes and thousands of tons of peat could be cut from it at a trifling cost. One may say that wood may be so cut, but it must be understood that peat makes a steady, strong fire, and needs no more attention than coal, while a wood fire must have constant attendance and is fitful and unreliable, and, for the poor, ruinously expensive.

The peat is cut during the summer and left to dry in high heaps, and by November it is as dry as chips. It is cut in bricks two feet long and six inches square at the ends. There is a delicious odor from it when burning that pervades a house and leaves a lingering sweetness about things. Every one who has visited northern Scotland can easily remember this fascinating odor, and the Block Island peat has even a greater fragrance.

# Perils of the Alaskan Gold-hunter

By Albert Hencke

THREE EXPRESSIONS of the ugly moods of nature combine to make the Copper River district of Alaska one of the most peculiarly dangerous spots in the world. The announcement has been made of the recent discovery in this Territory of deposits of gold richer than any which have been found in the gold country of the Northwest since the gold-fields at Cape Nome were located; and the American government is continuing the fight begun many years ago in this section against the formidable obstacles of nature to promote the comfort and convenience of those who must drag their packs through the valley of the Copper River to reach the gold regions about Mt. Drum, the Tanauna range, Mt. Wrangell, and the Yukon valley.

The three natural phenomena which make this pilgrimage so dangerous are the glaciers, the mountain torrents, and the volcanoes. It is an odd combination of destructive forces of heat and cold, and of the rapid rush of water and the slow and ponderous power of rivers and mountains of ice. Yet each is in some way responsible for one of the others. The volcanic nature of the district has produced the roughness of the surface which causes the swift streams and cataracts. The glaciers, too, contribute to the dangers of the water, for the icebergs, the children of the glacier, stir the water into treacherous currents and whirlpools.

When the government engineers and surveyors first went into this territory of terrors they encountered continually and without warning the obstacles which are now known and to some extent avoided, and they experienced many hardships and many thrilling adventures. The purpose of the government in sending surveyors into this country is to cut a trail and probably later to build an all-American railroad from Prince William Sound in the Gulf of Alaska to the Klondike, extending northward from the sound along the Copper River valley, thus to make the gold-field easily accessible and to facilitate the mining and the delivery of the precious metal found there. It was a party of government surveyors which passed through the season of trial and suffering that I am going to describe as it was told me by members of that same party, reduced in eleven days to nine weak, famished, and horror-haunted beings who crept one morning into the camp at Wood's Cañon in the Copper River valley. The experience of these men is only one instance of what is endured by the gold-seekers in this part of the world, and it shows only one of the obstacles which they must combat.

The party had been working along the Corner River more than two hundred and fifty miles north of the mouth of the river and were returning slowly, their immediate objective point at this time in their journey being Wood's Cañon, where there was a large base of supplies. Emptying into the Copper River more than seventy-five miles above Wood's Cañon was the Tonino River, a peculiarly treacherous stream filled with quicksand and with sandbars thrown up by the swift current, which snarled along at the rate of twelve miles an hour—as fast as the lively center of a horse. The party of government surveyors were in the valley west of the Corner River, and the Tonino, extending from the west and emptying into the larger stream almost at right angles, was directly in their path. The torrent had to be crossed.

It was decided to build a large raft, for there was a good stock of provisions to be transported—provisions to sustain the party until Wood's Cañon was reached. This plan of building the raft was the idea of a Swede who was in the party, a great strong fellow who had seen a lot of rough life on land and sea, but the experience which followed was bitter evidence of his ignorance of the malignant Alaskan swift water. It was the custom of the native Indians to tie two or three short logs to-

gether, making a small raft on which one man could steer through the driftwood and obstacles of the river in crossing. The Swede seaman insisted, however, that the passage could best be made on a large raft which would hold all the provisions and outfit at once. So one was built of heavy logs bound together with ropes. To guide it, "sweeps" were made. These were slender poles, a flat board being nailed on one end, making long, rude oars. Before the party was the quarter of a mile of the swiftly flowing water with a more danger in it than in the ocean; and the big raft was loaded with provisions and

then pushed off from shore.

It was the early morning of a clear autumn day, but the air was cold. The water had in it the sting of ice. The raft began to move rapidly down the stream, borne by the rushing current. The men soon realized that even with their long sweeps steering would be difficult. Then they discovered that to resist the force of the stream was impossible. They had lost entire control of the raft. The men were not discouraged at first, however, thinking that at a favorable point in the river they could cross. But the favorable point was not reached and the

A UNITED STATES GOVERNMENT BRIDGE ACROSS AN ALASKAN STREAM

B. F. MILLARD, ALASKAN COPPER KING.

dangers increased. They were rushing down-stream at the mercy of the current and the treacherous sandbars. Occasionally they swept close to shore, and branches of overhanging trees which leaned far out over the water swept the raft as it whirled and rocked past in the torrent. The men clung to it for their lives, but a large part of the provisions was swept away. There was little time to think of this. The immediate risk was greater than the danger of future hardship. Then came the most horrible moment in that long period of struggle. For an hour they had drifted down the stream. The raft had been battered by huge logs which were heaped up at the head of the sandbars and which rose and fell with the current; it had been swept and scraped again and again by the trees that dipped their branches into the river. Then two of the helpless unfortunate ones attempted to escape. At times the raft passed close to the shore. Once or twice it came within six feet of the bank. It was at one of these moments that two of the men leaped from the raft for land, thinking that they could clear the space between.

They leaped, fell short, and disappeared under the foaming, ugly waters. There was a weak struggle in the water. The men on the raft saw the expression of terror and agony on the faces of their comrades but they could give no help. And the raft with its crew of nine plunged on with the current. It was nine o'clock that night when they swept into a great heap of brush and driftwood that had been caught on a sandbar. They found themselves held immovable by the force of the water.

Then they crowded out among the logs and brush, creeping, slipping, and falling half into the icy water, abandoning the raft and reaching shore at last. They were seventy-five miles from Wood's Cañon. And the only food that remained of the abundant store which had been placed on the raft was a can of tea and a sack of flour saturated, made into a paste, by the water. With this they started on the seventy-five miles tramp to camp. The distance was estimated and the flour and tea divided, each man receiving his proportionate share, a "flapjack" of flour for each day of the journey. You can imagine how long one small sack of flour would last. Nine men engaged all day in the most arduous physical exertion. They were constantly sick with hunger as they trudged on, but nature helped to maintain them during those days in a most unusual way. The wanderers fed on "rosebuds," as the miners called them. Really they were the red seed-pods of the wild roses, the same roses which one finds on the Western prairies. The pods are round and filled with pulp which is sweet and which contains a certain amount of nourishment. Living like that, the nine men of the party averaged only seven and a half miles a day and reached Wood's Cañon camp nearly dead with famine. The hardships of these and others like them who were pioneers have brought good results. Many of the smaller of the mountain torrents in this district are now crossed by bridges, so that the trail is made easier. One of the sturdiest of the pioneers in Alaska, and the man who opened the trail in the Copper River valley which has since been surveyed by the United States government, was B. F. Millard, of Chippewa Falls, Wis., who has located the largest copper find in Alaska. Another was "Bill" Collis, also a pioneer, who accomplished a feat which made him famous in the Copper River valley. It was his duty to carry the United States mails from Prince William Sound to the camps up the Copper River and then return by boat down the river. Near its mouth, which is a great delta, there are many dangerous rapids and cataracts. One day "Bill" Collis, with a party of men as daring as himself, steered a big boat successfully through this torrent—something that no one had ever done before.

A LEAP TO DEATH IN AN ALASKA RIVER TURBULENT.—Scene for Leslie's Weekly by Albert Hencke.

# Mike Foley's Watermelon Party

By N. R. Brewer

feasts upon the dew and sunshine of a spring morning. Behold that innocent confidence accepting all things!

"Who made God?" asked Guy.

"Why do the cowslips come in the spring and not in the fall?" queried Angela.

"Oh, mamma, God is just hanging out the stars," said he one evening, as he stood by the window and saw the first twinkling orb in the eastern sky. "Why does He do it at night and not in the daytime, too?"

"Mamma, do the birds pray?" asked the girl one night as she rose from saying her prayers at her mother's knee.

"Not exactly, my child, but they worship God by singing and building their nests and raising their young and doing what He wants them to do. They never disobey Him like naughty people do sometimes."

"Then do they go to heaven when they die?"

"God only knows what becomes of them, my dear. Now go to sleep and don't ask so many questions," and she kissed and tucked them into bed.

After the Sunday morning chores were done Guy and his brother were allowed their liberty for the rest of the day. They either visited some of the neighbor boys or entertained them at home. Sometimes there would be a score or more of all ages gathered at one place, when they would enter into all manner of games—pull-away, leap-frog, baseball, touch-the-goal, swimming matches, and quoits.

Angelia took a quiet interest in the games and frolics of the boys, but she was not in the least a tom-boy and never joined with them. She observed everything, however, and smiled at their antics and witticisms.

Mike Foley was the loud-mouthed, boisterous fun-maker of the crowd, the inventor of every scheme for pleasure or mischief, and always succeeded in enjoining the others into his plots. Once it was to tear out and carry away Neighbor Perkins's fish-trap, that yielded every morning a bountiful catch; another time "Old MacFadden's" melon patch must be raided. Old Mac kept a savage dog that annoyed all who came near the house. Then the melon patch was right in front of the house, where he could watch it, and the difficulty thus created, of looting the patch, made the adventure all the more tempting to the boys. How could it be done?

They had come from a swim in the pond and were lounging in the shade by the house when Mike introduced the subject.

"Hi, boys! what'd'ye say if we dodge in on old MacFadden's melons to-night? I'll be spooked if they're not ripe by this time, and it'd be lots of fun."

"Oh, wouldn't it?" cried Fred Crumb, who was next

THERE IS not a more beautiful thing than the dawning intelligence of childhood, when the young mind unfolds to the wonders of this material world. The unconscious curiosity, the ever-questioning brain seeking to probe into some new mystery, to know the why and wherefore of this thing and that, to drink in with joy every sparkling bit of knowledge, to grow and expand in the light of new discoveries, is like unto the opening of the rosebud that

best leader in mischief and always seconded Mike's suggestions for more fun, and as he jumped up he clapped his hands and feet together. "But how 'll ye do 't, how 'll ye do 't?" put in a third boy. "That dog o' his'n 's got a good sneller an' he'll yelp afore you can find a melon in the dark, I'll bet."

"Ah, fudge!" said Fred. "I'll hit 'im with a melon if he comes near me, an' if we all do the same, he'll quit yelpin' in a jiffy."

"But how about the ... man's shotgun? He's got one an' he'll shoot mighty quick. He told me he would if any one came too near his patch," ventured the conservative third boy.

Mike sat on the ash-barrel and kicked his heels against it and spat on the ground while each one had his say. It seemed an impossible job and he was thinking.

"Well, say, brats, how 'll this work? Supposan' one of you fellers takes a cow-bell an' sneaks around on the other side of the shanty in the cornfield an' 'en commence to tinkle the clapper, jest a little at first, an' get the old man to thinkin' the cows 's in his corn, an' 'en he'll go for 'em with the dog, an' when you hear him comin' jest hold the clapper an' skip, an' 'en when you get over the fence give it another clap an' skip again. He'll think the cows are lyin' down an' he'll hunt an' hunt with his dog in the dark, an' while he's doin' that, we'll be huntin' melons, an' if we don't get some, my name 'tain't Mike Foley."

"Gee whittaker! that's a trick," shouted Fred. "Who'll take the bell?"

"Not me," said Rob Brant. "I ain't a-goin' to let that cur get hold on my brichaloons alone in the dark."

"Not me, neither," came from every quarter of the crowd.

"Oh, you're a lot of cowards," growled Fred.

"That's it. You'll do it, won't you, Fred?" said Mike.

"We'll, I dun-no, seein' youse fellers know more about that dog 'en I do—"

"An' you'll kerflunk, too, eh? You fellers are a lot of puppies."

"Well, why don't you do it yourself? You first started the business," said Rob.

"Well, it's as big a trick to get them melons out o' there as 'tis to play hide-an'-seek with old Mac an' his dog, an' I'll have to see that we git 'em, you know. I'd do it in a minute if it warn't for that."

"Ah, put!" put in Fred. "You dar'n't do it; you know you dar'n't."

"You fellers can't tease me into gettin' my Irish up," returned Mike, and before he could say more, Guy, who till now had had nothing to say, shouted, "I'll do it! I'll do it!" and his eyes flashed with daring anticipation. "You kids just crawl along close to the fence, an' when you hear me a-tinklin' the cow-bell an' you see old Mac goin' into the corn, you all scoot in an' get 'em."

"That's O. K.," said Mike. "We mustn't go till after dark, 'cause folks 'll smell somethin', 'en thar won't be so much fun in it."

They all met at the appointed time in the lane not far from MacFadden's shanty, where there was a dense wood on both sides of the road.

The night was cloudy, obscuring the moon, yet light enough to enable them to find the biggest specimens in the patch, and, as Mike said, "jist right to go a melon swipin'."

"Now, boys," said he, giving a general command, "don't pull any melons what you think is green, 'cause we don't want to hurt old Mac's patch more'n we have to. All we want is somethin' good to eat. Just thump on the rinds, an' if they sound like 'spink-spink' you'll know that they's green, but if they sound like 'spunk-spunk' 'en you'll know they is ripe. Don't tramp on the vines more'n you oughter."

It's hard to convince the average country boy that there's anything wrong in stealing melons, unless it is the danger of being caught in the act. But the fact that "Old MacFadden" was a stingy old salt, who would never so much as give a hungry boy a slice of melon for the asking, when he had cart-loads of them to throw to the pigs, made the boys feel that they had all the more right to steal. The difficulty was to avoid his bulldog and shotgun. So, in jubilant spirits, Guy started on his circuitous route for the rear end of the cornfield. The rest of the party crept stealthily along the lane under cover of the thick brush through which the road had been cut. Guy did not realize until quite alone in the dark how timid he would feel on undertaking such a hazardous task. But now he felt his courage begin to fail him. What if that dog should really catch him, or if old Mac should collar and maul him half to death—which he surely would do if he could. But he dared not go back on what he had undertaken.

With these thoughts uppermost in his mind, he glided along, climbing over the snake fence and advancing nearly half-way through the corn toward the house. He then began to tinkle the bell slowly, pausing momentarily to listen. He heard his own heart beat louder, he thought, than the bark of a dog. Several times he had a mind to retreat, but that wouldn't do. Coming nearer, he made more and more noise, until he was suddenly startled by the growl of the dog and a shout from the man urging the beast on in search of what he supposed to be some of his neighbor's foraging herd. Guy heard him grumbling and calling down the maledictions of heaven on Tim Foley and his troublesome cattle, as well as his mischievous boys, and calling to Watch, for that was the dog's name, to follow them.

Guy's nerve now gave out and he took to his heels with all his might, holding the clapper of the bell tightly. He was nearing the fence when he heard the patter of the mad animal's feet on the wet ground and he knew he was in hot pursuit.

He had barely reached it when, with a fierce howl, the creature seized him by his trousers and began to tug and jerk about with such force that he was hardly able to retain his foothold.

In his awful fright he dropped the bell, but, still holding the hickory stick, he used it with all his might upon the dog's back until he let go his hold and retreated, barking loudly. This gave the lad a chance to regain the fence before his ferocious antagonist renewed the attack.

It would have been quite easy for him to scale the fence, however, had he an instant more time, but just as he was throwing one foot over the top rail the dog seized him again, sinking his teeth through the cloth and into his flesh, which made him scream with pain and fright. With frothing mouth and glaring eyes the dog pulled and shook him in a vain effort to bring the boy off the fence, but the terrified youngster clung to his support with the tenacity of desperation. The beast pulled with unabated fury until he tore the flesh and brought away the entire half of the boy's breeches. This fragment seemed to satisfy him and he ran toward his master, bearing in his mouth this trophy of the chase.

Finding himself thus released, Guy landed, dazed and half-frightened to death, on the other side of the fence. He picked himself up and bounded forward, stumbling and staggering over the bogs, scratching his half-naked limbs on the briars until he was sure that he was safely beyond the reach of his pursuers.

Now he began to recover from his fright and to realize that he was pretty badly hurt and much worse frightened, and that he had no trousers to conceal the lacerated and bleeding part of his anatomy. He was in a most embarrassing position. How could he go home in that fix? Besides, the boys would never cease laughing at him, and Angelia would surely learn what had happened and her reproof would be the greatest humiliation of all. It was not with pleasure that he now thought of the feast

# In the World of Letters

By La Salle A. Maynard

AMOS R. WELLS,  
Who wrote "Sermons in Stones."

threatens to be upset by novels of an entirely different class. No fewer than eight new editions of Dickens's works are in preparation in London and will be reproduced in the United States. An interesting relic of the genius of Gad's Hill was recently sold in London. The article was originally one of the stone balusters of old Rochester Bridge, and was afterward converted by "Boz" into a sundial. When, on the death of the author, the dial came into the possession of Mr. Crighton, of Rochester, England, he inscribed it with the words: "These relics of Gad's Hill Place and old Rochester Bridge are placed here in sincere regard for Charles Dickens." This souvenir of the great author was eventually knocked down for about two hundred and fifty dollars.

CHARLES DICKENS sympathized with certain kinds of rebellion, if we may believe one of his letters which recently came to light. It is addressed to a would-be contributor, and objects on principle "to making Wat [Tyler] such a thorough-paced villain, because a rebel on such grounds has a certain claim to one's sympathy, and I feel that if I had lived in his time I should have been very likely to have knocked out the collector's brains myself, or, at all events, to have looked upon the man who did so as a demi-god."

I AM PLEASED to note among the autumn announcements of Doubleday, Page & Co. a new edition of Amos R. Wells's "Sermons in Stones," a valuable little book which has already had a large circulation and an immense influence for good. Mr. Wells is one of the powers to be reckoned with in the literature of our day, and especially in that part of it which concerns itself with religious life and thought and the promotion of all things making for the uplift and betterment of mankind. Although still a young man, Mr. Wells has written over twenty-five books, and edited and compiled many others, all having for their aim the enlargement of the sphere of religious activities and the stimulation of the young and the old to wiser, better, and more effective service for their fellow-men. And not only through his numerous books, such as "Citizens in Training," "Just to Help," "How to Play," "How to Study," "The Business Man's Religion," and others of the kind, but also through his frequent contributions to the press, in prose and verse, has Mr. Wells sought to reach and inspire the hearts of men with noble ambitions and lofty ideals. A third and, perhaps, a still greater channel of influence has been open to him in his service as managing editor of *The Christian Endeavor World*, the organ of the United Endeavor Society, the largest and most powerful organization of young men and women in the world, with a membership in all lands running up into the millions. Mr. Wells has held this position since 1892, and under his management *The Christian Endeavor World* has gone on "from strength to strength" until it has become a model journal of its kind, being edited with rare taste and skill and put forth with every attractive feature which the best authors of the day and the finest typographic art can supply. How Mr. Wells manages to fulfill the many duties of a managing editor with such conspicuous success and find time besides to write books and contribute poems and sketches to the papers and magazines is a marvel to his friends, but he does it all, nevertheless, with the greatest apparent ease, and with no evidence in spirit or countenance of the hurry and worry that age and kill so many men.

THOMAS WENTWORTH HIGGINSON'S "Life of Longfellow," to be issued soon by Houghton, Mifflin & Co., will be particularly welcome to all lovers of American literature. Both biographer and poet are figures of importance in our literary history; both approached literature with much of the patriotic impulse, both were members of that fine company of old Cambridge authors. As a friend and neighbor of Longfellow, Mr. Higginson has been able to give the flavor of time and place and that effect of intimacy which enable the reader to see the man "in his habit as he lived." Much new material has been drawn from the manuscript correspondence of the first Mrs. Longfellow, from the manuscript volumes

called "Harvard College Papers," and from a series of extracts from the poet's earlier writings not hitherto brought together, so that the volume is a distinct contribution to our previous knowledge of Longfellow's character and work.

DR. JAMES K. HOSMER, author of "The History of the Louisiana Purchase," published by D. Appleton & Co., has recently been elected to the presidency of the American Library Association, a position heretofore held by such eminent librarians as Herbert Putnam, Melvil Dewey, and John S. Billings. Dr. Hosmer, who has been librarian of the Minneapolis Public Library since 1892, is a native of Northfield, Mass., where he was born in 1834, and is the son of the Rev. Dr. George W. Hosmer. He was graduated from Harvard in 1855, and received his degree of Ph. D. from the University of Missouri, and his LL. D. from Washington University, of St. Louis. In 1863 he married Miss Eliza A. Cutler, of Deerfield, Mass., who died a few years later. Dr. Hosmer was a Unitarian clergyman in Deerfield in 1860, but on the breaking out of the war enlisted as a private, declining a staff appointment, in the Fifty-second Massachusetts Volunteers, Nineteenth Army Corps. Since the war he has been a member of the faculties of Antioch College and of the University of Missouri, and until his appointment to the Minneapolis Public Library he was professor of English and German literature in Washington University, St. Louis. His writings have been extended over many years, his "Color-Guard" appearing in 1864 and his "Thinking Dayonet" in 1865. His books also include works on German literature, a life of his father, and various biographical accounts; with one piece of fiction, published in 1894, entitled "How Thankful Was Bewitched." His latest work, "The History of the Louisiana Purchase," is considered one of the most important contributions to the history of the continent in recent years.

I TAKE SPECIAL pleasure in being able to present to the readers of this page a portrait of Owen Wister, whose novel, "The Virginian" (Macmillan Company), is winning such high praise from discriminating critics on both sides of the water. The portrait is from Mr. Wister's latest photograph and is a faithful likeness of this young and brilliant novelist. Mr. Wister is a Philadelphian by birth, and, unlike most Americans, has kept his residence in one place and is still a citizen of the City of Brotherly Love. Following a well established precedent in the history of men of letters, he studied law and was admitted to the Bar, but has given scant attention to the practice of the profession, choosing rather what seemed to be the clearer and more promising path of authorship. Mr. Wister's first novel, "The Dragon of Wantley," appeared in 1892, and gained so large a measure of popularity that the writer has been kept busy ever since in trying to keep up with his literary engagements. In his latest novel, "The Virginian," he has risen to a much higher plane of achievement than ever before and has produced a work which will give him enduring fame.

A WRITER IN *Russia* gives some interesting details concerning Tolstol's methods of literary work. The great novelist, we are told, habitually writes in a bold, dashing hand on quarter sheets of common paper. Sometimes he fills twenty pages a day, which makes about half a printed page, or a little over. He is not addicted to any particular species of pen or paper. He generally works in the morning, or rather between 9 a. m. and 3 p. m., the hours he considers most appropriate to work. When, however, the manuscript, in a neat form, reappears on his table, he immediately proceeds to transform it. Even so, it is simply a new charcoal sketch. Words erased or interpolated, written on the margins, between lines, at the bottom of the page, referring probably to the page that follows, soon deface the original manuscript. A second fair copy frequently shares the fate of the first. Certain chapters of Tolstol's works have been re-copied more than ten times. Nevertheless, he does not hesitate to alter his own style; in fact, he has a certain amount of disgust for all that is compassed by art. "All that sort of thing," he says, "simply takes off the freshness from genuine thought and injures the impression conveyed."

A NEW AND cheaper edition of Marion Crawford's "Ave Roma Immortalis" has been issued by the Macmillan Company. This book no one who loves the Eternal City can afford to leave unread. Mr. Crawford knows Rome thoroughly, and, furthermore, it is perhaps because he is a novelist that he has succeeded where so many have failed. The history of Rome is packed with romance. What is more fitting than that, for the purposes of the general reader, it should be told by a man with an inborn sympathy for the human side of history and an equally instinctive narrative gift. The scheme is on the whole ideal. It makes the narrative commonly tangible and vivid, so that for all the mist of romance that is flung over the city, each famous building, each heroic, or sinister, or pathetic figure, stands out effectively in its proper place. The book is invaluable, an addition to the literature of Rome, which will not only rejoice the hearts of travelers seeking a guide, but also will give instruction and delight to those whose fate it is never to see the Eternal City.

JUSTIN HARVEY SMITH, the author of the papers on "The Prologue of the American Revolution," which are to appear in *The Century* during the year 1903, has been professor of modern history at Dartmouth since the chair was established in 1897. Professor Smith is a graduate of Dartmouth in the class of '77, and he is said to be the fourth who has received a perfect mark there, Rufus Choate and the late Chief Justice Field, of Massachusetts, being two of the others. Professor Smith was at one time a partner in a large publishing house, and was for several years at the head of its literary department, but in 1897 he dropped business, and after further travel and study abroad brought out "The Troubadour at Home," a reconstruction of the personalities of the mediæval Provençal poets.

AMONG THE notable books to be issued by the Macmillan Company at an early date will be a volume of short stories by Gertrude Atherton, whose novel, "The Conqueror," has been one of the successes during the present season. The volume will bear the title "The Splendid Idle Forties." It will contain the stories which were originally published under the title of "Before the Gringo Came." A number of new stories have been added, and the complete volume has been thoroughly revised. In its entirety the volume contains the full social history of California under the Spanish and Mexican rule. Californians have long looked upon Mrs. Atherton as the best social historian of her State. The stories are accurate pictures, true to the customs of the time in those fine old days before the Spanish were driven out of California, and the whole fabric of the life was, as it were, part and parcel of what can be seen now only in some of the remoter parts of old Mexico.

THE QUICK response which readers gave to books of the "Elizabeth in her German Garden" order demonstrated how rich a field had been unworked by writers of popular books. A volume which will recall that success, but which at the same time is distinctly original on lines of its own, is "The Housewives of Edenrise," which the Appletons have nearly ready for publication. The author's name is not disclosed. "The Housewives of Edenrise" is neither a novel of incident nor a psychological study; indeed, it can scarcely be called a novel at all. It is more nearly a moving picture, which, no matter how many feet of its film it unrolls, shows the same people in the same place engaged in the same occupation. The people are the upper middle class, the place a village, and the occupation is the discussion of each other's faults and follies, and their own virtues. There is no plot, no hero, no heroine, no love story, but the author succeeds in interesting readers in an absorbing way without them.

TO ONE who has had the privilege of reading "Dorothy Vernon of Haddon Hall," Charles Major's latest novel (Macmillan Company), will be surprised at the fact that it has kept near the top of the list ever since it appeared among the books most in demand at the book stores and the public libraries. A more charming creation than "Dorothy Vernon" has not appeared in the realm of fiction in many a day, and the whole novel has a flavor of romance about it of the most exquisite sort.

WE ARE free to say that we have enjoyed Frank T. Bullen's "Deep Sea Plunderings" (D. Appleton & Co.) much more than we did "The Apostles of the South-east," since in the former we have a volume of sea tales pure and simple, and without that admixture of religious sentiment which detracted from the interest of the later story as a literary performance. Mr. Bullen has a keen eye out for the moralities, no matter of whom he writes or where his scenes may be, and we think all the more of him for that. At the same time his tales of adventure on the ocean, like those of the present volume, are not lacking in the vigor, ruggedness, and other robust qualities which naturally go with such a life.

## Stomach Troubles.

HORSFORD'S ACID PHOSPHATE

PRODUCES healthy activity of weak and disordered stomachs; perfects digestion, and improves appetite. An unexcelled strength-builder. It induces refreshing sleep.

THE MONEY MUSS IN RACING.—While James R. Keene, the millionaire banker and horseman, did not say in so many words, recently, that the running turf was suffering from the money muss or speculation fever, that is just what he meant. While the vast majority of the owners of thoroughbreds do not agree with Mr. Keene, that they should not wager heavily on their horses when engaged in racing for stakes and purses, the financier mentioned many points which, if they could be injected into horse-racing, would do the sport much good. Racing, both in America and abroad, has boomed this year as never before and more money has been wagered on the horses than in any previous season. But the fact has forced itself on the rulers of the Jockey Club in this country, that the pure money end in racing is attracting entirely too much attention and that the question of the breeding of thoroughbreds has become a secondary consideration. Racing, as conducted at present, is little more than a means for the wagering of money, and the track-owners are largely responsible for this condition. Well-known gamblers and book-makers are allowed to own and race animals, employ jockeys, and otherwise occupy positions on practically an equal footing with the wealthy men who race horses merely for the pleasure of seeing animals of their own breeding finish first. Men directly or indirectly identified with the betting ring should not be allowed to race horses; neither should they be allowed to employ prominent jockeys. Here is a simple remedy for the august racing commission to consider, and if the suggestion is handled intelligently many of the evils of the turf will be wiped out at once. Certain stables have been run in the East this year in a manner both shocking and unnatural, and if measures are not taken to suppress in and out running the sport will suffer tremendously. Certain owners and trainers are permitted to send animals to the post, in and out of condition, whose performances have caused scandal.

INCONSISTENT THOROUGHBREDS.—The tremendous crowds at all the racing classes this year, both in this country and abroad, certainly indicate a wonderful revival of interest in the doings of the thoroughbreds. It is a singular fact that the winners of the rich prizes in the East this year have not followed up their success in subsequent races, if we except Gold Heels, the best handicap animal of the year, and Major Dangerfield, from the same stable. Featherstone captured the Metropolitan with Arsenal, and the animal has not won his feed-bill since. Then the ex-bicycle magnate captured the Brooklyn with Reina, and that mare has brought up the rear about every time she has started since that memorable contest. Drake, the international plunger, captured the American Derby at Chicago with Wyeth, and Wyeth has been beaten by ordinary animals ever since.

Then Drake captured the richest stake in the country when Savable poked his nose in front in the Futurity, and it will be interesting to watch the work of the Futurity winner during the remainder of the season. About 50,000 people witnessed the running of the Futurity, and it is estimated that close to a million dollars were wagered on the result in the ring at Sheephead Bay and in the pool rooms throughout the country. There is another significant fact in connection with the running of these big races on rich stake occasions and on holidays, and that is the fact that the winners, as a general thing, are seldom public choices. There are many clever plungers who invariably refrain from making big wagers on the big days at the tracks. Among the two-year-olds there is not one this year as consistent as were Blue Girl and Endurance by Right. In the three-year-old division inconsistency is almost as flagrant, while among the older horses there has been in-and-out running right through the season. Still a thoroughbred is not unlike an athlete in that when he appears to be at his best he is losing form and growing stale.

A MIMIC BASEBALL WAR.—To those who have watched the baseball war for spoils, waged during the last two years between the National and American leagues, and are not financially interested in the outcome, the situation has become almost comical. It was only recently that the old club-owners recognized that they had in the younger organization opponents worthy of their steel. The management of the old league has been lax for several years, giving to the American club-owners just the opportunity they needed to launch their ship. The American League has been at least partly a success, almost from its inception. R. B. Johnson, not so many years ago a reporter on a Cincinnati newspaper, is a lucky man, but at the same time he deserves credit for what he has accomplished. He has been a more troublesome thorn in the side of the National League than was the Brotherhood, with its vast fortunes behind it, of a dozen years ago. The old league won the Brotherhood fight on a legitimate, but rather transparent, bluff. It has at last found that the same tactics will not work in the present emergency. Each organization is paying ruinous salaries, and if the present strife is continued much longer both will lose much capital and the game will suffer. There is plenty of territory for both, and the sooner a general powwow is had and a sensible peace arrangement signed, the better it will be for all concerned. A com-

mittee of two, one from each association, with power to select a third, could settle the fight without much more ado.

FOOTBALL AT THE UNIVERSITIES.—Unseasonable weather has handicapped the captains and coaches at the various universities, with the result that the football season is not as far advanced at present as was generally expected. Lively interest is felt in the game at Columbia, in spite of the fact that no big games will be played in New York this year. Columbia has in Morley, the coach, and in Weekes the hustling captain, two football generals who are pretty sure to bring out all the good material available. Columbia hopes to beat Pennsylvania or Princeton this year, but the prospects do not look bright. Yale has plenty of good material and Trainer Murphy is confident that he has in the Old Eli football giants a champion eleven. Harvard complains of the scarcity of heavy men for her rush line, and Princeton has been in the same predicament. New tactics will be tried in the coaching at Pennsylvania. It is too early to pick winners, but as they are lining up at present, the critics pin their faith to Yale. Cornell is satisfied with her prospects.

### Sporting Queries Answered.

J. C. A., SYRACUSE.—Prizefighter claims a record for the broad jump of 22 feet 7 inches, but the A. A. U. may not allow the jump, as it was made with a heavy gale of wind behind him.

W. E. S., LOUISVILLE.—Experts agree pretty generally that Lon Myers was the greatest of his time. He was unbeatable at several distances. Long, while running, was the fastest quarter-mile runner ever lived, but that distance was his specialty.

### True Food

ALWAYS CURES DYSPEPSIA.

Wrong food brings penalties. A lady in Lone Tree, Okla., found this out. After suffering for years with dyspepsia, she says:

"Many times I could not eat anything; sometimes I drank a little hot milk, at other times the lightest food distressed me so that death would have been gladly welcomed as a relief. I was weak and listless and unable to work for want of strength."

"Two years ago a dear friend earnestly recommended me to try Grape-Nuts as she had found it a most valuable food. I commenced to use it immediately, and the benefit I received in an incredibly short time was almost marvelous."

"Words cannot express the joy and thankfulness I felt when I found I was relieved of that dreadful distress from indigestion that I had been experiencing after each meal."

"After continued use, health and strength returned; I began to enjoy life and go among my friends again, so much improved that remarks were made about my good health. I sleep well now, sit all day with perfect ease and comfort, and sew and work as I like. I wish I could induce every sufferer from dyspepsia to use Grape-Nuts." Name given by Postum Co., Battle Creek, Mich.

### Mike Foley's Watermelon Party.

Continued from page 374.

of melon. In fact, he was disgusted with the whole adventure and wished he had not attempted to play the trick on MacFadden and his dog.

Arriving at the place by the creek where they were to return with their booty, he found that his companions had not yet reached there. So he waded into the shallow water and bathed his wound.

"Hello, there! what ye doin'?" said Mike in a low voice. "In a-swimmin' already? Did the dog scare ye any, Guy? We've got lots of 'em—some bigger'n your head. But what ye doin' in that water? Can't ye talk none?"

"That dog bit me some an' tore my pants," said Guy, "an' I don't know how I'm goin' to git home? It hurts awfully—an' then what'll ma say? I believe she'll lick me for gettin' my pants tore."

"Gee! that's tough. Why didn't you hit him?"

"Hit him? Mebbe I didn't! But it was no use. I was on the fence an' the dog kept pullin' till he got half my pants, an' I was glad to let him have 'em so I could git away, or he'd 'a' eaten me up alive."

Guy waded out of the water and threw himself on the ground. The other boys came up, bearing their melons and all out of breath with excitement. Mike told them what had happened to Guy, who was too much disgruntled to say anything. They all readily sympathized with him and told him not to mind.

"I don't care so much about the sore—that'll heal up after a while—but them pants won't, an' ma'll scold like everything, if she don't do something worse."

"Oh, well, we'll tell her somethin' to make it right. Gee! this melon is a honey. Here, Guy, you first." Mike handed him a bouncing slice. "Now eat that an' 'en it won't hurt so much. You done a mighty good job out there, anyway. To tell the truth, I was a bit scared to go into that cornfield myself, an' I guess all the rest of us was, too."

"Yes, old Mac started out after them cattle jest a-whirlin'. I was peekin' at him under the fence an' I could see his eyes—golly! they jest looked green, he was so mad. I knowed you'd ketch somethin', Guy," said Crumb.

"Oh, how he did cuss, didn't he, Mike? He jest let a big swear word with every jump he took, an' that dog—fury! he went a-kinin'. He knowed there warn't no cows in that corn. He smelt your breeches, Guy, an' them was what he was after from the start," put in the fourth boy.

"I wonder he didn't smell your pants, Jim," growled Mike; "they're dirtier'n Guy's, an' if he had, he'd a turned on us an' we'd 'a' had to scot out of that patch empty handed. Then where would we 'a' been now without some melons?"

"Gol darn it! this one is green as a squash," came from Guy's brother, as he laid open another.

"You don't know how to tell a ripe melon. Why didn't you thump on it? You must 'a' been in too big a hurry. Afraid of gettin' thumped yourself, I'll bet," was Mike's retort.

"Well, a fellow does git in a hurry sometimes when he's a-stealin'. I got in a hurry, too, an' jest as I was near the fence wit' a monster of a feller in my arms I caught my foot in some vines an' down we went, me on top, of course, an' when I got up that melon was turned to a squash."

At this remark one of the smaller boys swallowed a lot of pulp, seeds and all, which made him gag, while another boy pounded him on the back with a rind.

"Oh, but it was ripe, though. I grabbed a bite an' then went on a-huntin' for some more," continued the speaker. "an' when I heard the dog a-barkin' an' the old man a-shoutin' an' the bell a-jinglin', I knowed we 't goin' to be noticed, so I just took my time an'

thumped around till I got two that was good an' ripe. Just look at this!" as he held above his head a luscious slice; "this is for Guy. Here, don't be a-gruntin' so; you ain't half dead yet. I don't believe it hurts half so bad as when your ma spansks ye."

"I wouldn't 'a' gone into that corn for all the melons Old MacFadden's got," was Mike's defense of Guy. "Never mind, Guy; we'll sneak home, an' while you stay in the barn I'll go in an' tell your ma that you fell out of a tree and tore your pants an' she'll give you another pair, an' we'll put some axle-grease on where the dog bit you an' in the mornin' you'll feel all right."

So, after gorging themselves until they could hardly walk, on the fruit that MacFadden had so tenderly cultivated, they pitched the rinds and green melons into the stream and started, each one for his own home, save Mike, who went with Guy and his brother to see the former through the ordeal of facing his mother.

Mrs. Berkman was already in bed, but, as was her custom, had left the door unlocked until the boys came in.

Mike timidly raised the latch and stole into the room. Mrs. Berkman called out to know if both her sons had come home safely.

"Yes, ma'am; they's here, but this is me—Mike Foley. I came to tell you that Guy tore his pants. He tore the seat right out of them an' he wanted me to ask you if he could have another pair. He's a-kinder ashamed to show himself."

"How did he do that, Mike?"

"Oh, jest a-climbin' a tree. You see we was after a squirrel's nest an' Guy slipped an' fell straddle a knot in the tree."

"Did he get hurt at all?" queried the mother.

"Oh, not much. He got scratched a bit, but he's all right, only he's afeared you'll lick him. You won't do that, will you, Mrs. Berkman; he isn't to blame."

There was something in the tone of Mike's voice as he pleaded for his friend which aroused her sympathy, and she assured him that Guy need have no fear, but said that the boys must both go to bed and that she would bring him another pair of pants early in the morning.

Guy was delighted with having gotten off so easily and begged Mike to remain all night and sleep between them, three in the bed. This Mike consented to do, and soon all were sound asleep.

### Shall We Burn Peat Instead of Coal?

Continued from page 371.

Peat might easily be cut from the bogs near great American cities and the poor supplied at small cost. Indeed, the present coal famine may lead to a general use of peat among the poor, for at any time it would be a vastly cheaper fuel than coal or wood. Peat cutting would become a new industry, giving work to thousands, for a skill is demanded as in mining, and there is no peril attached. Vast tracts of useless land could be turned to worthy account. Peat is far more healthful as a fuel than coal, as there is no gas from it when burning, and by its use the health of the poor would be benefited; for in close, unventilated rooms coal burning becomes a menace to health and peat is entirely free from any injurious components.

The people of many lands abroad use nothing but peat as a fuel, because coal would be impossible to them on account of its price, even at the surprisingly low figures at which coal is sold abroad. In Iceland, which is utterly treeless, peat is burned universally, excepting in the hotels at Reykjavik and in one or two families, which are supplied with coal from Newcastle. The Icelandic peat fields are enormous and great stacks of peat bricks are piled along the roadways at all times of the year. In the Orkney and Shetland Islands coal is rarely used and the people at night carry home baskets of peat, which they buy for a few pence from the peat-bog owners. The cost

of fuel in the islands and in northern Scotland is trifling. The poor Scotch Highlander and islander may always have a fire, however reduced in circumstances he may be, and he frets but little about what he shall burn. The labor of peat gathering is comparatively slight, and in Scotland the women work in the bogs, wheeling and stacking the peat bricks all day. The Highlander gathers and stacks his peat each autumn and is sure to have a plenty for his winter needs. For his winter's peat the cottier has to pay but a few shillings, and sometimes it costs him but his own labor if he has a small peat bog of his own.

Irish peat bogs are famous the world over, for the poor Irishman uses nothing but peat for fuel, and his ancestors used it for hundreds of years before him. The bogs stretch for miles and are inexhaustible, for after some years the peat renews itself. Men, women, and children assist in the peat gathering, and in some places in Ireland it is free to all who care to dig and cut it. The women carry it on barrows and stack it by the wayside. In some places the peat is six feet deep and is dug to this depth, and on these great bogs, stretching as far as the eye can see, are scores of busy people cutting and carrying all day long to supply themselves with fuel against the long winter that sets in so early. In Ireland and Scotland peat is generally burned in open fireplaces, but it burns just as readily in a stove, provided it has been thoroughly dried. Peat is really coal or carbon in its earliest stage and burns with many of the characteristics of coal.

Thus one may apply the old adage, "There is no great loss without some small gain," and out of a social calamity may rise a national benefit.

### Americans the Longest-lived People.

THAT THE clean and temperate methods of living which characterize the American people, as a whole, have their effect in added healthfulness is shown by a recent census report, where it is demonstrated that Americans live longer than any other race. The report shows there was an increase in the median age of the white population of the United States during each decade from 1810 to 1900, amounting in the ninety years to 7.4 years.

### Fooled Him.

BUT IN THE PLEASANT WAYS OF PEACE.

GOOD thing some men are married. Their wives keep a sensible watch over them, and have a way to help overcome their troubles.

Mr. E. Lewis, of Shaniko, Ore., was located for several years at various points in South America, and fell into the native custom of frequently drinking coffee. He says: "I took to using it the same as those nervous, excitable people in South and Central America. They make very black coffee and it becomes more or less an intoxicating beverage. At the end of about four months I began having severe sick headaches and nervousness, but supposed it was from the tropical sun. At last my wife became alarmed at my headaches and stomach trouble. She tried to induce me to quit drinking coffee, laying my trouble to that, but I continued to use it."

"She read of Postum Food Coffee, and ordered some from the States, but kept it a secret from me. The very first time she made it, when I came in for my coffee and roll, I noticed that peculiar, pleasant flavor of Postum, and asked her what it was. She said it was a new brand of coffee and asked me how I liked it. I tried two cups of it with rich 'Leche-de-Chena,' which is used by everyone as milk in Panama, and thought it excellent. After a couple of days my headaches stopped, and in a short while my nervousness disappeared as if by magic. I have been using nothing but Postum for the past year, and have been completely cured, and my wife has also been cured of constipation by changing to Postum, and we shall never go back to coffee again."

# Jasper's Hints to Money-makers

HOW NEAR Wall Street was to a panic on Monday, September 29th, is not fully realized by the general public. A \$70,000,000 drop in a single day in the value of the leading stocks was sufficient to make the entire market look very sick, and sick it was, so badly off that the Secretary of the Treasury had to resort to the most drastic and revolutionary measures to save it from an appalling stroke. And now the question is, has he really saved it?

## LEGAL NOTICES.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF September 18, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears of assessment for OPENING AND ACQUIRING TITLE to the following named streets in the BOWLING GREEN SECTION 11, EAST 187TH STREET OPENING, from Grand Boulevard and Concourse to Madison Avenue; also, STEVENS PLACE OPENING, from East 187th Street to East 189th Street. Confirmed August 4th, 1902, entered September 17th, 1902.

EDWARD M. GROUT, Comptroller,  
City of New York, September 18th, 1902.

## NOTICE TO TAXPAYERS.

DEPARTMENT OF FINANCE,  
BUREAU FOR THE COLLECTION OF TAXES,  
No. 57 Chambers Street, Borough of Manhattan,  
New York, October 6th, 1902.

NOTICE IS HEREBY GIVEN that the Assessment Rolls of Real Estate and Personal Property in the City of New York for the year 1902, and the warrants for the collection of taxes, have been delivered to the undersigned, and that all the taxes on said assessment rolls are now due and payable at the office of the Receiver of Taxes in the borough in which the property is located, as follows:

BOROUGH OF MANHATTAN, No. 57 Chambers Street, Manhattan, N. Y.

BOROUGH OF THE BRONX, corner Third and Vermont avenues, The Bronx, N. Y.

BOROUGH OF BROOKLYN, Rooms 2, 4, 6, and 8 Municipal Building, Brooklyn, N. Y.

BOROUGH OF QUEENS, corner Jackson Avenue and Fifth Street, Long Island City, N. Y.

BOROUGH OF RICHMOND, corner of Bay and Sand streets, Stapleton, Staten Island, N. Y.

In case of payment before the 1st day of November next, the person so paying shall be entitled to the benefits mentioned in section 915 of the Greater New York Charter (chapter 378, Laws of 1897), viz.: A deduction of interest at the rate of 6 per cent. per annum between the day of such payment and the 1st day of December next.

DAVID E. AUSTEN, Receiver of Taxes.

After the announcement of Secretary Shaw's purpose the expectation was—or at least the intimation was given out to that effect—that the relief might amount to \$130,000,000. It was calculated that the removal of the requirement that banks must hold a 25 per cent. reserve against government deposits would increase the loaning facilities of the former by \$130,000,000. It was thought that by his second measure, namely, continuing the government deposits in the banks, on other securities than United States bonds, would furnish relief to the extent of \$25,000,000 or more. This was a high estimate and gradually these figures have shrunk away until the total relief is figured up as only between \$10,000,000 and \$40,000,000. The fact is that experience alone will indicate how much the relief will amount to and how far it will go.

The immediate effect of Mr. Shaw's action was good. The patient was helped for the time being by the use of a strong stimulant. There is no concealing the fact, however, that both at home and abroad, the unprecedented action of the secretary is regarded with much apprehension. If his example be allowed to stand, there is no knowing what a future Secretary of the Treasury may do. It is fortunate that the people have confidence in the integrity of the present incumbent, for it is easy to realize that a different kind of a man in the office might make out of his opportunities in such a speculative market, a magnificent fortune in a single day.

As at first understood, Secretary Shaw's intention was to permit the banks, receiving public moneys, to substitute other than government bonds as collateral. It was subsequently explained that new but high-class State and municipal bonds would be accepted as such collateral. The substitution of these securities for government bonds would enable the banks to use the latter for the purpose of taking out new circulation. In the ordinary vernacular, the situation is now "up to" the banks, and it is most critical. If they continue to co-operate with the trust companies, in the promotion of speculative combinations (as some, not all, of the banks have notoriously done), if they persist in assisting in the manipulation of a bull movement, they must face another crisis before many months have passed. They will not do this unless there is no other recourse, and if they do it, it will be with the purpose of helping friends to get out of the market as quickly as possible.

There is no doubt as to what the banks ought to do and would do, if they could. The question is, what can they do in the predicament in which some find themselves in the whirlpool of over-speculation? One thing seems assured, and that is that little help can be expected from abroad. Shrewd money-lenders find in Secretary Shaw's remarkable action the highest proof of the critical condition of our speculative market. But for the general prosperity of the country, which seems to continue unabated and the hope of large crops with good prices and a well-sustained foreign demand for them, the outlook for the winter would be deplorable.

The labor troubles are a serious factor that must be borne in mind, and political conditions are so uncertain that, despite the demoralization of the Democracy, many fear a significant upheaval in November. Even if we escape this calamity, the fear of troublesome tariff and trust legislation in Congress next December is not allayed. The railroads are all paying more for labor than they did a year ago, and this increased expenditure must be reckoned with. I am inclined to believe that railroad earnings have reached the high-water mark and that the comparison made next year with this will not be altogether agreeable.

"D. P. B." Milwaukee: I note what you say. Observe my comments.

"C." Scranton, Penn.: My reports regarding the concern are unfavorable.

"W." Castleton, N. Y.: Four dollars received. You are on my preferred list for one year.

"B." Providence, R. I.: Two dollars received. You are on my preferred list for six months.

"Montana": (1) I do not understand your inquiry. (2) Farnestock & Co. stand well and have a high rating.

"G." Cincinnati: The report of the Butterick Company shows heavy earnings, but the capital is very large and the business not a monopoly. It is not an investment.

"L." Carson City, Neb.: The St. Louis, Iron Mountain and Southern United Refining Co., around 93, net you over 44 per cent, and are a pretty good investment.

"McG." Jacksonville: I certainly do not believe in the scheme to which you refer. Who is to guarantee it? Anybody can make you a big offer; the essential is security.

"O." Knoxville: It would take a library to teach you all that is to be learned by a beginner.

Perusal of the news and financial columns of any first-class newspaper would probably be more satisfactory than anything else.

"Novice," Brantford, Canada: I certainly do not approve of the blind-pool scheme recommended by Forest or by any alleged financial mercantile agency, or alleged Wall Street newspaper. Most of these things are humbugs pure and simple.

"K." New York: Two dollars received. You are on my preferred list for six months. (1) Everything depends upon the character of the proposition and its size. Consult your broker confidentially. (2) It is not regarded very favorably.

"S. W." New Haven: The house might be reliable for the time being, and yet be unable to stand up under severe financial pressure. You should send in a dollar for a three months' subscription, which will entitle you to a place on my preferred list for that period.

## New York-Grass Valley Gold Mining Company

OPERATING

# CALIFORNIA

PRESIDENT, HON. GEORGE W. ROOT,  
Supreme Court of California.

**15c. per Share (Full Paid and Non-Assessable) Par Value \$1.00**

Grass Valley Mines have produced since '49 over

## \$100,000,000.

No failures in this district.  
The Idaho Mine has produced over \$14,000,000.  
The Empire Mine has produced over \$10,000,000.  
The New York Grass Valley is a much larger property than either of the above, and will produce MILLIONS OF DOLLARS.

DIVIDENDS SHOULD BE ENORMOUS.  
An investment made now may mean a large fortune later on and should pay you very handsomely.  
You will not be able to buy this stock under par within a year, as it is selling rapidly, and the present allotment will soon be exhausted.

PER **15c.** SHARE.

Order at once and send for our Free "Market Letter" and Prospectus of the Company.

## KAYE, DE WOLF & CO.

BANKERS AND BROKERS 39 AND 41 CORTLANDT ST. NEW YORK

**Delicious Drinks and Dainty Dishes**  
ARE MADE FROM

# BAKER'S BREAKFAST COCOA

**ABSOLUTELY PURE**  
Unequaled for Smoothness, Delicacy and Flavor

Examine the package you receive and make sure that it bears our trade-mark.

Under the decisions of the U. S. Courts no other Cocoa is entitled to be labeled or sold as "BAKER'S COCOA."

**Walter Baker & Co. Ltd.**  
Established 1870 DORCHESTER, MASS.

# Pears'

was the first maker of sticks of soap for shaving. Sticks in 3 sizes; shaving cakes in 3 sizes.

Pears' Soap established over 700 years.

**"THE OVERLAND LIMITED"**

Electric lighted to  
**CALIFORNIA**  
via the UNION PACIFIC

This train is really a  
**FIRST-CLASS MODERN HOTEL**

With Handicapped Parlors, Drawing Rooms, Bed Chambers, Boudoirs, Libraries, Smoking and Reading Rooms, Barber Shops, Bath Rooms (hot and cold water), Superbly Appointed Dining Rooms, glittering with Mirrors, Cut Glass, Fragrant Flowers, Electric Candelabra, etc., Promenades, Observation Rooms, Electric Lights, Electric Fans, Telephones, Electric Reading Lamps, Perfect Heat, etc.

**RUNS EVERY DAY IN THE YEAR**

**Fast and Superb Service**  
TO THE CITIES AND RESORTS SOUTH.

The Southern Railway announces the most excellent service and schedule for the Southern travel for the season of 1902 and 1903. Operating from New York over the Pennsylvania 12 through sleeping car lines daily reaching most every prominent city in the South and Southwest, also giving high-class dining car service on all of the through trains. This route operates the Washington and Southern Limited, 21 hours New York and New Orleans connecting with the Southern Pacific Sunset Limited from New Orleans to the Pacific coast. Two other fast trains, the New York and Memphis Limited and the U. S. Fast Mail, To Florida, Cuba and Nassau, the New York and Florida Limited, operated daily and during tourist season, the world famous Southern's Palm Limited. For full particulars, descriptive matter and general information regarding the South, call or address New York Office, 271 and 1185 Broadway. ALEX. S. THWATT, Eastern Passenger Agent.

**Colonist Rate \$50.00.**  
New York to Arizona, California, New Mexico, El Paso.

via Southern Railway, on sale daily, commencing August 1st until October 30th, 1902. Tourist sleeping car operated from Washington, D. C., on every Monday, Wednesday and Friday, through to San Francisco without change. Berth rate, Washington to San Francisco, \$7.00. For information and full particulars, address New York Office, 271 and 1185 Broadway. ALEX. S. THWATT, Eastern Passenger Agent, 1185 Broadway, New York.

## Jasper's Hints to Money-makers.

Continued from preceding page.

"S.," Fairhaven, Mass.: Mistake has been rectified. Thank you.

"C. K. G.," Vergennes, Vt.: Anonymous communications not answered.

"G.," New York: Letter received. You are on my preferred list. If difficulty continues, advise me.

"Wheat," Syracuse: Address the secretary of the board of trade, Chicago. I deal with Wall Street interests.

"L.," Brooklyn: I am not advising the purchase of anything at present, but, on reaction, think well of Lehigh Valley.

"G. F.," Cincinnati: I regard none of the propositions as having an investment quality, and most of them are too speculative to recommend.

"J.," Perth Amboy: The Oro Honda is certainly not an investment, and I do not regard it as much of a speculation. The Treadwell is better.

"S.," Albany: I do not advise the purchase of shares in the Standard Mines and Milling Company at three cents a share or at three shares for a cent.

"Pinkerton," Boston: I agree with your judgment that it is unwise to seek an investment so far away, though it is an old saying that "distance lends enchantment to the view."

"J.," Boston: You can get the price list of the California mining and oil stocks from Joseph P. Toplitz, 330 Pine Street, San Francisco, Cal. Inclose a two-cent stamp and mention Leslie's Weekly.

"H.," Indianapolis: The National Fibre and Cellulose Company, of Chicago, makes marketable products from corn stalks. Until I make further investigation I cannot definitely reply. Sanford Makeover & Co., of Chicago, are handling the proposition.

"Lamb," Philadelphia: Additional light regarding the American Alkali Company is difficult to obtain. If indignant shareholders would engage a good, strenuous, fighting attorney, to give the manipulators and destroyers of this property a hard time, the right thing would be done.

"University," You have picked out bonds that approximate the investment class and that are reasonably secure. Registration will slightly affect the market value. Coupon bonds are easier to handle in the market, as they require no registration. The intrinsic value, of course, is not affected.

"E. D. B.," San Francisco: Two dollars received. You are on my preferred list for six months. I spoke in advocacy of the St. Louis and San Francisco and the St. Louis Southwestern shares when they were about half present prices. It would be wiser to wait until market conditions are more settled.

"B. T.," Minneapolis, Minn.: (1) Many believe in a great future for Mexican rubber plantation properties. The representations of the Obispo are regarded more favorably than many others. (2) I have no means of knowing. (3) Wealthy men usually have their own lines of special investments. (4) Perhaps.

"B.," Peoria: One dollar received. You are on my preferred list for three months. (1) If you trust your broker, there is no reason why you should not leave the stocks in his hands. If you want them for investment, you had better have them put in your own name. (2) The mercantile agencies will give you the rating.

"D.," Philadelphia: One dollar received. You are on my preferred list for three months. The offer of the Butterick Company, made by The Developer, is not a bargain, because the price it makes is about the same as the price of the shares in Wall Street. If the actual assets are only \$2,500,000 doesn't the capital of five times that amount look pretty large?

"H. F.," Cincinnati: (1) The Hidden Fortune is located in a very favorable mining region and the outlook, I am told, is promising. (2) I should prefer the Hidden Fortune to the Oro Honda. I do not regard the latter at all favorably. (3) Pennsylvania and Texas Oil Company is paying dividends and makes good reports. Even the best mining and oil propositions must be speculative.

"J. C. P.," Baltimore: (1) I should regard such bonds as the St. Louis, Iron Mountain and Southern, United Refunding 4s, or the Peoria and Eastern First Consolidated 4s, or the Union Pacific Convertible 4s, as better investments than the local security you mention. (2) Very little trading in it is going on at present and the fact that the management has not changed does not increase public confidence in it.

"H.," Chicago: I feared neither the Chicago and Alton 3 1/2s, nor the new Rock Island 4s, as strictly investment bonds. I think better of the former. Good bonds yielding around 4 per cent. that ought to improve, are the Kansas City Southern 3 1/2s, the Chicago, Baltimore and Quincy Joint 4s, a little below par, and the Peoria and Eastern First 4s around par, with interest guaranteed by the Big Four.

"G.," Syracuse: The Porto Rico Gold Mining Company, I find, on making inquiries, is incorporated under South Dakota laws and has 222 acres of mineral land in Porto Rico, in a field which is just being opened to American enterprise. I am informed that a reduction plant is now being erected, and that much is expected from its operation. The president of the company is Dwight W. Pardee, Assistant Traffic Manager of the New York Central Railroad.

"P.," Wilkesbarre, Penn.: (1) As matters stand, I should rather have St. Louis and San Francisco second preferred. (2) As an investment American Cattle preferred, at present, seems to be about on a level with Foundry preferred. (3) Railroad shares are better than industrials. (4) It all depends on how severe the shock to the market might be. A panic would affect all sorts of securities, investment bonds included, but these less than anything else.

"G. R.," Danville, Penn.: Four dollars received. You are on my preferred list for one year. (1) Rubber Goods common has been advancing on reports of better earnings. The preferred would seem to be the better purchase, as there is only about \$8,000,000 of the latter and nearly \$17,000,000 of the former. Dividends on the common are hardly to be expected soon. (2) Amalgamated Copper, being more active and speculative, would have the preference.

"X. Y. Z.," Poughkeepsie: (1) I hesitate to advise anything about American Ice, in view of the failure of the company to make truthful reports. (2) Not if I had a fair profit in Steel common. Remember that the latter pays a dividend, while Ice preferred pays none and may not resume payments for some time, as there is no doubt that its business this year, in view of the cool summer, has not been up to the best record. Independent competition is constantly growing.

"M.," Philadelphia: (1) The settlement of the coal strike, which seems more likely from week to week, it is expected, will be made the occasion for a revival of speculation in all the anthracite shares.

While you are out yarning, don't forget to stow away some of that famous Champagne, God's Imperial Extra Dry.

**Advice to Mothers:** Mrs. Winslow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

At every exposition where the Solmer Plums have been brought into competition with others they have invariably taken the first prize.

and especially in Reading and Erie common, but I still believe that prices generally are too high and am not in favor of the purchase of stocks, unless after a substantial reaction. I think better of the Reading, Jersey Central 4 per cent. bonds, though they are not, strictly speaking, investment bonds.

"Pacific Ocean," Santa Monica: Two dollars received. You are on my preferred list for six months. Government bonds just now are worth more to the banks than to you. It would seem to be wiser, therefore, for you to sell them and with the proceeds buy gilt-edged stocks or bonds. Those that you have are local securities, but I should judge that they are fairly good. The Union Pacific Convertible Four offer you a good security and will pay you better than the governments which you held at high prices.

"S.," Cincinnati: (1) Toledo, St. Louis and Western was incorporated under Indiana laws July 5, 1900, as successor to Toledo, St. Louis and Kansas City Railroad. The Ontario and Western was incorporated under the laws of New York in 1879, as successor to the Midland Railroad. (2) No, it is a voluntary association founded in 1792. (3) Unless money market conditions improve shortly, prices should recede. On sharp declines, Toledo, St. Louis and Western, and Ontario and Western might be available for speculative purchases. (4) I know nothing about it.

"B.," Utica: (1) The confidential offer of "the young lady stenographer," who tells you that she is able to get hold of the secrets of her New York employer and sell them to you in the shape of stock-market tips, and signed "A. H. Arthur, 105 East Fourteenth Street, New York," shows that all fools are not dead yet, and that the individual who has gotten out this elaborate circular is aware of the fact. Evidently he did not strike me in Utopia. (2) Beware of cheap dividend-paying industrials while money is high and the market ragged.

"Subscriber," Lawrence, Mass.: No safer investment in the world can be found than United States government bonds, but they return a very low rate of interest. A sound, substantial savings bank would net you about 50 per cent. more than a government bond. (2) Perfectly safe bonds embrace the West Shore 4s, selling around 114, the Adams Express 4s, around 104, the Atchafalpa 4s, at about the same price, the Illinois Central 4s, and Manhattan Consolidated 4s, all around 105, and the Oregon Railroad and Navigation 4s, at about 103.

"H.," Hartford, Conn.: The proposed absorption by the United States Rubber interests of South American rubber properties, it is said, will be beneficial to the former. The talk of organizing a rubber monopoly, however, is hardly justified. (2) The report that an American-Jamaican fruit company is being formed in Jamaica, with \$5,000,000 capital, by persons connected with the United Fruit Company, and in opposition to the latter, has been printed. It may or may not be true, but it reveals one phase of competition to which all industries are more or less liable.

"G.," Tacoma: (1) The anti-railroad feeling which you say is spreading in Washington is spreading, unfortunately, in many other sections. Like the unrest of labor organizations, and the coal strike, this is not helpful to the maintenance of business prosperity. There are many ominous signs in the air. (2) The report that the Goulds have bought control of Union Pacific away from the Harrimans hardly seems credible. (3) The prolonged drought in Texas and the very low estimate made by the government of cotton crop conditions are not favorable indications for the continuance of large railroad earnings in the South.

"S.," Augusta, Ga.: Two dollars received. You are on my preferred list for six months. (1) I have heretofore referred to the over-capitalization of Railway Steel Springs. The common represents water; the preferred, while prosperous conditions continue, ought to earn its dividends of 14 per cent. quarterly. The common pays nothing. (2) The Virginia-Carolina Chemical Company common pays 14 per cent. quarterly, but it is not an investment security and this is not a good time to speculate. On reactions, buy standard shares. Manhattan Elevated is among them. Or, if you want a speculative security, the Wabash & Dubuque are promising of maintaining their strength.

"L.," Duluth, Minn.: Two dollars received. You are on my preferred list for six months. (1) I could hardly set down the figures, especially in view of the fact that they are written almost a week in advance of publication and conditions constantly change. (2) Cannot advise about grain. Would if I could, but it is not my specialty. (3) I have heard similar reports of Brooklyn Rapid Transit. Some of the ablest financial leaders are behind it and their power of manipulation is great. On the earnings, as reported, a rise would not be justified. Many believe that a combination of all the local traction interests in New York is contemplated. In that event, Brooklyn Rapid Transit would certainly lose nothing. Ordinarily, inside information, if authentic, is safe to follow.

"Pilgrim," Pontiac, Mich.: (1) If you are a subscriber at the home office, at full rate, you are entitled to be on my preferred list, which means a preference in mail delivery, also. (2) Until the money situation clears up, both at home and abroad, I look for further liquidation, with a feverish and subsequently a sluggish and declining market. On declines, if I purchased anything, it would be dividend-payers that have not been unduly advanced and that have improving prospects, such as People's Gas of Chicago, Manhattan Elevated of New York, and Reading first preferred. Of course the Pacific preferred shares, including Atchafalpa, have an element of safety about them that must be considered. Sugar and Leather preferred ought also to be reasonably safe. (3) No, I try to give the latest from week to week.

"Average," Mont.: One dollar received. You are on my preferred list for three months. (1) I would hold on for the present until market conditions are more clearly established. If a sharp break should occur, you might even up, and on a lower average get out almost whole. (2) Chicago Union Traction is in the hands of such skillful manipulators that I am afraid to recommend its purchase, even in the face of glowing promises of an ultimate advance. Speculatively, if market conditions are right, it is in favor. (3) I do not think anything is a purchase until the financial situation, and especially the condition of the money market, is more thoroughly settled. (4) Western Union's splendid record as a dividend-payer would make it look cheap around 90, but of course it is very highly capitalized and is not therefore an investment security.

"F.," Hoboken, N. J.: I do not remember having ever advised its purchase. I am careful simply to report the situation as it is given to me, leaving my subscribers to act according to their own discretion. It is impossible to obtain satisfactory information regarding the company and I can only await developments. If your advice is from trustworthy parties, who understand the situation perfectly, it should be taken, for it is better than any I am able to obtain at present. As a rule, I do not believe in making sacrifices without just cause. (2) The promoters of the White Horse Mining Co. report that the work of development is rapidly proceeding. I have asked for further details and am awaiting them. (3) I do not recommend the purchase of the mining stock represented by J. L. McLean & Co. as an investment, nor of the Thunder Mountain stock represented by J. E. Morehead & Co. The Great Eastern Consolidated Oil Co., of Pike & Co., has nothing that recommends it.

"J.," Toledo: My statement must have been misunderstood. I did not mean to say that from personal knowledge I questioned the standing of the Ohio Rubber Company. I meant to say that I

had not been on the ground and personally examined the property. The article to which you refer was not written by me, but I have the assurance of the writer that, after a thorough examination of the company's statements and an inquiry into its management, he felt satisfied to speak of it in the high terms of commendation which he used. Following up his investigations, myself, I find that the officers of the company are not engaged in the promotion enterprise, but that they are mainly gentlemen of excellent reputation in business circles, who have large interests in the development and manufacture of rubber, and who honestly believe in the value of their property. Inasmuch as my first statement seems to have been misunderstood, perhaps because it was not expressed as it should have been, I am glad that you made your inquiry and enabled me to answer those somewhat at length. I am only anxious to be conservative and careful in giving advice to those who know how carefully and honestly this department has always been conducted since it was placed under my charge.

**INFORMATION ABOUT GOAT LYMPH.**

In response to a large and constantly increasing demand for information about the Goat Lymph treatment, we have issued a booklet that covers this subject in a comprehensive manner. It tells all about Goat Lymph; what it is, how it is obtained, how it is administered, what ailments it cures, and how it differs from any of the numerous remedies in which the use of this remedy is indicated may obtain.

Why Goat Lymph cures such ailments as chronic articular rheumatism, locomotor ataxia, epilepsy, paralysis agitans, hemiplegia, melancholia, hysteria, neurasthenia, primary dementia, senility, mental and nervous prostrations, and premature old age, is fully explained.

The subject is thoroughly discussed in an interesting way by physicians and former patients. The booklet will be sent free on application to the

## KEEP YOUR BLOOD CLEAN

## Purity is Free

Schlitz beer costs the same as common beer, so that purity is free to you.

Yet purity costs us as much as the beer itself.

It requires absolute cleanliness. It compels us to filter even the air that cools the beer. Then we carefully filter the beer, and sterilize every bottle after it is sealed.

And the beer must be aged for months in a temperature of 34 degrees, for otherwise the beer would cause biliousness.

Don't let your dealer decide which beer you shall drink, for he makes most on the common kinds.

Ask for Schlitz, for purity means healthfulness, yet that purity is free.

Not a beverage known to man is more healthful than beer, if it's pure.

Barley-malt and hops—a half-digested food and a tonic.

Your doctor says the weak must have it. Why not the strong?

But don't drink a germ-laden beer, when Schlitz is sold everywhere.

Ask for the brewery bottling.

Seven Months Ago I Sold Stocks at \$2—Now Worth \$6 and \$8. I can give you the benefit of my vast experience in stock values in Kentucky oil and make money for you as I do for my regular clients.

**FORTUNES WILL BE MADE IN KENTUCKY OIL.**

Invest now in these great producing wells. Let me tell you what I can do with a small amount of your money. I handle only stocks of reliable companies.

Twenty-year Gold Bonds that will net 6 per cent.  
**A. G. MORGAN, Stock Broker, 11 Cheapside, LEXINGTON, Ky.**

The nectar of the gods may have been a myth. Be it so, we still have the whiskey of our forefathers—DEWAR'S SCOTCH, a beverage of distilled delight, praised alike by king and commoner.

### Meeting of American Bankers' Association, New Orleans.

For meeting of American Bankers' Association at New Orleans, November 15th to 18th, the Pennsylvania Railroad will sell tickets from all stations on line east of Pittsburgh and Erie via Pittsburgh or Washington, November 15th to 18th, good for return passage within 30 days, date of sale included, at reduced rates.

By attaching ticket with joint agent at New Orleans on or before November 18th and payment of 50 cents the return limit will be extended to November 30th.

### A Market For American Prints.

There is a good market in Brazil for the cheaper kinds of American prints in fast colors, according to Consul-General Seeger. The trouble seems to be, he says, that the manufacturers in America will make no concessions—as do the English and Germans—to the peculiar tastes of the masses, who are likely to buy those goods. Mr. Seeger tells of receiving a letter from a New York firm, containing some samples, which he submitted to the most important dry-goods house in Rio de Janeiro. As a result, the firm received an order for fifty boxes of calico, and Mr. Seeger was told that the purchase would have been much larger if the buyers had been accorded choice of patterns.

### A Shrewd Mother.

"HERE," said Mr. Snaggs as he laid a volume on the table, "here is a book that I am very desirous Lucy shall read."

"Very well," replied Mrs. Snaggs; "I'll forbid her to touch it."

## A Costly Soldiers' Monument

BY PRIVATE beneficence the most costly soldiers' monument in New York

MR. JAMES J. BELDEN,  
Donor of the Soldiers' Monument.  
Ryder.

State has just been erected in the little town of Fabius, Monroe county. On the Fourth of July there was unveiled in Fabius a costly soldiers' monument, presented to the town with commendable liberality by the Hon. James Jerome Belden, of Syracuse. This token of honor stands on the site of Mr. Belden's birthplace, and the grounds surrounding it have been made into a beautiful public park. The monument, which is suitably inscribed, was built by Mr. H. Q. French and cost \$15,000. Its pedestal is of Quincy granite and is ten feet high. Under this is a polished base seven feet square, and it is surmounted by a life-size statue of West-erly granite representing a private soldier. The dedication ceremonies attracted a large gathering of G. A. R. men from the Saline City and elsewhere, and of people from the vicinity. Mr. Belden made the presentation speech, which was responded to by Mr. O. H. Sisson, of Fabius. Mr. Abraham Gruber, the well known political leader of New York City, delivered the principal address of the day—a thoughtful, brilliant

THE BEAUTIFUL NEW SOLDIERS' MONUMENT  
RECENTLY ERECTED AT FABIUS, N. Y.

and eloquent effort. Interest and enthusiasm were at a high pitch, and there is no doubt that the monument will serve to deepen the patriotism of the people of Fabius. It is to be hoped that Mr. Belden's munificence will find imitation in hosts of other places throughout the North.

## Life-Insurance Suggestions

[NOTICE.—This department is intended for the information of readers of LESLIE'S WEEKLY. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.]

ONE OF the objections to all the fraternal insurance orders is that they are not under the same control and constant scrutiny which are given to the old-line insurance companies by State officials. Again and again beneficial and fraternal orders have gone to the wall, bankrupted not only by mismanagement, but by dishonesty. The Ancient Order of Red Cross, which went into the hands of a receiver recently because of the defalcation of one of its officers, is only one of many similar instances. Efforts by their respective Legislatures to bring the fraternal under the same strict supervision of the insurance departments that extends over the old-line companies are always bitterly opposed by advocates of fraternal insurance. State insurance superintendents throughout the country are almost unanimously in favor of the stricter inspection of fraternal bodies. The facts and figures given in their reports are startling in their nature. As I have often pointed out, security is the first consideration. How can this be had without the publicity which the State insurance

departments insist upon, respecting all the companies over which they have control?

"H." Baltimore: One dollar received, for which your subscription will be continued for three months.

"G." Reardon, Wash.: (1) No. (2) No. (3) No. If all the dividends and the final results are considered together.

"H." Newton Centre, Mass.: There is really very little difference in results and none as to security. Whichever may be your preference it will certainly satisfy you.

"S." Philadelphia: I do not think the bond is better than an endowment policy. The latter would certainly be entirely satisfactory. The Equitable's proposition is good.

"K." Brooklyn: The policy offered you by the Prudential is certainly safe and secure. There is no question as to its strength. If you can afford it, you ought to be insured for the sake of your dependents.

"C." Paris, Tex.: The Fidelity Mutual Life of Philadelphia reported last year the receipt of \$2,457,000 in premiums, and actual expenses of management aggregating almost a million dollars, which seems pretty large. I should not call it one of the greatest companies.

"J. G. W." Chicago: If you have no dependents and simply want an income for yourself and wife, you can secure from any of the great insurance companies of New York City for \$40,000 a joint annuity of \$3,142, payable annually so long as either of you survives. If you should divide the money into two portions of \$20,000 each, the one purchasing an annuity at the age of 71 would receive \$2,695.40 per year for life, and the one purchasing an annuity at the age of 61 would receive \$1,737.60 per year for life, payments in each case to be made annually. If payments should be made quarterly or semi-annually there would be a slight deduction to cover interest on the money advanced before the end of the year.

*The Hermit.*

**IMITATION IS THE SINCEREST FORM OF FLATTERY.**  
There are different kinds of piano players, but none of them has succeeded in attaining the perfection found in **THE CECILIAN, THE PERFECT PIANO PLAYER.**

The Cecilian enables anyone to perform the most difficult piano music without practice. It is the only piano player which is easily operated by anyone and which makes possible the accurate and perfect rendition of all kinds of music. Years of unceasing toil in practice would not enable you to do what you can do in a few minutes with the Cecilian. Send for our free descriptive booklet "D."

Its price is \$250.00 and is sold on the easy-payment plan.

## The Success of Monte Carlo

SOLOMON, the wise man of the Scriptures, and many other sages since his day, have given forth the solemn counsel that "the way of the wicked shall not prosper," and also the correlative that "righteousness is profitable both for this world and the world that is to come." However true these sayings may be as to general principles of human conduct, the exceptions to be found in every age and every part of the world are numerous and striking.

Gambling, for example, has ever been justly held as a sinful practice, one of the most demoralizing of human vices, and yet to-day the richest and most prosperous state in all the world is Monaco, wherein is located Monte Carlo, the most famous—or infamous—gambling hell on the globe. Fifty years ago, when the Casino at Monte Carlo was first opened, Monaco was on the verge of bankruptcy, an insignificant, miserable, little principality, with no assets worth mentioning and no future. The turn came suddenly when the Prince of Monaco one day accepted an offer of 1,700,000 francs from François Blanc, the chief of European gamblers, for the privilege of opening and operating the Casino as a gambling hall. Money literally flowed into the coffers of François Blanc and his fellow-concessionaires from the day the place was opened, and has continued to flow ever since.

When Blanc died, he left a very large fortune to his widow. The Casino was then handed over to a company with an enormous capital, and the Prince of Monaco renewed the concession for the modest consideration of \$5,000 a week, with an extra trifle of \$100,000 a year to keep up his body guard. The whole state has grown rich since the gamblers came, and not the state only, but the coast for a hundred miles round. Sandy soil originally worth twenty-five dollars an acre, fifty

miles from Monaco, has realized \$10,000 an acre in thirty years; the two hotels in the state have multiplied by twenty-four, and as against three jewelers and seventeen wine merchants twenty years ago, there are to-day fifteen jewelers and eighty-five wine merchants. A thousand people are kept in regular work at the Casino itself, and honest folk who live by honest means have grown rich in spite of themselves through the remarkable development of the state. The people of Monaco have the good sense not to gamble themselves, and no citizen, save on one day a year, may enter the Casino. "If men from other lands, with more money than brains, choose to lose their brains and leave their money in Monaco," the native argument seems to run, "we have nothing to do with it. At least we will use their money well and wash our hands of the channel through which it comes."

All this profit is over and above the actual expense of running the Casino itself, which foots up to nearly \$5,000,000 a year. It costs, for instance, about \$205,000 for the item of the "theatre and orchestra"; firemen and maintenance of gardens eat up \$100,000 more, and opposite to such suggestive entries as "grants to the press" and to "bishop, clergy, and educational institutions" are set down the sums of \$100,000 and \$45,000, respectively. The lighting and water supplies drain the revenue of the tables to the extent of \$95,000, and the prizes the authorities are called upon to offer at carnivals, races, pigeon-shootings, and other amusements, absorb another \$55,000. How much it costs to dispose of the persons who are so inconsiderate as to shoot themselves after a run of bad luck at the tables, is not set down in the lists, but this is probably covered by the contingent fund, for which thousands of dollars are appropriated each year.

## Business Chances Abroad

THE Governor of the State of Oaxaca, Mexico, issued a proclamation on July 17th, offering a prize of \$5,000 in Mexican currency to "the person or company that, within three years from the date of this decree, shall drill and put into working order an artesian well in the city of Oaxaca or in the towns of Xochimilco and San Felipe del Agua and Hacienda de Aguilera." Exemption from all local taxes will be granted to those who undertake the work, established or to be established, on capital invested, from the date of commencing the work and for the period of ten years after, if results are successful. During the period of operations, the company or persons engaged in the work, as also all employees, will be exempt from all personal taxes. In order to obtain the concession under the present decree, a written application must be made to the Governor, and upon obtaining the concession a written notification must be made to the Governor that work is to be commenced, and upon suspension of work a written notice must be given whether it is stopped temporarily or finally, as case of failure or success. We presume any further information in regard to this matter can be obtained of Consul-General at City of Mexico.

Another country, of which we hear comparatively little in trade circles, is Croatia-Slavonia, but according to our consular representative at Budapest, Hungary, Mr. Frank D. Chester, the opportunities for a greatly enlarged American trade are open there, providing the right measures are taken. There is a good opening, he says, for all American machinery used in factories; for agricultural machines and implements, bicycles, automobiles, typewriters; for all American novelties, and for shoes. Direct trade is advantageous to both parties. American firms should send out capable agents, and the fact of their being Americans will gain them admittance where other agents selling the same article would not be received. They should speak German, if not also Serbo-Croatian, which is the language of Dalmatia, Bosnia, Herzegovina, and Serbia. Dairy machines are needed in large quantities, especially separators and churners. A German firm is monopolizing this branch of machinery at present. A light, strong, and cheap plow would also sell well. Firms wishing to do a regular business should have a branch office in Croatia, with a stock of all the required implements, preferably at Mitrovica, the center of the extensive region of Slavonia.

## The "Little Red Schoolhouse" in Reality.

NO SUGGESTIONS for educational reform and advancement made at the recent session of the National Education Convention were more practical and valuable than those of the speaker who urged that if effective instruction is to be imparted to all children, more generous provision must be made for the ample compensation of teachers, for permanency in their work, and for centralized schools in the rural districts.

No one acquainted with the true situation of affairs can fail to realize the need of radical reform in the management of our rural schools in many parts of the country. The "little red schoolhouse" of the country cross-roads has been a frequent theme of song and an object around which has clustered much fine and pretty sentiment, but, like "the old wooden bucket," and many other things which figure largely in poetry and romance, it does not stand so well under the light of actual knowledge or before the tests of matter-of-fact science.

Regarded from these view-points, the system of instruction followed in many of these rural institutions, with their wretchedly paid teachers, their lack of graduation and continuity of study, their endless change of methods and instructors, their meagre and insufficient equipment, is about as unsatisfactory and inadequate as a school system could well be. It dooms all children who must receive their education in these places to a dull, dry, and aimless routine of study, a weary and endless beating over the same ground, a few elementary studies each year, with no definite plan, no incentives to higher work, no stimulus to ambition. A system, in fact, better calculated to stifle a love of learning, to discourage and depress the mind of a child in the early pursuit of knowledge, could hardly be devised than that followed at the present time in many of the little schools to be found in our rural districts.

The teaching facilities of these places are generally limited to a ferule, a lump of chalk, and a clapperless bell, while the intellectual equipment of the teachers is often of the same meagre order; the latter, however, being all that could reasonably be expected on a stipend of three or four dollars per week. The net result of all this is, that the children are turned out of these schools at the end of eight or ten years of attendance with a knowledge of only the simplest elementary studies, and that confused and imperfect, and with no desire awakened in them to tread the paths of learning any further. Full half of their school life has been literally wasted in the needless and vacuous repetition of a few things, their eyes never being really opened to the riches and wonders of nature about them, nor to any other of the many avenues of knowledge lying before their feet.

The praise accorded to our public-school system is just enough, perhaps, as applied to the system in general and particularly as it is worked out in our large cities and towns, but the "little red schoolhouse" of the country cross-roads is not a thing remembered with pride and affection by those who realize precisely what it stands for in their own lives or in the lives of other unfortunates who have been committed to its cramping processes and its narrow, joyless, and deadening round of duty. To such the "little red schoolhouse" stands more properly as a thing unhappy and forlorn, a reminder of golden opportunities neglected and wasted through lack of needful guidance and the help and inspiration coming from an adequate and enlightened system of instruction.

It is gratifying to be able to add that the character and general status of the rural schools in New York State have been steadily improving under the direction of Mr. Charles R. Skinner, who has been State superintendent of public instruction since 1895, and is fully alive to the needs of the situation. He has been especially successful in efforts to raise the standard of qualifications among applicants for teachers' certificates and thus to greatly improve the tone of the service. In these efforts at improvement of the district schools Mr. Skinner has found a valuable coadjutor in Governor Odell, who, in his last annual message, called attention to their needs, and recommended and obtained through the Legislature an increase of \$250,000 for common-school purposes. He also changed the plan of the distribution of the public-school fund so as to insure its going to the places where it is needed most. Hereafter each of the poorer districts is to receive an allotment from the State of \$150 for each teacher employed

instead of \$100 as before. The total increase of the school fund going to the counties outside of New York City amounts to \$361,575 for the present year, the greater part of which will go to the support of district schools. Under this wise and liberal arrangement it is certain that the condition of the "little red schoolhouses" in the Empire State will be radically improved in the near future and become, more truly than in the past, a source of just pride to the citizens of the commonwealth. In his recent eloquent address at the celebration, at Olcott Beach, N. Y., of the one hundredth anniversary of the settlement of Niagara County, Governor Odell expressed his attitude on the school question tersely as follows:

"Civilization has as its handmaiden education, and among all the functions of the State none receives such jealous regard and care. A natural development of our great school system brings with it the idea that the State owes to every locality the duty of according to it support which will make education as free in the most isolated sections as in the most populous communities. It was this that led to recent legislation which not only gives to the localities larger appropriations, but distributes such aid where it is most needed."

Work along these very proper lines has already had excellent and encouraging results, and if it can be followed by some system of gradation for such schools, such as that prevailing in Kansas, for example, the first approach attaching to the "little red school" system as it has existed in the past may be, in time, wholly removed.

## Generosity in the Churches.

THOSE WHO believe, or affect to believe, that religion is declining throughout the countries of Christendom will find no support for their pessimistic notions in the figures showing the amounts already collected for the "twentieth century" funds started by various denominations in this country and Europe. These funds have already reached a total of \$40,000,000 and the promoters of these enterprises are confident that they will have the balance of \$10,000,000 more. Of the amount raised, more than one-half is credited to American churches, the Methodists being far in the lead in liberality. The Canadian Methodists started in to raise \$1,000,000 and have already secured that and \$250,000 besides. The Presbyterians of Canada set out for the same million-dollar goal and have already gone nearly a half million beyond it.

It is especially gratifying to note that all these enormous sums have been collected at an expense of less than one per cent. of the total, and also that in spite of this generous giving it has in no way interfered with the regular contributions to missionary societies and to the support of churches. On the contrary, all religious societies show an increase in receipts, and there is hardly one that is not out of debt, a condition that has not obtained in years. The funds collected are to be used first for the payment of church debts, and after that for the endowment of colleges, missionary societies, and other religious institutions.

As giving and doing are always closely related, it is unbelievable that this outpouring of millions for the extension of religion at home and abroad will not be speedily followed by a corresponding development and increase in the spiritual life and activities of the churches. The open hand and the open heart generally go together.

## Some Wonderful Life-insurance Facts.

THERE IS perhaps no important economic factor in the business world less appreciated than the life insurance element. Notwithstanding the fact that its beneficence is extended to and intimately affects the lives of one-third, approximately, of the seventy-six millions of inhabitants of the United States, it is nevertheless quite probable that with the majority of people it is entirely overlooked as a possible feature in the economic history of the times.

Without doubt, this lack of appreciation of its importance is due to the ignorance of just what the business is, what its volume, and why so intimately related to the affairs of a very large proportion of the population. Were the magnitude of the institution universally known, it is certain that from this knowledge alone would develop a clearer conception of the prominence of the work, and of its great weight in the business world. The human mind, because of its limitations, is, to a certain extent, incapable of appreciating exactly what a number of nine digits signifies, and therefore the mere relation of large totals would convey little or no meaning. The statistics of the life insurance business require great numbers, and hence, to get an adequate conception of what they are, it becomes necessary to see how they compare with those of other important economic elements.

First in importance, of course, is the accumulation of assets, since these furnish whatever security may be guaranteed to the contracts, and the only means by which the guarantees of the various companies can be fulfilled at maturity. The amount held by the seventy-six ordinary and industrial companies in the United States was, on December 31st, 1901, \$1,910,998,960. We obtain some idea of what a vast sum this is when we know that it is more than twice as large as the aggregate capital and surplus held by the 3,969 national banks of the country at their last report. It equals about two times the total interest-bearing debt of the United States.

This enormous accumulation of resources—\$276,882,697, or 14½ per cent., of which is held as surplus in excess of all liabilities—furnishes the foundation on which there is written and in force \$9,401,190,026 of assurance. This amount is what the companies now operating in this

country expect to pay—probably within the next fifty years, and certainly within a period but little longer. This volume of risks in force is written on 15,660,986 policies, which affect, as stated before, probably about 25,000,000 people.

Notwithstanding the magnitude of the business at present, the assurance in force is but a fraction of the total written by the companies since their organization less than sixty years ago. The number of policies actually issued is 54,262,213 and the amount of assurance represented \$27,586,668,883. The difference between the actual issues and the amount now outstanding is accounted for by the large volume of assurance which has been terminated, to the benefit, in most cases, of the assured, and measures, to a certain extent, the beneficence of the institution.

## The Plain Truth.

JUDGE FOSTER, of the Court of General Sessions in New York, deserves commendation for having put the stamp of legal condemnation upon the miserable delusion that a woman can reform a man by simply marrying him. The occasion arose where a suspension of sentence was asked for a young man arraigned before him for sentence on the charge of larceny, the plea being based on the ground that the prisoner was engaged to an "estimable young lady" who would marry him at once if he were set free. Judge Foster refused to suspend sentence, and sent the man to the penitentiary for six months. He had investigated the fellow's record, he said, and found it bad. He added that he hoped that during this period the young woman would investigate the prisoner's history herself, and take back her promise to marry him. It is too much to hope that the wretched old fallacy will suffer very much from this legal pronouncement, but if it saves even one woman from yoking herself for life to a brute and a criminal it will be a cause for gratitude.

IT IS highly gratifying to be assured that the recent sale of the Philadelphia *Public Ledger* to Mr. Adolph Ochs will involve no radical change in the general policy, editorial conduct, or make-up of that famous and influential journal. The character and management of two dailies already owned by Mr. Ochs, the *New York Times* and the Philadelphia paper of the same name, the latter of which has since been consolidated with the *Ledger*, were sufficient in themselves to assure the public that the latest acquisition would be conducted in accordance with the highest standards of modern journalism. It is good not only to have this assurance, but to know that Mr. L. Clarke Davis will remain as editor-in-chief, a position he has so long and ably filled, and that the *Ledger* will retain the general features which have familiarized it to successive generations of Philadelphians and to many thousands of other readers besides. The *Ledger*, from the days of its foundation by the late George W. Childs, has always stood for the best and noblest things in American life and character. It has been conservative without being hide-bound and retroactive; it has been independent without being censorious and intractable; it has kept pace with the times in every legitimate field of newspaper enterprise without ever resorting to sensational or catchpenny devices. That a journal conducted along such high and self-respecting lines can be made profitable is shown by the fact that at its recent sale the property brought the handsome sum of \$2,300,000. That it may long continue in its present course will be the ardent wish of all true friends of American journalism.

A FEW YEARS ago a resident of Brooklyn was sent to state-prison for eighteen months for swindling. He could have received a much heavier sentence, but as he was the sole support of his wife and two children, and it being his first offense, the minimum penalty was inflicted. Upon his release the man hurried home to Brooklyn, determined to lead an honest life. But he was without character. No one would give him work. In desperation he changed his name and soon obtained employment as a conductor on the Brooklyn Rapid Transit Company's cars. He was a model husband and a faithful employé. But unfortunately for him he happened to have as a passenger on his car one day recently the judge who sentenced him, and to whom he made himself known, expressing his thanks for the leniency that had been extended to him, explaining his altered circumstances and his bright prospects. The judge was greatly pleased and gratified, and expressed himself to that effect. But a few days later the judge happened to comment on the man's good fortune to a friend, through whom, somehow, the story came to the ears of the police, who, in turn, notified the trolley company. The conductor was arrested and sent to jail on the charge of violating Section 570 of the Penal Code in saying that he had never been convicted of any crime, and that he was giving his own name. The other case relates to a policeman who is now a member of the force in New York. About two months ago this man was convicted of an atrocious assault upon an inoffensive person and sentenced to two months in the penitentiary on Blackwell's Island. The judge who sentenced him expressed himself freely as to the man's brutality and declared that he had disgraced his uniform. While he was serving his time in the penitentiary this policeman's salary was going on. He came out of jail with sixty days' pay due him. After paying his fine he was still thirty days' pay better off than he was before the city gave him free board, and was also restored to his former place in the service. And yet we are asked to believe that we live in a community where the scales of justice are balanced to a nicety and judgments are righteous.

## PEOPLE TALKED ABOUT

IF NOTHING occurs to prevent, we shall have a real live European monarch among us about one year

KING LEOPOLD, OF BELGIUM,  
Who proposes to visit America in 1903.

hence in the person of His Majesty the King of the Belgians. As King Leopold is now past seventy-five years of age, and the oldest reigning sovereign of Europe, next to the Emperor of Austria, there is, of course, a strong probability of some interference with this plan, but the King is said to be a man of extraordinary vigor for one of his age and may, therefore, have a reasonable expectation of being in the world for some years longer. Should he come, he will be the first monarch of Europe to set foot on American soil. We were once honored with the visit of an Emperor in the person of Dom Pedro, of Brazil, and the former Queen of the Hawaiian Islands has been a visitor within our borders on several occasions, but with these two exceptions no crowned heads have ever paid us a call. Several others, however, have expressed their strong desire to see the United States, among them being the Emperor of Germany and the king of Siam.

GENERAL ALEXANDER SEWARD WEBB has confirmed the report that he is to retire from the presidency of the College of the City of New York after thirty-three years' service. General Webb some time ago intimated to the Board of Trustees his desire to withdraw. The last legislature passed a bill setting apart one per cent. of the excise money to pay annuities to those who have been long in the service of the college. The bill provided for an annual pension to the president of \$5,500 and to the professors of from \$2,000 to \$3,000 annually. General Webb is sixty-eight years old and still hale and vigorous. He thinks, however, that thirty-three years in the harness is long enough, and he wants to get out and rest. He was graduated from West Point in 1855 and was an officer in the regular army until 1870, when he became president of the City College. During the Civil War General Webb served in the Army of the Potomac, was wounded at Gettysburg, but was afterward in the Rapidan and Wilderness campaigns. He rose to the rank of a major-general in the volunteer and regular army.

A LITTLE anecdote strikingly illustrative of Joseph Chamberlain's habitual ways of dealing with men and things is told of him when as a young man he was a volunteer teacher in a night school at Edgbaston. So interested in the work was he that he became first president of the School Mutual Improvement Society, and often took part in the "penny readings." His reading of "Sam Weller's Love Letter" is still remembered, and the story is told that once, when one of the young men in his class was particularly stupid, Mr. Chamberlain called to him and said: "Look here, Brown, if you don't know any better I forgive you; but if I thought you said these words willfully I would give you a downright good thrashing."

THAT GREATEST of all news-gathering and news-distributing agencies, the Associated Press, requires

MR. MELVILLE E. STONE,  
The great American purveyor of news.  
Gayford.

for its right operation quite as much practical business talent as does almost any other large organization. For that reason the association is fortunate in having for its general manager a man with so much energy and executive ability as Mr. Melville E. Stone, who was recently re-elected to the position he has held for many years. His merits, thus recognized by his journalistic colleagues, are also appreciated by Emperor William, who, when Mr. Stone a little while ago was in Europe, bestowed on him the crown order decoration of the second class, an honor never before granted to an American, and which is equal to knighthood in England. Mr. Stone is qualified for his responsible post both by native capacity and a long journalistic experience in the West. He thoroughly comprehends the needs of the daily newspapers in the matter of telegraphic news, and is master of methods of promptly and amply supplying those needs. This explains why the Associated Press service, all things considered, is far superior to that of any rival. Under Mr. Stone's management, also, there is an absence of the inharmonies that in years past disturbed the organization. This is now a compact and powerful body which is of the greatest use to the community. Mr. Stone is a genial and courteous gentleman and his administra-

tion of Associated Press affairs is fair to all concerned. He is in the prime of manhood, and he promises to be the most conspicuous general of the news-collecting army of the world for a long time to come.

FEW AMERICAN singers have won as high commendation from European critics or as great popularity

beyond the sea as Miss Mary Munchhoff, the soprano who is soon to be introduced to the concert-goers of New York. Miss Munchhoff is a native of Omaha, Neb., and made her first public appearance abroad only three years ago. She has sung with the three most important musical organizations of Germany and has achieved triumphs at many musical centres in Europe. She is the first American singer who was ever chosen an honorary member of the famous Beethoven Society of Bonn. Miss Munchhoff is graceful, modest, intelligent, and sympathetic. Since her first arrival in Germany five years ago she has thoroughly mastered three foreign languages, German, French, and Italian. Despite her success and the exceptional honors shown her she remains an ardent patriot and never forgets to mention that she comes from Omaha, and she stipulates in all her contracts that she must be announced as "Mary Munchhoff, soprano, Omaha, Neb., U. S. A." This intense pride in her native land will of itself assure for Miss Munchhoff a friendly reception from the American public, and make more easy its conquest by her gift of song.

MISS MARY MUNCHHOFF,  
The American soprano who has won great honor abroad.  
Gayford.

THE VERY recent installation of that brilliant scholar and educator, Professor Edmund James James, Ph.D.,

DR. EDMUND JAMES JAMES,  
The new president of Northwestern University.

LL.D., as president of Northwestern University, at Evanston, Chicago, attracted a great deal of attention in educational circles. The institution, which is conducted under the auspices of the Methodist Episcopal Church, is one of the largest of American universities, having had a total attendance of students the past year of 2,414. The head of such a great school requires high intellectual gifts and much force as well as fineness of character. These qualities are happily combined in Dr. James, under whose charge the university may be expected to be even more flourishing than ever. The new president has had a uniformly successful career. He is forty-seven years old and comes from a long line of Methodist ancestry. He was educated at universities here and abroad, and was for thirteen years professor of public finance and administration in the University of Pennsylvania, whose graduate school he organized. He was also an organizer and long a director of the well-known Wharton School of Finance and Economy; the founder and for several years the president of the American Academy of Political and Social Science, and the first president of the American Society for the Extension of University Teaching. In 1896 he became professor of administration in the department of political science of the University of Chicago, where he remained until Northwestern secured him. Dr. James has delivered able addresses before many learned bodies and is a prolific writer.

ALL THE WORLD has heard of the Barings, the famous house of English financiers but not so many probably have heard of Mrs. Godfrey Baring, the beautiful young wife of one of the representatives of the Baring family. It is said that this lady comes of a race celebrated for the beauty of its daughters, her mother having been a Graham, of Netherby. Mrs. Baring, who spends a portion of each year in the Isle of Wight, is devoted to the sea, and as accomplished as she is beautiful. She is a cousin of Lord Crewe's young daughters, and a niece of the Duchess of Montrose.

MANY INTERESTING anecdotes are told of Lord Salisbury, who has recently laid down his sceptre as Prime Minister of England. As a working journalist he is said to have borrowed sixpence, and to have paid it back twenty years later, when the man who lent it him, and whom he did not see again in the interval, called on him on a matter of business. The best anecdote, per-

MRS. GODFREY BARING,  
An English social queen and beauty.

haps, is that concerning a certain energetic journalist just appointed to an important editorship, who invited Lord Salisbury to tell him what line he should adopt in his paper in regard to national affairs. "I should have no politics," was Lord Salisbury's blandly crushing observation.

THE LAUNCHING of the protected cruiser *Des Moines* at the yard of the Fore River Ship and Engine Com-

pany, Quincy, Mass., the other day was an event of much interest to the people of Iowa. Governor Cummins, other leading officials, and a number of prominent residents of that State lent their presence to the occasion. Two young ladies took conspicuous parts in the ceremony. Miss Clara N. Carleton, of Haverhill, Mass., cut the ropes holding the last keel-block and started the ship down the ways. The vessel was christened by Miss Elsie Macomber, of Des Moines, Iowa, who had accompanied Governor Cummins and family from the West. Miss Macomber belongs to a family of high social standing and is one of the handsomest society belles of her home city. She is a brunette, bright of mind, and charming in manner. The new cruiser, which was designed by Rear-Admiral Hiebhorn, is a fine vessel and represents what he considers the most useful of the medium-sized type of warship. To guard her against sinking, should a shot strike her along the water-line, she is supplied with about one hundred water-tight compartments and a protective belt of corn-pith cellulose. The latter is a novelty in naval construction. Should water rush in through a hole made in the cruiser's outer shell the corn-pith would swell and stop the leak. Most of the new vessel's cruising will probably be done in the tropics.

MISS ELSIE MACOMBER,  
Who christened the new cruiser *Des Moines*.—Walter.

ONE OF the queerest features of court life in Europe is the marriage by proxy of royal personages. There are at the present moment no less than three royal ladies who have been thus wedded—the Queen-Regent of Spain, the Dowager Queen of Portugal, and the ex-Queen of Naples. Kings and reigning sovereigns are held to be too important personages to be married anywhere else than in their own dominions.

MANY DIVERTING stories are current in European papers concerning the ways of the Shah of Persia during his recent visit to that part of the world. While Mozaffar-ed-din is well educated and a sensible and up-to-date man in many things, he seems to have a truly Oriental conception of his own superiority and wonderful power and greatness. It was he who wrote to Queen Victoria some years ago complaining that her Ministers came into his presence with their boots on, and his contempt for time-tables when traveling is proverbial. He once stopped a reception in Rome and bade the King and Queen an abrupt good-night. The versatility of the Shah is the most pronounced feature of his character. He can shoot at full gallop, it is said, and hit a bird on the wing. He can play the piano, work the telegraph, and take photographs, and he has traveled through half Persia on a motor car. He is interested in all he sees, reads all he can, and is broad enough in his fancies to spend one day at church and the next on the race-course.

A GREAT American humorist appears to be essential to the happiness of the American people. There was

general sorrow over the passing away of such creators of jollity as Artemus Ward, the Danbury News man, and Eugene Field. Of the old guard Mark Twain is left, but he is a back number, having uttered nothing of late that contains genuine humor. There are only two of the later writers who have forged to the front rank of humorists of this country. These are George Ade, author of "Fables in Slang," and Finley Peter Dunne, everywhere known as "Mr. Dooley." Of these two Mr. Ade occupies, perhaps, the wider field. Mr. Ade's reputation was made early in life, he being now only thirty-six years old. After graduating from Purdue University, Indiana, he became a reporter on a Chicago paper and it was there that his peculiar talent developed. Notwithstanding that he is a fun-maker, he is one of the most serious and thoughtful of men. He is studious and cultured and aspires to greater things than he has as yet accomplished. He has written two plays, one of which, "The Sultan of Salu," has already been on the stage for nearly a year and will be produced in this city in January. His second play, "Peggy from Paris," has lately been rehearsed for presentation here. These works are pervaded by the author's abundant flow of humor and will doubtless delight metropolitan audiences.

MR. GEORGE ADE,  
An American humorist of the first class.—W'indcraft.

### Big War Games in Kansas.

THE RECENT military manoeuvres at Fort Riley, Kan., though far from being so extensive and spectacular as those practiced in the great European army encampments, were yet carried out on a scale unusually large for mimic warfare in this country. On the big plain, some 2,000 acres in area, on the army reservation, about 5,000 regulars and militiamen pitched their tents, and for several days, when the weather permitted, were exercised in all manner of warlike movements. War problems of various kinds were put to solution, and in reconnaissances, strategic marches, sham fighting, and the like, the troops and their officers got systematic ideas as to the methods most effective in actual campaigns. One of the most striking spectacles of the entire meet was a sham battle conducted during a fierce storm with the utmost skill, and involving a lively artillery duel.

Camp Root, as the temporary military settlement was called, in compliment to the Secretary of War, was under command of Major General John C. Bates, U. S. A., who directed the manoeuvres. The commander was aided by an efficient staff, and zeal and competency were shown by officers and privates generally. The operations undoubtedly were of great benefit to the soldiers concerned, and it is intended to have an increasing number of members of the army and the national guard take part in them in coming years. General Bates, however, thinks that in that case the training grounds will have to be enlarged. Even with only 5,000 men to handle, he says, there was none too much space for the war games that were played, and he wonders what could be done at Fort Riley with 50,000 men, the proposed maximum of troops to be manoeuvred there. It is probable that abundant room will be found somewhere for this kind of practice, now recognized by our military experts as being most essential.

The greater part of the troops at Camp Root were infantrymen, cavalrymen, and artillerymen of the regular army, and only two States—Kansas and Colorado—sent bodies of militia to participate in the manoeuvres. Many other States, however, detailed officers to witness the operations. In fact, there were present more representatives of the national guard of the States than were ever before assembled on any similar occasion. Among these officers were the following: Colonel Irving E. Webster, Second Regiment, Florida; Colonel W. N. Thomason, Third Georgia; Colonel Charles R. Darling, Sixth Massachusetts; Major C. C. Macdonald, Fourth Missouri; Colonel W. T. McGurran, Second Michigan; Major J. K. Harrison, Third Indiana; Colonel George W. McCoy, First Indiana; Lieutenant-Colonel S. A. Bowman, Third Indiana; Major T. J. Louden, First Indiana; Captain F. J. Ellison, National Guard of New York; Lieutenant-Colonel J. F. Fee, First Indiana; Major A. L. Kuhlman, Third Indiana; Major Bryce D. Armour, Assistant Inspector-General Rhode Island Brigade; Adjutant-General

Cole, of Connecticut militia; Brigadier-General Joseph Whitney, Second Massachusetts Brigade; Adjutant-General E. S. Miller, North Dakota; Brigadier-General Wiley, Pennsylvania; Major-General W. H. Stacy, Texas; Adjutant-General W. H. Whiteman, New Mexico; Adjutant-General George H. Browne, Michigan; Captain D. W. C. Falls, First Infantry, New York; Colonel E. D. Hugnemin, Second Georgia; Brigadier-General H. S. Tanner, Rhode Island; Major O. C. Drew, Assistant Adjutant-General Texas Volunteer Guard; Colonel Henry Hutchings, First Texas; and Colonel H. L. Archer, First Nebraska.

Among the distinguished visitors at the camp were Lieutenant-Colonel Raspanoff, military attaché of the Russian Embassy at Washington; Governor Stanley, of Kansas; Assistant Secretary of War William Carey Sanger; Assistant-Adjutant General W. H. Carter, Commissary-General Weston, U. S. A., and Generals Funston and Kobbé, U. S. A. Official reports of the evolutions received at Washington declare them to have been eminently successful.

### A Warning to the Tender-hearted.

IT WILL be remembered that Victor Hugo's famous story, "The Man Who Laughs," was founded on the practices of a band of miscreants in England who kidnapped little children and mutilated them in order that they might make more effective use of them as beggars, the hero of the story being one of these unfortunates. Inhuman practices of the same kind, for the same purposes, are said to be common at this time in China. But according to recent reports from local police courts, it is unnecessary to go into the realm of fiction or over to the Celestial empire to find professional beggars resorting to mutilation in order to excite sympathy. A gang of these parasites was recently discovered in Hoboken, N. J., every one of whom had maimed himself in some way. Some had chopped off one or more fingers, some had burned themselves with red-hot irons, and others had crippled their arms or legs in various ways.

How successful these self-inflicted injuries had been as adjuncts to the begging trade may be judged from the fact that one of the band, who betrayed the others to the police for motives of revenge, declared that one man had gathered in \$2,000 in four months and another had made \$500 in five weeks. The rule seemed to be, it was said, that the more severe the mutilation the better were the returns financially. The most obvious moral for honest people to draw from these statements is to beware of professional beggars generally and to be especially hard-hearted toward the kind who display alleged wounds and injuries. The proper method of dealing with these impostors is to turn them over to the police, and when that remedy is not convenient a good healthy dog will serve equally as well.

### The Problem of Fogs.

FORTUNE AND fame in unlimited measure await the man who first devises some practicable and successful method of grappling with the difficulties, discomforts, and dangers arising from the presence of heavy fogs on land or sea. That they can ever be dispelled or driven away entirely is an unreasonable expectation, and the most and the best that can be hoped is that some way will be found to forecast their coming and some method devised to penetrate them for a considerable distance with light-rays or the human vision, and thus render travel by land and water far safer at times than it is to-day. What such inventions or discoveries would mean for the city of London, for example, or the ocean highway in the vicinity of Newfoundland, can be faintly imagined. In the latter case alone it would mean the saving of many lives and a vast amount of property every year now lost in disasters, to say nothing of the added sense of security to thousands of ocean voyagers.

Meteorological students and investigators have been busy trying to solve the fog problem for many years, and some success has been achieved in the way of devising a system of fog-signals for the guidance of mariners and also some ingenious contrivances in the shape of fog-bells and warning signals. But the chief and largest difficulties still remain unsolved, in spite of all human ingenuity; and practically nothing has been done to mitigate the woes of life in towns enshrouded for days together in impenetrable masses of slimy, sticky, all-pervading fog. It is this condition now, as ever, that makes life in the English metropolis at certain seasons not worth living in the estimation of many unfortunate beings; and many other towns and cities in all parts of the world have occasional visitations of the fog misery almost as bad.

As London suffers more from this source than any other city in the world, it is not surprising to learn that the greatest efforts should be made there to combat the fog evil. During the present year an extended course of experiments was in progress in London under the combined auspices of the municipal and national governments, for the modest purpose of determining, first of all, whether the coming of a fog can be foretold for a few hours in advance, a consideration of great value in itself to the business of street illumination. A staff of volunteer observers has been organized to report on conditions existing simultaneously over a considerable area. It is expected that all the fire stations in London will be included in the system. The national weather bureau furnishes the necessary instruments and has drawn up a code of instructions. When a sufficient amount of data has accumulated the government experts will review and digest it for practical purposes.

It is hoped that the outcome of this investigation will be not only some method of forecasting fogs, but other means or devices for mitigating the perils and annoyances arising from this same source.

# A Day at Yale

A GLIMPSE OF STUDENT LIFE IN A GREAT AMERICAN UNIVERSITY

By Carroll Johnson Waddell, of the Yale "Daily News"

THE INTRODUCTION of the freshman into the ways of Yale is usually bewildering. With a slight alteration of details the "Adventures of Verdant Green" might be adapted to the college in the City of Elms. When the freshman picks his way through the chaos of trunks and suit-cases in the New Haven station he feels the first tingle of consciousness that he is at last a Yale man. And, perhaps, with a swelling pride he gives the expressman his room address in an authoritative manner—and unfortunately in the hearing of some modest upper-class men who will give him cause to recall it within the first twenty-four hours. If he has decided that he shall never be taken for a freshman he is as a consequence at once appraised and sorely taxed. With that first night in New Haven are indelibly associated the torch-lighted ring of seniors squatting about the wrestling matches in the Hopkins grammar-school lot and the collisions of his class with the sophomore phalanx in York Street. The halo of college life then became indistinct; he considered freshman year an unnecessary evil. But he was coming into his citizenship in the miniature world of the Yale campus.

As a community the Yale campus has all the characteristics of the greater world for which it prepares. It has its opportunities, its rewards, and its standards, and they vary from the gilded life of indolence to strenuous endeavor. The freshman has a wide range from which to choose the branch to supplement his class-room work. This is one of the first problems which confront him. He has passed his entrance examinations and is technically a Yale man, and a Yale man he will be to his younger brother at the first vacation; and yet he sees that if he is to be a part of Yale he must descend to prosaic work six days in the week. And by spring he has become a duly accredited member of the sturdy stirring community.

A day in Yale is typical of the Yale spirit which is the pride of the past and the hope of the future. It is a well-ordered medley of close application and hearty relaxation. It begins with morning chapel at 8:10, and alarm clocks are still ringing in rooms at ten minutes before eight. The inevitable is a hurriedly eaten or omitted breakfast and a dash for the doors of Battell Chapel, for if a man is not in his seat at the rising of the choir for the chant he is considered late and his supply of allowed absences thereby decreased. About the campus there are tales of occasional scanty raiment in chapel, with boots, trousers, and mackintoshes as the sole details. But that last ten minutes' doze was worth the haste! An old Yale custom which is observed every week-day morning is the bowing of the seniors to the president as he passes down the centre aisle immediately after the benediction. The class sits on each side of the aisle, and as the president passes each pew the occupants rise, bow low to him, and then fall in behind and pass out of the rear door. None but the seniors are allowed this privilege of homage.

The haste with which the thirteen hundred men pour out of Battell Chapel may be explained by an expected check in the Yale station post-office in Fayerweather Hall, across Elm Street. Or there may be a more sentimental reason. This sub-station of the New Haven post-office is for Yale exclusively, and the amount of mail handled here equals that of the average town of thirty thousand inhabitants. It would seem that Yale men are good correspondents. The morning is devoted to the mind in class-room—the noon hour, to the stomach in "Commons." In whatever else the college man may be declared deficient the development of his appetite has never been questioned.

About nine hundred men board at the University dining hall, or "Commons," as it is known outside of the official catalogue; and they have their customs. Drop a platter or dish upon the mosaic floor and a prolonged cheer will go up from every man in the room. Without any feasible provocation one man can start a din by tapping with his knife upon a plate or pitcher, and his small part will then be overwhelmed, for hundreds will join in the unharmonious clatter. After a successful football or baseball game the variety of "stunts" is wide. The score is rhythmically counted and a Yale cheer is appended; all the adapted songs of the day are sung and then re-sung. And it may be that some of the dishes fall by intention, for the cheer which follows. Few feminine visitors venture within the doors of "Commons" and the visit is seldom repeated, for clouds of waving white napkins and a cheer are compliments of too apparent frankness.

With little evident regard for the serious work of life which is so near, the seniors fill the spring with customs which are peculiarly theirs. Their baseball games are

played during the fall and spring in the early afternoon and evening within the senior fence before Durfee Hall, where grass is an unknown ornament. In name alone does the game as here played resemble the national sport. The diamond boasts of a home plate, but trees are substituted for the regulation bases—and regulations are suspended. Each game has rules unto itself. The number of men at the bat and in the field is unlimited, and the tennis ball is seldom awaited by less than six hands. The game is akin to football in that interference is often formed about a base-runner and met by the ill-fated baseman. The numerous infielders are intentional obstacles to base running. Baseball ethics are, however, adhered to in the disputing of decisions by the umpire, whose position as autocrat is strengthened by the vote of the majority, which is always in the field and rarely unbiased. But it is a rollicking rally of the seniors and the other classes, who watch the games from their fences.

Another privilege of the seniors is to spin tops, roll hoops, and use roller skates. Elsewhere dignified men make ludicrous attempts at these long-neglected sports and many appear to be serving their novitiate, but class distinction prevents comment save by their classmates. In the typical day there are fewer recitations for the undergraduate during the afternoon. He now turns toward Yale Field, the gymnasium, the harbor, or the golf links.

At Yale Field a small battalion of gridiron warriors is

SENIORS PLAYING BALL BEFORE DURFEE HALL.  
Leopold.

drilling in football tactics. The discipline is that of a more formidable battle-field, for the word of a Yale captain is law within his branch of athletics. Beyond the strands the freshmen recruits are at work under the direction of coaches from the upper classes, while the inclosed gridiron is occupied by the candidates for the university team. Small squads are perfecting themselves in the several points of the game; the ends are getting down the field under punts by the full-back candidates, and the centre men are being coached in breaking through their opponents' line. The new candidates are being instructed in tackling the dummy and in mastering the rudiments of the game. And no man has cause to complain that his trial is not comprehensive and rigorous. The field is dotted with men at work in every department in the gridiron catalogue; for a football suit is never becoming to a drone. The coaching of the university team is under the general direction of a head coach appointed from among the graduates who once wore the mole-skin for Old Eli. At the approach of the championship games the auxiliary force of graduate coaches is increased until every man on the team has the individual attention of one or more of the veterans.

At a word from the captain the field is cleared and two elevens are chosen from the men on the benches for a short line-up. The championship games are not played with greater dash and zest than these practice scrimmages which are to determine the composition of the final team; for seventy-five candidates create keen competition. It is the work which sews the lone "Y" on the jerseys.

The frost has scarcely left the ground when the baseball diamonds at the Field swarm with candidates for the season's nine. It is a picture of industry similar to that on the football field. It may be a short game between the first and second nines to try out the candidates; or it may more probably be the sliding out of the timidity of a man between third base and home; or the coaches

telling an outfielder that he cannot catch a cold—much less a ball. Beyond the diamonds are the track house and the training grounds for the athletic meets. The sprinters are practicing quick starts, and the distance men are lengthening their stride around the cinder track.

While rowing receives some attention during the fall—including the fall regatta on Lake Whitney—the chief work of the year is the spring preparation for the annual races with Harvard on the Thames at New London. At the harbor the crews are at work on their stroke and recover before the cutting cold of the winter winds has left. The spectators on the observation train in June wear colors and cheer and admire the brawny backs and sinewy arms; they envy them the prominence of the day. But the work in the tank at the Yale gymnasium and on the New Haven harbor before the final arduous preparation at New London is not envied, for it is overlooked. Every oar in the boat has been a prize, and the season's preparation has been for that less than twenty-five minutes' struggle on the Thames in June.

At night the Yale man turns to his varied programme. With the majority it is the time for the book. There is little that is picturesque in a solitary man at a desk and his work for to-morrow; but it is a Yale reality. It is a detail in the picture which is omitted from the prevailing storiette of college life, which has in unreal prominence a blazing fire, a banjo, and a pipe. For all the desk light will burn some time during the evening; for some it will burn into the morning. A side of Yale life which is little realized by the public is the modest work in the city missions which are maintained by the undergraduates. Any night one may see perhaps a glee-club man singing gospel hymns to an audience of workmen, or a member of the university football team grimly meeting defeat in a game of checkers at the hands—and vainly scrubbed hands they are—of a newsboy. About one hundred undergraduates are active in the boys' club work, and one of its most popular branches is the entertainment of small groups of boys by the undergraduates in their dormitory rooms during the year. The work is mutually beneficial. Wandering into the campus on the way from their eating "joints" to their rooms, small squads will join a group at their fence. The essence of Yale life is found here. It is a comfortable fence and it is rarely vacant.

No feeling of loneliness or isolation can exist in a class after it has come into possession of its fence in sophomore year, for after the dinner hour in the spring evenings groups of fifty or more gather here and sing. Their repertoire will surely include all the Yale and popular songs of the day. At the close of the Yale song, "Bright College Years," every man will stand and uncover at the words: "For God, for Country, and for Yale." It is a custom never omitted. Within Alumni Hall the glee and banjo clubs are rehearsing, but in jerseys or costless there is little resemblance to the clubs which will tour the country during the holidays; nothing similar save the playing.

The squad of competitors for editorial positions on the Yale Daily News are dashing about the campus and over curbs on their bicycles in mad pursuit of the news of the university. Such candidates are known as "beetlers," but the term has no taint, as it is applied to all competitors for positions on Yale periodicals. The compositions of eighteen weeks for the News are pronounced types of Yale strenuousness. One of the favorite resorts of Yale men is "Mory's," an orthodox chop house which is mellow with age and rich with Yale traditions. Freshmen are the only undergraduates who are excluded from the privilege of patronizing "Mory's." The walls are begrimed and hung with old prints of Yale life in the early part of the century; the tables are carved with countless initials, and as soon as every available space is filled the tops are removed and hung on the wall. One round table in the front room is reserved for seniors. More famous than its famed rarebits and golden bucks are the nightly gatherings at "Mory's" of Yale undergraduates, which have done much to cement the Yale brotherhood.

On the campus, lights have begun to die out from the windows and the activity of the miniature city is gradually relaxing for the night. Could the fathers of New Haven pass a night on the Yale campus they would no doubt favor a more rigid curfew ordinance and the blue code of the days of Elihu Yale; but, nevertheless, at the opening of her third century Yale typifies the rugged independence of Americanism ready to cope with whatever task the larger world shall assign. And this smaller world of four years on the Yale campus is the training ground with its daily work and play.

### DAILY STUDENT LIFE AT YALE.

SURROUNDINGS AND ACTIVITIES OF THE THOUSANDS OF YOUNG MEN WHO THROG THE HALLS OF THE UNIVERSITY.

PROPERTY, THE RESULT OF YEARS OF TOIL, BLOWN INSTANTLY INTO A MASS OF RUINS.

IN FIVE SECONDS THE STORM LAID WASTE A PLEASANT HOMESTEAD.

## Terrible Sweep of a Cyclone

A FURIOUS cyclone with some very peculiar features recently laid waste a strip of fertile country seventeen miles long in the vicinity of Mendon, Mich. "What struck me as exceptionally remarkable was the storm's formation," commented a gentleman as he surveyed the ruin-strewn path of the cyclone. "Just before the disaster occurred, I was driving in my buggy a mile south of Mendon. Suddenly, my attention was attracted to a small white cloud, no larger than a man's body, which came up from behind a hill. Clearing the top of the hill, it quickly expanded to many times its original size and took a rotary motion. By this time I had comprehended what was about to happen. Stopping the horse, I alighted and watched the proceedings. The cloud, still whirling rapidly, took a southeasterly direction. A moment had hardly elapsed before it was joined by another cloud of a dark violet hue. At once the two came down to earth and became a huge black blur, in which it was almost impossible to distinguish any one object plainly. It seemed to me that the cyclone resembled some monstrous black bat, whose extended claws snatched and smashed to kindling-wood everything in their path. The white cloud was not funnel-shaped. In fact, there was not the slightest difference between it and the common white clouds we see in the sky daily. Except for its peculiar actions I should never have noticed it."

No photographs can furnish an accurate conception of the devastation wrought by this cyclone. We may in some degree realize the enormous power of the wind; none of us can vouchsafe a "why" for its grim pranks and fancies. The first building struck by the storm was a dwelling-house. The owner, his wife, and their baby girl were seated in the living-room. The house was lifted like an egg shell fifty feet into the air, then dashed to the earth again and smashed into kindling-wood. Its occupants knew nothing of what had occurred until they found themselves in the road, half buried in the mud. The clothes had been torn completely from the child's body; but, though she was for a considerable time unconscious, she recovered. Of the house, not enough lumber was left to build a common sized door. A huge oak,

several feet in diameter, was twisted from the ground and hurled several rods distant. All was a complete ruin!

Beyond this the storm lifted somewhat, then came down to earth with redoubled fury. This time its victim

rest had fled for refuge, in time, and was blown with the house into the fields. In spite of numerous cuts and bruises he rallied from the shock. A singular feature concerning the damage wrought here was the fact, that while the buildings were blown in one direction the trees were afterward uprooted and carried in another. Agricultural implements were twisted beyond recognition, and one chicken was so unfortunate as to lose its head and be shorn of its feathers.

But by far the scene of the greatest calamity was some pretty woods near the St. Joe River. Here the storm seemed to vent the very worst of its wrath. A half dozen trees, robbed of limbs and foliage, are all that were left standing. The others, many of them giants of a century, were torn, roots and all, like so many canes, from the ground and scattered hither and thither, completely blocking the old road and necessitating the work of cutting a new highway through their trunks and branches. Immediately behind the grove a huge barn was leveled to the earth, pinning four horses beneath its heavy timbers. Pitiful, indeed, were the whinnies of the dumb beasts before they could be extricated from the wreck. A little farther on, a chestnut, scarcely two feet from the farm-house, was broken off and whirled over the house. The dwelling remained intact. Near the well-house, two trees, blown together, held the floor of the stable between their branches. What an army of skilled workmen could not have accomplished in a week, the cyclone had wrought in less than twenty seconds.

The second day following the disaster, a telephone message was received from Tekonsha, a town twenty miles distant, stating that a certificate of deposit on the First National Bank of Mendon, belonging to Mr. —, had been picked up in that vicinity. The paper was found to be the property of a gentleman whose home had been demolished by the cyclone, and it had, without a doubt, been borne the entire distance by the wind. It is remarkable that so severe a storm could have occurred without a long list of serious casualties. The residents of the devastated section are thankful that their heavy losses did not include the loss of life.

### California—The Land of Poppies

WHERE, blue and silver in the sun,  
The broad Pacific swells,  
And, king among the forest trees,  
The giant redwood dwells;  
And frosty winter never smites  
The smiling earth with gloom,  
In all their gay and glowing pride  
The languid poppies bloom.

THE hills are rich with yellow ore,  
And in the vales below  
The luscious fruits and fragrant flowers  
Of every climate grow;  
And by the ruined mission's walls  
And from the wayside sod  
And all along the garden walks  
The drowsy poppies nod.

BRIGHT, crumpled blossoms, silken pink,  
Pure white and crimson deep,  
And vivid scarlet, everywhere  
They tell a tale of sleep,  
When purple shadows long and cool  
Among the vineyards lie,  
And apples ripen into gold  
Beneath a turquoise sky.

WHILE Louisiana on her shield  
The sweet magnolia shows,  
And Maine displays the brown pine cone,  
New York the queenly rose,  
And Delaware prefers the peach  
To garland her renown,  
The Golden State elects to wear  
A regal poppy crown.

BY MINNA IRVING.

was a flourishing farm. The farm-house stood on one side of the road, the barns, granaries, out-houses, etc., directly opposite. Nothing escaped! One member of the family, an aged man, was unable to reach the cellar, where the

markable that so severe a storm could have occurred without a long list of serious casualties. The residents of the devastated section are thankful that their heavy losses did not include the loss of life.

## Changes in Our Diplomatic Service

THE HON. ANDREW D. WHITE, who is to retire from the position of American ambassador to Germany about November 15th, will have a fit successor in Mr. Charlemagne Tower, who has been selected by President Roosevelt for the place at Berlin. Mr. Tower is at present United States ambassador to Russia, and he has represented this country at St. Petersburg most ably and creditably. His promotion gives rise to a chain of changes. Mr. Robert S. McCormick, now ambassador to Austria, is to be transferred to the Russian capital; Mr. Bellamy Storer, now minister to Spain, is to go to Vienna; Mr. Arthur S. Hardy, minister to Switzerland, will proceed to Madrid, and Mr. Charles Page Bryan, minister to Brazil, will become our representative in Switzerland, and will be succeeded at Rio de Janeiro by Mr. David E. Thompson, of Nebraska.

Mr. Tower, who heads this list of fortunate and promoted diplomats, was born in 1848 in Philadelphia of wealthy parents

and received every educational advantage, graduating from Harvard and afterward spending four years abroad in the study of history, modern languages, and literature. Returning from Europe he studied law and was admitted to the bar. In 1878 the degree of doctor of laws was conferred on him by Lafayette College. He was for some time president of a railroad in Minnesota. In 1897 he was chosen as minister to Austria, and two years later he was sent to St. Petersburg. His ability, his diplomatic experience, and his good record

make it entirely certain that in Mr. Tower's hands the interests of the United States will be well safeguarded at Berlin.

The other officials named have also made excellent records in their present posts, and may be expected to keep up their good work in their new stations. Mr. Thompson, who is to go to Brazil, has been for years a prominent and active Republican in his State. He began life as a railroad brakeman, but worked his way up to the higher grades of service. He is now interested extensively

in real estate. Two years ago he was a candidate before the Legislature for United States Senator, but was defeated by Mr. Dietrich. He is a very capable man and will doubtless successfully uphold this country's interests in the matter of the coming rearrangement of tariffs between the United States and Brazil. The dispute of Brazil and two other countries over Acree, where Americans have interests, may require his attention.

MR. CHARLEMAGNE TOWER,  
Who is to be ambassador to  
Berlin.

MR. ROBERT S. MCCORMICK,  
Coming ambassador to  
Russia.

MR. CHARLES PAGE BRYAN,  
New minister to Switzerland.

MR. DAVID E. THOMPSON,  
Appointed minister to Brazil.

## Fine Sport for the Wild-geese Hunter.

THE WILD goose is the last of the large game birds that were once plentiful throughout the United States. Wild geese are found in the greatest numbers in the valleys of the Mississippi, Missouri, and tributary rivers. In the West, especially in the smaller cities and towns, everybody hunts during the season. A few of the more adventurous hunters go after the Canada goose. They go to the nearest city on the Mississippi, or other large river, and buy a shanty-boat, in which they float down until they reach some good hunting grounds. One or two days' run from a city like St. Louis, Kansas City, Cairo, or Memphis takes the hunters to a good shooting ground.

The geese feed in the swamps, lakes, and wheat-fields adjoining the river, and fly back and forth to the sand-bars at all hours of the day and night. It is on these sand-bars that the goose hunter hunts his game, or rather lets the game hunt him. He digs a pit in the sand and then puts up a set of wooden decoys which he has made himself. He stands in the pit surveying the surrounding country until he sights a flock. He then crouches down in his pit and calls the geese to him. A good hunter can imitate the geese's cries with his voice, while one who

cannot uses an artificial call. When the flock comes within thirty yards of the pit the hunter jumps up and shoots. If he is a good shot he will get one bird with each barrel.

About noon he goes back to his boat and, after hanging his game on nails in the cabin, cooks dinner. The shanty-boat is well equipped for cooking purposes. On sunny days the hunters eat their dinner on the bank, enjoying the scenery and the breeze with their meal. When the geese no longer decoy at one place the hunters untie the boat and float down ten or twenty miles and work another sand-bar. The boat is propelled by two large oars, which are used chiefly in making landings. When the men reach a city they tie up in shanty-boat town. It is a common thing to see a hundred shanty-boats in the river and on the bank in these floating suburbs. The shooting season lasts from October 1st to the middle of March. When the season is over, the hunters dispose of their boats for what they will bring, and after bidding each other farewell, go back by rail to their homes in the North.

As a health-giver, no tonic made equals Abbott's, the Original Angostura Bitters. Druggists and grocers.

## Mayor Low's Frank Weekly "Talks."

FEW THINGS afford a sharper contrast to the manners and methods prevalent at the centre of municipal authority in New York under Tammany administration than the weekly "talks" to press and people which Mayor Low has been giving at the city hall. Then the manners were generally objectionable, the methods devious and unknown, the citizens of New York being given at times to understand in plain language that the plans and purposes of the municipal rulers were "none of their business," and when any information on such matters was extracted it was generally regarded with well-founded suspicion as being only half truth, or possibly no truth at all. Mayor Low, on the contrary, having no jobs and plunderings of his own to conceal, and no rascally subordinates to shield from public scrutiny, is taking the public into his confidence and giving them a frank, straightforward "talk" each week on the workings of the city departments, on improvements contemplated or proposed, and other topics on which all citizens have a present and vital concern. This is an eminently proper attitude for the chief magistrate of a city to take toward the people, whose servant he is, and the example cannot be too widely followed by other men occupying a similar office.

MRS. CAMPBELL AND PINKI-PANKI-POO.—Dowry.

## Mrs. Patrick Campbell Tells of a Mistake

By Eleanor Franklin

WHEN I GOT off the Broadway car at Twenty-fourth Street I stepped into a puddle of muddy water. It was raining hard and I couldn't get my umbrella up, so by the time I got to the ladies' entrance of the Fifth Avenue Hotel I felt exactly as a dominick hen looks when she gets in out of the drip and begins to pick and preen herself. I introduce the subject in this manner simply by way of announcing that it was a most disagreeable day, and with my feathers, feet, and arid very much dampened I was not

feeling so good-natured myself.

Not that my ardor had been in such a glow. Dear, no! I was on my way to meet an appointment with Mrs. Patrick Campbell, made by her imported press representative the evening before. "Now Mrs. Campbell hates interviewers, you know," he had said. This was cheerful information, but it didn't matter much. It is an interviewer's business to get such and such detailed facts from such or such source and he generally knows how to go about it. If he finds it necessary to sacrifice some personal dignity in the proceeding—well, that is all right. It is a feature of the profession.

"Really, you know," continued the representative, "she has simply refused to receive them since she has been in New York, but you are one of three or four whom she has consented to see." Decius Brutus says of Caesar, "When I tell him he hates flatterers, he says he does, being then most flattered." People who "thoroughly dislike the spirit of American journalism," as Mrs. Patrick Campbell has so frequently been quoted as saying, can usually get a deal more free advertisement and entertain successfully a vastly greater number of reporters than your Eager Person, as George Ade would write it, who enters and crawls to the press.

Oh, it's a trick which works well in most things, that assumed air of indifference and ennui. And so Mrs. Patrick Campbell was to receive me, a mere interviewer, in her apartment at the Fifth Avenue Hotel, and here I had stepped off a street-car backward into a puddle of water and got my hat and feelings jolted sidewise.

"What is this, an interview?" was the greeting I received upon my presentation.

"Well, you might call it by that disagreeable title if you felt inclined, Mrs. Campbell."

"Let me see. You are—?" This seemed to be an important question, so I re-introduced myself.

"Ah, yes; to be sure. My manager was telling me. Well, what do you want to know—how old I am—how many gray hairs I have?"

Now, of course, she didn't say this for publication, but it exactly expressed her English idea of American journalism, and when I smilingly assured her that I had not the slightest interest in her age nor the number of her gray hairs she yielded charmingly.

"Come over here and sit down with me," she said, graciously enough, goodness knows. Why shouldn't she be bored? She didn't know me. I was a damp person from outside, where it was raining and disagreeable, and she probably felt the contrast between my dismal drab and the soft cosiness of her own exquisite white wool gown, which clung so gracefully to her tall, lithe figure. I'm sure I did. Besides, she knew I'd misunderstand her, perhaps misquote her—paint her in colors of my own creation. Why shouldn't she dislike to be interviewed? It must be bad enough, indeed, but just the same the interviewer isn't usually having a knutching party, either.

"Now, tell me," she said, "what can I do? One may as well help all one can, I suppose. I don't mean to be disagreeable, but interviews are so difficult, as a rule, but still I will do what I can. You see, I know you are a journalist. You want to succeed in that as much as I want to succeed in my profession; that is your work, this is mine. Would it not be disagreeable of me not to help if I can? We should always be willing to help in everything, shouldn't we?" and her beautiful black eyes grew deep and soft as she added: "What atoms we are, after all, each whirling about in our own separate little maelstrom."

"Have you really expressed to me your idea of American journalists? Are they all so difficult?" I asked.

"Oh, dear, no; but it is all so new to me. Not so much this season, but last, I really didn't understand it, and I got myself disliked simply through my lack of understanding. There is a critic on one of the big newspapers in New York

who really dislikes me and will say nothing good of me, and I don't blame him either, but it was all through a mistake on my part. You see, it is customary in England to give on a first night, after the performance, a supper on the stage to one's friends and associates. Over there we never think of inviting the representatives of the press. It would be positive bad form—like catering, you know, for favorable criticism. Well, it never occurred to me when I came over here that the same rule did not apply on this side also, so on my opening night last season I planned the usual little celebration and told my business manager I should be pleased to receive any friends whom he might wish to invite. Well, of course, I thought nothing more about it. The opening came and the performance passed off very satisfactorily, and our friends began to come in for the little party. We were just sitting down to supper when a card was sent in to me. 'Mr. ———, New York.' Well, being hostess, I was very busy just then, and, seeing the name of the newspaper, I supposed, of course, it was a reporter, and I sent word back that I couldn't see him. Well, it turned out that he was my business manager's friend, whom he had invited to supper at my request. Dear! dear! it makes

After this we talked of many things mutually interesting, or rather Mrs. Campbell talked in her unusually persuasive little way and I listened, thinking all the while, as I watched the play of thought upon her expressive face, how much we should love her if she belonged to us.

But she is "a stranger within our gates," as strange to us and our way as we to her and hers. If she belonged to us we would not go to her theatre out of curiosity merely, but to be lured by her art and our love; to see the personation of a charming woman drawn on lines of strength and beauty and to come away satisfied and proudly happy in the thought that she is ours. Do we not so love our Mrs. Fiske, our Julia Marlowe, our Maude Adams, our Henrietta Crossman, and Viola Allen?

But Mrs. Campbell is "a stranger within our gates," so we must needs run with eyes and mouths agape and look her over, examine her in minutest detail, pry into her very thoughts, and then chatter-chatter until there is nothing left to say. When we have become well acquainted with her, as we are with Miss Ellen Terry and Sir Henry Irving, we will simply welcome her, I suppose, and call her "English cousin."

### Fuel Substitutes.

WITH THE possibility before the country of coal at twenty dollars a ton and upward, it is not surprising that the "mother of necessity" should be busy contriving other things to take the place of black diamonds as a fuel. Whether coal is high or low, or there is no coal at all, crude oil is fast coming to the front as a combustible, and is now extensively used on railroad and steamship lines in various parts of the world. Only recently a corporation has been formed with a capital of several millions to push the sale of oil as a fuel. The situation in the coal market will doubtless also lead to a large use of gas for cooking and heating, as well as illuminating, and when once installed for this purpose its advantages over coal in the way of cleanliness and convenience will be likely to cause its continuance thereafter, when coal drops back to its normal price. Electricity, also, which now leads all other natural agents as a producer of light and power, will in all probability some day figure largely as a heating medium, and the present scarcity of coal may bring that day still nearer. It seems quite likely, indeed, that the great coal strike may be only hastening the time when coal shall be king no longer, but will find its supremacy disputed by oil, gas, and electricity. The most novel suggestion we have noted by way of meeting the present emergency is that of the Baltimore man who says a good substitute for coal is dried peach-stones. The only objection to their use is their scarcity, which depends entirely on the size of the peach crop. The Baltimorean referred to says his family had used peach-stones as fuel for years until about three or four years ago, since which time the supply appears to have decreased. All other resources failing, we might fall back upon peat, the fuel of Ireland, a material which abounds also in the vast marsh lands of North America, or we might also, if stern emergency demanded, throw some part of our two-billion-bushel corn crop into our furnaces, a material which makes excellent fuel, as some Western farmers have discovered in other years, when corn was too cheap to make it worth while to send it to market.

### Grateful for Food.

LIVED SEVEN WEEKS ON MILK.

"THREE years ago this month, I was a great sufferer with stomach trouble," writes Mrs. William Leigh, of Prairie du Sac, Wis. "I had to give up eating meat, potatoes, and sweets, and lived simply on bread and tea; finally that, too, had to be given up. I got so weak I could not work, and I took nothing into my stomach for seven weeks but milk. I had tried three doctors, and all for no purpose; the last doctor advised me to stop all medicine. I had to anyway. I was so weak I was prostrated in bed."

"A friend advised me to try Grape-Nuts, but I was afraid to when a teaspoonful of milk brought tears to my eyes, my stomach was so raw. But I tried one teaspoonful a day of the Grape-Nuts for one week, and finding it agreed with me, increased the quantity. In two weeks I could walk out to the kitchen; in four weeks I walked half a block, and to-day I do my own light housekeeping."

"I live on Grape-Nuts and know they saved my life; my people all thought I could not live a month when I commenced using them, and are very much surprised at the change in me. I am very grateful that there is such a food to be obtained for those who have weak stomachs."

MRS. CAMPBELL'S LATEST PORTRAIT.  
Sargoy.

my head ache to think of it! Such a rude thing to do; but I was hardly to blame under the circumstances. I just thought it would be bad form to receive a newspaper man at such a time. It would have been in England."

Just then Pinki-Panki-Poo came tinkling from an inner room. I say tinkling, because all the little silver buckles and tiny bells on her elaborate regalia made as much noise as if they had been on a dog of respectable proportions.

"Ah, my Rita!" exclaimed Mrs. Campbell, picking the little mite up and sitting her in the palm of one hand. "My Pinki-Panki-Poo! Has she not become famous? You hear more of her than you do of me, a good deal. Everybody writes about her. My Pinki-Panki-Poo is appreciated in America."

"Yes, I know," I replied; "but I thought the general impression was that this is due to the plentiful lack of ideas on the part of your press agent."

"My press agent! There it is again. Do you know the latest story they have about me and my press agent? They say I have employed one whose business it is to keep everything possible out of the papers. That is not speaking well for my business acumen, is it? But it all comes of my not understanding the newspaper spirit in America in the beginning," and Mrs. Campbell gave Pinki-Panki-Poo a vigorous little hug by way of emphasis.

# Horrors of the Cholera Epidemic in China

By an Eye-witness

CHOLERA-SCOURGED CITY OF CHEFOO, WHERE THOUSANDS OF PERSONS ARE BEING SWIFT AWAY.

CHEFOO, CHINA, September 7, 1902.

CHINA IS probably the most thickly populated country on the face of the earth, and one often wonders how its teeming millions find subsistence. The country could not support this immense population were it not that forces are at work which tend, in a measure at least, to keep down its increase. Emigration, wars, famines, inundations, and pestilences are factors which help keep down the population. It is estimated that the Tai-ping rebellion cost thirty millions of lives. The Yellow River, rightly called "China's Sorrow," has swallowed up millions of people. Famines extending over large areas have depopulated entire districts. Pestilences, such as the bubonic plague and cholera, have also carried off millions.

China has been visited by several fearful epidemics of cholera, and so extensive were they in area that they might more properly be called pandemic. The severest of these cholera epidemics occurred just forty years ago, in 1862. Beginning at Foo-chow it spread north, south, and westward through the entire country, sweeping millions into the grave. Whole villages were depopulated and one-half of the foreign population in the ports succumbed. In the native city of Shanghai, by actual count, a thousand corpses a day were carried out for six weeks. This epidemic spread westward, encircling the globe, appearing in less than two years in Europe, whence it was carried over to America. Another epidemic raged in 1894, the summer after the China-Japanese war, but was confined mostly to the coast cities. In Peking 50,000 died.

Not since 1862 has there raged such an epidemic of cholera as is raging at present. Some old residents who passed through that one think the present one is even more extensive and just as virulent. It is sweeping through the whole empire, from Canton to Peking and from Shanghai to Szechuan. And it is not confined to coast or port any longer, but is also sweeping through the country districts, making havoc in every village it strikes. It seemed to begin simultaneously, in June, in Canton, Shanghai, and Manchuria, and from these centres it has spread until there is scarcely a province in the empire that is not infected. Thousands have perished in Manchuria, Chili, and Shantung. In Kweilin, a large city of Kiangsi, people are dying at the rate of 1,000 a day, and over 40,000 have already succumbed. So great was the death rate that it was impossible to meet the demands for coffins, and tub-makers and other workers in wood were pressed into service to make coffins. In Shanghai the epidemic has been especially severe, not only among the natives, but among foreigners as well; over forty foreigners have succumbed thus far. It spares no one, high or low, old or young. Usually the beggars and coolie class are the first to be attacked, and then the better

classes are affected. It has crept into the imperial palaces at Peking and some of the eunuchs have died of it. As a consequence the Empress Dowager has become frightened.

The disease seems to be of a specially virulent type, an unusually large per cent. dying from its effects. Some die within a few hours. Carriers of burdens, fruits, vegetables, etc., fall down and die in their tracks before reaching their destination. Whole families are wiped out in a single night. The writer knows of a village near Chefoo consisting of fifty families. In a short time one hundred members died and the surviving ones have lost all hope. They do not attend to their business, but simply wait until their turn comes. Travelers arrange with their muleteers or carters to be taken home,

may die before morning and there be no one to identify him. Quarantine regulations are only enforced at the ports and evaded elsewhere. For example, quarantine is enforced here, at Chefoo, against ships from Manchuria, but steamers carry thousands of coolies from Port Arthur and New Chwang to Tengehow, a city fifty miles northwest from here, on the coast. Two weeks ago there was not a single case of cholera reported at Tengehow; now the people are dying there at the rate of twenty to thirty a day.

And when one knows the extremely filthy condition of Chinese towns and cities, the constant violation of all rules of hygiene and sanitation, it is no wonder that the disease spreads. At present it is a daily sight to see old and young indulge freely in cucumbers, melons, and unripe fruit. The water from their filthy wells is not always properly boiled and is a sure source of infection.

And what is being done to stay the progress and spread of this dread epidemic? Practically nothing. Probably the most practical measures are being put forth by the missionaries. Officials are induced by them to issue proclamations warning the people to refrain from eating melons, cucumbers, and unripe fruit, and to drink only boiled water. Tracts are also printed and distributed telling the people how cholera can be avoided. Thousands of people are treated by the missionaries, who distribute medicine freely, and hundreds owe their lives to this treatment. The natives are helpless in treating this disease; they bleed the patients or run red-hot needles into them. They have recourse to their superstitious practices, celebrating the New Year, thinking thus to fool the disease demons, or give theatricals to the god of pestilence, or dress up a beggar in theatrical clothes and then wash him in the sea. It is really pitiable to see these vain and senseless efforts of the people while the observance of a few simple hygienic rules might save thousands of lives.

## No Duty on Little Presents.

COLLECTOR STRANAHAN, of the port of New York, is ably seconding Secretary Shaw's efforts to have a common-sense construction put upon the customs laws relating to the belongings of passengers returning from abroad. He has laid down the rule that trifling presents brought over by such persons and not exceeding \$100 in their aggregate cost are not dutiable, provided they are intended for immediate relatives. An excellent beginning is thus made in bringing our customs regulations down to a basis where they will compare favorably with those of other enlightened lands. The good work should proceed.

HEIDIOUS GOD OF PESTILENCE WHICH THE CHINESE SEEK TO APPEAR WITH THEATRICALS.

dead or alive, as there is such a strong probability of their dying while on the road, and every Chinaman wants to be buried at home, if possible. The writer has seen coolies and beggars stricken down on the streets of Chefoo.

The appearance of collapse, the sunken eyes and cheeks and ashy color of the face, only too plainly told the tale. From forty to fifty a day have been dying in Chefoo and daily rude coffins are being carried past the writer's door up to the pauper graveyard. The effect of this epidemic is paralyzing; traffic is seriously affected, and there is but little travel. Inn-keepers refuse to entertain single travelers, for fear the party

# Concerning a Woman's "No"

By William MacLeod Raine

BILLIE MILLIGAN had just finished proposing to Tasse Williams, and she had that moment made an end of rejecting him. A man may take his answer tragically or comically, with anger, pathos, dignity, unconcern, or bitterness, according to the genius of his grain and breeding. Milligan chose to take his incredulously.

"A woman's 'no' means yes," he ventured, tentatively.

She shook her pretty head decisively. "Not this time."

"You're missing a great chance," he informed her, calmly.

"How modest you are!" she murmured, and looked at him out of twinkling eyes.

"Not at all. I simply appreciate myself. It doesn't do to depreciate one's worth these days."

"Indeed! I suppose I am not clever, or I would see you in the radiant light you see yourself," she retorted.

"You probably haven't got the right focus on me; but don't worry about it; I'm here to change your point of view if it takes all summer," he explained cheerfully.

"How nice of you!" she gushed with mock admiration.

"Well, that's not for me to say. Still, you might do worse. I'm bound to rise. How would you like to be the wife of Senator Milligan?"

"Oh, make it President," she implored, ironically.

"Can't. I'm barred—not born in this country, you know. Confounded nuisance!"

"Too bad!"

"Yes, it is too bad. But I'm not worrying over it. I look at it as one of those things that can't be helped."

"You are quite a philosopher. I suppose you will come in time to look at my answer in the same way," she suggested.

He did not intend to consider that as a possibility.

"There's no analogy between the cases. I expect to change your mind. You are a woman, and therefore to be won. Didn't some poet chap say that?"

"You seem to have a good deal of confidence in yourself. Couldn't you get the Constitution changed, too, while you are at it?" she scoffed.

"I might; but don't bank on it. I can only promise you the senatorship," he told her easily.

"You are a very promising young man. One would like to see some little beginning of performance as earnest of the future," Miss Tasse answered.

"Rumor bath it that Billie Milligan made the winning touchdown in the Western game," he answered demurely.

"Oh, I'm not denying you can play football, but one does not marry a man on his football record. I have not noticed you do any brilliant work at Greek or Analyt."

"You've never known me try, have you?"

"Can't say I have. Suppose you do try your hand at something serious for a change. If you are going to achieve greatness you will have to begin some time. It will be amusing to see the process of a Senator in the making. The evolution of a statesman. What an inspiring topic!"

His eyes answered her mocking laugh, but there was in them a latent suggestion of seriousness.

"Very well. In what line would you like me to distinguish myself at present—scholarship, society work, public speaking? You pays your money and takes your choice."

"Well, suppose we say public speaking. Get on one of the intercollegiate debates, for example," she told him after a slight pause for consideration.

"And if I do something big in public speaking, it is understood that your 'no' becomes a 'yes'?" he demanded. Womanlike, she temporized. "I should be quite safe."

"But if I do?"

"We'll see."

"But if I do?" he insisted.

She laughed a little shamefacedly. "Really, you are the most persistent youth."

"I don't think I heard you answer my question. If I do?"

The door-bell rang to admit a friend of hers, but as she fled she flung back saucily over her shoulder:

"It is quite impossible, you know, but if you do—I shall think again about it."

Milligan thought about it a good many times before he

"IT IS QUITE IMPOSSIBLE, YOU KNOW, BUT IF YOU DO—I SHALL THINK AGAIN ABOUT IT."

saw his way clear to a solution of the problem before him. The thing did look a bit impossible. To be sure, there were several intercollegiate debates to be held in the Winter term, but the trouble was that he had no claim to an election as one of the representative debaters of the college. He had never done anything at that line, and there were a good many other students who had done a good deal. Milligan knew himself to be a popular fellow, and it was quite within the bounds of reason that if he used his influence as half-back on the football eleven and captain of the 'varsity nine, he might win a place among the debaters by sheer "pull." But he did not like to do that. It struck him as hardly fair to the other fellows who had shown their ability as debaters. What he wanted was some unexpected chance to prove himself in line for an election as one of the representative debating team. He did not at all doubt his ability to make a good showing, but the rub was to get the chance.

It happened that a certain famous candidate for the Vice-Presidency was scheduled to make a speech to the students in a few days, and the Young Men's Party Club had made great preparations to do him much honor. Milligan also made his preparations, but he did not advertise them. There was a great crowd of students at the depot to greet the candidate, and when his train drew to a stop the "Hi-O-Hi" was ripped at him from five hundred throats again and again. Then followed class yells, and an improvised yell of the political club. Banners and transparencies done in college colors were in evidence everywhere. Certainly the candidate could not complain of a lack of heartiness in his reception. He was chaired on the shoulders of the excited crowd to his carriage, which was dragged up the main street of the town to the college campus by the students themselves in lieu of horses. Long after he had disappeared into the house of the college president for the mid-day dinner, enthusiastic youths were still flinging class yells into the air and demanding to know, "What's the matter with our next Vice-President?" Which query they answered with the usual refrain, "He's all right—all right."

An hour later a long double line of young men faced each other and stretched from the house of the president

to the college chapel. There were some hundreds of them and they were stationed at intervals of three feet, each bearing some device which set forth the merits of the candidate or the cause. They were awaiting the appearance of "Prexy" and his distinguished guest, who meanwhile were still lingering over the walnuts. This was when Billie Milligan got in his fine work.

Milligan and his room-mate, Jack Daniels, vaulted across the back fence of the president's yard, came quietly around the corner of the house, walked briskly down the walk, and stepped in between the waiting lines. Both men were clad in immaculate afternoon attire: frock coat, high hat, patent leathers with spats, regulation gloves, and funeral gravity.

Their stage entry had been so quiet and so sudden that only a few of those nearest gasped out a recognition. Naturally they were mistaken for the candidate and his host.

A cheer was lifted into the air, rolled along the line, and came echoing back from the great crowd which waited outside the chapel. With becoming dignity Milligan and Daniels paced slowly down the walk, bowing to right and left without the flicker of a smile upon their faces. As they moved forward and were recognized, loud guffaws and indignant protests greeted them, but except in their immediate vicinity the cheering still continued, alternating lustily with the college and class yells.

"Egad, we have a warm place in the hearts of our fellow-countrymen, apparently. Didn't know our virtues were so thoroughly appreciated," commented Daniels in the intervals of his formal bows.

"Bedad, and we're prophets in our own country, Danny, my son. I'm wondering, though, how long it will be till the lightning hits us. Mind, no weakening. We play the game right till the call of time," answered Milligan, with his graveyard face still in evidence.

(Continued bowing and cheering.)

"Oh, I'll see it out, but I want to bet a hat they make us pay for our fun after the show is over," returned Jack.

"That's what they will. Say, keep your eye on Mickey Green over to the left here. Wouldn't it make a horse laugh to see how sold he looks after all that bellowing he has been doing?—I thank you, gentlemen, for this splendid evidence of your regard.—Oh, I say, Danny, get on to 'Beef' Harshaw pushing out of line to shake hands with your uncle.—Sir, the honor is mine, I do assure you," Milligan ran on, partly to his companion and partly to the outer world.

(More bows, cheers, groans, but never a sign of levity in the two wooden faces with the solemn, stereotyped smiles graven on them.)

Milligan had arranged for every contingency that he could foresee. Among other things he had tipped the janitor of the college chapel not to open the doors until the last moment. Consequently a large crowd eager for diversion was waiting outside the building.

Billie mounted the steps of the chapel with his companion, and turned to bow his thanks for the enthusiastic greeting which had been tendered him. For a long minute he stood bowing with his hand in the breast of his coat. Mingled with the good-humored, derisive cheers were groans, cat-calls, ridicule, and much ironic advice. But Milligan knew his time would come, and stood waiting for the din to subside, as silent as the Sphinx and apparently as unperturbed.

The inevitable happened, and somebody called for a speech from him.

"Speech! Speech! Give us a speech, Billie," they began to call from all sides.

Now Milligan had audacity enough to sink a three-decker. He had planned no less a debut for himself in the forensic field than a joint debate between himself and the vice-presidential candidate. That he might know his adversary, he had traveled three hundred miles a few days before to hear him speak. He had put a week into the preparation of what he was about to say, and had let everything else go by the board in the meanwhile.

He raised a hand for silence, and one of those curious impulses of quiet which sometimes come over a crowd swayed his audience now. So far everything had worked

GREAT INTEREST IN COLLEGE FOOTBALL—SCANDALS OF THE TURF—HUNTING IN THE SOUTH.

**THE ACTORS ON THE FOOTBALL STAGE.**—While October plays a distinctive part in football history each year November is really the month devoted almost exclusively to football. It is the month of the year between the sports classified as of the outdoor and indoor sort. While the absence of important games to be played in New York City will lessen the interest in the game this fall in the metropolis, the same condition of affairs does not prevail in other sections of the country. Throughout the East and West the interest in the robust college pastime has never been greater than it is to-day, and those who have predicted that the college game would ultimately give way to the association game have still a long time to wait for this change. College football is a rough sport, and, while not as easily understood as the association game, it holds its popularity as few other sports have done in this country. Those who a few years ago decried the sport on account of its alleged brutalities have about turned their attention to other things. The graduate committees in charge of the teams at the different universities have done much during the last few years to eliminate many features which enabled the enemies of the sport to condemn it. Many friends of football would like to see the rules so changed that there would be less mass play and more open work, but it is doubtful if this can be brought about so long as the Rugby game is played. Close formations seem to be as necessary to Rugby as individual, open, spectacular work is to the association game. The effort to introduce professional football now going on probably will not prove to be a success. The college student will sacrifice an eye, a tooth, much cuticle, or broken bones for his college, and will go down in college sporting history as a hero for the cause. When, however, a man is called on to make such sacrifices for a salary at so much a week or season the conditions will be found to have changed. I have known college men to join semi-professional teams after leaving college, but they never played with the same vim which characterized their work at college. For one thing, a man will never train as faithfully as he did when the college trainer was his athletic and physical mentor and adviser. When not in perfect physical condition a man has no business tackling football. Yale has turned out a splendid eleven this year, and the followers of Old Eli are pretty confident that the New Haven collegians will beat both Princeton and Harvard. The crimson had a dangerous attack of overconfidence early in the season, but this has fortunately disappeared, and the followers of Harvard realize they have not nearly as good a team as was at first supposed. Harvard must play better football than she has shown to date to beat Yale. At Princeton, Pennsylvania, Columbia, Cornell, Carleton, and other Eastern colleges the teams are shaping up nicely, but that any of them will defeat either Yale or Harvard seems dubious. Still, surprises are happening regularly in football. Out West the University of Michigan has put another wonderful team in the field, and it is too bad that the Michigan giants will not have an opportunity to tackle the best teams in the East. The chances are, however, that Michigan will meet one of the "big four" next season. Last year Michigan made the remarkable record of scoring 550 points to nothing for her opponents, and if this record is duplicated this year the Eastern universities will have no tangible reasons for refusing to meet the young giants of the West. Michigan's coaches are confident that they have an even better team than last year.

**CORRUPTION ON THE TURF.**—The wonderful success of horse racing this year seems to have dulled the intellect of the track-owners and of the members of the Jockey

Club. In-and-out running, clumsy or woefully careless riding, by some of the leading jockeys has caused so much scandal on the Eastern turf during the last few months that those fond of the sport are particularly solicitous about its future. The present policy of the Jockey Club has been to decry severe criticism, but this

MR. CHARLES JARRAT, HOLDER OF THE WORLD'S KILOMETER MOTOR RECORD.

policy cannot be continued if the welfare of the turf is to be maintained. The stewards have sat in the stands this year and witnessed the most flagrant cases of reversal of public form, of reckless riding, and of peculiar betting in the ring, without paying the slightest attention to them. They have also seen the attendance figures dwindle during the last few weeks, and yet have not made a move which would help to restore public confidence in the honesty of the turf. The recent meeting at Gravesend was even more unsatisfactory than was the spring meeting at this track, and while the big plungers, of the "Pittsburg Phil," Drake, and Gideon order, are credited with heavy winnings, the public at large, which backs the horses on their form shown in previous races, shouted with glee when the racing at that track had been finished for the season. The meeting at Sheepshead Bay was also anything but satisfactory to those who go to the tracks more or less during the racing season. The present policy of the racing officials seems to be to give every possible protection to the bookmakers and to forget that the great public exists.

**THE SALVATION OF BASEBALL.**—There is a disposition in some quarters to ridicule the statement made by Andrew Freedman, the ex-owner of the New York Baseball Club, that he has sold out his interest in that club to John T. Brush, of Indianapolis. Those in a position to know tell me that the sale has actually taken place and that the national game will have no further troubles with Freedmanism. A Chicago paper, on the night of the announcement of Freedman's retirement, wired to the leading

baseball writer in each city of the National League circuit, asking for personal opinions as to how Freedman's retirement would affect the game. The replies were unanimous that it meant the salvation of baseball. No man ever connected with the game achieved the same amount of unpopularity as Freedman. Of Brush, who is really the leader as well as the diplomat of the old league, some harsh criticisms have been made in certain quarters. Those, however, who know the Wanamaker of Indianapolis, are of the opinion that he will spend money liberally and place a first-class team in New York. That is all that is needed to boom the game throughout the country.

**A TIP TO HUNTERS GOING SOUTH.**—All over the country sportsmen are getting ready to take their shooting jaunts into the fields and woods. The trips South are becoming more popular each year, and the number of Northern sportsmen who will go to Virginia, West Virginia, North and South Carolina, Georgia, Florida, and other States south of Mason and Dixon's line, will be larger this year than ever. The sportsmen generally are of the better class, spend their money freely, and are nearly always welcome visitors to the natives. In a few districts the old laws preventing the shipping of game out of the State are still operative. Reports from several sections of the country show that quail and rabbits are plentiful this fall, owing largely to the open and dry summer. Partridges, turkeys, ducks, and geese are also said to be large in numbers in sections where these birds are to be found.

GEORGE E. STACKHOUSE.

### Sporting Queries Answered.

**G. C. M., CHICAGO.**—Heershoff, it is understood, has already received a commission to build a boat for the New York Yacht Club which will be able to beat either the *Columbia* or *Constitution*. It will be raced against Lipton's new *Shamrock* when the challenger reaches this country.

**H. M. L., SAN FRANCISCO.**—In a game of draw poker the player must take the number of cards he asks for, providing they have been dealt to him and the next hand has been dealt. If he called for the wrong number, that is his own fault, and he must discard from his hand to fit the draw.

**S. A. F., LOUISVILLE.**—The Louisville Club holds the record for the number of defeats sustained in a single season. The Pittsburgh team this year makes a new record for victories on the baseball field for one season. The Pirates captured 103 victories. The old record was 102.

**G. A. Y., ST. LOUIS.**—No national ping-pong championship has as yet been arranged for in this country, but there is talk of such a tournament for the coming winter, to be held in either New York, Boston, or Chicago.

**J. M. M., PATTERSON, N. J.**—The word chauffeur, as applied to the driver of an automobile, is generally pronounced as if it was spelled "shofer," with the accent on the last syllable.

**L. E. W., CHICAGO.**—Miss Genevieve Hecker recaptured the woman's golf championship this year.

### SUCCESSES OF A PROSPEROUS DRAMATIC SEASON.

PORTRAITS OF PROMINENT PLAYERS AND STRIKING SCENES FROM THE LATEST OF NEW YORK'S AMUSEMENT OFFERINGS.

REV. DR. THEODORE CUYLER,  
Eminent divine, who has published his  
recollections.

that the venerable and distinguished author must have wielded the blue pencil with merciless vigor and impartiality on his work to condense the story of such a long, busy, and remarkable career into so small a compass. To put within the space of less than four hundred pages what might easily, no doubt, have filled ten times that number, without loss of interest, was surely an act of self-restraint worthy of note. But in these days of many books, Dr. Cuyler has acted wisely in this matter in giving the world only the cream of his recollections, the richest part. As it is, the volume is replete with entertaining and delightful anecdotes of many men and women famous in the circles of literature, art, politics, religion, and philanthropy during the latter half of the nineteenth century, with whom Dr. Cuyler was on terms of personal intimacy. One of the first in the long line of brilliant names thus linked in happy memories is that of Washington Irving, whom Dr. Cuyler met on a Hudson River steamer one summer day three years before the former was laid away to his rest in the old Dutch churchyard at Sleepy Hollow. The sunny-hearted author of the Knickerbocker legends is described as being attired on this occasion in "an old-fashioned black summer dress, with 'pumps' and white stockings, and a broad Panama hat." The meeting must have been mutually agreeable, for we find the fact chronicled that on parting Irving whispered quietly in the ear of his young clerical acquaintance: "I should like to be one of your parishioners."

WHITTIER, GENTLEST and most beloved of American poets, is another of the rare personages to be met in these pages. On one occasion Whittier was invited over to dine at Dr. Cuyler's with the "Chi Alpha," a clerical association, the brethren gladly putting aside their regular programme to listen to "the fresh, racy, and humorous talk of the great poet." After this meeting Dr. Cuyler and Whittier had a moonlight walk together, in the course of which the former told the poet that not long before, when he quoted a verse of Bryant's to Horace Greeley, the editor had replied: "Bryant is all very well, but by far the greatest poet this country has produced is John Greenleaf Whittier." This compliment from "friend Horace" seemed to please Whittier greatly. Of Greeley himself we have a number of diverting stories. Perhaps the best of these is that relating to Greeley's comment upon himself for a blunder he had made in an editorial by writing the word "Cattaraugus" when it should have been "Chautauqua." When the editorial appeared Greeley went up into the composing room in a great rage and called out, "Who put that Cattaraugus?" The printers all gathered around him, amused at his anger, until one of them, pulling down from the hook the original editorial, showed him the word "Cattaraugus" just as he had written it. When Greeley saw the situation he assumed an air of the greatest meekness and drawled out: "Will some one please kick me down those stairs?"

DR. CUYLER has made frequent and protracted visits to Europe, and his friendships over there have included such illustrious personages as Gladstone, Dean Stanley, Spurgeon, Lord Shaftesbury, Newman Hall, and Dr. John Brown. With the author of "Rab and His Friends" in his Edinburgh home Dr. Cuyler spent some delightful days. One day the two made a call on Sir George Harvey, the famous artist, whom they found in his studio, working on a Highland landscape. Sir George, we are told, was a hearty old fellow, and the two friends had a "merry crack" together. On the return from this drive Dr. Brown gave his American visitor an elegant edition of "Rab" with Harvey's portrait of the immortal dog. It was Dr. Cuyler's privilege to be the guest of Mr. Gladstone on several occasions, and the two had many earnest talks together over great issues of the day. Once when Dr. Cuyler called to say "good-bye" previous to returning to America, he found Gladstone suffering from a cold so severe that his voice could only be heard in a whisper. Seeing this, Dr. Cuyler said, "Do not attempt to speak, Mr. Gladstone; the future of the British empire depends upon your throat." "No, no, my friend, it does not," was Gladstone's reply, as he gave a parting hand shake. And Dr. Cuyler proceeds to say that his prediction came true. "Within a year the marvelous old man had recovered his voice, recovered his popularity, resumed the Liberal leadership, and for the fourth time was prime minister of Great Britain."

IT SHOULD be said that the chief value and significance of this story of Dr. Cuyler's career, as told by himself, lies in the striking testimony it affords to the power of a life devoted to the highest service to which any life can be given, and with a range of influence such as few men have been able to command. Dr. Cuyler has had the

unique distinction of using as mediums of influence, at one and the same time, the three most powerful agencies of modern civilization, the pulpit, the press, and the platform; and through and by these means his wise, helpful, and inspiring counsels have reached and affected for good the lives of an untold multitude of his fellow-men. Through more than fifty crowded and eventful years, incessantly, unweariedly, in all matters of sound and righteous principle, has Dr. Cuyler been laboring with voice and pen for the promotion of right living among men. Although staunchly loyal to his own creed, Dr. Cuyler has never been a controversialist, but has chosen rather to gain his ends through the counsels of a sweet, tolerant, and gentle spirit. While his trumpet has never given forth an uncertain note on any great question of the day, his mission has been emphatically that of a pacificator, a promoter of that charity and good will among men which constitutes the essence of the Christian gospel. Dr. Cuyler is to-day one of the most widely and deeply loved of all living men, and his counsels are gladly heard and received by people of all creeds and nationalities throughout the civilized world. May it yet be many years before the *finale* is written for the story of this most noble and illustrious teacher and guide.

MARY TRACY EARLE, whose "Flag On the Hilltop" is one of the latest juvenile stories from the press of Houghton, Mifflin & Co., is a native of Illinois, the State where the scene of the story named is located, and she has evidently drawn on her own experiences for the wool, if not for the web, of the tale in which figure "copperheads" and other characters who were to be found in the border country during the Civil War. Cobden, Ill., Miss Earle's birthplace, is in a border-land between the North and the South. The Earles and many other settlers from the North and East came in before and during the Civil War, and were surrounded by the earlier settlers from North Carolina, Tennessee, and Kentucky. Cobden used to be called South Pass; then the name was changed in honor of Richard Cobden, when he went through on his American travels. Much that Miss Earle writes may be traced back to South Pass, but more to a little place in Mississippi, on the Gulf coast, between New Orleans and Mobile. From 1885 to 1893 Miss Earle spent much time on the coast. Life in the far South was so different from that in the middle region that it gave her her first available literary material. The impression was so vivid that for a time she wrote of it almost exclusively, but then began to go further back. Nearly everything she has written relates to one of these two places, yet she wrote little until she left them both and came to New York in 1893.

### The Best of the Best.

THE LEADING ORATORS OF OUR TIME IN SESSION  
ASSEMBLED.

THE FINDING of a book which contains all the ingredients of good reading, which will appeal to all who read for profit or amusement or who prefer to combine both, is a rare event in the life of the reviewer. The task of discovering the good is perhaps rendered all the more difficult by reason of the perennial outpour, under the name of literature, of much which, at the best, is of ephemeral interest. But it is a satisfying thought that even the most extravagant claims, the most vigorous puffing, will not galvanize the worthless into life, whereas the hold of that which is good will steadily grow.

That which will stand the touchstone of the highest praise of competent judges must indeed be of supreme merit. Such is "Modern Eloquence," of which it may be truly said that the highest praise is no exaggeration. Having read the laudatory remarks of those who are competent to pass an opinion, and then having carefully examined the ten volumes of the work in question, one feels that the half was not told. This combination of book and library should be in the hands of all who care to read anything that is worth reading. Are you interested in literature, politics, art, science, money-getting, character-building, your own country, foreign countries, history—in short, are you interested in anything? If so, you will find much to hold your attention in "Modern Eloquence." Are your tastes catholic? Then you will find a veritable treasure-trove in this collection of gems. The subjects dealt with are as numerous and varied as the tastes, whims and humors of the inhabitants of this country.

Whether you read as a pastime or as a serious occupation, whether your humor is grave or gay, you will find much to your taste in every one of the ten volumes. Whether you have an hour or half a day to devote to reading, you will find what will hold your attention, and you will want to go on reading. No one of ordinary intelligence could read even the list of contributors without noticing some whose fame was familiar to him, for the contributors are the most prominent in arms, in arts and song, in science and in business. And what is more, every man speaks on subjects with which he is well acquainted. Pathos and humor play hide and seek in the pages of "Modern Eloquence"; glorious deeds are recorded and actions of glorious dreams are dealt with; the noblest nations and individuals are described in fitting language; philosophers,

poets, politicians, soldiers, statesmen, seers, men of action, men of thought—all speak words of wit and wisdom. "Modern Eloquence" is one of the most

difficult books to lay down; one always longs to read another page, another speech.

To give more than a suggestion of the contents of "Modern Eloquence" would require a bulky pamphlet, or a closely printed page of a newspaper; to say that it is a library of the most famous after-dinner speeches, classic and popular lectures, the best occasional addresses, anecdotes and short stories, no more does justice to it than would a two-dozen word description cover New York satisfactorily. Similarly to endeavor to give an adequate idea of the many excellencies and interests of "Modern Eloquence" is like trying to condense all one knows of a big subject into a ten-minute speech. Think of the most prominent of modern statesmen, divines, lawyers, orators, and in fact the leaders in many walks of life, and you have a list of the contributors. Think of the subjects which you and your most intelligent friends would be interested in—such are the subjects dealt with by those who have given of their best to "Modern Eloquence."

To take Volume I, as an example (it is one of those devoted to after-dinner speeches) Henry Ward Beecher is represented by six speeches, including "Religious Freedom" and "The Glory of Woman"; Hon. J. H. Choate by eleven, including "The Pilgrim Mothers" and "Peace Between Nations"; Mark Twain by six, including "New England Weather" and "Woman, God Bless Her"; Chauncey Depew by twelve, including "The Beggars of the Sea" and "Woman"; George William Curtis by six, including "The English-speaking Race," and among many others the following figure: Henry Van Dyke, Charles Dickens, Robert Collyer, Captain Coghlan, Joseph Chamberlain, Andrew Carnegie, William Jennings Bryan, Max O'Rell, J. G. Blaine, and Senator Beveridge. One of the most striking features of Vol. III. is eleven speeches by General Horace Porter, full to overflowing with hearty laughter.

Volume VII. contains thirty-one orations, among which may be enumerated "International Brotherhood," "Marcus Aurelius," "Chance," "The Pleasures of Reading," "Government and Religion," "Sir Walter Scott," and "Ill-used Men." Among the orators represented are Lyman Abbott, Felix Adler, Arthur James Balfour, Phillips Brooks, Rufus Choate, Henry Clay, George Dawson, and Henry Drummond.

In Volume IX. we take at random, "Characteristics of Washington," by William McKinley, "American Literature," by Brander Matthews, "The Strenuous Life," by Theodore Roosevelt, "The Lamps of Fiction," by Goldwin Smith; and an "Appeal for Dreyfus," by Emile Zola. And the foregoing are but items picked in passing. "Modern Eloquence" is a work which all who can get should have. It is published by John D. Morris & Co., Philadelphia.

### Coffee Vice

HOLDS FAST UNTIL YOU GET A KNOCK-DOWN.

"I HAD used coffee moderately up to six years ago," writes a lady from Piney Creek, Md., "when I was seized with an attack of nervous prostration, and was forbidden coffee by my physician. I was constantly under treatment for nearly three years. After my recovery I once took a cup of coffee and it made me so sick I did not want any more."

"After the nervous prostration my stomach was very weak, so that I had to be careful with my appetite. As soon as I would eat certain things I would have an attack of stomach trouble sometimes lasting several weeks, so when I was attacked by erysipelas two years ago my stomach was immediately out of order."

"I kept getting worse until nothing would stay on my stomach, not even rice water or milk, and I was so weak I had to be fed with a spoon. I had a craving for something like coffee, but that was impossible, so father went down town and got some Postum Food Coffee, and when he asked the doctor if I might have it, he quickly answered, 'Yes.' Mother made it exactly as directed and brought me part of a cup, and it was delicious, satisfied every craving, and best of all, stayed on my stomach without distress, giving comfort instead. For several days I lived on Postum, gradually increasing the amount I took until I could drink a cupful. Then I began to take solid food with it, and so got well and strong again. I now use it constantly, and am entirely free from any stomach trouble."

"Father and mother both use it. Coffee made mamma nervous and disagreed with her stomach so that she would taste it for hours after drinking. Father had stomach trouble for five or six years, and used to be deprived of various articles of food on account of it. Now he can eat anything since he quit coffee and uses Postum. Father says that it is better than Mocha or Java." Name given by Postum Co., Battle Creek, Mich.

MARY TRACY EARLE,  
Author of "Flag on the Hilltop" and other  
stories.

SHILOH CHURCH, BIRMINGHAM, ALA., WHERE ONE HUNDRED AND FIFTEEN LIVES WERE LOST IN PANIC.—Covell.

## Deadliest Panic in a Church

THE RECENT stampede of a congregation assembled in the Shiloh Baptist Church (colored), at Birmingham, Ala., with the resultant loss of one hundred and fifteen lives, was one of the most senseless on record. The occasion was the national convention of colored Baptists, and the audience, which packed the auditorium, was being addressed by Mr. Booker T. Washington, the able and eloquent president of Tuskegee Institute, on the subject of "Industry." While Mr. Washington was in the full tide of speech, a slight commotion, due to the crowding, occurred in one part of the church. An impulsive fellow shouted "Fight," and another, misunderstanding him, exclaimed "Fire." The latter cry was taken up by the others and speedily

the crowd was in a panic and an uproar. A wild and simultaneous dash was made by the frenzied people for doors and windows. Men, women, and children were trampled under foot, and many of the maddened mob used clubs or razors on the individuals who obstructed their pathway to escape. It was a horrible scene full of sickening incidents. Mr. Washington, who remained perfectly cool, tried in vain to allay the terror of the people, and the rush ended only with the emptying of the edifice. Later the sobered and remorseful people had the painful task of gathering up the dead and wounded victims, equaling in number the list of losses in a sizable battle. The fatalities exceeded those of any similar catastrophe in the South.

## Business Chances Abroad.

WE are sorry to see any creditable publication giving currency to the foolish and mischievous statement that the forthcoming naval manœuvres are designed ever remotely to prepare the navy for a war with Germany. As a matter of course, the real object of these manœuvres, and, in fact, the only excuse for all the expenditure connected with them, is to bring our war vessels up to a higher grade of practical efficiency and thus prepare them for more effective service in case of hostile action anywhere. But that the naval board is planning these manœuvres, as asserted, with the special view of offsetting the naval superiority of Germany in a prospective war, we do not believe. It is quite true that certain German naval officers gave us a just cause for indignation by their conduct in Manila Bay, and that the recent embargo laid on American meats and canned goods by the German government is somewhat irritating, but to declare that these things or anything else has occurred of sufficient gravity to betoken a possible war between Germany and the United States is to indulge in an utterance both rash and silly. The only thing that offers the slightest possible prospect of a collision between this country and Germany is the colonial ambition of the Germans in South America, but that is a contingency still too remote for serious consideration. As a matter of fact, we do not believe that the United States will have any war upon its hands for many years to come, and the longer war is deferred the less likely it is ever to happen again.

It is a highly interesting fact, not generally known, that some of the finest lace in the world is made in Paraguay, South America, rivaling the products of France and Belgium in delicacy and beauty. Lace making was taught the natives two hundred years ago by the missionaries and has been transmitted from generation to generation, till it is now quite general throughout the republic. Some towns are devoted to making a certain kind of lace. In one town of 8,000 or 9,000 inhabitants, almost all the women and children, and many of the men, make lace collarettes, handkerchiefs, and ladies' ties. Another town makes lace embroidery, and others drawn-thread work,

such as centrepieces, tray mats, tea cloths, dollies, etc. The designs used in making the lace are taken from the curious webs of the semi-tropical spiders that are so numerous in Paraguay. On this account it is called "spanduti," an Indian name which means spider web. Our consul at Assunpcion, Paraguay, Mr. J. N. Ruffin, says there is scarcely a dealer in Paraguay who would not purchase American goods if it were not so difficult to get a draft on the United States. This is due to the fact that nearly all the exports go to Europe. Some of the principal lace makers, he says, have agreed to give the benefit of all their drafts on the United States for the facilitation of trade, if American importers and dealers in hand-made lace and drawn-thread work should take up their product.

Our manufacturers and commercial men desirous of extending their trade in South America would do well to study some of the methods adopted by the Germans for building up their business in that quarter of the world, as they are outlined in a report by our Consul, Mr. C. C. Greene, located at Antofagasta, Bolivia. Thirty years ago, he says, the trade coming to the Pacific ports was monopolized by the British and a few American houses. The Germans, appreciating the importance of this trade, made well-conceived plans to gain it. They carefully trained a number of able young men. When these were versed in commercial affairs and in the language of the people among whom they were to live, considerable shipments of goods were made to the British and American houses, and the young men found places as clerks and were given special charge of these consignments. They remained there till they acquired a complete knowledge of the coast trade; then they were provided with ample funds and stocks, and opened German houses, with brilliant success. In many branches they now have a monopoly, and the British and American houses no longer enter into competition. The Germans not only established houses in the larger ports, but also agencies in the smaller ports and interior towns. In the south of Chili, German banks do most of the German business and a good share of the local trade.

THE publication of **MODERN ELOQUENCE** (ten handsome library volumes) is an event of premier importance. For the first time the best After-dinner Speeches, Lectures, Addresses, Anecdotes, Reminiscences and Repartee of America's and England's most brilliant men have been selected, edited, and arranged by an editorial board of men—themselves eloquent with word and pen—men who have achieved eminence in varied fields of activity. These gems of spoken thought were fugitive, from lack of proper preservative means, until the Hon. Thomas B. Reed, upon voluntarily retiring from the Speakership of the House of Representatives, gathered about him these men of mark and experience in literature, his friends and co-workers in other fields, and began the task of preparing this great work. North, East, South and West, and the Mother country as well, have been searched for gems in every field of eloquence.

### AND MANY OTHERS

Here was a lecture that had wrought upon the very souls of great audiences; there an after-dinner speech which "between the lines" was freighted with the destinies of nations. Here was a eulogy expressing in few but virile words the love, the honor, and the tears of millions, and there an address pregnant with force—its fruit a strenuous life's work. Or, perchance, a reminiscence, keen, scintillant repartee, or a story, potent in significance and aflame with human interest. Matter there was in abundance, for English-speaking peoples are eloquent; but the best—only the best, only the great, the brilliant, the worthy to endure—has been the guiding rule of Mr. Reed and his colleagues. Their editorial labors have been immense.

While libraries and musty files were being delved into in a hundred places—while famous men were putting into manuscript their brain children—while reminiscence, repartee and story were being reduced to type, and speeches, addresses and lectures, which money could not buy, were in friendship's name being offered, Mr. Reed was preparing for this work his most ambitious contribution to literature—his *piece de résistance*—"The Influence and the History of Oratory." Prof. Lorenzo Sears, beloved and honored in many lands for his critical and contributory work in literature, was writing "The History of After-Dinner Speaking." So with Champ Clark, Edward Everett Hale, Senator Dolliver, and Hamilton Wright Mabie—each was producing a special contribution, which of itself is a gem of thought, a monument to research, study, and observant experience.

Whatever the viewpoint, this work is without precedent. It has no predecessor, no competitor. Speeches that have been flashed across continents, lectures that have been repeated over and over again to never-tiring audiences (but never published), addresses that have made famous the man, the time and the place—these are brought together for the first time, and with them a large number of the wittiest sayings of the wittiest men of the nineteenth century.

For an hour—for a whole evening in the easy-chair at home—for the study of style and diction that have electrified brilliant assemblies—for the man ambitious to become a successful or popular public speaker, and for the one who has to prepare a toast or an address,—this work is a never-failing source of charm and inspiration. Nor is this solely "a man's work." "The tenderest tribute to woman I have ever read," said Senator Dolliver when he read the manuscript of Joseph Choate's after-dinner speech, "The Pilgrim Mothers."

**MODERN ELOQUENCE is sumptuously published, but moderately priced.**

## Special Offer

A large and handsome portfolio, containing 11 sample full-page photographs and chromatic plates, and 80 specimen pages of brilliant After-Dinner Speeches, Lectures, Addresses, Anecdotes, etc., will be sent free of charge on request. With this we will also submit a special proposition which easily will place this great work in your possession.

# Jasper's Hints to Money-makers

NOTICE.—This department is intended for the information of the regular readers of LESLIE'S WEEKLY. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to LESLIE'S WEEKLY at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.

AT LAST investors and speculators are beginning to realize that a crisis in the stock market approaches. It must come as the result of wild over-speculation, principally by a new crop of Wall Street gamblers; unparalleled over-capitalization of railroad and industrial properties; and a general tendency on the part of the people, stimulated by good times, good wages, and plenty of work, to over-spend their money. Not content with a good old-fashioned satisfactory "boiled dinner," the epicureans of the Stock Exchange have insisted on an all-the-year-round banquet and have kept it up until they have so gorged themselves that the doctor must be called in. The banks, in this instance, are the doctors.

With the average reserve fund held by the national banks in twenty-five of the thirty-three reserve cities in the United States falling below the legal limit of 25 per cent. required by law; with the Secre-

tary of the Treasury straining every nerve to put more money in circulation; with great pools and combinations still making demands for large credits to maintain their position or to float new enterprises; with money still in demand for moving the crops and for the extension of legitimate commercial enterprises, and with the banks of Europe practically closed against further drafts from this side, where are we at? We must judge of the present by the experience of the past. And we know that such conditions have invariably signified the calamitous end of an over-enthusiastic stock-market boom.

Some New York financiers are insisting that the money market trouble is purely local and not a matter of concern outside the precincts of Wall Street. But the decline in the reserves, in all but eight of what are known as the reserve cities, to an abnormally low percentage, testifies to the fact that there is a scarcity of loanable funds East and West, North and South. The spirit of over-speculation is not localized. It predominates over everything else and is found everywhere. Men and women have taken funds from savings banks and have sold safe investments and mortgages to obtain a higher rate of interest and to tempt fate in the whirlpool of speculation. Largely owing to this enormous demand for securities the great financiers have been pouring out a vast aggregate of new issues of industrial and railroad stocks and bonds. The climax came a little too quickly for some of the big manipulators and they find themselves embarrassed by burdens which they expected to unload upon the people, but which they themselves must carry. The rise in the rate of interest affects these heavy borrowers severely, and whenever the pressure is so great as to force them to unload we shall see the beginning of the end. The abandonment of the proposed new bond issue of \$100,000,000 by the Southern Pacific Railway and the haste with which the steamship trust has been launched upon its half-greased ways, are signs of the times.

Those who imagine that the pathway of a great financier is strewn with roses make a mistake. In the appeal of Mr. J. P. Morgan to the stockholders of the Southern Railway for the continuance of his control for five years longer, by the extension of the term of the voting trust, he virtually admits that if the railway were turned over to the stockholders (as it would be if the semi-annual dividend in October were paid) it might fall into the hands of some of the great financial speculators who have been indulging in more or less successful operations in Louisville and Nashville, Rock Island common, and some of the steel and iron companies. I do not see how the Southern Railway would be worse off than any other railroad which is not in the hands of a voting trust, if it were turned over to its stockholders. In fact, this voting-trust, scheme is particularly a good one only for the voting trustees. No matter who may own the trusted stock, no matter if the trustees are not the possessors of a hundred shares apiece, the latter, as trustees, have the right to vote on all the stock and virtually own and control the property of somebody else.

Originally the placing of control of reorganized properties in the hands of trustees was intended to safeguard and establish the interests of the stockholders, but in these days the plan has been utilized mainly to advance the interests of the trustees. Naturally stockholders are becoming restless under such conditions, and are eager to get their properties back into their own hands once more. There is great doubt whether the stockholders of the Southern Railway have not good cause to appeal to the courts, if possession of the property should thereupon not be turned over to them. Litigation of this kind is not improvable, and following that which threatens the proposed Southern Railway merger and which has already halted the steel trust bond conversion scheme and the Northern Securities combination, it looks as if Mr. Morgan might have his hands quite full, aside from the most aggravating of all his troubles, arising from the anthracite coal strike and the popular feeling against the so-called "coal trust."

Will a big corn crop essentially help the stock market? Much will depend upon the price the corn crop brings. The larger it is, ordinarily, the lower the price. A great crop movement, it must be borne in mind,

means great demands on the banks for money with which to move the crops. Would it not be strange if the big crops, for which the bulls have been so earnestly looking, should result in such a drain on our money centres as would cramp the loaning facilities of the banks and trust companies? A great crop at low prices would lead to a general demand by the farmers for lower freight rates. The railroads have been earning so well of late years because of the general maintenance of rates on a satisfactory plane, with larger train-loads, bigger locomotives, and better tracks and grades. A reduction in rates would be the natural outcome of a big corn crop and of lower prices for corn. This, coupled with the popular outbreak against the industrial combinations, or so-called trusts, and the growing demand for anti-monopoly and anti-railroad legislation in the West, not to speak of the proposition to demand a revision of the tariff aimed against the trusts at the approaching session of Congress, all aggravating symptoms, is disquieting to business circles. It is safe to say that one of the first bills introduced at the approaching

## Keyless Clocks Are Going to England.

A GREAT COMPLIMENT SHOWN A GREAT AMERICAN INDUSTRY BY A GREAT ENGLISHMAN.

The wonderful success of the Keyless Clock, which to-day is the highest exponent in the art of clock building, is astonishing the investing world.

One of the many good reasons for this is the fact that even England is awakening to the fact that there are some great things in America worthy to be taken to England, and that great American money-makers can be great money-makers in England as well. Pre-eminently in this line is the Keyless Clock—a great clock which winds itself—the great clock which is acknowledged the acme of perfection and simplicity.

Recently, Mr. Geo. Douglas, a very prominent man in the world of finance, a director in the Heather Bank, of Dingley, Yorkshire, England, purchased to take home with him, two Keyless Clocks. To prevent any accident, this gentleman ordered that the same be not sent by express, as is the custom, but he would take them with him, among his personal effects; and thus the clocks were sent to his state-room on board the steamer *Gair*, on which ship he sails on October 3d.

Mr. Douglas was enthusiastic in his praise of the clock; in fact, he never expected to see anything like it, and he was kind enough to tell the General Manager of the U. S. Electric Clock Co. that "of all the good things he was taking with him to England from this great country, nothing equaled in value or importance these two clocks," one of which he will likely have in his bank and the other in his home.

The company have received a number of applications and direct offers and inquiries, and prominent among these is one from Messrs. Clement Clark & Co., 34 Robertson Street, Glasgow, Scotland. This is one of the very prominent houses of the United Kingdom. They have a thousand agencies and branches throughout England, Scotland and Ireland. They made the United States Clock Company a direct offer for the exclusive agency, and offered to put the service of their entire organization at the command of the Keyless Clock.

## Jasper's Hints to Money-makers.

Continued from preceding page.

short session will be one to remove the duties on steel and iron goods made abroad in competition with the United States Steel Corporation. Already I hear that such a bill is being framed by some of the Democratic leaders. Its introduction and discussion, not to speak of its passage, which is hardly probable, would not be helpful to the steel shares.

The vigor with which financial interests are endeavoring to close up pending deals is significant. The long-talked-of ship combination has at last been launched on a troublesome sea. Rumors that the Pennsylvania-Gould fight over the Wabash extension into Pittsburg has been, or is to be, speedily settled prevail, and this means much. Mr. Morgan has unloaded his Louisville and Nashville elephant on the Atlantic Coast line, and if he could clear up the Northern Securities litigation and the trouble over the retirement of the 40 per cent. steel trust preferred shares he would be less anxious to stand under a tottering market.

I find no comfort in the statement that the Federal treasury now holds a record-breaking deposit of gold. This means that we have been increasing our foreign imports which pay heavy duties to the government. Large importations of luxuries are always a sign of extravagance and indicative of an approaching disturbance to prosperous conditions. I see nothing in the immediate future to warrant an expectation of a general rise in the market. Special conditions may strengthen certain lines, but even these will not be able to stand up unless the money market relaxes. I have long predicted higher money rates, in the belief that the whole country is involved in a wild speculative craze, which has resulted in extraordinary demands upon the resources of the banks in every section. The reported plethora of funds in the West turns out to have no foundation. Money is needed all over the country, and is held as tightly abroad as it is at home. Under such conditions, how is a bull market possible?

The outlook is for a continuance of high money rates and a compulsory liquidation in the market, with occasional feverish rises, but a general declining tendency, except in a few specialties, regarding which strong interests have long been planning action that must be beneficial in the end.

"T. of M.": He has no rating.

"Billy the Reader": Anonymous communications not answered.

"Investor": Grand Island, Neb.: I am not advising it as an investment.

"S.": New York: Of course it is speculative, but it is better located than nine-tenths of similar propositions.

"S.": Philadelphia: Address your inquiry to the secretary of the Cotton Exchange, Hanover Square, New York.

"W.": Brooklyn: I certainly do not believe in the scheme of the Central Security Company, or anything of the kind.

"X. V. Z.": Thomaston, N. Y.: Two dollars received. You are on my preferred list for six months. The New York Engineering and Mining Journal.

"G.": Scranton: I hesitate to advise short sales with the market in such a peculiar condition, though most stocks, in my judgment, are altogether too high.

"G.": Lewistown, Penn.: I do not believe that U. S. Steel common, representing, as it does, nothing but water, is a safe investment purchase at anything like present figures.

"A.": Hackensack: Four dollars received. You are on my preferred list for one year. I do not believe in the proposition of the Storey Cotton Company. You had better speculate for yourself.

"G.": Toronto, Ont.: One dollar received. You are on my preferred list for three months. At present it would be extremely unwise to enter the market. I could not accept your proposition. I simply give advice.

"F.": Cripple Creek, Col.: It is not regarded as an investment, as so much depends upon securing and maintaining valuable contracts. Its friends speak highly of it. Reports of earnings have not been fully disclosed of late.

"D.": New Jersey: (1) I do not regard the liquidation as complete. (2) A feverish market with a declining tendency is more than likely to follow. On reactions, Texas Pacific and Kansas City Southern preferred may be bought for speculation.

"L.": Albany: The judgment against Dougherty & Albers, of 69 Wall Street, for \$3,327, was for a balance due for services in selling stocks of various companies. (2) W. E. Woodend & Co., 25 Broad Street, are members of the Consolidated Exchange, rated well, and excellent credit. They deal in small lots also.

"W.": New York: I have repeatedly said that when business depression comes, as it ultimately must, in the course of events, probably before the next Presidential election, and possibly much sooner, all the iron and steel shares will be unfavorably affected. That is why I should dispose of them at a profit.

"A.": Concord, N. H.: The Green Bay B Debentures have never received any interest payments, and are not entitled to any until after 5 per cent. has been paid on the A Income and on the capital stock. There are only \$600,000 of the Debenture A's and only \$2,500,000 of the capital stock, the \$17,000,000 Debenture B's coming later. The

recent rise is said to be owing to purchases by other roads which seek control.

"J.": Annapolis, Md.: The bill attacking the validity of the lease of the Chicago and Alton alleges that Harriman and his associates were on both sides of the deal and were thus enabled to make it very profitable. I have often pointed out that insiders get the milk in the coconut and are then perfectly willing to permit the public to come in and tackle the shell.

"T.": Toronto: The reason for the proposition to increase the bonded indebtedness of the St. Louis and San Francisco by the issue of \$18,000,000 4 per cent. is not given. It is curious that the very roads that talk so much about their large earnings and fine prospects are adding enormously to the obligations ahead of their capital shares. It is for this reason that I am advising my readers to purchase the bonds instead of the shares.

"L.": Baltimore: (1) Still on the list. (2) Manhattan Elevated ought to be purchased on declines. I also think favorably of Kansas City Southern preferred, Toledo, St. Louis and Western preferred, and the coal stocks. At the same time, I am not advising purchases of securities until there has been an extensive liquidation, unless you wish simply to speculate for a turn. Manhattan, on declines, would probably be good for a long pull.

"W. M. E.": Leesport: The Virginia Iron, Coal and Coke Company owns the leading iron, coal, and coke properties in southwest Virginia. It has a capital of \$10,000,000 and \$10,000,000 bonded debt. It is said to be making large earnings and to be benefiting substantially by the anthracite strike. An abatement in the demand for coal, following industrial depression, would, of course, injure all such properties.

"C. N.": Peoria: (1) You are not entitled to personal answers unless you are on my preferred list as a subscriber at the home office. One dollar will pay your subscription for three months. (2) Watch the market very carefully and, if it breaks, even up and get out at the first opportunity. The strategic position of Chicago and Great Western gives great value to the property, and its absorption by, or combination with, some of the great existing systems has been anticipated.

"H.": Detroit: (1) It is understood that the bondholders' committee of the Michigan Telephone Company hopes to reach an amicable adjustment of all interests and a satisfactory reorganization. (2) I am unable to answer your inquiry, whether Baltimore and Ohio is securing control of Reading. Pennsylvania interests are, no doubt, heavily involved. (3) How quickly a reaction in the iron trade sometimes comes, is evidenced by the sharp cut in prices in the sheet trade, resulting from over-production.

"G.": Pittsburg, Penn.: The constant weakness and declining tendency of Metropolitan Street Railway shares, especially since the new horoscope process by which its control was taken out of the hands of the stockholders, have led a great many to sell out their holdings. The stock is selling for all it is worth. Of course it is a dividend-payer and in the event of a strengthening and rising market, or of a general combination of local traction interests, it might advance. As to these future conditions, it is impossible to judge at present. If the whole market should have a tumble, you might, by averaging up on a low basis, get out whole.

"J.": Wilmington, Del.: (1) How tremendously the coal strike has injured the anthracite companies is revealed by the deficit of half a million dollars in Reading, including its constituent companies, for the month of August last, as com-

pared with the surplus of nearly half a million in the corresponding month last year. (2) The rise in Pressed Steel Car is attributed by some to the expectation of its consolidation with American Car and Foundry. Another story has it that a short interest in Pressed Steel Car, caused by the sale of the stock by insiders, who have recently left the concern and started an opposition, had something to do with the matter. I do not look upon the shares as an investment.

"L.": Nashville: The recent payment of \$10,000,000 to the steel trust underwriting syndicate was a fourth dividend of 5 per cent., aggregating \$40,000,000 of profits on the \$25,000,000 in cash that was supplied to the syndicate. It is said that at least \$15,000,000 more will be realized. There was evidently a good profit for the insiders in the steel trust, a good deal more than there has been for the outsiders. (2) The appointment of a receiver for the National Salt Company probably signifies the end of that concern, which is said to have lost a quarter of a million dollars during the first half of the present year. Yet only a short time ago, it was paying generous dividends on both its preferred and common shares; so generous that I advised my readers to sell out, as most of them, I understand, did. It would seem as if the holders of the stock should have some method of punishing the gang of heartless speculators who have manipulated and speculated this property into the grave.

## Fast and Superb Service

To the Cities and Resorts South.

The Southern Railway announces the most excellent service and schedule for the Southern travel for the season of 1904 and 1905. Operating from New York over the Pennsylvania 12 through sleeping car lines daily touching most every prominent city in the South and Southwest; also giving high-class dining-car service on all of the through trains. This route operates the Washington and Southwestern Limited, 30 hours New York and New Orleans, connecting with the Southern Pacific Sunset Limited from New Orleans to the Pacific coast. Two other fast trains, the New York and Memphis Limited and the U. S. East Mail, to Florida, Cuba and Nassau, the New York and Florida Limited, operated daily and during tourist season, the world famous Southern's Palm Limited. For full particulars, descriptive matter and general information regarding the South, call or address New York Office, 271 and 113 Broadway. **ALEX. S. THWEATT, Eastern Passenger Agent.**

## A UNITED STATES WALL MAP

**FREE** This handsome county map, 48x34 inches, is mounted on rollers, ready to hang on the wall. It is printed in colors, is thoroughly up to date and is particularly interesting and valuable, as it shows in colors the different divisions of territory in America acquired since the Revolution. The original thirteen states, Louisiana purchase, the Texas annexation, the Gadsden purchase, the cession by Mexico of the Northwest acquisitions by discovery and settlement. It will be sent to any address on receipt of 15 cents in postage to pay for packing and transportation. **P. S. EUSTIS, Passenger Traffic Manager C. & O. Ry. Co., 209 Adams St., Chicago.**

## Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of *Leslie's Weekly*. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," *Leslie's Weekly*, 110 Fifth Avenue, New York.]

ONE OF the most graceful and eloquent speakers at the recent national convention of insurance commissioners, held at Columbus, Ohio, was Mr. James W. Alexander, who has achieved distinction in the insurance world as President of the Equitable Life of New York. Mr. Alexander has always been recognized as one who believed in the highest ideals in business as well as in private life, and the topic most appropriately assigned to him was "The Ideal Company." Many of my readers have asked me, from time to time, to specify the characteristics of a successful insurance company. Mr. Alexander, in his admirable address, did this so well that I propose to quote him.

He declared that the ideal insurance company must have high-minded, honorable, experienced and skillful officers, having no aims in business other than to subserve the interests of their policy-holders; that it should be conducted on a cash plan, and that the premiums and the re-insurance reserves should be computed on the most conservative tables of mortality and rate of interest; that it should have "as low an expense rate as is compatible with the broad and liberal conduct of its business," and that it should disapprove the system of bonuses offered to agents for the transaction of given amounts of insurance during a stated period.

"The ideal company," Mr. Alexander added, "must be exceedingly careful in regard to the physical soundness of all its risks. It must maintain a large surplus which constitutes a bulwark of defense, and ultimately each policy-holder receives his appropriate share of the same to the last cent." The ideal company should have a large and widely extended business, should be friendly with the small companies that are carefully and soundly managed, and bulk of business should be secondary to strength and security for all time." I advise those who are interested in life insurance to read in full this instructive address, the chief points of which I have briefly outlined. Copies, neatly bound, will be sent free of charge, on application to the President of the Equitable Life of New York. In making the request mention *Leslie's Weekly* and enclose a two-cent stamp for postage.

"C. W." New Orleans: (1) Certainly. (2) Any of the great insurance companies will give you the figures, or I will get them for you if you desire it.

"E. G." New Orleans: (1) The first policy you mention matures as an endowment. (2) Usually an agent is sent, but I can obtain the information for you and send it confidentially if you wish.

"B." Canton, O.: The Royal Union, of Des Moines, was established in 1886. Its premium receipts last year were about \$311,000 and its total disbursements \$250,000, of which nearly one-half were expenses of management. I should prefer an older and stronger company. (2) Prefer the Travelers, of Hartford, for an accident policy.

"R." Watertown, N. Y.: (1) My preference certainly would be the company you first mention and in which you have a tontine policy. (2) The Metropolitan last year reported total disbursements of about \$28,000,000, and over half of this, that is, more than \$14,000,000, was set down as actual expenses of management. The Equitable reported disbursements of nearly \$39,000,000, only one-third of which, or about \$10,000,000, was for expenses of management.

*The Hermit.*

## Jasper's Hints to Money-makers.

Continued from preceding page.

"C." Monson: The Graham County Mining Company reports that it has expended upward of \$100,000 in the opening of gold and copper mines and the establishment of valuable water power and irrigation franchises in Arizona, and in extensive development work. The capital is \$250,000, half of which is reserved in the treasury. The references given by the company include a number of prominent banks, clergymen, and business men. It would be easy for you to communicate with any of these. The small capitalization indicates that this is more of a business than a speculative proposition.

"M." Philadelphia: (1) There is no question that if the men who are carrying the burden of United States Steel shares are ever compelled to let go, the stock, especially the common, will sell considerably lower. I can imagine a critical condition which might make this heavily over-capitalized concern too great a burden for the public to bear. In fact, it is regarded by many as a menace to the stability of the market. I hesitate to advise you to sell at present, because some believe that if the bond proposition is carried through the preferred shares will be advanced and this might enable you to get out without loss, or at least to exchange 40 per cent. of your stock for a fairly good bond, under the proposed plan of procedure. (2) If you have a profit in holding it might be well to take it, in spite of the promise that it is to be put on a dividend-paying basis. The Jersey Central is a worth keeping. (3) The United Gas Improvement Concern is a close corporation, but is in the hands of very successful men, who have franchises of enormous value. The persistent strength of the stock has led many to believe in it as an investment.

## Meeting of American Bankers' Association, New Orleans.

For meeting of American Bankers' Association at New Orleans, November 14th to 15th, the Pennsylvania Railroad will sell tickets from all stations on line east of Pittsburgh and Erie via Pittsburgh or Washington, November 8th to 10th, good for return passage within 15 days, date of sale included, at reduced rates.

By depositing ticket with joint agent at New Orleans on or before November 18th and payment of 50 cents the return limit will be extended to November 30th.

## Some Good Advice.

In one of the leading magazines a distinguished physician advises that wool should be worn next to the skin the year around in our climate; light in summer, heavy in winter. The changes necessary for comfort should be made in the outer clothing. In this way a more equable temperature is kept up on the surface of the body, which is thus protected from sudden changes of weather.

This is good advice; and if care is taken to see that the woollens are absolutely pure and porous, as in the well-known goods of Jager manufacture, one can be sure of comfort as well as health from acting upon it.

## Colonist Rate \$50.00.

## Concerning a Woman's "No"

Continued from page 388.

like a charm. Billie knew that if his luck held the rest lay with him. He had his opportunity, now let him make the most of it.

He began laughingly to throw good-natured digs at his friends in the audience, and presently drifted into a dialect story which he told inimitably, for he had in a high degree the gift of mimicry. Imperceptibly he carried the crowd with him telling one story after another until one of them led to a reference to "the distinguished gentleman who will follow me." From that it was but a step to "my honorable opponent," and before his audience divined his purpose, he was launched on a political discussion. He had a strong, flexible voice, and it carried to the confines of the crowd. Gradually the smiles died from the faces of those who were listening to him. They awoke to the fact that they were listening to a cool but scathing indictment of the party to which they nearly all belonged. The audacity of the attack captured their imaginations.

Epigrams, terse statements of principles, logical argument, biting irony, and keen satire were in turn compressed into that fifteen minutes. Milligan had facts and figures at his tongue's end and appeared to be master of his subject. The Irish humor and enthusiasm of the man fairly effervesced in him; nor did the rich, mellow voice and superb figure of the young athlete appeal in vain. His closest friends were amazed at him. They could not know that this was not an impromptu talk; they did know they were listening to a born orator, full of charm, magnetism, and boyish abandon, and yet with a knowledge of his subject that surprised them. He seemed to know by instinct the joints of his opponent's armor that were most open to attack.

Milligan had had his share of popularity. He had known what it was to be carried across the whitewashed gridiron of a football field on the shoulders of a wildly cheering mob. He had tasted the joys of making the hit that brought in the winning run in the ninth inning of a hard-fought game, and had seen the grandstand rise en masse to its feet in temporary

insanity. But he had never felt a more subtle triumph than at this moment when he learned the power of oratory to move the listeners. Afterward he confessed to Daniels that he liked it "down to the ground."

Milligan called on Tasse Williams that evening. After they were fairly seated, she looked him over curiously from head to foot.

"Well, I was there when it happened," she said at last, briefly.

Billy laughed a little nervously. "There were several people there, from all accounts. What did you think of the performance?"

"Me? Oh, it does not matter what I think. I understand the vice-presidential candidate heard the finish and came up to congratulate you."

Milligan nodded. "And the college president had his word of praise to add?"

"He only wanted to know why I had been hiding my light under a bushel."

"They say you have been elected unanimously to the Western debate."

"Misfortunes never come singly," he murmured.

She looked at him suspiciously. "That might mean almost anything. I don't believe I quite like it."

"Perhaps I did not wrap it up right. What I meant to say was that it is an ill wind that blows nobody good," explained Billy.

"That's better. But tell me: upon what meat doth this our Caesar feed that he hath grown so great?"

"Oh, I don't mind your laughing at me. If my first appearance was a bit out of the ordinary, it was in a good cause."

Tasse made no remark about the cause.

"You don't stick at a trifle to gain your ends," she smiled.

"No, I'm not one of your over-modest men. I believe in making chances when I don't find them waiting. This was an opportunity, and I embraced it. You are another, and—"

"Yes, I understand," she interrupted hurriedly.

But Billy was afraid she didn't, and he emphasized the point to make it plain.

### Jasper's Hints to Money-makers.

Continued from preceding page.

"F." Lowell, Mass.: Yes.

"H." C. W., Thomaston, Conn.: Anonymous communications are not answered.

"F." Syracuse: (1) The National Starch First 66, ground per, are a fair industrial investment, not gilded. (2) So I understand. Ownership would imply responsibility.

"C." Atlanta, Ga.: W. E. Woodend & Co., 25 Broad Street, will give you the information you seek regarding the Chicago grain and meat market as well as stocks. They stand well.

"B." Allentown, N. J.: Colorado Southern and all the other cheap speculative railroad shares have had their day, if tight money continues, and perhaps for a long time to come. I am not advising purchases now unless the entire market should undergo a process of quick liquidation.

"A." Chillicothe: (1) I cannot advise because it is impossible to obtain information of a reliable character regarding American Ice. It is not dealt in very much now and is regarded as a clique stock, in view of recent disclosures. (2) I think it would be well to keep out of the market at present, unless there should be a very sharp decline.

"R." Lynchburg, Va.: (1) All such propositions must be highly speculative. Not one, out of a great number, ever wins. If you are fond of taking chances, go ahead. (2) Douglas, Lacey & Co. are members of the New York Consolidated Exchange, handle mostly mining properties, and have agencies in nearly all the principal cities.

"B." Wilmerding, Penn.: You have been imposed upon by the high-sounding advertisements of seductive concerns. I doubt if you will ever see your money again. Why people will put their money into the hands of strangers without knowledge of what they are to do with it and without proof that the strangers will give anything of value in return, surpasses comprehension.

"Y." New York: Of the stocks you mention my preference on sharp declines would be Kansas City Southern preferred, Texas Pacific, and Toledo, St. Louis and Western preferred. American Ice common's only recommendation is its apparently low price. Not being able to learn anything about its earnings, I am unable to speak of its merits. For a turn the cheap industrials sometimes offer good opportunities to the agile speculator.

"R." Middletown, N. Y.: (1) Pacific Mail is controlled by the Union Pacific, and its future, therefore, depends entirely on what insiders in this great corporation may care to do with it. At times it is a speculative favorite, but at present I am advising my readers to have more regard for

investment securities than for purely speculative. I do not see that the new steamship combination will affect it either way. (2) I would defer investments until market conditions are more settled. (3) Not at present.

"R." Brooklyn: The condition of the cotton crop, especially in Texas, does not promise much for improvement in the earnings of the first stock you mention this year. On these earnings the stock is high enough. The expectation that it would benefit by a merger of the Gould railways has made it a speculative favorite, but of course only speculators can tell what the proposed plan is, and will not do so until they have taken the best advantage of their information. Southern Railway is too speculative and has had too much of an advance for me to recommend it, especially with the market conditions as they are. Both these shares, however, in case of a serious decline, would offer fair opportunities for a turn.

"K." Baltimore: Five dollars received. You are on my preferred list for fifteen months. I shall have to send telegrams collect. (1) I agree with you that it is a good time to keep out of the market until monetary conditions are more settled. It might be wise for you to even up in Leather common at the first opportunity, and then get out whenever the market advances. While the enormous amount of common shares issued by the United States Leather Company must be considered and the fact that it sold last year as low as seven or eight dollars a share, still its very cheapness makes it a favorite with many speculators. Rubber Goods common is now selling considerably lower than the price of a year ago, and the concern, I am told, is in better hands. For this reason it is regarded favorably by those who deal in the cheaper industrials. There are no dealings in the Nashville stock to which you refer, in this market. Will advise you if I obtain the information you seek.

New York, October 16, 1902. JASPER.

A GAVE cannot be held without a few bottles of Cook's Champagne, Imperial Extra Dry. It is sparkling and delicious.

**Advice to Mothers:** Mrs. Winslow's SCOTCHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhea.

If any persons still doubt the superiority of the Schmeier Piano let them try for themselves and be convinced, not only that the Schmeier is the best, but that it will continue to be the best.

Use BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.

## WILLIAMS' SHAVING SOAP

### "BUILT UP HIS TRADE."

"As a barber of many years' experience, I have used all kinds of Shaving Soaps—the cheap as well as the high priced—and have never found any soap to compare with Williams', for it is as near perfection as can be made. The lather is not full of air bubbles, but is rich, heavy and creamy, and I have found from actual test that there are from fifteen to twenty more shaves in a cake of Williams' Soap than in any other soap. Williams' Soap has done more to build up and hold my trade than any other toilet article which has ever been used in my shop. I feel it my duty to tell all barbers that Williams' is the only soap that will please all classes of customers."

T. H. TEDRICK, Winterset, Ohio.

Williams' Shaving Soaps are used by all first-class barbers and are for sale all over the world.

## How To Regulate the Trusts.

IN HIS recent very able and suggestive address on the supervision of life insurance, delivered before the national convention of State insurance officials at Columbus, Ohio, the Hon. John A. McCall, the well-known president of the New York Life Insurance Company, set forth certain principles underlying the insurance laws of the various States, which are capable of a far wider application, it seems to us, than the speaker himself probably realized.

In his review of the history and growth of the movement for State inspection Mr. McCall showed how the States, beginning with Massachusetts in 1855, have gradually formed a body of supervisory statutes so searching in their character, and so stringent in their requirements as to financial safeguards, the security of investors and the conduct of business on sound and economical principles, that it is now practically impossible for any regular life insurance company to do business anywhere in this country except on an honest and legitimate basis. Among the more important requirements now embodied in the statutes of nearly all the States are these. That each insurance company must file a certified copy of its charter with the State department; that it must submit an annual sworn statement of its business and financial status to the State insurance officials, and must also satisfy these officials that it is lawfully organized under the laws of the State where it has its home office. It is also generally required that the insurance companies shall show that they have on deposit with the treasurers of their respective States securities to the value of at least \$100,000. Each company is required to appoint a resident attorney in each State, upon whom legal process may be served; it must furnish a complete list of its agents and local offices, and must give bonds that its agents will comply with all the laws applicable to their business.

These are only a few of the many regulations and restrictions imposed by the States upon life insurance companies, all of them designed to protect the citizen from imposition, fraud, injustice, and other abuses which existed when no supervision was exercised and which would be likely to spring into being again were the present safeguards removed.

While some of the supervisory statutes may seem unnecessary, severe, and exacting, the general result of their enactment has been beneficial in the highest degree to all sound, honorable, and legitimate insurance enterprises. They have driven crooked and swindling concerns out of business, and left the field to those worthy of the patronage and confidence of the people. Under these restrictive laws all the better class of insurance companies have flourished as never before, and their business has grown to such vast proportions that in the total amount of capital involved and the extent of their operations they stand at the head to-day of all financial undertakings of modern times.

We have passed these points in review chiefly because it seems to us that in these supervisory laws applicable to the life-insurance business we have already at hand the best possible means for the regulation and supervision of the so-called trusts. With the necessary adaptations to the differing character and methods of these trade combinations, we see no good reason why the great body of statutes and the supervisory systems now established by the respective States might not be applied and utilized in remedying the real or alleged evils arising from these aggregations of capital. These requirements would insure that degree of publicity in trust operations now insisted upon by President Roosevelt and others as the chief remedy for trust abuses; they would furnish the guarantees, under State requirements, for that sound business management and that security to patrons and investors which have directly or indirectly helped to place life insurance on its present solid footing and made it strong, safe, and prosperous. Such restrictive laws would have the effect not only of remedying such abuses as exist or are likely to exist from the growth of trusts, but would insure to all regular and honorable enterprises of this sort a measure of protection under law and a degree of public confidence that would be greatly to their benefit.

These measures of State supervision would be far more practicable also than any amendment to the Federal Constitution could possibly be. To effect a change in the organic law of the nation is necessarily a long and tedious process, covering a space of many years, and this should

only be resorted to in extreme cases and where principles of national and vital importance are at stake. In the regulation and control of trusts there is no need of resorting to a constitutional amendment. Let the States exercise the same authority over trade combinations that they now do over life-insurance companies, and the thing will be done. This is a safe, sure, and speedy method. Why not try it?

## How Railroads Help the Working Man.

THE IDEA that our great railroad corporations are the enemies of labor and the oppressors of business has become deep-seated. These railroad corporations have become so great and powerful and seem to accomplish their ends by such inexplicable methods that many have come to believe that they are a menace to good government. It is believed that they are seeking to increase their power and extend their influence for the purpose of still further levying tribute upon the labor and commerce of the country, and even more effectually crushing those who oppose them and protest against their discriminating rates than they have been able to do in the past.

Recognizing this fully, every State in the Union and Congress itself have, in response to popular demand, enacted laws restraining the combination and consolidation of railroads and regulating their rates. Many decisions of the highest courts have sustained the constitutionality and justice of these laws. Yet in some devious way the greater railroad companies have gone on absorbing lines that aspired to be rivals, consolidating with competitors, buying up connecting links, building feeders, and swallowing up all manner of lesser railroad companies until, while railroad mileage has greatly increased, the number of companies has decreased until almost the entire mileage of the country is controlled by a dozen groups of companies; and all this has been accomplished in the face of hostile legislation. In addition to this the companies have, in some mysterious way, evaded or anticipated all the attempts of commissions to regulate their rates.

It is not strange, therefore, that the people have come to believe that all this has been accomplished by the corruption of the courts and other public officials by the railroad companies, and that popular feeling has been growing stronger and popular clamor louder until there is no surer method by which a politician may leap into public prominence and favor than by leading an attack, even though an unsuccessful one, against these same railroad corporations whose growing power seems to threaten the very liberties of the people.

The announcement of the organization of the Northern Securities Company for the purpose of securing a single ownership of two great competing railroad systems in the Northwest was such an open and flagrant attempt to defy and evade the laws to prevent such a consummation that the whole country was aroused, and the President himself, not content to await the outcome of the actions begun by the several States through which the systems run, instructed the Attorney-General of the United States to take steps at once to prevent its accomplishment.

The decision of the cases questioning the legality of this action is of great importance to American labor, and really involves the continuance of American industrial supremacy over the rest of the world. As the questions involved may become of political, as they now are of economic, importance, we print in this issue a notable article by Professor Guy Morrison Walker, on the debt that American labor owes to our railroads, in the hope that the facts that it contains may help to guide aright the political judgment of the people and save them from following a course which, if persisted in, Professor Walker believes, can only result in their reduction to a condition of industrial slavery.

## Phases of Great Strikes.

A PHASE of the coal strike which cannot fail to interest the thoughtful, is the incompetence of government to intervene authoritatively in the strife. To settle a strike the State must determine wages and prices, a matter, under existing conditions, beyond its power. It cannot make capital work at a loss nor workmen labor for what they deem inadequate wage.

Authoritative action would, of course, be possible were the State to buy the mines, a policy advocated by a considerable party, both here and in Europe. But the ultimate result would be a social revolution—the control of all capital and labor by the State—a scheme to which the government cannot even seem to lend its sanction. In the coal strike matter President Roosevelt, though intensely desirous of relieving a distress steadily growing more acute, was limited in his endeavor to a mere invitation to the warring factions to try once more to agree in a conference. As the psychological moment for such a conference—the moment when each side is ready to concede something—had not arrived, it ended at first in failure. Then came the offer of the operators and the way to arbitration opened. The remedy for this incompetence of the State in labor wars which menace the industry of the country, if not our civilization, is not easy to point out. The subject may well occupy the attention of legislators.

Another interesting phase of great labor contests is the savagery with which they are waged. In the coal strike capital and labor struck together. From the start it was a war to the hilt. Instead of the calm bargaining of trained officials characteristic of business differences, bitter passions developed at once. The strikers, it is alleged, sought to disable the mines, fought the police and the sheriff's posse, blew up dwellings and bridges, and killed or maimed those who wished to work. On

their side, the operators refused to yield an iota and insisted on the extreme rights of property.

Why a display of furious passions so opposed to the national character and to rational business conduct should be the inevitable outcome of a mere labor dispute it is difficult to say. Probably in the case of the miners a partial explanation may be found in the presence of a large foreign element, which, in quarrels, always develops a certain savagery. But the leaders are American, must have some thought for to-morrow, and must know that such displays of fury tend to destroy reverence for law, and the very protection on which they depend. Above all, they must realize that they have no right to interfere with the liberty of another man to work. The right of the individual to sell his labor where and when he chooses is fundamental to the safety of the state. If that right cannot be protected under our republican system, then we should welcome the man on horseback.

No doubt in time the labor problem—which is, in effect, the right division of profits between labor and capital—will adjust itself, if only by the growth of enlightened opinion. But it is discouraging to note the slowness of the process, and the failure of the parties to such questions to realize how greatly the unreasoning bitterness of their strife retards the hoped-for consummation.

## The Plain Truth.

WITH A disposition apparent in some quarters to sneer at the recent combined operations between the army and navy as an unnecessary, extravagant, and inconsequential display, it is important to note the valuable results attained as they are regarded by naval experts and the commanding officers in charge of the operations. From these sources it is learned that the manoeuvres were highly successful and that much practical knowledge was gained as to the use of search-lights at sea and the operation of war-ships at night in the vicinity of an enemy, all of which may prove of exceeding value in the future. In his report on the manoeuvres Admiral Higginson justly singles out for special mention Rear-Admiral Coghlan, whose act of leading the squadron into Newport at night, through blinding search-lights and smoke, and against a strong current, is pronounced to have been a brilliant piece of navigation. Much credit is also given to Captain Lyon, of the *Olympia*, for his cable-cutting operations, and to Captain Brownson, of the *Alabama*, and Captain Manney, of the *Massachusetts*, for their able work. That Admiral Higginson himself performed his difficult and arduous duties with remarkable skill and efficiency, all the country knows.

THE COUNTRY will have cause to feel profoundly grateful to the board of lady managers of the World's Fair at St. Louis if they succeed in their effort at having indecent dancing and other improper exhibitions excluded from the exposition of 1904. The amusement features of these expositions are right and proper enough provided they are conducted along legitimate and respectable lines, but when they include such bold and audacious outrages upon public decency as were seen on the Midway at the Chicago fair they bring merited reproach and condemnation upon the whole enterprise. The evil influences of the Chicago Midway have, in fact, not yet ceased to operate, and the harm wrought among the people at large by the degrading exhibitions there on view has been immeasurable. The midway at the Buffalo exposition was much cleaner, but some features were permitted there which should be omitted from such enterprises in the future. The managers of the St. Louis exposition will find it profitable in more senses than one to adopt a rigid rule in regard to all these side-shows and see that it is strictly enforced. The range of amusements and attractions available for these purposes that are innocent and wholesome is wide and varied, and there is no excuse whatever for the introduction of the filthy and salacious. The vast majority of the American people prefer the things that are pure and cleanly in their recreations as well as everywhere else, and they make a great mistake who go upon any other assumption.

IN VIEW of prevailing conditions in New York as to vice and crime and the deplorable laxity of the police in regard to the detection and punishment of notorious offenders against law and public decency, it is exasperating in the last degree to have these alleged guardians of the public peace exhibiting so much prowess and vigilance in running down and bringing to justice children guilty of picking flowers in the public squares, vendors of peanuts for obstructing the streets, and menagerie proprietors for venturing to open their exhibitions on Sunday. All these things are, no doubt, deserving the attention of the police, but they are as the new-fallen snow in harmlessness compared with the lewdness, the glaring and obtrusive vices, crimes, and immoralities which for some inscrutable reason are permitted to go on unchecked in the low theatres, dance-halls, and other vile resorts of the city. It is surely a grossly unjust and inconsistent act of police authority to pounce upon a harmless animal show for a breach of Sunday observance while in the very same neighborhood saloons, gambling-dens, and other resorts of the kind are allowed to run in open defiance of the law. A vigorous and vigilant enforcement of all the laws and ordinances is the duty of the police, and if they performed this service promptly and impartially with every class of offenders there could be no just cause of complaint. But a zeal that expends itself upon little children, poor pushcart men, and other comparatively harmless persons, while the real criminals, the thugs, thieves, procurers, and other scoundrels are carefully overlooked, reveals an outrageous and intolerable state of things and is a disgrace to the government of a civilized city.

## PEOPLE TALKED ABOUT

WHEN GENERAL ADNA R. CHAFFEE is relieved of the chief command of the American forces in the Philippines he will be succeeded by an officer amply competent to fill the position. The coming new commander is General George Whitefield Davis, who was promoted some time ago to be major-general. General Davis, who is sixty-three years old, will have but nine months to serve as head of the army in the archipelago, as he will be retired for age in July, 1903. The general is one of our successful soldiers who never had a West Point education. He enlisted in the volunteers during the first year of the Civil War and in 1866 was mustered out with the rank of major.

GENERAL GEORGE W. DAVIS,  
The newly designated commander of the army in the Philippines

The next year he secured a captaincy in the regular army, and from that time until the Spanish-American war his advancement was slow. He made a reputation, however, as an engineer. On the outbreak of the conflict with Spain he was appointed a brigadier-general of volunteers and was elevated to the like rank in the regular service in 1900. He was military Governor of Porto Rico in 1899-1900 and made a good record in that post. He is the author of several monographs on Porto Rico. General Davis was ordered from Porto Rico to the Philippines, where his work has been highly commendable.

IN HIS recent volume of "Reminiscences," covering sixty years of public life, the Honorable George S. Boutwell has many entertaining anecdotes to relate concerning his old associates in politics and government. Mr. Boutwell admired General Grant in all his capacities, and considered him far superior in military affairs to Sheridan or Sherman. He ranks Sheridan above Sherman as a commander, and assures us that Sheridan, in spite of his denials, did say, after his return from Europe at the close of the Franco-Prussian war, that "either of our armies at the close of the war (Civil War) could have marched over the country in defiance of both the French and German forces combined."

BISHOP CLARK, of Rhode Island, enjoys the distinction of being the oldest Anglican bishop in the world. He belongs to a family distinguished in the religious annals of America. One of his brothers, Rev. Dr. Rufus Clark, was for many years pastor of the First Reformed Church at Albany, N. Y. Bishop Clark himself began his ministerial service as a Presbyterian, but only remained in that denomination one year. He was made bishop of Rhode Island in 1854.

WE HAVE heard comparatively little in recent days about Zanzibar, principally for the reason that the country has been for many years under the protectorate of Great Britain, the slave trade has been nearly suppressed, and the course of events in that part of East Africa has been so peaceful that there has been no "news." The last disturbance was that which occurred at the accession to the throne of the Sultan Hamoud Mahomed bin Said in 1896, and the British government determined then to forestall disputes of this sort by taking to itself the right to fix the succession. Sultan

SULTAN SEYYID ALI,  
who lately succeeded to the throne of Zanzibar.

Hamoud died recently, and his son Seyyid Ali will now reign in his stead. This young man has been educated in England at the famous school of Harrow, and is quite an up-to-date person. It is said that his school days at Harrow differed little from those of the ordinary public-school boy. Not only did the new Sultan, who is said to be bright and intelligent, remain at the bottom of the school, but he was equally careless of prowess in the playing-field, where his football in particular was of a wild rather than of a skillful nature. Chosen to represent Zanzibar at the coronation, he took up his quarters in London as a guest of the King, but the postponement of the festivities and his father's illness made it necessary for him to return to Zanzibar. Seyyid Ali, who will be under the care of the prime minister of Zanzibar until he is twenty-one, has followed Oriental custom by marrying

his cousin, a princess of the royal house, who is but eleven years of age.

THE PAGES of Rev. Dr. Theodore L. Cuyler's autobiography, recently published, are crowded with fresh and entertaining anecdotes of notable men and women of the past half century in both Europe and America. On one occasion, when Dr. Cuyler was pastor of a church in Trenton, N. J., he had as guest at table Horace Greeley, who had come over to make a speech at a political convention. In the course of the meal Mrs. Cuyler asked the editor if he would take coffee. His droll reply was, "I hope to drink coffee, madam, in heaven, but I cannot stand it in this world." Dr. Cuyler quotes elsewhere a striking remark once made to him by Mr. Greeley with reference to a certain popular orator who afterward became minister to China: "Mr. B—— is a pretty, a very pretty man, but he does not study, and no man can ever have permanent power in this country unless he studies."

LIEUTENANT-GENERAL BUTLER, commanding the British forces at Devonport, is one of the few British officers of high repute who were not called upon to do service in the South African war, and very likely, has congratulated himself on that fact since so many of his fellow-officers, equally distinguished, left their reputations behind them in that unhappy strife. Sir William is entitled to rest upon laurels previously won. His career of active service commenced with the repulse of the Fenian raid into Canada, but includes many serious items, such as participation in the Ashanti war of 1873-74, the Zulu campaign of 1878-79, the Egyptian war of 1882, and two distinct tours of duty in the Sudan, where in 1885-86

SIR W. P. BUTLER, K. C. B.,  
One of King Edward's veteran generals.

he commanded a brigade and was present in the action at Ginniss. An eminently thoughtful and accomplished soldier, he has a considerable literary as well as military reputation.

THE OLDEST active bank president in the United States is said to be Mr. David Crosby Foster, of Poughkeepsie, who has been at the head of the savings bank in that city for many years. He is ninety-three and still vigorous.

A LONG line of noble and high-born ancestors has given to Lady Castlereagh, of England, a heritage of grace and beauty such as few women of her land and time possess to-day. She is the wife of Lord Londonderry's only son and heir, and must therefore some day in the not distant future rise to a still higher position than she now holds. Lady Castlereagh is said to be specially fond of out-door sports and is an excellent swimmer. She is connected with an immense number of well-known people, and she is a grand-niece, by marriage, of the Duchess of Argyll. Her ladyship often helps her mother-in-law, Lady Londonderry, to do the honors of splendid Wynyard and of Londonderry House. She has been known to the King and Queen from earliest childhood, and one of the most beautiful wedding presents received by her on her marriage was a gift from their Majesties.

LADY CASTLEREAGH,  
An English society leader and lover of out-door sports.

IN A PLEASANT sketch of Gladstone's home life in a recent number of *Lippincott's* we are told that when they were first married Gladstone put two alternatives to his wife, either to know nothing and thus be free of all responsibility, or to know everything and be bound to secrecy. His own remark fifty years later, "My wife has known every political secret I ever had," points to the choice she made and also illustrates her discretion.

IN THE front rank of the great artists of the time stands M. Raoul Pugno, the French pianist, who is now visiting the United States. M. Pugno's finish of style, and the superb delicacy, and above all the thoroughly human quality, of his art have won the admiration of the greatest continental musical critics. His artistic triumphs in Berlin, Vienna, Paris and London, as well as in this country some four years ago, were of the sensational kind. He is not only a virtuoso and artist, but also is a composer and an authority on musical matters. He is honorary professor of the Paris Conservatory of Music, the only one who can claim such a distinction. The government of the French republic decorated him with the Cross of the

Legion of Honor, and similar honors were conferred on him in Spain, Holland and Turkey. M. Pugno began his tour in this country at Boston and afterwards made his appearance here. He will visit many other cities. His farewell in New York, which will occur about the end of January, will be with the New York Philharmonic Society.

FEW CONTRIBUTIONS have been made in recent years to the sciences of economics and sociology of more practical value than those of Walter A. Wyckoff, now a professor at Princeton, whose books and magazine articles on these subjects have given him a world-wide reputation. Professor Wyckoff was graduated from Princeton in 1888, and soon after began an experiment which consisted of a study of the sociological and economic conditions of the wage-earners in America by becoming a wage-earner himself. One of these experiences extended over a period of eighteen months, during which he worked his way from Connecticut to California, engaging in various employments as a day laborer as he went along, sometimes as a section hand on railroads, sometimes as a drayman in cities, and again as a "hired man" for a farmer, remaining from two to four weeks in each position. The fruit of his experiences on this tour was given to the world in two volumes, "The Workers," one of the most entertaining and valuable works of its kind ever written. Mr. Wyckoff has been assistant professor of political economy at Princeton since 1898. This fall Professor Wyckoff is engaged in another tour of investigation in Colorado, and proposes to walk through all the principal sections of that State.

PROFESSOR WALTER A. WYCKOFF,  
Who is on a walking tour through Colorado studying social conditions.

GENERAL CHAFFEE continues to earn credit for possessing that priceless article—common sense. One of his latest orders warns the troops not to interfere in any way, even by advice, with the conduct of the civil governments in the Philippines. So we reverse the old Roman axiom and read: in the reign of law arms are silent.

SOME DELIGHTFUL bits of Irish folk lore are to be found in Mr. W. B. Yeats's recent book on "The Celtic Twilight." The Scotch, according to Mr. Yeats, have gone altogether wrong in their dealing with the "wee folk." They have denounced them as wicked and pagan, preached at them from pulpits, and had them up before the magistrate, with the result that the goblins of Scotland are sour in their tempers, fierce, terrible, and inimical to man. In Ireland the situation has been much better managed, with kindness, humor, and a spirit of mutual help: "Warlike mortals have gone amongst (the fairies), and helped them in their battles, and they in turn have taught men great skill with herbs, and permitted some few to hear their tunes. Carolan slept upon a fairy path. Ever after their tunes ran in his head, and made him the great musician he was."

THE NEW YORK Clearing House Association, which is now able to report larger transactions than is any other similar organization in the world, has just chosen as its president a man of sterling worth and of surpassing ability as a financier. The new incumbent, Mr. James Stillman, is a man with many business interests, being president of the National City Bank and also of the Second National Bank, head of the cotton firm of Woodward & Stillman, and a director in about fifty railroads, banks, and industrial corporations. Under Mr. Stillman's management the National City has become one of the most prominent banking institutions in the world, his methods of business being bold and effective. An illustration of this was given in 1897, when, by depositing \$50,000,000 United States bonds in the Treasury he secured for his bank the distinction of being the chief depository of the millions paid to the government by the Union Pacific Railroad. Mr. Stillman is said to be in close touch with the Gould and Rockefeller interests, and he is, of course, a very wealthy man. He has a town house, a fine residence at Newport, and an estate at Cornwall-on-Hudson, where he pursues farming and cattle-breeding. He is a skilled amateur photographer, and is interested in music and art. His charities have been numerous, among them being a gift of \$100,000 to Harvard University for the erection of an infirmary, besides an endowment to maintain the latter.

MR. JAMES STILLMAN,  
New president of the New York Clearing House Association.

BRIG.-GEN. J. M. WILSON (RET.),  
Late chief of engineers, United  
States Army.—Backrack & Co.

MR. EDWARD W. PARKER,  
An expert mining engineer.  
Parkinson.

HON. GEORGE GRAY,  
Judge of United States Circuit  
Court.—Guthrie.

MR. EDGAR E. CLARK,  
Grand Chief of Order of Railway  
Conductors.—Kudgila.

MR. THOMAS H. WATKINS,  
An experienced coal-mine  
operator.

## The Arbitrators of the Coal Strike

BISHOP JOHN L. SPALDING,  
A prominent Catholic prelate.  
Anderson.

ALTHOUGH MANY persons questioned the propriety of interference by the chief executive of the nation in a strike, however widely harmful the latter might be, the issue of President Roosevelt's efforts to settle the long dispute between the coal miners and the operators has been so happy that criticism is silenced. The commission which the President has appointed to arbitrate the matters in moot has been selected with good judgment, being composed of able and respected men, and it appears to be

entirely satisfactory to both parties to the controversy. General confidence is felt that its inquiry into the conditions in the anthracite region will be intelligent and fair, and that its united conclusions will be sound.

Brigadier-General John M. Wilson, whose name is first in the list of commissioners, was formerly Chief of Engineers, United States Army, having been retired in October, 1901. General Wilson is a graduate of West

Point, and served with distinction in the Civil War. After the war he directed important engineering work for the government and had charge of the completion of the Washington Monument. For a time he was superintendent of the United States Military Academy.

Mr. Edward W. Parker, the second member of the commission, is an expert mining engineer, and is chief statistician of the coal division of the United States Geological Survey. He is also editor of the *Engineering and Mining Journal* of New York. He is the author of the annual reports in the volumes of the geological survey on the production of coal, coke, and salt.

The Hon. George Gray, the third arbitrator named, is judge of the Circuit Court of the United States in the third circuit. He was United States Senator from Delaware from 1885 to 1889, and was a member of the peace commission in Paris in 1898 and of the joint high commission at Quebec in 1898. In 1900 he was appointed a member of the international committee of arbitration under The Hague convention.

Mr. Edgar E. Clark, the fourth member of the commission, is grand chief of the Order of Railway Conductors, and was selected as a sociologist. He has shown great ability in managing the affairs of his order, and he strongly believes in arbitration, holding that strikes should be entered on only as a last resort. He is serving his sixth term as grand chief.

Mr. Thomas H. Watkins, the fifth arbitrator, lives in Scranton, Penn., and was formerly the largest an-

thracite coal operator in that region. He has of late years been interested in railroad enterprises and the mining of soft coal. He is regarded as an authority on mining, and is a director of the Temple Iron Company, to which the leading coal operators represented in the strike also belong.

Bishop John L. Spalding, of Peoria, Ill., the sixth member of the commission, is one of the most prominent prelates of the Catholic Church. He was formerly chancellor of the diocese of New York. He is the author of a number of books, and is regarded as a friend of the miners.

Mr. Carroll D. Wright, who is to be the recorder of the commission, is United States Commissioner of Labor, and was recently installed as president of Clark University, Worcester, Mass. He has been for many years a lecturer on labor subjects and is the author of several works treating of wages and labor.

MR. CARROLL D. WRIGHT,  
Eminent authority on labor questions.  
Parsons Brothers.

### The Struggle of the Poor for Coal.

NO BETTER illustration could have been found of the desperation of the poorest of New York City, those who live always "from hand to mouth," than the eagerness with which they struggled for their buckets of coal during the coal strike, when that fuel was sold to the poor at twenty-six distributing places in New York. Before the opening of the gates to admit purchasers, large crowds, in which women outnumbered the men two to one, thronged the streets. In their anxiety to be near the front these people created panics in several instances, requiring squads of policemen to bring about order. The demand continued with little abatement until newspapers began to forecast the settling of the strike. Then the poor people decided to wait, and they did.

It was estimated that in one day 50,000 persons bought coal at the distributing depots, each person buying only one bucketful, paying fifteen cents for thirty-five pounds. This was said to be the cost of the coal at the yards, including the price at the mines and the expense of transportation. The price was estimated per ton at \$9.75. In one day one yard sold at this rate \$1,800 worth of anthracite. All this money was received in small coins, among them thousands of copper cents. The money was carried to the bank in a box. At each coal depot was an office or window where tickets were sold.

A woman with a sack or basket would buy a ticket for fifteen cents entitling her to a bucket of coal. She would then go into the yard, deliver the ticket, and have her sack or basket filled. On the sidewalk at nearly every coal-selling place was a crowd of boys, some of them with little home-made wagons or carts. They were impromptu draymen and would bargain with the woman who had bought anthracite, and who lived several blocks away, to carry her load to her home for a nickel or a dime. This infant draying industry alone was not inconsiderable. Some who bought coal at fifteen cents a bucket sold it afterward for twenty-five cents to some of their neighbors. At some depots, it was complained, smaller buckets containing less than the required

thirty-five pounds were substituted for those of regulation size. And there were other schemes devised for profit or for fraud.

Many of the women who bought coal were so old and decrepit that they could scarcely carry their burdens home. Others were thinly clad and shivering in the cool wind. This sale of coal brought from their homes of poverty the city's very poorest.

### Woman's Remarkable Feats of Alpinism.

EVERY YEAR Madame Brassard, who keeps a little cocoa shop at Lyons, France, follows the French Alpine troops during the manoeuvres in order to sell cocoa to the soldiers, with whom she keeps up in all their long marches. This year, in the course of a few days, Madame Brassard made the ascent of Mont Jovet, crossed in deep snow the Col de la Vanoise, reached the summit of Mont Froid in a snow-storm, then accompanied the troops to the top of Mont Cenis, and finally left them at Mont Frejus, after selling out her stock. She then returned home, refilling her basket at Lyons, and walked to Savoy to be present at the grand manoeuvres. The profit from all these remarkable feats of Alpinism amounted to barely thirty dollars.

THE PRINCETON FACULTY OF HALF A CENTURY AGO.

1. Professor Arnold Guyot, the geographer. 2. Professor Charles S. Shields, still in the faculty. 3. Professor Schenck. 4. Professor MacLean, president of Princeton before Dr. James McCosh. 5. Professor Atwater. 6. Professor Duffield.—*Rear & Son.*

### Princeton's First Lay President.

THE INAUGURATION of Woodrow Wilson as president of Princeton University—an event which was celebrated with much ceremony on Saturday, October 25th—is of unusual significance because this eminent scholar and historian is the first man who ever occupied the president's chair of this Presbyterian institution who was not a minister. The accompanying picture, which is a reproduction of an old photograph, is interesting, because, though it was taken nearly fifty years ago, nearly all of the men in it are either alive to-day or have only recently died. Dr. Shields is still a member of the faculty, Dr. Duffield, the father of Rev. Howard Duffield, of New York, died only last year, and Dr. Schenck died but about two years ago. These seven men composed practically the entire faculty when they stood together before the camera, and their pupils numbered from two to three hundred. To-day fifteen hundred students assemble under the leadership of the new president, and the faculty has grown in proportion. Dr. Wilson is one of the most popular men in Princeton, and his inauguration marks the transition from the old to the new régime. He will carry out the university motto of "Progressive Conservatism," with more accent on the first word than any of his illustrious predecessors gave it. He is not merely a student, he is an alert, practical man, intensely interested in the newest

ideas, thoroughly understanding the life and the men about him, and closely in touch with both graduate and undergraduate sentiment. His inauguration was the occasion of a great reunion of Princeton friends and graduates, and it is generally believed that Dr. Francis L. Patton, who retired from the presidency, and who has just become the head of the Princeton Theological Seminary, has chosen a man who will most worthily succeed him and be a strong head to the university. That President Wilson will succeed greatly is the general wish. The continued prosperity of Princeton University is an important factor in the nation's progress. This great institution has numbered among its graduates many of our ablest men.

# Porto Rico's Curious Political Parties

By Peter MacQueen

SAN JUAN,  
September 25th, 1902.

THERE ARE many changes visible in the island of Porto Rico since I was here four years ago. The Porto Ricans are bolder looking; their cities have cleaner smells; electric cars flash through their palm groves, and an American automobile carries their mails from Ponce to San Juan over the eighty miles of splendid boulevard left by the Spaniards.

But colonization is a difficult task, and four years of freedom cannot annul four centuries of despotism. The Porto Ricans have been well used by the American government, notwithstanding the tariff of the earlier years. Of the Lower House of Delegates the whole thirty-five are Porto Ricans elected by the votes of free men. Of the eleven who make up the Upper House, or Executive Council, six are Americans and five are Porto Ricans. The Foraker bill was real statesmanship, but still Porto Rico has troubles of her own. The two parties, the American Federal and the Republican party, have developed bitter feuds and even bloodshed. The Republican party has nothing to do with the party in the United States of that name. Its members were smart enough to select the name of the dominant party in the United States. With the name all similarity ends. The Republicans (so-called) in Porto Rico are the slums, the Bowery statesmen, the Tammany politicians, the negroes, the lawless elements of the islands. This is the statement of all the English, German, American, Spanish, and other whites I have met. All the decent, law-abiding element have a horror of this party.

There is an element called "Las Turbas," the mob, led by a violent agitator named Manleon, which is the lowest part of the Republican party. Owing to the violence and lawlessness of "Las Turbas," protected by the insular police, the entire Federal party was last November intimidated from attending the polls, so that the whole body of delegates to the Lower House were Republican. This Manleon has just been released from prison, and the mob hailed him with fireworks and general rejoicing. Strangely enough, the American part of the Executive Council, including Governor Hunt, seem to sympathize with "Las Turbas" and Manleon, while the American business men and decent white men generally are disgusted with their revolutionary and South American tactics. There can be no doubt that Porto Rico left to the government of its native inhabitants would inside of two years become as bad as Venezuela or Colombia. The one idea of government among the Spanish-American peoples is government by military force and to kill the men who do not belong to your party in politics.

As to the principles of the two parties, neither has

any principle. The Porto Ricans are all in favor of annexation, and while not a bit grateful to the United States, are willing to work out their own salvation. There is not so much American capital invested as was expected; but improvements are coming. It is very arduous work to reconstruct the finances, laws, and usages. Many of the houses have been built on public lands. These squatter houses have been in the present families for generations; so that to fix titles and do justice to the people who have built and own the edifices requires a great deal of firmness, legal acumen, and sense of justice.

Governor Hunt, Attorney Harlan, and Secretary Hartzell are the real governors of Porto Rico. Hartzell is the most popular of the three. He is just now the acting Governor. Governor Hunt became very unpopular through his defense of Judge Ramos, a local judge who was accused by the San Juan News of notorious immorality. The charges were proved and admitted. Hunt in his letter to the President explaining the retention of Ramos said that immorality, in the best families as in the worst, was the rule in Porto Rico. This caused many protests from all over the island and a demand for the Governor's resignation. Mr. Bird, editor of the San Juan News, showed me many of these protests. I do not believe that immorality is the rule among the better classes.

In the matter of schools the American régime is doing wonderfully well. Porto Rican children are very bright and want to learn. Over half a million was spent last year on education by the island government, and 53,000 children are now enrolled in the public schools. There are far more than this number who desire a school education, and provision is being made for them as fast as is practicable. Acting Governor Hartzell told me that the idea was to teach children technical and agricultural pursuits rather than classics—a very wise thing. In the country towns little plots of ground are set apart and cultivated by the school children under competent teachers. Mr. Hartzell also tells me that this fall 1,160 teachers will be employed.

Except in its giving heed to "Las Turbas" and the unruly element of the so-called Republican party, the American part of Porto Rico's government is very fair to the people of the islands, and is showing great moderation and tact in dealing with very trying questions. Porto Ricans are getting even a better chance than American, English, or German settlers; but this will right itself.

There are about three hundred American soldiers on the island. The insular government has organized a fine body of United States soldiers from the Porto Ricans themselves. These number about a thousand. In examinations for civil service the Porto Ricans are allowed to start with 20 per cent. But in pay the Porto Rican soldier gets \$13.50, the same as our soldiers at home;

whereas, our fellows who serve here have extra pay as if they were in foreign service. The insular police are all Porto Ricans except the chief. They are a very nice-looking set of fellows, who are most dignified, in khaki suits. Great complaint is made about them, however, in that they mix in politics altogether too much. I am told on all sides that a policeman who is a Republican will not arrest an offender who is a Republican; and a Federal, they say, will do the same by his party. Moreover, the police are so well acquainted with the people in the towns where they are on duty that it is difficult to get them either to collect evidence or arrest criminals. Thus it has come about that life and person are not so safe as they were under the Spanish rule. The old "Guardia Civil" of Spain was very efficient and did not hesitate to shoot or even put the thumb-screws on the lawless. To remedy evils of the new police the government has taken the men on the force and changed them into strange towns. This works well until the officer gets acquainted.

Acting Governor Hartzell within a few days has issued strictest orders against the police mixing in politics, and his order is applauded all over the island. Hartzell is much more popular as Governor than Hunt. In a long interview I had with him during the absence of Governor Hunt he told me of the work of the government. He has great hopes for Porto Rico. A big hotel should be built in San Juan so as to make the island popular as a winter resort and attract men with money to invest. The orange, coffee, and sugar crops will soon increase vastly, especially by the building of railroads and electric-car roads. There is a fine variety of orange in Porto Rico which will take a great place in the fruit market of New York.

San Juan, the capital, is an attractive old town, built by Ponce de Leon, on an island, which later was fortified so as to be all but impregnable. Again and again the English, French, and Dutch attacked this stronghold on the Spanish Main. The old walls of San Cristobal and the Morro, picturesque now and still defended by a few first-class American guns, have seen many a gallant fray. Only four years ago a determined fleet lay in near them and for two hours made flinders fly. I saw some of the shells used by Sampson on that occasion, and observed great gaping wounds in the gigantic bastions. One watch-tower, called the haunted sentry-box, was struck by a small shell. A poor Castilian boy was there and his blood spattered the walls. No doubt some mischievous gunner in our fleet tried a shot at the tower just for fun. But away over in Spain his thoughtlessness broke the heart of a mother waiting through the sunny years for a footstep she will never hear.

GRAND BULL, CRUSADER, SOLD RECENTLY AT INDIANAPOLIS FOR \$10,000.

PINE COW, DOLLY II., SOLD FOR \$7,000, WHOSE CALVES HAVE REALIZED \$20,000.

TWO SPECIMENS OF HEREFORD CATTLE WHICH BROUGHT THE HIGHEST PRICES EVER PAID FOR THAT BREED.

## Highest-priced Cow and Bull.

THE GROWTH in favor with the farming community of improved breeds of cattle was demonstrated by a recent sale at Indianapolis of the Dale herd, composed of Herefords. This variety is so highly appreciated that forty-three animals put up at auction brought a total of \$43,300, or an average of \$1,007. This is declared to be the highest average in the history of this popular breed, and it is doubted whether a better figure was ever secured on a full herd of any class of cattle.

Among the notable beasts disposed of was Crusader, a magnificent three-year-old bull, weighing 2,300 pounds, which went to Edward L. Hawkins, of Earl Park, Ind., for \$10,000, the record price for a Hereford. Next in value was Dolly II., a fine cow, which was bought by Mr. Hawkins for \$7,000, an advance of \$2,000 on her selling figure of a few months ago. She is the most valuable Hereford cow ever sold. She is ten years old, weighs 1,850 pounds, and has produced calves which realized a total of \$20,000. Other sales made at this auction included one cow at \$3,500, and two at \$3,000 each.

## Automobiles Have Come To Stay.

WHILE SOME excellent but impulsive persons, moved by righteous indignation over the loss and suffering caused by reckless automobile driving, are writing to the newspapers advocating the total prohibition or extinction of horseless vehicles, Mr. Thomas Edison, with a surer eye and a larger grasp on the practicabilities of the future, is proposing to put an automobile on the market so cheap in price and so easily handled that no family can afford to be without one. At all events, the automobile has come to stay as surely as the telephone and the electric light, and any attempt to cripple or retard its use will be as vain as barking at the moon. That some abuses and not a few risks and perils will attend its introduction as a popular means of conveyance may be expected, but in the end these things will adjust themselves, as in the case of other great inventions of the kind, to existing needs and conditions, and the world will wonder how it was ever able to exist in comfort without automobiles. The automobile is destined to become a great factor in the world's progress.

## Alluring Coffee.

NEARLY KILLED THE NURSE.

WHEN one of the family is sick mother seems to be the only person who can tenderly nurse the patient back to health. But we forget sometimes that it is pretty hard on mother.

Mrs. Propst, of Albany, Ore., says: "About twenty-seven months ago father suffered with a stroke of paralysis, confining him to his bed for months, and as he wished mother with him constantly, his care in a great measure fell to her lot. She was seventy-four years old, and through constant attendance upon father, lost both sleep and rest, and began drinking coffee in quantities until finally she became very weak, nervous, and ill herself.

"By her physician's order she began giving father both Postum Food Coffee and Grape-Nuts, and in that way began using both herself. The effect was very noticeable. Father improved rapidly, and mother regained her strength and health, and now both are well and strong. Mother says it is all due to the continued use of both Postum and Grape-Nuts."

### Beware of Public Beggars.

WE HAVE found frequent occasion during the past few years to warn our readers against the frauds and impostors who make capital out of seeming or alleged infirmities and physical disabilities for the business of preying upon the sympathies of a generous public. A notable case of this kind of imposture was that of the man arrested by the New York police a few weeks ago, who had by long practice been able to perfect himself in the art of falling in a dead faint on the pavement at selected points in the fashionable quarters of town, where he felt sure of being picked up, resuscitated, and generously provided with money on the strength of his pitiable condition and alleged homeless and friendless state. It was shown, on investigation, that the fellow had been making as high as twenty dollars a day right along by this artful dodge.

A more extensive scheme of systematic imposture was that recently reported in the New York *Herald*, where a number of professional beggars had organized something like a regular co-operative company, with a president, secretary and other officers, and a plan for a division of profits. The president, or manager, was a one-legged man of more than ordinary shrewdness and intelligence. According to the testimony of his confederates, he received one-half of the receipts of the beggars in his employ. They were supposed to get from \$6 to \$8 a day. The manager provided crutches, bandages and canes, and saw that the beggars were made pitiable objects by the various arts of which he is master. He was able to disguise them so that they appeared to be suffering from wasting diseases. He instructed the blind how to act in "business hours." Either he, or his manager, attended to the binding up of sound limbs, so as to give the appearance of decrepitude. There were certain articles of agreement under which this remarkable "trust" was organized, the president, for example, agreeing to pay the fines of any beggars who were arrested and to take care of them in sickness.

That a scheme like this could live and flourish for a considerable period, is a striking commentary on the gullibility and credulous generosity of the American public. It is perfectly safe to say that in barely one case out of a thousand among the persons who appeal for alms in public places does actual and genuine need exist. In the vast majority of such cases the giving of help is simply an encouragement to laziness, vice, and crime. In New York, and most other American communities, ample, generous, and adequate provision is made by private and public beneficence for the care of diseased, infirm, and helpless persons, old and young, who are without friends or means of support, and there is no occasion for such people to seek a livelihood by displaying their infirmities before the public.

The only wise and proper way to treat applicants of this kind, if in New York, is to refer or report them to the Charity Organization Society, by whom a prompt and thorough investigation will be made and such treatment accorded as the case demands; and organizations similar to this society exist in almost every large

town, whose special work it is to investigate and make proper disposition of all local charitable cases referred to their attention.

### Bertha's Blue Eyes.

HONEST blue eyes,  
So sparkling and bright!  
Mirth in them lies,  
'Tis ever in sight;  
Mirth that's contagious,  
Where'er it may fall,  
Bringing quick solace,  
A blessing to all.

Honest blue eyes,  
So beaming and kind!  
Trust in them lies,  
To evil half blind;  
Trust in the friendships  
That comfort and bless,  
Trust in the fondness  
Of ev'ry career.

Honest blue eyes,  
So tender and true  
Love in them lies,  
Tho' hidden from view;  
Love that is helpful,  
Earnest and pure,  
Which to life's ending  
Will ever endure.

Honest blue eyes,  
So fearless and brave!  
Strength in them lies,  
To brave every wave;  
Strength for the morrow,  
Whatever it may bring,  
Strength which is courage,  
In storm can still sing!

MRS. FINDLEY BRADEN.

### Mohammedanism Kind to Children.

THE FRANK, honest, and impartial study of modern religions, after the comparative method, has brought even the most earnest and devoted students of Christianity to an attitude of respect and often of veneration for many forms of alien and so-called heathen faith in which many noble ethical precepts are mingled and in which millions of human beings have found the only response vouchsafed to them to the inward voice calling to worship and sacrifice. How much harm may come to missionary effort from assuming that religions like Buddhism, for example, are wholly false and vicious, Bishop Potter has been showing recently in published articles giving the results of his observations in India. Facts illustrative of this same general truth are brought out in recent cablegrams from Russia, describing the frightful mortality among infants in certain provinces of that country. In one province, where the mortality among the members of the Russian Greek Church is 342.1 per thousand, the death rate among the children of Mohammedan parents is only 140.4 per thousand. The Mohammedan law, it seems, compels mothers to nurse their own children, whereas the mothers of the Christian peasantry neglect their children in order to work in the fields, or leave them entirely to the care of others. This much, then, can be placed to the credit of Mohammedanism, when brought in contrast with the practices of some professedly Christian people, that, in spite of all its dark and degrading features, it is kind to little children. But, of course, there is no truer cherisher of the little ones than real Christianity.

### No Drugs.

JUST PROPER FOOD AND REST.

THE regular user of drugs to relieve pain is on the wrong track. Find the cause and remedy it by proper food and quit drugs for temporary relief or you will never get well.

A minister's wife writes: "Three years ago, while living at Rochester, N. Y., where my husband was pastor of one of the city churches, I was greatly reduced from nervous prostration and anemia and was compelled to go to a well-known Eastern sanitarium for my health. My stomach was in bad shape from badly selected food; I was an habitual user of carbonate of magnesia and my physicians made every endeavor to break up this most damaging habit, but all to no purpose.

"At the sanitarium I was given Grape-Nuts and learned the value of the food. I used it continuously, eating it at nearly every meal, and my recovery was rapid. Its use enabled me to eat and digest food and to give up the drug habit, and I am now completely restored to good health.

"At the present time I am able to attend to my household duties, pursue music, which was formerly my profession, besides reading and studying, all of which I was totally unable to do at the time referred to." Name given by Postum Co., Battle Creek, Mich.

# American Labor's Debt to Railroads

By Guy Morrison Walker

IT IS A well-known fact, though one that we seldom stop to recall, that the price of the finished product in the markets of the world is made up of the cost of manufacture plus the cost of transportation. Reduced to its lowest analysis, the cost of every manufactured product is simply the cost of labor to produce it, for the cost of raw material is simply the cost of labor to obtain it, whether it be by digging ore from the mines, gathering ivory in the forests of Africa, or shearing wool from the backs of sheep.

Under primitive conditions even transportation is simply labor, and the cost of transportation is simply the cost of the human labor necessary to carry the finished product to market. This condition is still to be seen in Oriental countries, particularly in China, where the greater part of the tea crop is borne to the waterways on the backs of men, and in Africa, where strings of negroes still bear to the coast the ivory gathered in the forests of the interior.

By the development of modern means of transportation, labor in civilized communities has been relieved of the burden of transporting its manufactured products to market by the costly and laborious methods that still prevail in less favored communities. The farmer of Kansas and Nebraska sells his great surplus of wheat and corn at a good profit in the markets of Europe because American railroads transport his grain from the farm fifteen hundred miles in the interior down to the coast at a cost of approximately one-third of one cent per ton per mile.

The province of Henan, in China, lying about six hundred miles inland from the coast, with an area about equal to that of the State of New York, and with a population of over twenty-two million, has a foreign commerce that aggregates only about five hundred thousand dollars a year. The province of Sze Chuan, with an area of two hundred thousand square miles and a population almost equal to that of the United States, is practically an unknown world because almost its only means of communication is by the small boats that descend the Yang-Tse River and the returning boatmen who trudge into the interior carrying on their backs such small bundles as they are able to bear. Although the men engaged in this traffic are paid only about eight cents a day for their work, and they board themselves out of that pittance, this method of transportation costs about ten cents per ton per mile, or nearly fifteen times the average freight charge of American railroads, and more than thirty times what American railroads charge for the transportation of grain.

The value of every commodity depends upon the breadth of the market for it, and particularly is this true of the value of labor; for labor necessarily depends for its value on the facilities which exist for transporting its products to market. Thus we see that in China, where the facilities for transportation are the poorest in the world, we find the cheapest labor—cheap because it is confined for a market for its products to the territory immediately surrounding it and is cut off from the markets of the world by the high cost of reaching them. In all China there is in operation less than one thousand miles of railroad. The following table gives the population, total miles of railroad, and the miles of railroad for each ten thousand of population in the leading industrial countries of the world:

Country.	Population.	Miles of Road.	Miles per 10,000.
Great Britain.	41,454,578	21,858	5.27
France.	38,641,000	26,234	6.78
Germany.	56,343,000	31,392	5.57
Austria.	47,102,000	22,545	4.78
Italy.	32,449,000	9,772	3.01
Russia.	128,932,000	28,589	2.21
United States.	76,303,000	202,000	26.47

It will be seen from this table that the average man in America is four times better served with railroad transportation facilities than the average of Frenchmen, who, next to ourselves, are the best served by their railroads of any people in the world; while the average American is five times better served in this respect than is the average inhabitant of Great Britain or Germany, who are our chief industrial rivals. From this it is easy to see how much greater is the opportunity of the average American to market the products of his labor, and how much wider is the market which these products may reach.

Transportation rates are not only governed by the methods of transportation employed, but in civilized countries, where practically the same methods of transportation prevail, they are governed by skill in operation and by the fixed charges that are necessary to build up the transportation systems. Nowhere else in the world has railroad operation been reduced to the science that it has in this country, where our train-loads average almost double those of Europe and our ton-mile rates are not only the lowest, but are scarcely one-third those of our nearest competitors. In all this the American laborer has a great advantage over the laborer in any other part of the world.

The average capitalization per mile of American railroads is only \$61,883, while the average capitalization of the railroads of Europe is almost twice that sum, amounting to \$113,880 per mile, and the railroads of Great Britain and Ireland are capitalized at \$268,951 per mile.

This means that the charge of American railroads upon the products of labor for transporting them to market, necessary to pay the fixed charge upon the investment in the roads, is only one-half as much as European railroads must tax the product of their labor in order to place that product in the market, and only one-fourth as much as English railroads are forced to tax the products of English labor in order to pay their fixed charges or the interest upon the sum invested in them.

While the market for any given product is controlled by that nation which can combine the lowest cost of manufacture together with the lowest cost of transportation to market, the price of that product in the market is governed by the next to the lowest possible combination of these two elements—or, in other words, by the cost to the nearest competitor. The nation which makes cheapest and reaches the market cheapest need not sell its products as cheap as they can be made and delivered in order to control the market, but only to sell a little cheaper than its nearest competitor can make and deliver. When one of the competitors for a market has secured control of it by reducing the sum of his cost of making and delivering below that of his nearest rival, he may thereafter, by the reduction of one of the elements of cost, be able to increase his profit without danger to his control of the market. He may even reduce one element of cost so much as to be enabled to increase the other element of cost and still make the combined cost less than it was before.

In other words, when one country has secured control of the market for any given commodity by being able to make and deliver it cheaper than it can be done by any industrial rival, that country may, by reducing its cost of transportation to market, greatly increase its profit and still control the market without in any manner reducing the price of its wages. It may, in fact, so materially reduce the cost of transportation that wages in that country may be materially increased without endangering its control of the markets of the world. It is just this that American railroads have enabled us to do in the markets of the world, and what this means to American labor is shown by the following table, which gives the cost of transportation per ton-mile and the average wage per day that is paid to labor in the leading countries of the world:

Country.	Cost of Transportation per Ton-Mile in Cents.	Wages per Day in Cents.
China.	10	\$1.10
Japan.	35	23
Russia.	22	34
Italy.	24	26
Austria.	22.5	50
Germany.	11.5	90
France.	11.9	80
England.	26	1.04
United States.	0.000	2.60

From this it will be seen that in China, where the cost of transportation amounts to ten cents per ton per mile, wages average only ten cents per day. In Japan, which, by reason of a small railroad system and fair means of water communication, has reduced its average cost of transportation to five cents per ton per mile, the wages are about twenty-three cents per day. In Russia and Italy, which of the civilized countries have the lowest railroad mileage in proportion to population and a high average cost per ton per mile for transportation, the average wage is only thirty-four and twenty-six cents per day, respectively. In Germany, France, and England, which approximate each other in the average cost of transportation per ton per mile and in their average mileage of railroad in proportion to their population, there is a fair approximation in the average wage. While in our own country, where we have the greatest railroad mileage in proportion to our population and the lowest cost of transportation, we have the highest average wage to be found in the world; the highest wage, in fact, of which there is any record in history!

In the face of these figures it is impossible to escape the conclusion that there is a definite, fixed relation between wages and the facilities and cost of transportation; that in the absence of transportation facilities and in the presence of a high cost or rate of transportation, industry languishes, labor finds little to do, and wages remain low. While as transportation facilities increase and transportation rates grow lower and cheaper, industry thrives, markets widen, commerce grows, and wages increase by leaps and bounds.

The industrial development of America, the great demand for labor, and the high wages that exist in our country to-day are due primarily to our wonderful railroad development and to the wonderful cheapness of our transportation rates. It is a mistake to imagine that manufactures can thrive or agriculture flourish in advance of adequate transportation facilities. Were the farmers of Kansas and Minnesota compelled to pay such transportation charges as the farmer of China, it would cost them \$1.50 a ton to ship wheat from their farms to New York, or \$4,500 for a thirty-ton car-load of 1,100 bushels. In other words, their wheat, worth only sixty cents a bushel on the farm, would cost \$5.00 a bushel delivered at tide-water.

Were the steel mills of Pittsburgh compelled to pay only as much as the manufacturer of Japan for the transportation of their products to market, it would cost them

\$25.00 a ton to deliver steel rails on board ship. Pittsburgh rails costing \$25.00 a ton at the mill would cost \$50.00 a ton in New York, while Chicago rails facing a transportation charge of \$50.00 a ton would have to be manufactured for nothing in order to compete with Pittsburgh rails in the Atlantic coast market.

Neither the products of the farm nor of the factory can pay such charges for transportation to market. It is easy to see that industrial development in competition with conditions as we know them in America is impossible in a country like China, where coal mined by cheap Chinese labor at a cost of only twenty-five cents per ton at the mouth of the mine is raised by the mere cost of transportation to \$8.00 per ton when transported a distance of less than forty miles. Under such conditions the consumption of coal is naturally limited to a small radius around each mine, and it is impossible to develop any mining industry. The miners of this country should recognize the fact that were it not for the wonderfully cheap rates made by our American railroads for the transportation of coal, not one mine in one hundred would be open to-day and most of them would be seeking employment, as are the inhabitants of most other countries, at wages averaging about one-fourth of what they are earning to-day!

In contrast with the labor conditions that exist in China the recent railroad development in Japan has resulted in a wonderful rise in wages. Wages have increased within the last twenty years from an average of eight, ten, and twelve cents per day to twenty, thirty, and forty cents per day, according as the labor is skilled or unskilled, while her exports to foreign countries have increased over 800 per cent.

Wages have always been low in those parts of the country far ahead of or removed from railroad facilities, and to-day the lowest wages found in the United States are in those States which have the poorest railroad facilities. Whenever the railroads came into a new community wages are almost immediately doubled. The following table, showing the cost of transportation per ton per mile for each decade of the last fifty years and the average wage of American labor at the same time, shows what the increase of our transportation facilities and the reduction of our railroad rates have done for American labor:

Year.	Cost of Transportation per Ton-Mile in Cents.	Wages per Day.
1850.	035	\$1.25
1860.	0274	1.50
1870.	0190	1.97
1880.	0126	2.13
1890.	0092	2.50
1900.	0069	2.60

It will be seen that as our transportation rates have steadily fallen the wages of labor have steadily risen, and that, too, in an almost constant proportion. In the last fifty years our railroad mileage has grown from a few thousand miles of scattered and disconnected links into a great railroad system of over two hundred thousand miles, every mile of which is in connection with every other mile, equalizing labor conditions and leveling prices throughout the whole country, preventing either local famine or local waste of surpluses. This and the reduction during the same period of our railroad rates from 3½ cents per ton per mile to 6.9 mills, or less than one-fifth what they were fifty years ago, has enabled us to accomplish the greatest miracle that the world has ever seen.

During those fifty years our population has grown from twenty-three millions to over seventy-six millions, and over eighteen million foreigners have immigrated to our shores. Yet in the face of this great supply of labor, and most of it extremely cheap labor, that has poured in upon us, we have been enabled to develop our industries and create such a demand for labor that we have more than doubled our own average wage and at the same time delivered our finished products in Europe so cheaply that that country, even after shipping its surplus supply of labor to us, has been unable to bring about any material increase in its own wages.

The reason that the iron mills of Saxony have been idle has been because German railroad rates to the coast have been more than the combined charge of American railroad rates from interior points to our seacoast and the added cost of transportation across the seas. Why do the industries of Germany languish? It is because the government control of German railroads has abolished competition and maintained German freight rates at figures nearly three times greater than those fixed by private competition here in America. In America the necessity for lower rates forced many roads into receiverships, but this resulted in a scaling of their debts and their reorganization on a basis which lower rates were able to support. This relief, however, is impossible to the government-owned railroads of Europe, for the attempt to reduce railroad rates based upon the present capitalization or cost of those roads to their governments would impair at once the security of government investments; and so the German laborer must struggle for a wage scarcely more than one-third that paid to the American laborer, in order to equalize this difference which prevails in the freight rates of the two countries.

Of what use was it to discover that California could raise fruit for the whole world when that State had but

# The Man Behind the Limelight

By Eleanor Franklin

CHARLES EMERSON COOK,  
Representing David Belasco's  
enterprises.  
Theater.

"A PRESS agent?" indignantly exclaimed a large gentleman in one of the big managerial offices on Broadway. "I do not like the name."

"No?"

"No! Do you know what the words press agent mean?"

My, what a towering, glowering gentleman!

"A man who draws a fairly good salary for manufactur-

ing 'pipe dreams' to order."

Ignored.

"A man who has the ability, natural or acquired, to make very large actors out of very scant material."

Don't bother the gentleman. He is writing.

"Master of the fine art of consistent and skillful prevarication, dreamer of—"

"Press agent, my dear young lady, means just what it says."

"Then it isn't a good press agent."

"Agent means one who works. Press agent, one who works the press."

Now, I was duly grateful to the large gentleman for furnishing me gratis this comprehensive definition, although he did it to prove how absolutely out of the question it was for him to list himself under such a head. After this, having impressed upon me the fact that I was "up against" an unyielding dignity, he began telling, in the first person, of course, and graciously enough, some of the things a so-called press agent is and isn't. Now, when a man gets talking about himself, he seldom fails to be eloquent and often reaches the sublime; consequently I came away imbued with the idea that I had been all wrong in my estimation of the press agency as a vocation, and of the busy and brainy men who manufacture all the interesting reading matter about our actors, actresses, chorus girls, and others, which fills the columns of the daily press and the pages of our weekly and monthly periodicals.

"Why is it," asks a young friend of mine, "that so many more things happen to stage people than to anybody else?" and I answer, "Because they employ press agents, my dear."

It is a press agent's business to keep his "star" constantly in the public eye. He must correspond with thousands of newspapers all over America, or the world if he is employed by a person of international importance. If there is little in his subject to attract public attention, he must invent something, and the more prolific his inventive genius the greater success he attains in his profession and the more valuable he is to the firm of managers which employs him. It has come to be generally well known that a great many of the interesting things we read about the Bernhards, the Mansfields, the Lillian Russells and Anna Helds are stories fresh from the fertile brain of some hustling press representative, and are quite as new to the persons about whom they are written as to us, who read them with such childlike faith and astonishment. They are works of art, some of them, too, and it seems a bit unfair that their authors may not step forth and claim recognition for their skillful handiwork.

It is a positive fact that almost none of the astonishing stories told about men and women prominent in the dramatic profession are true, and yet there is not a press representative in New York who will not join my large gentleman in declaring that they have never once perpetrated a "fake story" nor "worked" a newspaper into publishing anything that was not simple unvarnished news; and they each and every one repudiate the name "press agent" because it has come to be almost synonymous with an old Anglo-Saxon word of unmistakable strength and directness.

Back in the far corner of one of Klaw & Erlanger's offices

in the Holland Building, at Fortieth and Broadway, in a little private room just large enough for himself and "one at a time," banked in by piles of newspapers and surrounded by photographs and souvenirs of most of the distinguished men and women of the stage, one may find, most any morning Mr. Jerome H. Eddy, who has been called the "Dean of Press Agents." Mr. Eddy has had more great men and women on his list than any other newspaper man in the theatrical profession, perhaps, and was one of the first men to make theatrical press work a regular business. When he says he has never sent an untrue story to a newspaper it seems a thing quite be-

CHANNING POLLOCK,  
Of William A. Brady's forces.  
McMichael & Co.

E. D. PRICE,  
Press representative for William A. Brady.—Gilbert & Bacon.

lievable, since he has had so much excellent material at hand always that there was little excuse to waste time and energy in invention. The names of Mr. Edwin Booth, Mr. Lawrence Barrett, Miss Mary Anderson, Mr. Charles Wyndham, Mr. Sol Smith Russell, and Mr. W. J. Sullivan seem potent enough in themselves to dispense with press representation altogether, but they were not always so, and within the last twenty years Mr. Eddy has helped to proclaim the genius of each of them. Mr. Eddy is now, and has been for seventeen years, press representative for Mr. Joseph Jefferson, a position which a younger man might easily overdo, since the "dean of his profession" can well afford to forego the spectacular exploitation which an admiring youth in his enthusiasm might subject him to. Mr. Eddy is also a dramatic reviewer, having written a great many caustic criticisms under the nom de plume of "Nancy Sykes." In this he exemplifies the difference between a press representative and a dramatic critic. A press representative may not always say what he thinks, because he is under contract to say what the management wants the public to think. A dramatic critic may say what he thinks, unless he is bound by somewhat the same sort of contract drawn "on the quiet" between —, but of course such a thing is impossible.

Mr. Alf. Hayman, who holds the ribbons over the multitudinous head of Mr. Charles Frohman's attractions, is not a press agent, but the great manager's representative and assistant, and he is a busier man than President Roosevelt. He sits in a little inside office in the Empire Theatre Building, buried in the details of the business management of a list of stars too long for enumeration; a list which includes some of the greatest names on the roster of dramatic fame, both in this country and abroad. Of course, Mr. Hayman has an army of men under him to whom is assigned the work for individuals, but the general representative of any great firm of managers must be in complete command of every detail of that firm's business.

Mr. Wilbur M. Bates, general representative for Klaw & Erlanger, is another interesting gentleman who keeps a very large hand on an enormously big business. He sits in a spacious office on the top floor of the Holland Build-

ing, surrounded by three stenographers, all of whom he manages to keep busy most of the time. Just now he is dictating "news" about "The Rogers Brothers in Harvard," "Ben-Hur," Jerome Sykes in "The Billionaire," Miss Ada Rehan in "Diana of the Crossways," Mr. Martin Harvey, Miss Mary Manning, Mr. J. E. Dodson and Miss Annie Irish in "An American Invasion,"

and other more or less important "attractions." He is also doing the "original" work for the "Huckleberry Finn" production, which Klaw & Erlanger are to make later in the season. The word "original" used in this connection means that he composes the material, which is copied by subordinates and used all over the country as long as the pieces may run.

Mr. Bates began his newspaper career on the Boston Herald twenty-two years ago, although he doesn't look it. He drifted, in the course of a few years, under the yellow dome of the New York World Building, but left that strenuous paper for a quiet time on the Philadelphia Press. By way of spasmodic progression he deserted this post and became press agent for Yates's "Devil's Auction" and manager for Carver's "Wild West." After a checkered career on the road we find him at last doing the press work for Leibler & Co. in their productions of "The Christian" and "The Children of the Ghetto." Then, when Klaw & Erlanger made the great production of "Ben-Hur," he was engaged by them to place that enterprise before the public in an acceptable manner and has since remained general representative for the firm. Press agents are born and not made, and in his undoubted success Mr. Bates has simply followed a natural course and come into his own.

Then there is Mr. F. J. Wiltach, press representative for Leibler & Co. "Manners maketh the man and his suavity is a perpetual letter of recommendation." Mr. Wiltach is from "the other side" and talks with an English accent; says he is "feeling fit" and "serves me jolly well right for a duffer." A bibliomaniac, too, is Mr. Wiltach; talks classic literature in such a manner as to make one painfully aware of the abysmal depths of one's own ignorance. Just now he is doing the press work for "The Eternal City" with such people as Signor Mascagni, the spectacular Hall Caine, Miss Viola Allen, and Mr. E. M. Holland to give him inspiration, to say nothing of Madame Duse and Signor D'Annunzio. They say Mr. Wiltach holds the diamond belt for spectacular rhetoric. Well, why shouldn't he? One thinks in hyperbole about such people.

Mr. Robert Hunter is another familiar figure "along the Rialto," being also attached to the Leibler & Co. forces, and press agent for Mr. Kyrle Bellew, of the sad, sweet smile and interesting gray hair; also a sheep ranch in Australia, to which he threatens to retire every time Mr. Hunter runs short of material with which to keep his limelight aglow.

Mr. Charles Emerson Cook, formerly editor of the Boston Budget and now general representative for Mr. David Belasco, is another gentleman far famed for his personal persuasiveness. Mr. Cook began his newspaper career on the Harvard Crimson during his student days, at which time he was also Harvard correspondent for New York and Boston papers. Soon after his graduation in the class of '93 he was made editor of the Boston Budget and remained in that position for six years. It is rather interesting to know how Mr. Cook was inveigled into the press-agent business. He was doing the dramatic criticisms for his paper and during one of Mrs. Leslie Carter's engagements in Boston in "The Heart of Maryland" he paid enthusiastic and most beautifully expressed tribute to her undoubtedly splendid

REFORMER JACOB A. RIIS.

AMONG THE problems relating to municipal government and city life in all its phases there is none of more vital importance, none which appeals more strongly to humane feeling and the enlightened sense of men, than that which has to do with the treatment of the poor, the outcast, and the criminal elements to be found in the so-called slums. Comparatively few towns and not even many cities have "slum" regions such as are to be seen in London, New York, and Chicago, but almost every town and city in Christendom has an element in its population where slum conditions exist to a greater or less extent, where the evils attendant upon extreme poverty, ignorance, and vice prevail and call for treatment. Because of this fact such a book as Mr. Jacob A. Riis's forthcoming "Battle of the Slums" (Macmillan & Co.) will have practically a world-wide interest and value. Mr. Riis has taken his book, which was published some years ago under the title of "A Ten Years' War," and has completely rewritten it, adding practically a third more material than the original volume contained, besides entirely rewriting the text. He has brought the subject up to date. The book is a complement, and, as it were, a following volume to "How the Other Half Lives." That was the pioneer work, showing the conditions. This shows the battle which has been waged with those conditions, the improvement that has been effected, and the means which were used and which are still being used. Some of the subjects of which Mr. Riis ably treats are the conditions which set upon home life among the very poor; how the wrong beginning may be prevented; the political bearing of the improvements that have been made in such rapid strides; how safe and decent homes can be secured in the crowded tenement districts; the fight that has resulted in the establishment of playgrounds and parks; better public school buildings, and their use for neighborhood purposes.

IT WILL be remembered that when the story "Jarvis of Harvard" came out about a year ago, its author, Mr. Reginald Wright Kauffman, came in for not a little severe criticism, particularly by certain Boston papers by whom the young and aspiring novelist was accused of making a travesty of student life and writing of things of which he had little knowledge. Other critics, equally competent, took a different view of the story and praised it as a work of unusual brilliancy and promise. However that may be as to Mr. Kauffman's first book, there can be but one opinion, it seems to me, in regard to his new novel, "The Things That Are Caesar's" (D. Appleton & Co.), and that will be that it is a piece of remarkably clever work. Surely no one who has any knowledge of the distressing conditions surrounding the lives of men who have the prison taint upon them, but who are trying in spite of it to earn an honest living, will fail to see that Mr. Kauffman has studied the problem closely and sympathetically, and has given a striking portrayal of the wrongs and injustices often heaped upon worthy and deserving men honestly trying to rehabilitate themselves into society. We recall several stories that have been written along the same line, among them being John Habberton's "All He Knew," but we know of none making so strong an appeal to the sensibilities of the reader as this novel by Mr. Kauffman. The condition portrayed is a shame upon Christian civilization, and if the story helps to awaken the public to a realization of that fact it will perform a noble mission.

MRS. SARA BEAUMONT KENNEDY, whose Revolutionary romance, "Jocelyn Cheshire," published last spring, has been one of the most popular novels for the past few months, is the author of "The Wooing of Judith," just issued by Doubleday, Page & Co. It is a love story pure and simple, the scene of which is the Virginia of Colonial days. Mrs. Kennedy, who is descended on both sides of her family from good old Revolutionary and Colonial stock, numbers among her forebears Philip Livingston, signer of the Declaration of Independence; William Samuel Johnson, one of the framers of the Constitution;

MRS. SARA BEAUMONT KENNEDY.

Thomas Pollock, twice appointed Colonial Governor of Virginia, and Jonathan Edwards, President of Princeton College, whose name is among those recently selected for a place in our American Hall of Fame. Naturally, Mrs. Kennedy is an enthusiastic member of both the Daughters of the American Revolution and the Colonial Dames, and her war poems, written primarily for the celebrations of these societies, have been widely copied throughout the country and are almost as well known as her stories. Mr. Kennedy, her husband,

is a journalist and literary man as well, and has published many short stories, besides two novels of considerable merit.

NATHANIEL STEPHENSON, the author of a new and characteristic American novel, is a native of Cincinnati, where, in a rambling old house, he has lived from childhood up, investigating the neighborhood with historical eyes, with the result that for him the place bears more significance than for others. His first novel, "They That Took the Sword," was a story of incidents of the Civil War as witnessed in that city and its inhabitants. His new novel, called "The Beautiful Mrs. Moulton" (John Lane, New York), differs entirely from his first; it depicts very strongly the type of a successful American business man, and the social evolution of his beautiful and ambitious wife, the heroine of the story. Apart from the engaging interest of the narrative, Mr. Stephenson has a method of handling his characters which has been well likened to that of Thackeray—he shows a marked philosophical bent, and there is a goodly distribution of epigram throughout his pages. Perhaps the most interesting and important characteristic of Mr. Stephenson's work is that, with an exceptionally thorough knowledge of English literature, he is a loyal champion of American letters *per se*, eschewing the fashionable and affected mimicry of English stylists.

A NEW SERIES of books which will appeal to a wide constituency is in preparation by Appleton & Co. It will have the title of "Appleton's Business Series." The first volume will be "The Work of Wall Street," by Sereno S. Pratt. It deals with conditions as they exist to-day, and is based on personal knowledge. What is more, its author has realized what are the things worth telling, and has known how to present them in an orderly and understandable way. The book has twenty-three chapters, and deals with about everything in which the general reader may be supposed to have an interest. It is believed that this book will win a place in popular literature such as no existing publication on the subject makes any serious attempt to do. With admirable clearness Mr. Pratt has performed well a task undertaken by no other writer. From an intimate connection, extending over many years, with the most trustworthy sources of information, he has written entertainingly of the marvelous machinery employed in what is now rapidly becoming the world's financial centre. It would be difficult to mention any material fact relating to money or speculation of which there is not an adequate presentation.

ONE OF the most attractive features of the monthly illustrated numbers of *The Outlook* for the past year or more have been the series of reminiscent papers by Dr. Edward Everett Hale under the title "Memories of a Hundred Years." These papers are to be issued soon in book form by the Macmillan Company. This work shows, perhaps, more strongly than any other which Dr. Hale has written, his remarkable versatility and the

REGINALD WRIGHT KAUFFMAN,  
Author of "The Things That Are Caesar's."

amazing range of his activities during his long and useful life. The book opens with John Adams and closes with President Roosevelt. The illustrations comprise many rare and curious portraits, wood cuts, and fac-similes of interesting letters. There is a particularly interesting chapter on Boston in 1808 among many others equally entertaining. To go into details about this book would be to call up the names of every prominent man and woman associated with the country's social and political history during the last hundred years.

SO FAR as I am aware the first story to be founded on Christian Science is "The Right Princess," the new novel by Clara Louise Burnham, published by Houghton, Mifflin & Co. The story purports to be the account of an English family who have come to America in search of health for the heir of the house. His case

is one of arrested development owing to an injury to the head, received in childhood. He is not conscious of his limitations, and his self-complacency causes a friend to liken him to the spell-bound hero of an old fairy tale. A New England girl proves "the right princess" to break this spell, which she does by means of Christian Science. The story is one with much episode and action, and is so admirably told that it will prove, both to Christian Scientists and to the unbelieving, one of great charm and interest. It will not be surprising if it calls out a good deal of discussion.

THE PROMISED novel by J. P. M. (J. P. Mowbray) will bear the alluring title "Tangled up in Beulah Land" and will be in the nature of a sequel to that delightful work, "A Journey to Nature." It has to do with the narrator of that tale and "Charlie," now a young man with "entanglements"—which drive the pair away from the great city to the wilds of the Pennsylvania farming country, where the "Doctor" has set up a patriarchal establishment. The story shows the most acute and delicate sense of human character, along with a feeling for nature which permeates the whole tale like a breath of spring itself. Full of interest and sparkling humor, the plot unfolds itself naturally and inevitably to a thoroughly unforeseen and unforgettable climax. "Polly" is simply adorable, and would be in herself sufficient "reason for existence" in any book. "Tangled up in Beulah Land" will be issued at once by Doubleday, Page & Co.

TRUE IRISH humor is inimitable when coming from the inhabitants of our country who hail from the land of the shamrock, but when we have it from the pen of Kate Douglas Wiggin, writing from Kilmacow, Ballyhooley, or Cushendun, it is irresistible. "Penelope's Experiences in Ireland" is saturated with the flavor of Munster, Leinster, Ulster, and Connaught, and abounds in that genuine humor which, as Thackeray says, is "a mingling of wit and love." In illustrating this edition (Houghton, Mifflin & Co.) Mr. Charles E. Brock, the well-known English caricaturist, has been fortunate in catching characteristic expressions and in individualizing the people in the narrative. His cabbies, boatmen, farmers, and waitresses are as true to the soil of Ireland as their fellows in the earlier books he has illustrated were to England and Scotland.

IT MAY almost be said that the title of Mr. James Whitcomb Riley's new book of poems, soon to be issued by the Scribners, is a poem in itself. "The Book of Joyous Children" is the name. As may be inferred, the volume is a collection of poems about children; they were written for children, too, but that makes no difference with Mr. Riley's child poems, which grown-up folk read as greedily as the youngsters. The sweetness, the grace, the laughter, and the tenderness that are characteristic of Mr. Riley's best verse will be found to the full in this book. The types are, of course, Hoosier, but the traits of human nature in its most lovable and winning childlike moods are common to humanity and give the book a universal interest. It will probably prove to be one of the most successful of his books.

DR. FURNIVALL'S many friends in this country have learned with pleasure, by an authoritative statement, that the movement started to commemorate his services to English literature and philology has reached its completion. A sum equivalent to about \$2,700 was received, including subscriptions from friends in the United States and Germany. In accordance with Dr. Furnivall's own desire, the greater part of this has been devoted to helping the work of the Early English Text Society. The balance has sufficed to provide a boat for Dr. Furnivall's river parties for working-girls on the Thames and one or two other minor purposes.

IT IS A pleasing title, "The Blue Flower," which Henry van Dyke has chosen for his new volume of short stories, which the Scribners will issue in a few days. It is suggestive of that love of nature which is a compelling, if not a "ruling passion" with Dr. van Dyke, and which helps to give an abiding charm to all he writes.

SHREWD TACTICS OF FOOTBALL MANAGERS—THE TURF HERO OF THE SEASON.  
COMING FIELD TRIALS

FISHER,  
Princeton's famous centre in  
last year's team, now  
coach of Tennessee.

when the candidate for honors is supposed to be at his best. In football in the college world to-day each of the great university teams has one great game of the year to look forward to, and the coaches lay their plans accordingly. For instance, nobody at Yale attaches any significance to the fact that Amherst may play the sons of Old Eli a close game in early October. Harvard may beat the same team 40 to 0 a week later, and while the general public may begin to make comparisons as to the strength of Yale and Harvard displayed in such games, knowing supporters of the respective teams keep their peace, realizing that the players were allowed to do just so much work, and remain confident that the real strength of the team cannot be known. While the 'varsities of the big universities are seldom beaten by the elevens of the smaller institutions in the early portions of the football season, most of those games are practice exhibitions and show nothing except the weak and strong points in the line or back of it, or the forwardness of the offense and defense, to the careful coach. The average coach to-day is much more solicitous about the real strength of his team than he is in piling up big scores in the early games, which count for nothing. The same tactics are pursued at practically all of the big universities, chiefly to overcome the constant fear that this or that player, or half a dozen, for that matter, will get too fine before the important game or games of the season are to be played. Harvard is ambitious only to defeat, by good scores, the University of Pennsylvania and Yale. Yale is simply looking forward to her battles with Princeton and Harvard. Annapolis and West Point are anxious only about the outcome of the battle for the army and navy championship to be decided in Philadelphia toward the end of the season. Yale believes that she will beat Princeton and Harvard, and there is more confidence at New Haven this year than for several seasons. While Harvard is dubious about her meeting with Yale, the crimson expects an easy victory over Pennsylvania. Negotiations are already under way looking toward the re-establishment of friendly athletic relations between Princeton and Pennsylvania, and as these two will meet in athletics and possibly in baseball next spring, every indication points to the fact that they will meet again in football next fall. Columbia has in Weeks and Smith two backs who cannot be beaten. If the team was as strong in the line the Big Three would have their hands full winning a game from the New York University.

WHAT THE ATHLETIC SEASON HAS SHOWN.—Admirers of track and field athletics and the supporters of the

MARTIN THAD SOWDER,  
Winner of world's championship in bronco-busting  
contest at Festival of Mountain and Plains,  
Denver, Col.—Bronco.

Amateur Athletic Union have reason to congratulate themselves on the record of the outdoor season now drawing to a close. There have been practically no scandals, the games as a whole have been better attended than ever before, and yet practically no new track or weight champions have been developed during the year. Duffey, the little Georgetown flyer, is still the champion sprinter of the world, and has again demonstrated his superiority over both the American and foreign sprinters. His record of 9.3-5 seconds for the 100 yards is likely to remain untouched for many years. Of the distance men Alexander Grant has shown himself to be the best for anything from a mile up, including steeplechasing. At the hurdles none of the jumpers approached the performances of Kraenzlein, while at the weights Flanagan, Gray, and Mitchell retain their laurels. De Witt, of Princeton, is a coming champion, but it may take him two years to get to the top.

BETTER TIMES FOR BASEBALL.—It has been demonstrated to the satisfaction of the enthusiasts throughout the country that it is impossible to kill the interest in professional baseball. Now the skies look brighter and indications point to a part settlement of all vexed questions. This will mean that better baseball will be seen next season than ever, as well as the largest crowds at the games in the last ten years. The one thing which has bothered the old club-owners more than anything else is the determination of the American League that it would put a team in New York. Every foot of ground on Manhattan Island has been gone over by the club-owners of the old league, and they are convinced that it is impossible for their rival to obtain a desirable site.

TURF HERO OF THE YEAR.—While Hermis has snatched the championship wreath from Major Duingerfield in the three-year-old division on the running turf, there is still some contention about the premier two-year-old of the year. Salvage ran only one really good race in the East, that when he captured the classic Futurity. He has been ailing ever since, and horsemen generally gave the palm to Aceful until that sturdy colt was beaten by Gray Friar at the fall meeting at Morris Park. Irish Lad was thought to be the best until Aceful took his measure rather easily. The critics are beginning to mark the speed of Ugenia Burch and are pretty well convinced that she is the best filly of the year. Of the veteran campaigners, the old iron horse, Advance Guard, is really the hero of the year. Raced summer and winter since his two-year-old advent, he is the same lion-hearted animal that he has always been. Advance Guard invariably trails his field to the stretch and then comes through with a burst of speed which generally gives him the victory, invariably by the shortest of margins. He is the idol of the turf to-day, consistent and as true as steel. Advancing building operations about New York threaten several of the running tracks, and it is only a question of a year or two before Gravesend and Morris Park will be cut up into house lots. Would it not be a good idea to retain one track—say Sheepshead Bay—accessible, and have the Jockey Club take charge? Then the different associations could each in turn rent the track for their spring and fall meetings.

READY FOR THE FIELD TRIALS.—I have always noticed that when unusual activity is shown early in the season in the kennels and among the officials for the various field trials a good shooting season invariably follows. The handlers and trainers of the setters and pointers have been busy during the last three weeks getting their charges in shape for the coming field trials to be held in November. Several of these championships will be held on Long Island this year, and the trainers promise to turn loose some young dogs which will probably make their mark. Big preserves

CHESTER ELLSWORTH,  
Chicago's centre, kicking a  
goal from the  
40-yard line.

have been stocked in the East, so that fewer trials will be held in the South this year than for a dozen seasons.

HAVE FADDISTS DESERTED PING-PONG?—While the craze over ping-pong lasted well into the summer, the enthusiasts began to desert the tiny bats and little net with the advent of real summer weather. There are those who predict that the scientific indoor game will come back to popularity with a rush on the advent of real winter weather, but others think that the craze has died out. The next few weeks will tell the story of the stability of ping-pong. There is not the same demand for the implements of the game from the dealers and manufacturers that there was at this time last year.

A GREAT AUTOMOBILE SHOW.—While the automobile show will not be held until January at Madison Square Garden in New York, it is impossible even now to obtain space. Remarkable improvements have been made in the horseless vehicle during the last year, and the coming national exhibit will be the most interesting ever held in this country.

GEORGE E. STACKHOUSE.

## Answers to Inquiries.

J. H. M., NEW YORK.—The Jockey Club takes no official notice of betting in the ring. In the East the Metropolitan Turf Association, composed of well-known bookmakers, controls the betting proposition. It is an unwritten law that in case one of the bookmakers cannot settle a claim the association does it for him. In this way the public is protected. There are plenty of pool-rooms in and about New York at present, but it is difficult for a stranger to get into one of these places.

H. E. R., CINCINNATI.—In a game of casino partners are permitted to build for each other, but the build must come from the hand and not from the table. In table stake poker one always has a chance to call for the amount in front of him at the time the bet was made. When chips have been exhausted more can be purchased unless it is a freeze-out.

A. E. C., KANSAS CITY.—Under the rules of the National Cycling Association the professional and amateur champions are permitted to meet in a special series of races for the national championship. Kramer and Hurley may meet soon.

J. M. Y., CHICAGO.—The foul strike rule has worked satisfactorily this year. It was made to prevent strategic batmen from intentionally fouling good balls and delaying the game. G. E. S.

## Increase Your Capacity

FOR HARD BRAIN WORK.

HORSFORD'S ACID PHOSPHATE supplies just the material that is most wasted by brain work and nervous exertion—the Phosphates. An unexcelled strength-builder.

## A Mother's Milk

may not fit the requirements of her own offspring. A failing milk is usually a poor milk. Borden's Eagle Brand Condensed Milk has been the standard for more than forty years. Send for book, "Babies," 71 Hudson Street, New York.

# The St. James Society and Its Remarkable Work

By Oliver Shedd

BAUDOUINE BUILDING,  
NEW YORK,  
Home of the Society.

FIVE YEARS ago six physicians of New York City organized the St. James Society for the promulgation of an antidote, which had then first been discovered, for the morphine, cocaine, opium, and chloroform habits. The society began work in a field where there was abundant work to do. Although they were physicians and in their private practice had learned of the frequent use of the drug habit in its different forms, they were not aware of its astonishing prevalence, of the great number of unfortunate slaves of the "pipe" or the white powder, the "dope," or the "hypo" until they began giving their entire time to this field of practical work. The society has now 180,000 names on its list, and each one of these names represents a life of struggle and agony and dread such as only those know who are under the absolute control of a deadly drug. The society's work has thrown a light on this fearful habit, its causes, its dire effects, its prevalence in the most unexpected quarters, that makes the whole subject one of unusual interest.

The public has only a vague conception of what the drug habit is and what it means. Those who are its victims invariably conceal it. The very person whom you least suspect of such a misfortune may secretly and stealthily be gratifying a craving which is worse than death. So the names of those who have written to the St. James Society or have called at its rooms for aid are guarded as carefully as the society's funds. The names and letters are all filed away in a large cabinet which occupies a big safe. At night the safe is locked, and it can be opened only by a combination. Secrecy is the prevailing sentiment of the morphine "fiend," and the society recognizes this and does not violate it.

The St. James Society occupies two floors in the Baudouine Building, Twenty-eighth Street and Broadway, where it has its executive offices, its consultation rooms, and packing and shipping department. The physician in charge is Dr. M. O. Arnold, who for many years has had experience in the treatment of the drug disease. I had an interesting chat with Dr. Arnold when I called recently at the society's headquarters to observe for myself what work it was doing and how that work was done. Dr. Arnold told me one thing that shows how serious the drug habit is. "The average life of the morphine eater," said Dr. Arnold, "is twelve years from the time the habit first becomes fixed. Those who eat opium live about three years longer, but the cocaine 'fiend,' the person who uses the hypodermic injections, does not have an average life, after he becomes an habitual user, of more than ten years. Many of them are killed by it in six or seven years. You asked me something about the prevalence of the habit. Judge for yourself. In New York alone there are 20,000 opium smokers."

At my request, Dr. Arnold described the symptoms which follow the taking of a dose of morphine:

"At first," he said, "there is an exhilaration. The blood flows faster. Color comes into the face. The eyes are bright. The victim feels light, airy, unnaturally happy. He is like one who is filled with joy without knowing why. Then gradually comes reaction. The mind grows dull. The person is depressed. He is low, miserable, unhappy in a negative way. There is at that time no positive suffering. It is like a magnified fit of the 'blues'; it is an exaggerated form of the depression which one

feels on a rainy, gloomy, hopeless day. Then comes the next state; and it is vastly worse. He grows nervous. The faculties are active, but it is unnatural activity. The sufferer is apprehensive. He is constantly on the alert, fearing that some calamity is going to happen and come suddenly. His eyes roll; he glances right and left over his shoulder, looking for an imaginary danger which he has no reason to believe is present. The condition is becoming serious then. The nerves cannot stand long this state of ungoverned excitement. And it is then that the unfortunate one craves more of the drug—not because he relishes it, for he almost loathes its taste and smell—but because he knows that the stuff, detestable though it may be, will bring relief, and, if there is no other way, the victim will steal or even kill to get it. Suppose the drug cannot be obtained. The nervous excitement increases until there is a collapse. The sufferer falls into convulsions and then becomes unconscious. Sometimes death comes; sometimes insanity. In the state of depression many drug 'fiends' commit suicide.

"The habit, of course, grows with what it feeds upon," continued Dr. Arnold. "The more taken, the more is needed to produce the state of feeling desired. The beginner requires only a small dose to produce the sought-for exhilaration, to give the needed relief from depression. Then he finds that the customary dose is not sufficient. He doubles it and takes the dose more frequently, until the amount consumed in one day by some of the victims is enormous. In some cases it is enough a hundred times over to kill the ordinary healthy person. A half-grain of morphine would be fatal to many persons. There is none, aside from the habitual user, who can take a full grain and live. Yet we have had cases in which the morphine-user consumed a hundred grains a day, taking the doses at all times of the day and night. One of the applicants who called at our office here was a Chinaman. He was an opium smoker, and his was one of the worst cases I have ever seen. The man was near death. He was very thin, so that his skin seemed stretched over the bones of his body, and that man smoked eighty pills of opium a day. He was at it almost all the time, day and night, for he smoked continually during eighteen hours of the twenty-four. Sometimes the drug-user reaches such a state that the system does not respond to any quantity of the poison. Then the suffering is unspeakable and death is not far away."

In his office Dr. Arnold has a cabinet filled with an unusually interesting collection. It is the varied apparatus of those who, having been relieved of the drug habit, in some one of its various forms, have sent the instruments which they used in administering the poison to themselves to the headquarters of the St. James Society. In this cabinet are opium pipes and lamps, hypodermic

nerves and restore the nervous system. We have had others here who took chloral.

"Now, the principle of the antidote," continued Dr. Arnold, "is very simple. The morphine habit—and in this I include the habit of using opium, laudanum, cocaine, and other similar drugs—produces an abnormal state of the system. The functions of the body have become used to the drug stimulant and do not operate unless that stimulant is provided. It is this condition which produces the nervous state which is the craving. Now the effect of the antidote which the society provides is to supply to a certain extent the stimulant which the drug gave. The antidote, however, does not produce the extreme exhilaration which the drug does. It simply places the physical and nervous system in a normal state and keeps it there until nature can restore the waste which the morphine caused. For the habit is a disease. Like other diseases it depletes the system. It continually wears away the natural strength and resisting power of the body. When the use of the drug is stopped the body has an opportunity to restore itself. The antidote simply prevents the appearance of the craving and the nervous collapse until the normal, healthy condition of the body is restored by nature. When that condition of the body exists there is no longer a demand for morphine."

"The length of life after a person has once become a drug 'fiend' and the length of time required to effect a cure both depend on the strength of that person's constitution. The one who uses the smallest doses is not always the most easily cured, or the person using the largest doses the most difficult to cure. The Chinaman whom I spoke to you about a moment ago was rid of the opium habit in three weeks. One of those who wrote to us was an old retired sea captain who lived in Falmouth, Mass., and had taken morphine for fifty-seven years. On account of his natural strength and his rugged outdoor life he had lived with this habit fastened upon him four times longer than the average victim. And although he was in his eighties when his case came to the attention of the society, he was cured of the habit within a month. Others who have been users only a few months are often obliged to take the antidote for a month or more. Every person thinks that his or her case is entirely different from that of everybody else. But the general principle of the application is always the same, for the same causes produce the same effects on the human system. There is only a difference in degree."

In the shipping department of the society I saw boxes and kegs of the antidote, a brown fluid, directed to all parts of the world, and sample packages that are sent free to all applicants. "The society has applicants from all the countries of South America," said Dr. Arnold. "We supply the antidote in bulk in kegs to five sanitariums in Germany and twenty in the United States which cure the drug habit. And this is odd because the compound was first made by a German physician who was himself a morphine-user and who made the antidote to cure himself. The growth of the society's work has come about through the results obtained in individual cases. Persons who have become cured through its antidote have told others whom they knew to be afflicted. And thus the numbers have grown until the list is 180,000. There is one peculiar effect of the drug habit. It develops to a high degree the faculty of cunning. Yet nearly every one who is a victim feels the necessity of having a confidant, some one to whom he can tell the secret of his misery, but all this is changed when the habit is killed. A man is restored to his normal state, which is that of despising anything secret or deceptive. His physical vitality, which is sapped by the use of the drug, returns. He fully recovers from his weakness and his feeling of self-renunciation. His ambition is restored and he feels again the desire and the necessity to work and make a place in the world for himself, and for his family."

THE BUSY PACKING AND SHIPPING DEPARTMENT OF THE ST. JAMES SOCIETY.

syringes, bottles, pills, and white powdered morphine. Among the others were a syringe and needle and bottle of cocaine arranged in a little leather case for the pocket, just like the case for a pair of eyeglasses.

Dr. Arnold continued his little discourse to me: "Women and men in about equal numbers are using the drug," he said, "and sometimes this appetite takes a most peculiar form. I knew of one man who was a kerosene 'fiend.' He always carried a bottle of it in his pocket, and he would put one drop on the end of his tongue at a time. The habit grew on him until he took the kerosene constantly, always keeping his tongue moist with it. Kerosene is used in a number of well-known patent medicines which are alleged to soothe and quiet the

## American Labor's Debt to Railroads

Continued from page 418.

a population of 1,500,000 to consume it? But this fact becomes of great importance when it is known that by reason of our fast freights and cheap railroad rates California apples are shipped across the continent, then across the Atlantic, and sold in London so cheap that Scottish apples, paying English railroad rates for a distance of only 600 miles, are unable to compete with them. There is no question but that the high standard of American wages has been brought about and made possible by our low transportation charges. Our wages have, in fact, continued to advance until the standard is so high that in many branches of industry it is becoming difficult to maintain our command of the world's market, the struggle for which is growing fiercer with each day. Europe, still thirty years behind us in transportation rates, which she has heretofore equalized by low wages, is reaching after us, and a better development of transportation facilities is going on in all her different countries.

There is but one possible way of maintaining our domination of the world's markets, and that is either by a reduction of wages or by a still further reduction of the cost of transportation. Our laboring people must therefore recognize that their only hope, not only of better pay but even of maintaining their present industrial position, depends upon the ability of our railroads to continue as they do to-day to deliver our manufactured products at a cost which defies competition; that every imposition laid upon our transportation systems is an imposition upon labor itself; that every advantage taken from these transportation facilities robs the labor that benefits by low railroad rates; that every tax and burden laid upon our transportation facilities is doubly a tax and a burden upon labor, which is at the mercy of these same transportation facilities to find a market for its products.

Every obstacle placed in the way of cheapening the cost of transportation prevents and makes impossible any rise in wages. It is surprising when our attention is called to the manner in which we have hampered and burdened our railroads that we have succeeded as we have. It is time for laboring men to recognize that their

future is inseparably bound up with that of the railroads of this country. It is these railroads that have enabled our working men and mechanics to fatten off the work that they are doing for the whole world, while foreign workmen are idle and all Europe is wildly protesting against the American invasion. If our railroad rates were doubled, at which figure they would still be lower than those of any other country in the world, it would close almost every mill and factory in our country away from tide-water!

In order to maintain our position, railroad rates will doubtless become even cheaper than they are to-day. But it is to be hoped that this will not be accomplished by the reduction of the wages of railroad laborers to the standard of Germany, whose railroads only pay their engineers and firemen a wage ranging from eight to ten cents per hour for a ten-hour day, and whose laborers work for a pittance of from five to seven cents per hour.

Our whole people should join in securing every reasonable immunity from taxation or oppressive regulations for our great transportation systems, so that as we have used them to attain our present position in the industrial world, we may, by removing all obstacles from their way, make them the means of maintaining American wages at their present high standard and at the same time securing for American labor its rightful heritage, the markets of the world and the industrial supremacy of the earth.

## Jasper's Hints to Money-Makers

NOTICE.—This department is intended for the information of the regular readers of LESLIE'S WEEKLY. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to LESLIE'S WEEKLY at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.

TAKING advantage of the downward tendency of prices, speculators on the bear side rush into the market on every recession to cover their short sales. This momentarily strengthens the market and then the bears begin to sell the market again, standing ready to cover on the next decline. But the strength is gone. The clamor of the bulls is heard no more. The extravagant predictions of the brokers, in mid-summer, of another great bull movement in early fall, and a new range of high prices, are recalled with surprise and regret, and the heaviest traders in the Street are only anxious to get out safe and whole. The banks hold the key to the situation, and they are determined that there shall be no bull movement based on an idea that money is everlastingly plentiful and that stocks are everlastingly scarce. They are taking precautions now that should have been taken six months or a year ago. Realizing present conditions, it is difficult to believe that some of our greatest bankers could have been so indifferent to the future as they were at the opening of the new year.

And now we are approaching an election which may eventuate in a revolution. We are on the eve of a session of Congress in which the trusts are to be flayed and, if possible, driven out of business. The Legislatures of the various States are shortly to meet, and we are to have a revival, in the West, the South, and the Northwest, of the anti-monopoly sentiment which so griev-

ously affected the railroads within the recollection of many who are still young men. Never before in the history of this country have the laboring masses been so stirred up in animosity against capital as they are to-day. The coal strike, following the denunciation of the so-called meat trust, has affected the politics of every hearthstone. The settlement of the strike, I am assured, would have been brought about with little friction and with no permanently bad results but for the new hope which was implanted in the hearts of the miners by the interference of the President in a matter which he declared at the outset was not one for him to settle or one which he had any right to expert to settle.

My readers will bear in mind that for some time I have predicted a severe and unusually protracted period of stringency in the money market. Foreign financial writers, to whom we have perhaps paid too little attention, have, in pointing out the tendency to over-speculation in the United States, cautioned us several times of late against anticipating further relief abroad. In other words, we have overdrawn our credit account. It is estimated that we are debtors abroad to the extent of half a billion dollars. London and Paris, not to speak of Berlin, realize that what has happened, and is happening, in Germany must eventually happen here, and that as certain as the forces of nature operate, so do the laws of trade and finance, which means that periods of depression ultimately follow periods of prosperity and high prices.

I look for no immediate relief. The Secretary of the Treasury, while offering to pay interest in advance on government obligations, is only discounting the future. What he pays now he will not be able to pay out later, and we may need it then as much as now. Present relief is, therefore, at the expense of future conditions.

In my judgment, we cannot expect heavy imports of gold for a little time to come. We are more likely to have our obligations to the old country increased by the sale of our securities abroad. Our great banking interests are hanging their expectations on a single hope, and that is that abundant crops and generally prosperous conditions, outside of Wall Street, will in due season enable us to draw on Europe's available supply of gold for relief. But the failure of any large financial, industrial, or commercial interest in this country, or a general calling in of loans and a forced liquidation of stocks, might precipitate panicky conditions, far-reaching in their effects and destructive to prosperity in every line of business.

The President's action centred the attention of the people on the coal strike. It caused a feeling of uneasiness everywhere in the highest financial and business circles, which had sought as much as possible to minimize the importance of the strike, so that the currents of prosperity would not be interfered with by public excitement. The calling out of the troops in Pennsylvania, creating fresh antagonism between labor and capital, not only in Pennsylvania but in most of the Northern States east of the Mississippi, and coming, as it did, on the eve of the State elections, may prove to be the controlling factor in the November outcome. The loss of Republican control of Congress, at this juncture, and in the present temper of the people, would be a signal of danger that capital would not be slow to heed.

The question of the right of every man to work or not to work, which ought never to be a question in a free country, must now be met. If it is not, our industries will be strangled, as those of Great Britain have been and are being by the relentless demands made upon them. There is no reason why

this question should not be met in good temper and in a judicial way. Differences between thoughtful and patriotic men in this country are readily adjusted. The masses, thanks to our free-school system, stand on a much higher plane than do those of any other country in the world, and I do not anticipate that the former will not be guided by reason and common sense instead of the sentiment and passion which dominate the ranks of labor in other lands.

The outlook for the stock market is, therefore, one of hesitancy and doubt. We must pay what we owe and must meet our burdensome debt abroad. We can do this if we continue to raise large crops and to produce an excess of manufactured commodities at salable prices abroad. It is significant that our imports of Belgian and German iron and steel are rapidly increasing, and our much-talked-of corn crop has been largely reduced in value by late frosts; that our cotton crop has fallen below all estimates, and that, while our exports of general merchandise are decreasing, our imports of foreign goods are constantly increasing. We are passing through a season of unrest and disquiet. From which quarter the storm will blow, we do not yet know.

"G. F.," Cincinnati: I would leave it alone. The Continental Sugar Refining Company's stock is a good way from an investment at present.

"S.," Pittsburgh: The annual report of American Typefounders shows nearly 7 per cent. earned upon the common stock last year, and looks favorable.

"D.," Jacksonville, Fla.: Four dollars received. You are on my preferred list for one year. All Boston municipal bonds are highly regarded as investments and are perfectly safe.

"H.," Boston: (1) The decline in International Paper does not seem to be due to heavy realizing sales. It is said that the earnings are increasing. For investment the bonds of the company would be far safer than the preferred. If the company is so prosperous, it is significant that the preferred has been dropping around 50. Good 6 per cent. investments ought to sell higher. (2) The annual report of the Greene Consolidated is not a very lucid document and sheds little light on its real condition.

Continued on following page.

## Jasper's Hints to Money-makers.

Continued from preceding page.

"T." Augusta, Ga.: Answer by mail.  
 "C." Du Bois, Penn.: The scheme does not commend itself to me.  
 "G." Hartford, Conn.: None of the concerns has merit as an investment.

"H." Meadville, Penn.: Four dollars received. You are on my preferred list for one year.

"W." Providence: One dollar received. You are on my preferred list for three months.

"B." New York: I would not sacrifice my Union Pacific at present. Its earnings are good and it is a fine property.

"S." Mahanoy City, Penn.: The bonds are not dealt in on Wall Street and are a local security. I cannot, therefore, safely advise.

"C." Chicago: If you are on the preferred list you should get the paper promptly, as preferred subscribers receive the first copies printed.

"W." Steubenville, O.: I am unable to get favorable reports regarding either of the properties and do not advise the purchase of the shares.

"A." Chicago: I do not advise the purchase of the Rock Island securities. The road is now in the hands of manipulators who are not striving to serve the public so much as to serve themselves.

"O." Gloversville, N. Y.: Jacob Berry & Co., 44 Broadway, N. Y., are members of the Consolidated Exchange and do a large business. Mr. Berry was formerly a member of the New York Stock Exchange.

"H." Indianapolis: The Douglas Shoe Company's prospectus indicates that it is doing a very profitable business, and the capitalized basis of the concern is apparently more conservative than those of most industrial propositions.

"E." Elmira, N. Y.: The earnings of the Erie in spite of the strike, are reported good. The large financial interests that Morgan and Hill have in this property lead many to regard its shares with favor from a speculative standpoint.

"X." Y. Z.: Thomastown, N. Y.: (1) The Pennsylvania and Texas Oil Company would certainly be my preference over the Eastern Consolidated, if I wanted to speculate in oil shares. (2) No. (3) Will make inquiry regarding the National Fuel Equipment Company.

"G." Franklin, N. H.: The reported organization of a strong American and English company to exploit the copper mines of Alaska indicates that the over-production of copper may be expected to continue. It is, therefore, difficult to see how the earnings of the copper companies can be largely increased.

"Brown." Ashland, Penn.: Texas Pacific is one of the Gould stocks which has had a heavy rise, based on an expectation that it would be benefited by the proposed combination of Gould railways. The shortage in the cotton crop may affect its earnings, but I would not be inclined to sacrifice my holdings at present prices.

"Operator." Galveston, Texas: It is generally understood that Mr. Keene, who was the principal operator for the bull manipulators, closed out much of his holdings lately, whether with a profit or a loss he only knows. Keene's favorite position on the market was formerly on the bear side. He would make a formidable leader if he should take that side again.

"Montana." A report is current that Standard Oil interests have been accumulating Amalgamated shares and playing a waiting game by depressing the copper market as much as possible, so as to crowd out or shut down the smaller mines and thus curtail the output, for the purpose of ultimately increasing the price of copper. I would not sacrifice my Amalgamated.

"Eden." London, Canada: (1) You perhaps have observed the litigation into which the party has been drawn by some of his clients on several occasions. (2) W. E. Woodend & Co., 25 Broad Street, are members of the New York Stock Exchange. You might communicate with them in reference to your suggestion. (3) Of the stocks you mention Manhattan seems to have the best basis for a rise.

"Clinton." Fall River: (1) An unavoidable delay in the publication probably detained your paper. Let me know if the trouble continues. (2) No one can say what stocks will be most apt to decline, because of the power which great financial interests have, by combinations and absorptions, to magnify the value of certain securities in which they are chiefly interested. The entire market still looks high, whether the coal strike be settled or not.

"E." Brooklyn: Two dollars received. You are on my preferred list for six months. The case, from your statement, looks as if you had not been fairly treated, but, having accepted the broker's settlement, the matter seems ended. I doubt if the stock market is the place for a woman to speculate. There is no reason why a woman should not buy and pay for investment or any other shares, but it is hazardous business if bought on a margin, for a woman or any one else.

"H." Jacksonville, Fla.: (1) The rise in National Lead is occasioned by the announcement that it proposes to acquire a number of kindred and competing concerns. It is a bad time to conduct new industrial mergers. (2) A fresh outbreak of hostilities between the Heineke and the Clarke copper interests in Montana, seems to indicate that the warfare between the Amalgamated and competing copper companies is by no means ended. (3) The decline in International Silver was due to an alleged break in the scheme for its absorption. Stockholders who disposed of their shares on the recent rise were shrewd.

"Z." Providence, R. I.: (1) You ask me to point out any industry in this country which is now suffering from depression. What about copper? The copper market has been depressed for almost a year past and no relief is in sight. (2) The first effect of high money has been and will continue to be to discourage new speculations. The second effect will be to tire out the holders of stocks and leave them to sell whenever they can get a profit. This liquidation will grow heavier, as time progresses. It will be felt in all the speculative centres, Chicago, Boston, Philadelphia, Baltimore and Pittsburgh, as well as in New York. The more rapid the liquidation, the greater the decline.

"A. Y.": (1) I do not see how Wabash common is worth its selling price, in view of the fact that \$28,000,000 of B debentures are entitled to 6 per cent. dividends before anything can be paid on the preferred or common. Not 4 per cent. has yet been earned on the debentures. The latter, on declines, offer the best purchase of any of the Wabash securities. (2) For a speculative dash in the market, United States Leather common is a favorite with many. Kansas City Southern common was a purchase when I advised it some time ago around 20. This is one of the roads that may profit by being taken over by some of the stronger lines. (3) I am not advising purchases at present.

"I." Kansas City: (1) It will be difficult for the Western plunger to oust the Vanderbilts from control of the New York Central, the Northwestern, or any of the great Vanderbilt properties. The sudden return of W. K. Vanderbilt from Europe may have been occasioned by his interest in retaining control of the Northwestern, but it is just as likely that the financial conditions generally interested him. (2) The fight being waged all along the line against the Tobacco trust by cigar dealers and tobaccoists indicates that popular indignation against this combination is liable to make itself felt in State and Federal legislation before long, and this will not be helpful to the tobacco company's securities.

"Banker." Austin, Tex.: You are right in your inference that the country's prosperity is partly responsible for the higher interest rates. Low

rates are usually found when dull times prevail. But two other factors must not be forgotten. One is the withdrawal of currency by the Treasury and the increasing customs duties, and the other and more serious factor is the tremendous and widespread craze for speculation. With the resources of the Treasury for the relief of the market now exhausted, with the foreign money-lenders closing their doors against further loans to us, and with domestic banks unable to accommodate the demand for funds, only one result can be anticipated in the stock market, and that is litigation.

"Accountant." Trenton, N. J.: (1) I agree with you that the statement of the steel trust is by no means such a satisfactory document as many newspapers represent. It must be remembered that the trust is a holding company, obtaining its income from the profits of a large number of subordinate concerns, such as American Tube, Steel and Wire, and so on. When the steel trust makes a report showing the profit or loss from each of its constituent companies, we will be able to understand how and where its money is made. The mere skeleton outline of earnings in bulk amounts to little as indicating the strength of the trust as a business proposition. (2) The net earnings of the Westinghouse during the past fiscal year show a decrease of about \$32,000.

"S." Topeka, Kan.: The industrials that will suffer, in case business generally is depressed, will be those which manufacture specialties having a broad market only in good times. Among these iron and steel must first be ranked. Commodities for domestic consumption, such as food products, corn products, and so on, will be less disturbed, and the corporations engaged in their manufacture

will be more likely to enjoy a continuance of good earnings. (2) The tip to buy the stock of the United States Realty Company was given out in confidence several weeks ago. It may have been a trick for the purpose of supporting the stock in anticipation of the withdrawal of the Alliance Realty Company from the proposed combination, which is certainly not favorable to the United States Realty Company. The latter is doing a large business, but every one knows how building operations suffer in hard times.

"T." Butte, Mont.: When the Atchison tried to market its new serial debenture bonds, the statement was made that they were a lien ahead of the adjustment funds. In the annual report the adjustment funds are given the preference. How much reliance can be placed upon the Atchison's statements after this? (2) The arrest of several directors of a large industrial corporation in Germany, on the charge of making false statements of the company's earnings, suggests what the stockholders of the American Ice could do, if they would get together and employ a competent attorney. (3) I do not regard the shares of the Virginia-Carolina Chemical Company as worth any more because of the purchase of a potash plant in Germany. The condition of the German potash business, it is well known, is very much depressed, and the German corporations were no doubt very glad to unload on their American friends.

"S." Little Rock: (1) It is significant that the annual reports of the sixty railways operating in Texas during the past fiscal year show an aggregate loss of \$4,000,000 in net earnings, though the gross exceed those of the previous year by a million dollars. Increased operating expenses is given as

the cause. This fact, as I have pointed out, must be reckoned with later on by all the railroads in the country. (2) The decision of the Jones & Laughlin Steel Co., of Pittsburgh, to issue bonds for \$10,000,000 to carry out extensive improvements of this great plant shows how rapidly our iron-makers are catching up with the demand for their products. This is going on all over the country, and suddenly it will be discovered that we are producing more iron and steel than we can sell. Then look for a general slump. It will be observed that the Jones & Laughlin Co. does not propose to sell these bonds to outsiders, but only to the bond-holders.

"L." New Orleans: The cut in cattle rates from St. Paul, just made by the Great Western Railway, disturbing all its competitors, shows the power that this independent line can wield. It looks as if, under the compulsion of such action, some of the big lines would have to take in the Great Western, at the latter's figures, which will undoubtedly be high. (2) There is no doubt that a pool undertook to put up the price of Southern Pacific. It is said that the cost of the stock averaged to the members of this pool nearly \$75 a share and that the shares have been distributed on this basis since the banks have been calling in loans and compelling weak holders to sell. If this be true, Southern Pacific would look like a sale whenever it struck 75, at least until the money market improves and liquidation ceases. But it must always be borne in mind that Union Pacific interests which control have it in their power to declare a dividend on Southern Pacific and stiffen up the price.

# KING OF GOLD MINES.

## A Government Expert Makes a Report on Golconda Mine.

**I**N my advertisement of last week introducing to the public the merits of the stock of the Golconda Consolidated Gold Mining Company, I had not much opportunity to bring expert testimony to bear in support of my claims for this gold mine. Too much ground to cover. In this one I propose to give some extracts from a report made by Professor Lindgren, Government expert of the United States Survey, whose full report may be had for the asking. I quote him to show that the claims I make for the Golconda are based upon well substantiated facts, and are therefore worthy of earnest consideration by those who seek investments.

Professor Waldemar Lindgren, the expert of the United States Survey, says, in his report, pages 654 to 656: "The Golconda and 'Wild-West' are located on the **North Pole Vein**," which title he gives the mother lode. Again: "The croppings of the main vein can be followed from the **Columbia** . . . The croppings are marked on the hill southwest from **Golconda** shaft by a heavy mass of quartz similar to that above the North Pole."

This coming from such eminent authority as Professor Lindgren should leave no doubt in the mind of any one that the Golconda Mine is on the same vein covered by the "**Columbia**," "**Eureka and Excelsior**" and "**North Pole**" Mines. The owners of both the **Golconda** and **Columbia**, which properties adjoin, know they occupy the same vein. The reader will doubtless ask why it is considered so important to demonstrate that the **Golconda Mine** is located on the Cracker or North Pole lode or vein. I will tell you:

**Because on this vein are located more paying gold mines than on any other vein of similar length on earth, and this vein has been employed, proved, and has produced, and is now producing, and is capable of producing more gold than any other mineral zone on the globe, of similar length.**

There can be no question in the minds of those seeking a gilt-edge mining investment, therefore, that the Golconda has the ore.

The next question to consider is the management, which in this case is of such a character as to insure success. The manager of the Golconda, Mr. J. H. Robbins, is the present Mayor of Sumpter and the President of the First Bank of that place. He was one of the principal owners and vice-president of the Concord Company, which took that company, a mere prospect, and by patient development brought it to the stage where it was sold for \$750,000. Mr. Robbins has lived in the mining regions since 1862, and has had more or less to do with mines and mining from that time to the present.

James F. Meikel, a mining man of wide reputation and an operator of rare ability, is superintendent of the mine. He combines theoretical knowledge of mineralogy with a lifetime experience in mining operations. Under his efficient management great results may be looked for.

As I have said before, **this is a great mine to-day** and is ably managed. It has everything needed to make a great producing property, viz.: A wealth of mineral, ample water, unlimited timber, and efficient management. It needs a greater equipment, and shall have it, all of which will add in great measure to its productiveness.

The new prospectus is ready. It is one of the most comprehensive works of the kind I have ever sent out and sets forth in a conservative way a full and concise report of the surroundings and conditions of the properties now owned by the Golconda Consolidated Gold Mines Company, and has the full indorsement of the Board of Directors. It is a book which deals in known facts. I believe the investment is a safe and desirable one, and one that promises greater returns than any other of a similar character in the Northwest. And I also believe that from the manner in which the stock is being subscribed for, the present issue will be taken up in a less time than any that I have offered, the Cracker, Oregon, not excepted.

(It will interest those who had some correspondence with me relative to this same Cracker Oregon stock, to learn that \$10,000 ore has been struck in this mine and that the stock has been withdrawn from the market. **I sell stock in mines that have merit.**)

The fullest particulars regarding the Golconda proposition will be cheerfully furnished to those interested. The opening price of shares is 40c., par value \$1.00, fully paid up, non-assessable, no personal liability.

### LET ME SEND YOU THE PROSPECTUS.

In buying shares make all checks, drafts, money orders, etc., payable to order of Lee S. Ovitt, Fiscal Agent, and address all communications to

**LEE S. OVITT, Fiscal Agent.**

Offices in Milwaukee, St. Louis, Pittsburg, Boston, and Suite 129 Stewart Building, 280 Broadway, cor. Chambers St., New York.

## Jasper's Hints to Money-makers.

Continued from preceding page.

"T." Augusta, Ga.: Letter received.  
 "R." Lawton, Okla.: Answer by letter.  
 "H. D. W." Erie, Penn.: (1) Not worth buying. (2) No rating.  
 "W. C." New York: Four dollars received. You are on my preferred list for one year.  
 "W." Sea Isle City, N. J.: Have directed the change to be made. Let me know if trouble continues.  
 "Marlo," Kent, O.: I do not advise the purchase of additional shares of Jupiter Steel if you are looking for a safe investment.  
 "R." Winsted, Conn.: Two dollars received. You are on my preferred list for six months. Malcom & Coombe are members of the New York Stock Exchange in good standing and have an excellent rating.  
 "D." Freeport, Ill.: (1) There is no mistaking the character of the proposition and of the men who are behind it. Have nothing to do with either. (2) I do not believe in the 28-cent shares of the Belman Mining Company.  
 "G." Louisville, Ky.: The National Oil and Development Company is an Arizona corporation with 3,000,000 shares, at a dollar each. I am making inquiries regarding the somewhat remarkable statements of its prospectus.  
 "B." Lancaster, Penn.: (1) I am not acquainted with the parties connected with the industrial corporation and should not call it a safe investment. (2) The reports of the Obispo Rubber Plantation Company make a very favorable showing.

## DARKENING CLOUDS

To the helpless widow and children the future is dark with clouds, if the bread-winner dies without making provision for his family. A Life Policy in the Travelers Insurance Company provides support and shelter, and is frequently the means of relieving temporary embarrassment or taking care of the mortgage on the house.

You cannot afford to neglect the safeguards of the TRAVELERS INSURANCE COMPANY'S Life Policies.

The Accident Policies of the TRAVELERS guarantee a weekly income in case of disability from accident. They provide other important benefits.

Agents in every town; or write for interesting literature.

**The Travelers Insurance Company**  
Hartford, Conn.  
(Founded 1863)

"Average," Montana: (1) I do not agree with you regarding bottom prices, but think, on recessions, that American Sugar and Manhattan, and especially the latter, offer excellent opportunities for speculation. (2) The Minneapolis concern has no rating.

"G." Victor, Cal.: One dollar received. You are on my preferred list for three months. (1) I do not regard the shares as an investment. It is a speculative property and not one of the best. (2) United States Realty common is said to promise a bargain.

"V. E. H." Crafton, Penn.: Men of excellent financial standing are connected with the company to which you allude and the report they give of the mine is favorable. The enterprise, however, is somewhat speculative, as all such propositions obviously must be.

"Tarheel": I would not sacrifice my Chicago and Great Western common at present. While I have not advised the purchase of these shares, I have said that they were a favorite with some speculators because of the strategic value of the road. That value still exists.

"R. R. T." St. Louis: (1) A slight delay in mailing the paper, caused by accidental circumstances, now remedied. (2) The market has not been sufficiently liquidated. Money is made on fluctuations by quick turns, but the time to purchase for investment has not yet arrived.

"H." Boston: The proposed increase of the Greene Consolidated Copper Company's stock by an issue of 120,000 shares, at \$20 per share, is for the purpose of liquidating the heavy indebtedness on the concern. Whether it will result in the restoration of dividends remains to be seen.

"H." Rochester: (1) Mechanical difficulties have delayed deliveries temporarily. (2) I would not sell Brooklyn Rapid Transit short. Many suspect that the recent authorization to issue \$150,000,000 of bonds means that this property constitutes a combination or deal, which will make it far more valuable.

"S." Vancouver: (1) The latest decision in the Colorado Fuel and Iron Company was claimed as a victory by the Gates party. The litigation may not be ended. (2) Manhattan is less liable to suffer in a slump, in my judgment, than any other stock of its class. It is therefore a purchase on decline. (3) Neither is rated.

"Calvert": Five dollars received. You are on my preferred list for fifteen months. (1) I would not sacrifice my American Ice. The management of the company is not all that could be desired, but there is no reason why it should not be making money. (2) On recessions, I think well of Manhattan and Consolidated Gas for investment.

"G." Bangor, Me.: The heavy decrease in gross revenue, as the result of floods and the coal strike, reported by the Lehigh Valley Railroad, for the past fiscal year, exceeding \$3,000,000, does not indicate that the stock is a sale. There are reasons for believing that it is being gathered in by influential parties, who might possibly like to have it depressed.

"I." Tyrone, Penn.: I would sell the government bond, as it pays you very little interest, and you can do better by putting the money in some semi-investment bond, like the Kansas City Southern 3s, for instance. These are now selling at about 70 and net you considerably more than 4 per cent. The industrial stock to which you refer would, of course, be more risky.

"H." Lakewood, N. J.: (1) The earnings of the Pullman last year were sufficient to pay over 12 per cent. on the stock. (2) The surplus earnings of the Standard Milling last year were over \$600,000, which is considered a favorable showing. (3) I am assured by some of the heavy owners of the Butterick Company that it is earning over twice the amount of the dividends it is paying.

"G." Springfield, Ill.: A stockholder has brought suit to prevent the lease of the Metropolitan Street Railway to the Interurban Company, on the ground that the lease is a fraudulent plan of the larger stockholders to secure control and to deprive smaller holders of the profits earned by their stock. If the disaffected stockholders of the Metropolitan would all join in this litigation, it might be made very interesting.

"Cowboy," Montana: Two dollars received. You are on my preferred list for six months. (1) Douglas, Lacey & Co. are members of the New York Consolidated Exchange and handle mostly mining stocks. They appear to be doing a large business. (2) No rating. (3) I am making inquiries about the International Wheel, Tire and Rubber Company. (4) Not dealt in at all on the Exchange or curb. Impossible to give information.

"G." St. Louis: (1) Union Bag and Paper makes no regular reports of its earnings. Some of its mills have recently been closed by labor troubles and it is having increasing competition. Insiders continue to give out statements of its earnings, however, which I have not been able to verify. (2) Pacific Mail is controlled by Union Pacific interests. Whenever they get ready to advance it, they can do so. The Panama Canal and the subsidy bill are expected to be helpful to it.

"P." Delageville, N. Y.: (1) The nearest to what you want, in the shape of a 5 per cent. investment, reasonably safe, is the American Cable shares, paying 5 per cent. and selling a little below par. They have the guarantee of the Western Union Company behind them. (2) There are a little over \$24,000,000 of the Iron Mountain refunding 4s. They are due in 1929. An issue of \$30,000,000 has been authorized and \$10,000,000 more, as required, for extensions, at \$12,000 per mile. A reasonably cheap bond at present prices, though not gilt-edged.

"S." Cincinnati: (1) I meant that if Toledo, St. Louis and Western, and Ontario and Western shares had a slump they offered opportunities for purchase with an expectation of a subsequent rise. (2) Missouri Pacific's earnings are such that many regard it as a pretty safe 5 per cent. stock, and think it should sell on the same level as 5 per cent. stocks do. On the recent decline toward par it was largely bought as a speculative investment. (3) Simply address the secretary of the New York Stock Exchange, New York City.

"B." New York: Four dollars received. You are on my preferred list for one year. (1) I would not sacrifice my United States Steel common at present. A determined effort to advance the price will no doubt be made by the prominent interests which are behind it and which have been giving it open support. (2) While the condition of the copper market is not altogether favorable, many believe that Amalgamated Copper has been picked up on the recent decline by the insiders, who made a handsome profit when they unloaded it on the public at double the present prices.

"F." New York: (1) Toledo, St. Louis and Western preferred does not pay dividends. (2) Around 30 Ontario and Western would look reasonably safe. (3) Not much of a choice. (4) Toledo, St. Louis and Western common, on a slump, would be a good speculation. (5) I don't know what stock you mean. (6) Perhaps the cheapest industrial speculation is the United States Realty, which has been selling around 30, and which a very strong and vigorous crowd of Wall Street leaders is handling. (7) Higher prices for Butterick stock are promised. It sells around 50 and pays 4 per cent. per annum.

"A. H. S." Brooklyn: Of course much depends upon the sustaining power of the market. There is no dispute about the strength of those who are behind it, and unless extraordinary and unexpected conditions arise you are likely to be able to dispose of your holdings, taking them altogether, without loss. A financial crisis, coming from an unforeseen circumstance, would upset values generally, but, if you can hold, it would be better to stand where you are for the present. (2) I thank you for your courteous offer, but I have made it

a rule to decline all similar propositions. Will gladly answer inquiries.

"Banker," Milwaukee: The most succinct and accurate statement regarding the range of call money rates during the past eight years is embodied in a leaflet just issued by Spencer Trask & Co., the well-known bankers, of 27 Pine Street, N. Y. It gives the reasons for the sudden rise in call money rates at irregular intervals. The tabulated weekly statement for call money during October, November, and December, of the past few years, is made especially interesting because of the explanatory note that follows. The London quotations, which are also given, show no such violent fluctuations as we have had on this side. I advise you to drop a line to Spencer Trask & Co. and get this valuable contribution to financial literature. Enclose a two-cent stamp and mention Leslie's WEEKLY.

"Herman," Asheville, N. C.: Two dollars received. You are on my preferred list for six months. (1) Consolidated Tobacco 4s were given in exchange for the common stocks of the American and Continental Tobacco companies, though Continental common never paid a dividend and apparently never earned one. I am told by one of the leading owners of these bonds, however, that the earnings of the Continental are more than sufficient to pay the interest. They are regarded as speculative but a fair purchase in view of the increased earnings now reported. (2) I do not believe in the steel stocks as permanent investments, because of the serious fluctuations of the iron and steel business. Nothing suffers more in hard times, which are bound to come again, perhaps in the not distant future.

"C." Marblehead, Mass.: Two dollars received. You are on my preferred list for six months. (1) Nearly every New York paper reports railroad earnings daily in its financial columns. During panicky times in Wall Street stocks frequently fall to a level below that of their intrinsic value. Such times are bargain days for the investor with cash in hand. (2) I should think so, but a lawyer could answer you better. (3) As I have repeatedly said, Brooklyn Rapid Transit, on its earnings, looks pretty high. Nevertheless, one of its leading officers predicts that the great development of its business will eventually make it a much more valuable property. A quiet rumor prevails that either the New York Central or Pennsylvania interests will take it in on a favorable basis. I would not sacrifice my stock.

"S." Baton, N. M.: The Colorado and Southern Railway has as its officers: Chairman, Greenville M. Dodge, New York; President, Frank Trumbull, Denver. The directors include the gentlemen named and F. F. Olcott, J. Kennedy Tod, Edward J. Berwind, Adolph Lewisohn, of New York; Henry Walters, of Baltimore; Oliver Ames, of Boston; Norman B. Read, Chicago, and several others. It has \$31,000,000 common, \$8,500,000 first preferred, and \$8,500,000 second preferred stock, and a funded debt of nearly \$18,000,000. A 2 per cent. semi-annual dividend on the first preferred was paid October 1st. Its earnings have been increasing of late and this fact has been reflected in the rise in the share, the common having sold last year as low as \$7 a share, the second preferred at \$17, and the first preferred at \$40. All have had a substantial rise. The road was organized in 1898, to take over the property of the Union Pacific, Denver and Gulf, and the Denver, Leadville and Gunnison, part of which latter is a narrow-gauge road. The company has a large interest in the Fort Worth and Denver City Railway and in the Colorado Midland.

New York, October 23, 1902. JASPER.

12TH WARD, SECTION 6: EAST 117TH STREET PAVING AND CURBING, 125 feet at the foot of said street, at East River.

12TH WARD, SECTION 8: AMSTERDAM AVENUE FLAGGING, east side, from 185TH Street to Washington Bridge.

19TH WARD, SECTION 5: AVENUE "A" (Stanton Place) SEWER, between 58th and 59th Streets; also 58TH STREET SEWER between Avenue "A" (Stanton Place) and East River. 44TH STREET SEWER ALTERATION AND IMPROVEMENT, between East River and 2d Avenue, and to CONNECTION AT 1ST AVENUE.

EDWARD M. GROUT, Comptroller, City of New York, October 10, 1902.

### Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of LESLIE'S WEEKLY. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.]

IS ANY ONE too poor to save is an important problem which the readers of a London daily are at present attempting to solve. The question is not by any means a new one; it is one which has troubled past generations, just as, in all probability, it will affect the generations yet to come. We cannot say that this latest discussion of the subject is throwing much, if any, fresh light upon it. In the first place, there is a diversity of opinion regarding the term "poor." One man, who derives an income of \$1,350 a year from private property, fancies he comes under the category, while another does not consider any one poor who has an income of \$500 a year. It is manifestly impossible to fix any limit in a matter like this. Very much depends upon the locality and the conditions and surroundings of the individual. An income that would be amply sufficient to insure a family a comfortable home, excellent social advantages, and a good living in a country village would mean many privations and sore discomforts in any large city. On the whole, however, we are inclined to believe that Max O'Rell's views on the point under discussion come nearer the safe and common-sense rule than anything we have seen. "I do not care," he says, "how small the income of a man is, he should never spend the whole of it, especially if he has a wife and children. He should at least save enough to pay every year the premium on a good life policy. No man is worthy of the name who does not do this, at least, at the price of whatever privations he has to submit to. Some pleasure may be derived from high living, but certainly no happiness."

"B." Silver City, Idaho: I do not like the plan of insurance you have accepted and doubt if your expectations from the so-called "special contracts" will be realized. You would be safer in a larger and stronger company.

"G." Memphis, Tenn.: In the case of Crosby against the Mutual Reserve the court decided in favor of the company's right to fix the assessment and cancel the policy, when Crosby refused to pay the amount called for.

"T." Duluth, Minn.: Of course you understand that the "estimate" the company gives you is not a guarantee. Everything depends upon the honesty and success of the management of the concern. Why not take out a regular life insurance?

"J. A. M." Victoria, Kan.: Your policy is good, but whether the company would loan anything on it or not, if you would make a proposition to take out additional insurance, I do not know. Why not make the proposition. The experience of your neighbors with fraternal organizations is just what might have been expected.

"H. E. H." Syracuse: Your letter should have been addressed to LESLIE'S WEEKLY, and not to "The Frank Leslie Publishing Co." The two concerns have no connection with each other. I do not recommend either one of the companies you speak of as of the best class. In life insurance none can be too good.

"Y. M. L." New York: On payment of the money, your annuity would begin at once. The income depends upon the amount of the annuity you purchase. The older you are the larger the payment the company makes you. I can send you a plan confidentially if you will send me your address and tell me how much money you wish to invest in the annuity.

*The Hermit.*

### A Rumor Denied.

A report has been circulated and widely copied by the American newspapers to the effect that the Monks of La Grande Chartreuse have sold to some company the right to manufacture the celebrated green and yellow cordial bearing their name. We are informed by the American agents, Beyer & Co., 45 Broadway, New York City, that, as a matter of fact, the Carthusian Monks have made CHARTREUSE for the past 300 years, they are making it now, and will, in all probability, be engaged in its manufacture 300 years hence.

### Seeking a New Home?

## Hope for Consumptives.

A Positive Cure Found By a Celebrated Michigan Physician—He Sends a Trial Package Free.

At last a cure has been found. Incredible as it may seem, after the centuries of failure, a positive

DR. D. P. VONKERMAN, The Discoverer of the Only Cure for Consumption.

and certain cure for the deadly consumption has at last been discovered. It remained for a great physician of Michigan to find the only known cure for consumption, after almost a life's work spent in experimenting and study.

Consumptives who have returned from the West—come home to die because they thought nothing could be done for them—have tried this new discovery and are now well and strong.

If you are afflicted, do not fail to send at once to Dr. D. P. VonKerman, 624 Shakespeare Building, Kalamazoo, Mich., for a free trial package, proofs and testimonials; it costs nothing. The Doctor does not ask anyone to take his word or any one else's, as he sends a trial package free, and a few days' use will show you how easily and quickly you can be cured. Delay is dangerous. There is no time to lose when the death hand of consumption is tightening its clutch upon you. Write to-day.

The nectar of the gods may have been a myth. Be it so, we still have the whiskey of our forefathers—DEWAR'S SCOTCH, a beverage of distilled delight, praised alike by king and commoner.

## The Man Behind the Limelight.

Continued from page 428.

achievements. Mrs. Carter, liking his "literary style," it is presumed, asked him to call upon her and meet Mr. Belasco. He did so, with the result that he was induced to give up regular newspaper work and become general representative for the Belasco attractions.

Mr. Cook is also a contributor to various magazines, writing regularly for the *Strand* in London and several American periodicals. This is true of most of the prominent press agents in New York. In fact, to be at all successful in this business a man must wield an easy pen and possess the fertile and far-reaching imagination which is the first requisite for successful newspaper work. Of course there is a "youngest man in the business." There always is, and we always hear of him because nobody ever hesitates to acknowledge, with that delightful little air of self-depreciation which sits so charmingly upon the shoulders of youthful prodigies, that he is the youngest man to attain a certain distinction. In just the same way a man will make capital out of long service after he gets too old to keep the pace.

However, strange as it may seem, the youngest man in this business is one of the most distinguished and capable. He is Mr. Channing Pollock, only twenty-two years old and general representative for Mr. William A. Brady. Mr. Pollock was dramatic editor of the *Salt Lake Times* at the unripe age of fourteen, which speaks better for him than for the paper which he represented. He left this position to go as secretary to his father, who was then United States consul to San Salvador, and upon his return became dramatic editor on the *Washington Post*. After three years in this capacity he was engaged by Messrs. Brady & Ziegfeld as press agent for Anna Held and graduated from that position as general representative for Mr. William A. Brady. Mr. Pollock published a book last year which attracted considerable attention, called "Behold the Man!" a story of the Passion Play, material for which he gathered during his student days at Prague.

A story of press agents would not be complete without mentioning Mr. Edward D. Price, also with William A. Brady, who is one of the oldest and most thoroughly liked and respected of them all. Mr. Price has written a lot of exceedingly clever sketches under the caption "The Man Behind the Scenes," and is also a well-known contributor to various magazines and author of an interesting little volume entitled "Letters of Mildred's Mother to Mildred." Indeed, they are a busy and interesting lot of men, these theatrical press representatives, and while they are "unhonored and unsung" in their representative capacity, yet they influence public opinion in affairs theatrical to a vastly greater extent than a self-sufficient and independent world would care to acknowledge.

## Tripoli a Field for Trade.

ONE OF the few portions of the known world with which the United States has no commercial relations, which its products do not reach through indirect channels, and with which our government does not even maintain communication through the instrumentality of a consular agency, is Tripoli, that vast nominal dependency of Turkey, bounded by Tunis and the Sahara and Lybian deserts. A few hides and tanned skins reach the United States from Tripoli, but as no representative of the United States stands guard with helpful suggestions, our people have no share in the slowly developing relations of that country with the modern world. Petroleum from Russia to the value of \$120,000 was imported last year. American petroleum has not obtained a foothold. Flour to the value of \$275,000 was imported in 1901, as compared with \$640,000 in the previous year; it all came from France and Italy. In the opinion of Mr. Robert P. Skinner, our consul at Marseilles, France, American firms in many lines could build up a very satisfactory importing and exporting trade with Tripoli if proper efforts were put forth.

In the mountains, a morning outing is ever so pleasant with Cook's Imperial Extra Dry Champagne.

**Advice to Mothers:** Mrs. Wesslow's SCOTCH-SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

The musician or artist who buys a Sohmer Piano gets an instrument that is a work of art, and the result of many years' hard study and labor.

## One Great Lesson To Be Learned.

IF PRESIDENT MITCHELL, Mr. Samuel Gompers, and other men prominent in the councils of the labor organizations will take advantage of the present public interest in their affairs and methods to issue a frank, clear, and vigorous statement to their followers in deprecation of the spirit of hatred so often manifested by union men for non-union men, and will accompany this declaration, where possible, with orders that persecution and maltreatment of the latter shall cease, they will do more to further the cause of unionism and secure the sympathy and goodwill of the American people than by any other act they could possibly perform.

No circumstances whatever, no particular conditions, no conceivable exigencies, can excuse or condone a resort to violence, rioting, and murder to further the ends of labor, and these things cannot and will not be tolerated by the American people. The spirit which finds expression in the odious word "scab" applied to non-union workers, the obloquy heaped upon these persons in various ways, the persecution of their families—all these things are vicious, detestable, unmanly, and un-American, and they must cease or the whole system which has given rise to these abominable practices will be stamped out and suppressed. There is no room in a land of freedom, justice, and fair play for any organizations committed to barbarous and brutal practices.

It is a time for plain and direct speaking on this subject, free from demagogic cant. It is not enough that Mr. Mitchell and other labor leaders should plead, as they generally do when such outrageous acts are committed in times of labor struggles, that they are opposed to particular deeds, that they have counseled against them, and that most of it is the work of outsiders anyway. The thing to be done by these leaders and by all others who have influence among labor organizations is to insist upon it as a fixed principle, applicable always and under all circumstances, that workers who do not choose to join a union are entitled to the same rights, privileges, and enjoyments in the world at large as those who do; the same respectful and honorable treatment as fellow-citizens, and that neither they nor their families are to be molested or abused for exercising their right to work on their own terms and conditions.

The vast majority of Americans, members of the learned professions, farmers, educators, bankers, and business men of all grades, are just as truly entitled to the designation of workmen as those who mine coal, lay bricks, build houses, or perform any toil to earn their bread. All are toilers and all have a common interest in seeing that labor shall earn its due and full reward. It should therefore go without saying that the American people as a whole sympathize with every honorable and legitimate effort made by any class of workers to better their condition. Neither does any rational being deny the right of any class of workers to form combinations among themselves for the advancement of mutual interest, and few, if any, will deny that many large and positive benefits may, and do accrue from such organization.

Combination and co-operation are the order of the age in every department of human endeavor, and unions among miners, masons, bricklayers, and painters are just as natural and proper as they are among merchants, bankers, and manufacturers. No sensible person will dispute this. The objection in any case lies not against the fact of organization but against some method of procedure employed to gain a certain end. And here the blacklisting practiced by some combinations of employers as well as the violent acts committed by some members of labor unions are entitled to equally emphatic condemnation. Both are a violation of the principles of manly, fair, and honest dealing which should characterize the transactions of enlightened men, and both should be sternly discountenanced and suppressed.

## The Student Code of Morals.

A WORD that has long needed speaking by college authorities has been spoken at last by the board of overseers of Tufts College on the student code of morals. "We wish to record our conviction," say these overseers, "that it is never justifiable for college authorities to ignore or condone misdemeanors on the part of the students which would lead to action in the police courts if the names of the offenders were not borne on the college rolls. Edu-

cation is of little value if it does not develop a profound respect for law and order. Any man who is incapable of intelligent self-control is a dangerous element in a democratic state. The arrest and conviction of a few bumptious youths, followed by their prompt dismissal from college, would prove an object-lesson in citizenship of incalculable value to the entire student body." Wiser words than these on the subject of college discipline we have never seen. If the principles here set forth were generally enforced among college students we should be spared such scenes, for example, as those which recently occurred in New Haven when a body of Yale students broke up a theatrical performance and afterward defied and fought the police who attempted to stop the uproar.

Rowdism of this sort is less excusable in a body of supposedly intelligent and professedly respectable young men than in a gang of street hoodlums, and deserves even more severe punishment. The hazing practices prevalent in many colleges in years past have often served as a cover for silly, brutal, and ruffianly conduct, which, if indulged in elsewhere, would have deservedly landed the perpetrators in jail. Incalculable harm has been done not only to the cause of higher education but to the character of the students themselves by the vicious notion that excusses of various sorts in speech and conduct, profanity, intemperance, and licentiousness, are less heinous when committed by college boys than when practiced by other people. In their clear and emphatic utterance on these points the overseers of Tufts have performed a service for the cause of college morals which entitles them to the profound gratitude of all right-thinking men and women.

## Our "Plain Duty" to Cuba.

AFTER HEARING so much as we have in certain quarters during the past few months about America's "shameful" treatment of Cuba in the matter of reciprocity and the terrible plight in which we have left the new republic by the failure of the last Congress to effect a reciprocal trade arrangement, it is well that there should be set before the public such an explicit and authoritative statement of the things accomplished during the American occupation of the island as that coming from the bureau of insular affairs at Washington. The American people have had a general knowledge of the benefits conferred upon Cuba during that period, the improved sanitary condition of Cuban cities, the lowered death rate, the progress made in road improvement, in the establishment of public schools, and the institution of other needed reforms, but in the statement referred to we have the record summed up for the first time in a clear and concise form and from an official source.

For the benefit of those who seem to be under the impression that our duty toward Cuba has been but inadequately fulfilled we give here a brief summary of this statement. The military government was established by the United States July 18th, 1898, and terminated on May 19th, 1902. During this period more than three hundred post-offices were established, with native postmasters, and in connection therewith a money order system was inaugurated both for domestic and international business. A free-delivery system was also instituted in all of the larger cities, as well as railway post lines, and in many instances star routes in the interior and country districts. Municipal schools, hospitals, and public works were founded, industries were fostered, and farms and plantations stocked. Thousands of brood cattle and horses were purchased and resold to the natives on easy terms, enabling them to resume work, which would not otherwise have been possible.

The number of school-houses provided nearly equals those in this country for a corresponding area. A telegraph line was constructed connecting the principal cities. Public roads were opened throughout the island, which, with bridges built and repaired, have been of incalculable benefit to the inhabitants, among whom highway improvements had long been one of the greatest needs. One of the finest of these roads is the concrete turnpike running from Santiago to San Luis, a distance of about twenty-four miles. This road was planned by and constructed under the direction of General Wood, under the immediate supervision of Lieutenant Matthew E. Hanna and Captain S. D. Rockenbach. This road, crossing the mountains, is considered by experts as probably the finest mountain road in the world. The harbors of the island were also greatly improved; an admirable system of buoys and beacons was established; government warehouses and docks were repaired and constructed, and regulations, conforming to those in vogue in this country, governing harbors, were established.

The total revenues from all sources collected during the occupation was \$57,200,000, and the expenditures therefrom \$35,370,000. The remainder was turned over to the republic of Cuba at the time of the withdrawal of United States authority, May 19th, 1902. The buildings selected for barracks and quarters for the army were used only temporarily by the troops, and when put in thorough repair and good sanitary condition were turned over to the municipalities for hospitals. Many of the most completely appointed hospitals in the island have been created in this way. The death rate prior to the American occupation had been as high as eighty and ninety in a thousand, but decreased to less than twenty-three in one thousand, and during the season just passed, when yellow fever was formerly at its height, Havana was entirely free from this epidemic. In the light of the facts herewith set forth it will occur to most sensible persons that much of the "plain-duty" talk about Cuba now current is superfluous. We have done our duty toward Cuba, but we owe something to ourselves. It is not alone what reciprocity will do for Cuba but what it will do for us that we may well proceed to consider. The Cuban

market naturally belongs to us, and, under any fair and common-sense arrangement, trade between the United States and the island would be almost as large, regular, and mutually beneficial as it is between any two of our States. A few of the principal items of our exports to Cuba last year (1901) and their value will show that even under the disadvantages existing our trade has been large and profitable. These items are as follows:

Boots and Shoes.....	\$340,000
Fresh Beef.....	230,000
Hams.....	614,000
Bacon.....	456,000
Salt Pork.....	584,000
Lard.....	2,811,000
Condensed Milk.....	406,000
Beans and Peas.....	356,000
Potatoes.....	281,000
Corn.....	817,000
Wheat Flour.....	2,008,000
Total.....	\$8,102,000

Even from this partial exhibit of our Cuban trade we may gain some idea of the splendid market existing in Cuba for our agricultural and manufactured products, provided the channels of trade between are not barred at either end by a prohibitive tariff. The plainest of all plain duties is the duty we owe to ourselves to hold and enlarge this market by a reciprocity treaty. We have done a magnificent service for Cuba, as the record shows; now that it is in our power to secure some reciprocal benefits it would be a blind and fatuous policy that would stand between us and our interests. This may sound mercurial, but it is business-like and it is plain common sense.

## The Plain Truth.

EVERY RIGHT-thinking citizen will gladly note the action of the Navy Department in issuing an order prohibiting the sale of liquor of any description in American Samoa. The blackest and heaviest existing reproach on modern civilization lies in the fearful ravages of the drink traffic introduced by white men among the savages of South Africa, the New Hebrides, and other distant parts of the globe. Such awful results have followed the use of strong drink among these people as to almost, if not quite, offset all the good accomplished among them through the higher agencies of civilization. If the American government can do anything to prevent history repeating itself in this particular in Samoa, it will surely be a cause for rejoicing.

WE ARE loath to credit the report that the new government of Cuba is so neglectful of the sanitary condition of the Cuban cities that the latter are in danger of lapsing into the filthy and dangerous condition which obtained under Spanish domination. No service rendered to the Cuban people during the American occupation was of more practical value and far-reaching importance than that performed by Major Gorgas and his condutors in cleaning up Havana and Santiago and converting them from veritable pest-holes into healthful and healthy communities. Whatever may be the feelings of the Cuban people as to their more recent treatment by the United States, it would be foolish and impolitic for them to "go back" on the sanitary reforms instituted by the Americans. Under intelligent and enlightened administration Cuba may yet become a great health and winter resort for the American people, and in that way lies a great profit for the Cubans.

THE FACT that the final decision of the International arbitration court at The Hague in the "Pious Fund" case is in favor of the United States is itself a matter of trifling importance, the chief and most significant point being that the decision establishes a precedent for the settlement of international disputes which, it may be hoped, will be generally followed hereafter, thus paving the way to a realization of the happy condition when war shall be no more. It was in every way fitting that the United States and Mexico, the two leading republics on this continent, should be the first parties to submit their differences to this international court, and the conduct of the case, as well as the decision, will add to the prestige of The Hague tribunal. The court has decided that, since the government of Mexico had undertaken the administration of a trust fund for the benefit of the Roman Catholic Church of California, it was bound to pay the interest to the beneficiaries, notwithstanding the cession of California to the United States. If the republic of Mexico accepts the decision without appeal, the principle will have been established that an eleemosynary or religious foundation is not rendered void by change of nationality on the part of the beneficiaries. This may have a possible bearing on the Philippines friar question.

THE ACTION of the New York State Bankers' Association at their recent convention, urging the repeal of the present bankruptcy law, will receive the hearty endorsement of every active and upright business man and financier, and all other persons who are concerned in the maintenance of fair and honorable methods of dealing. The intent of the law, as these bankers say, at the time of its enactment was entirely laudable and the purpose it served was entirely just and right, but that it has now "outlived its usefulness" will not be questioned by any one familiar with its operations in recent years. So frequently is it resorted to by unscrupulous men to enable them to cheat and defraud their creditors that the very term has come to be regarded almost as a synonym for crookedness and dishonesty in commercial life. The law cannot be repealed too soon for the interests of all men who pay their just debts in full when possible, whether the law compels them to or not, and who prefer that those who owe them shall go and do likewise and not shield extravagance and recklessness behind a convenient statute.

## PEOPLE TALKED ABOUT

AT THE present time there are in English society two beautiful and distinguished women who have the right to bear the historic name of Lady De L'Isle and Dudley.

LADY DE L'ISLE.  
One of the most hospitable of English hostesses.

gentle and simple, with a large-hearted hospitality rarely seen in these days. Emily Frances, Lady De L'Isle and Dudley, was married to the second baron only nine years ago.

THE JAMESTOWN EXPOSITION COMPANY has made an excellent selection for president in the person of General Fitzhugh Lee, who is not only a Virginian to the core, but a man of high character and conspicuous ability.

THE ESTEEM in which the United States is held in the lands of the Orient is evidenced to some degree by the fact that the governments of China, Korea, and Japan have decided to participate in the world's fair at St. Louis on a larger scale than in any previous exposition of that type. This official attitude of the three countries was the immediate result of representations recently made to their respective rulers by Mr. John Barrett, commissioner-general of the Louisiana Purchase Exposition to Asia, Australia, and the Philippines. While in the Celestial Kingdom Mr. Barrett was in conference with Liu Kun Yi, the famous senior viceroy of China, who has his capital at Nanking, has practically the authority of a King, and rules over a population equal in number to that of the United States. Liu Kun Yi is seventy-five years old, and has held high positions for more than fifty years, having been a viceroy for thirty years. Many regard him as an abler man than was Li Hung Chang. He has been uniformly friendly to foreigners, and did all he could to quell the late Boxer outbreak. He is very favorably disposed toward the United States because of the latter's action during the Chinese troubles, and is anxious to have China well represented at the exposition in 1904. Mr. Barrett was presented to the viceroy by United States Consul William Martin, a close friend of Liu Kun Yi, was received with high honors, and was generously entertained.

IN SPITE of the sensational clamor about the dangers of automobile traveling, that method of locomotion is growing rapidly in popularity both in Europe and this country, as it appears evident that it requires only the exercise of ordinary prudence and common sense to make it as safe as any other way of travel. Automobiles are now owned and operated extensively in England both for business and for pleasure, and it is no uncommon sight to meet one of these horseless vehicles on the fine highways about London under the sole guidance of a woman. Our illustration affords a view of an up-to-date machine owned by Colonel Cornwallis West. Standing in front of the automobile may be seen Mrs. George Cornwallis West, better known as the former wife of Lord Randolph Churchill, nee Miss Jerome, of New York, Colonel West's daughter-in-law; holding the steering wheel is Princess Henry of Pless, while the third figure is that of Mrs.

A TRIO OF FAIR AUTOMOBILISTS.  
Princess Henry of Pless, Mrs. George Cornwallis West, and Mrs. George Cornwallis West—Three charming English women of the day.

Colonel West herself. The scene is on the grounds at Newlands, the lovely home of the Wests.

REMARKABLE GROUP OF AGED MEN.  
From left to right they are: Deacon Matthew S. Kenyon, Christopher C. Lewis, Deacon George T. Collins, Deacon Gardner S. Kenyon, Thomas R. Wells, George A. Babcock, Silas C. Wells.—S. Hayward

ONE OF the most interesting "group" pictures on record, taken recently in the village of Ashaway, R. I., affords evidence that "Little Rhody" is doing her utmost to raise the average of longevity in this country. At the celebration of the birthday of Deacon George T. Collins, at the place named, the following seven men, each more than eighty years old, sat for a collective photograph: Deacon Matthew S. Kenyon, aged ninety-one years; Silas C. Wells, aged eighty-eight years nine months; George A. Babcock, aged eighty-eight years eight months; Christopher C. Lewis, aged eighty-seven years seven months; Thomas R. Wells, aged eighty-six years; Deacon Gardner S. Kenyon, aged eighty-five years nine months; Deacon George T. Collins, aged eighty-three years. The average age of the sitters was thus eighty-seven years three months, a record which it would be hard to beat anywhere. All these aged gentlemen were hale, active, and enjoying life at the time. Since then Mr. Babcock has died, but as the result of an accident, not of old age. Four callers whose ages averaged nearly eighty years were also among those who congratulated Deacon Collins. This suggests the thought that if Ponce de Leon were still alive he would make his search for the "Fountain of Life" in Rhode Island instead of directing it toward fabled El Dorado.

ACCORDING TO the most reliable accounts, there is no good reason why King Leopold, of Belgium, should have disowned and disinherited his daughter, the Princess Stephanie—that is, no reason that would be good outside of a European court. The princess married against her father's wishes, it is true, but her husband, Count Lonyay, is a man of noble lineage and excellent personal character. Hungarian tradition mentions a Count Lonyay of renown

a thousand years ago, and the Princess Stephanie, if she has lost her rank and title, has at least not brought dishonor upon her house through her alliance. Count Lonyay's father was a Hungarian rebel half a century ago, and was sentenced to death for high treason, and Leopold II. has probably little love for rebels or their sons.

BY VIRTUE of her position as the wife of Sir Arthur Hardinge, the distinguished English diplomat who

was largely instrumental in inducing the Shah of Persia to visit London recently, it fell to Lady Hardinge to perform the duty of hostess on several occasions to that royal personage, a duty performed with the tact and graciousness coming from extended experience in similar functions. There was true hospitality in this, but also a political motive, for a pleasant experience in London was calculated to make the Persian ruler still more favorably disposed toward Great Britain than he has been. Lady Hardinge was, before her marriage, Miss Alexandra Ellis, the daughter of one of his Majesty's old and most valued friends and servants, Major-General Sir Arthur Ellis. Accordingly, she spent much of her childhood and youth in intimate friendship with her namesake, the Queen, at that time the Princess of Wales. The marriage of Miss Ellis to Sir Arthur took place some three years ago, and has proved a happy one.

LADY HARDINGE,  
Who entertained the Shah of Persia during his London visit.

THE PROFESSIONAL visit to the United States of Dr. Adolf Lorenz, the celebrated specialist of Vienna, bids fair, so far as a certain class of cripples is concerned, to be a lasting blessing to this country. Dr. Lorenz was recently summoned to Chicago to perform an operation for the relief of Mr. J. Ogden Armour's little daughter, who was afflicted with congenital dislocation of the hip. What is expected to be a permanent cure was effected and the doctor received for his services a fee which has been estimated at high as \$150,000. His method of reducing the deformity mentioned is a new one, which dispenses entirely with the use of the knife, and consists simply of skillful and careful manipulation. Although he might have kept the details a secret, Dr. Lorenz, animated by a high and generous spirit, went to the Chicago hospitals and treated several other patients successfully in the presence of many surgeons assembled at his invitation. Afterward the doctor visited other cities and repeated in each his object-lesson for the benefit of local surgical experts, as well as for that of the disabled children. This reveals an altruistic disposition equal to the highest standard of a great profession. For thus freely imparting to American members of the faculty a full knowledge of his *modus operandi*, Dr. Lorenz deserves the esteem of every friend of humanity.

DR. ADOLF LORENZ.  
The Vienna specialist, paid \$150,000 for curing J. Ogden Armour's child, and now visiting America.—Wright.

# New York Seen Through a Pair of Western Eyes

By Harry Beardsley

A YOUNG man from the West followed the crowd out of a North River ferry-boat and stood on the cobblestones of New York City.

A minute later he was one of a herd of human cattle who had been loaded into a small, weather-worn, and time-tattered car drawn by two horses. It was the first horse car that the Western man had seen for many years. To him it seemed a resurrected relic. It cost him an effort to realize that a method of transportation which had long ago become a joke and a laugh and an opportunity for humorists, which had been ridiculed out of existence in his own Western city, should here in the metropolis, in the great New York, be doing earnest, real, and serious every-day service. He found himself looking to see whether the car had a conductor or whether there was at the forward end a box with a glass front and a slot in the top where passengers were expected to deposit their nickels, thus to assist the company in obtaining its revenue. The Western man glanced down at the floor to see if it were not covered with hay.

The windows rattled. The car was constantly in a jar. Suddenly the vehicle stopped. The mass of human live-stock inside swayed forward. Then the presence of a conductor became apparent, as he prepared to add to his car-load.

"Step up lively!" he commanded to those outside. "Move forward there, please!" he shouted in a domineering tone to the herd within. The Westerner braced himself stubbornly, to stand exactly where he was, when he observed a most surprising thing. To his astonishment the people about him, without even a protest, were endeavoring to pack themselves closer together with a general movement toward the front of the car! The stranger recalled at once how in his Western home street car conductors in gentle tones were obliged to coax and plead with their passengers to induce them to make room for others. The Western street-car crowd was moved by persuasion; but these New Yorkers, it seemed, permitted themselves to be driven.

And in this conduct of the people, the stranger saw that they had no time for stubbornness, no time to spend in resenting the domineering air of the conductor, no moments to be lost in protest or expostulation. A great common and controlling spirit was apparent. It was shown in this very willingness to be driven. Then and there the Westerner encountered for the first time that constant, irresistible, dominant force which pervades this spot, where nearly four million people are heaped together—nearly four million individuals struggling always to reach the top of the heap. And this persistent, powerful influence that carries men and women blindly onward, making them disregard the rights of the weak, causing them to lose sight, sometimes, of the common laws of conduct—this influence could be seen in the action of every man and woman.

Such was the Western man's first impression.

The crowds did not saunter in the streets. They seemed driven forward always by this same persistent, resistless energy. They threw themselves into the points of congestion like wild beasts in a stampede.

"What is the reason for this?" asked the Western man in amazement. "Is it that all of these people have more than they can do? Is it because each individual is struggling to make up lost time? They will be driven," thought the stranger, "to the verge of nervous collapse."

He found himself carried in the human current that

poured through Broadway. Without the necessity of hurry he was plunging forward with the stream.

Then he observed what he thought one of the oddest inconsistencies of these rushing, hurry-stricken people. In front of him a great crowd had gathered. The people blocked the sidewalks and interrupted the progress of vehicles in the street. A policeman, towering above the others, was struggling in their midst.

"Here is some dreadful accident," thought the Westerner. Propelled by the same curiosity that inspired his fellows, he pried his way into the throng to reach the centre. He stood on tiptoe to look over the heads of those in front. He was prepared for a picture of blood and agony. What really greeted his eyes was this:

A fallen horse on the pavement—that was all. The animal made two unsuccessful attempts to rise. Then it gave up and lay flat on its side, its head stretched out on the street.

And for this the same people who had been rushing forward as though millions depended on moments had stopped and now stood staring, resisting the efforts of the struggling policeman! To the Western man this was an enigma. That such a commonplace occurrence as the falling of a horse in the street could stem this tide, could hold so much interest for people apparently so absorbed, was a matter so conflicting that it puzzled him.

It was evident, then, that the haste of the people was not the result of a definite purpose belonging to each individual. It was, perhaps, more like a disease with which all were afflicted. It occurred to the stranger that this hurry might be the head and the extreme of a national tendency to gain great things in days or weeks, to accomplish much in minutes. And what seemed to him the nervous tension of the people was expressed, he thought, in another way by the fact that the individuals in the crowd were absorbed in themselves, each seeming to be wholly occupied by his own thoughts. And it seemed to the spectator that this subjective mental activity was expressed even further. It seemed to him that he never before saw so many persons who, unconscious of their environment, the publicity of the street, were orally communing with themselves.

One man, walking rapidly like the rest, had clinched his fists and was mumbling aloud something defiant. He was evidently rehearsing what he was going to say and do to some one else. Another was talking to himself in a contemplative way. Apparently he was holding a debate in his mind. The stranger stared in surprise at these soliloquists, and they stared in return; but their gaze was vacant. The current of their self-talk was not interrupted.

"If this thing keeps on," thought the Westerner, "what will become of us? We will be a nation of people always talking to ourselves." The thought was not pleasant.

There were many things to make New York seem like a foreign city to the man from the West. One was a difference in accent and manner of expression in speaking. And this impression of the foreign city was augmented by the actual presence of thousands of foreigners—of large districts, great cities within themselves, where one could wander for blocks and not hear an English word; where the strange people conducted their own affairs in the ways of their own native lands, little affected, apparently, by the manners and customs of the country of their adoption.

One evening the stranger was one of the throng that streamed through the long channels of the business

streets, out to the bedrooms of New York. He was walking rapidly when he ran fair into a man in the crowd. The two men stopped and eyed each other. The Westerner saw a rough-looking individual, burly, and red in the face. The man from the West expected hostilities. To his amazement the other, in the most sincere, suave, and courteous manner, said:

"I beg your pardon."

The Western man was quite overwhelmed, and when he made inquiries of persons in the street, he found them eager to give him information. Policemen, and even the New York street-car conductors, whom he had been taught to consider ruffians and bullies of the worst order, the Western man found to be most eager to oblige him. The train-men even undertook to point out the places of interest to the stranger and to discourse on them between bell-jerks and fares. It was not hospitality exactly, but a spirit of courtesy, which New York men seemed to possess in abundance. It was charming. There was little gruffness. Men spoke to each other in tones soft and polite.

"What delightful gentlemen these New Yorkers are!" mused the Westerner. The Western man observed, too, with a feeling that was not one of favor, that in New York custom permits men to remain seated in street cars while women stand.

Now, in at least some of the Western cities, this unwritten law prevails: That when a woman enters a street car, no matter what her appearance or age, she is entitled to a seat, and the responsibility rests upon the man sitting nearest her. If he does not respond promptly, the other men and the women who are sitting look fixedly at him, saying very plainly with their eyes:

"Here, why don't you get up and give that woman your seat?"

If the man continues to defy public opinion thus expressed, the responsibility falls on his next neighbor. Obeying this custom the Western man gave his seat in a street car to a woman, and she thanked him.

Afterward a New York acquaintance said to the Westerner: "You don't want to give up your seat every time a woman comes in the car. If you do you will be standing up all the time. The chances are that a woman won't thank you, anyhow. Besides, everybody will size you up as a farmer."

To the Western man in New York came the impression of the city's superior air of refinement. It is expressed in the architectural splendor of the buildings, it is shown even in the miles and miles of brown-stone houses, which, at first monotonous in the similarity, impress later their quiet stateliness. And the refinement is in the clean, pure atmosphere that comes with the breezes from the embracing sea.

In the glow which he felt in the elegance and the personal and architectural beauty of Fifth Avenue, the man from the West was shocked and startled by a spectre in the street. He had seen this thing in a "Wild West" show; he had read of it in tales of adventure on the frontier; but he came to New York to witness its actual operation.

There it was, a stage-coach rumbling along Fifth Avenue! Through the parade of fashion it made its way calmly—old, ramshackle, and ragged, like a tramp at a fashionable reception.

"And this is the City of Inconsistencies," thought the Western man.

## A Great University's New President.

THE SERVICES in connection with the recent installation of Dr. Edmund James James as president of Northwestern University, Evanston, Ill., fittingly expressed the joy and pride of that institution in once more having a supreme head and in securing for that position one of the foremost educators of the day. For more than a year the university had been without a president, and it is not surprising that the end of this embarrassing lack and the advent of Dr. James were celebrated with enthusiasm. The exercises extended over the better part of three days and were all through of an interesting nature. They were attended by great throngs, including delegates from a number of foreign universities, from many American universities and colleges, from the learned societies of this country, and from various normal schools, high schools, and academies. Rarely, if ever, on such an occasion, has there been so large and so representative an assemblage of the educational leaders of their time.

The exercises of the first day, which was Sunday, Oct. 19th, were religious and they took place in several churches, where prayers were offered for the success of the university and President James's administration. President James and members of the university faculty listened to a scholarly address at the First Methodist Episcopal Church by the Rev. Dr. William De Witt Hyde, president of Bowdoin College, on "The Reconciliation of our Educational Ideals." On Monday, the second day, there were receptions, addresses by prominent men, and processions of students. The new law school of the university was formally opened with an able address by the Hon. Oliver Wendell Holmes, Chief Justice of the Supreme Judicial Court of Massachusetts, who is soon to sit in the Supreme Court of the United States. On Tuesday, the third day, there was a formal reception of delegates and official guests, at which a dozen addresses were made. Later in the day the delegates, official guests, members of the faculties, alumni, and representatives of the students marched from Orrington Lunt Library to the First Meth-

odist Episcopal Church, where the installation ceremonies took place. These were participated in by Bishops Earl Cranston and Stephen M. Merrill, of the Methodist Episcopal Church. Half a dozen university presidents and others made speeches, and President James delivered a thoughtful inaugural address. In the evening President and Mrs. James held a reception, which was a brilliant and enjoyable affair.

Northwestern University, which is conducted under the auspices of the Methodist Episcopal Church, has a history of remarkable success. The charter for the institution was granted in 1851, but the latter was not opened for the reception of students until 1855. Dr. James is the seventh regular president of the university, and there have been four presidents *ad interim*. The university has flourished from the beginning and it is now one of the best equipped and most important schools of the first order in this country. More than 2,200 students received instruction in its various departments last year, and the roll for the current collegiate year shows an increase. There is every prospect that under Dr. James's capable direction the university will experience even greater prosperity in the future than in the past.

## He Made the First Revolver.

IT CANNOT justly be said that Joseph Shirk, of Lancaster, Penn., who died the other day, contributed very largely to the happiness of his fellow-men, but as he was the man who made the first revolver, he doubtless performed a very useful service, as things go in this world. While the revolver is not a very large weapon, it has probably snuffed more persons out of existence since it came into being, under Mr. Shirk's hands, forty years ago, than many more formidable engines of war. While its bark is not as loud as a cannon, its bite is usually just as bad, and it is a good deal handier for burglars and other bad men to carry around.

## How Railroad Advertising Pays.

TO EVERY ONE who has the discerning sense to recognize the true significance of the rapid changes and adjustments taking place in industrial and financial circles, consequent upon the new era of consolidation and expansion that has set in in these spheres of human activity, the annual reports of the great railroad systems of the country are full of special interest. These show that lowered rates of fare, improved equipments, and added conveniences and comforts, made possible in many cases only by consolidation, have brought an immense increase in passenger traffic and the consequent earnings of the roads. With this increase has come about a change also in the relative importance of the officials at the head of great railroad departments. The department of the general passenger agent, for example, has been advanced from a position of comparative unimportance as a financial factor in railroad operations to the very front rank, requiring for its management the most resourceful, energetic, and masterful men that the country affords. How much depends upon having a man of this character to direct and develop the passenger business of a great railroad system may be judged from the recent annual report of the New York Central, where it is shown that the passenger receipts for the year ended June 30th, 1902, were \$2,940,728 more than during the year previous, a record for which no other road affords a parallel. Here we have, incidentally, a demonstration in cold figures of the value of a man like George H. Daniels, general passenger agent of the Central, who is "up and at it all the time" in pushing the interests of his department, upon the public platform and through the advertising pages of all the best publications, as well as through the regular executive channels of the business itself. He has demonstrated that railroad advertising pays and pays well.

# The Thorn of All Nations

By L. A. Maynard

IF MAYOR LOW and some of his associates in the new administration of New York find the regulation or control of the liquor traffic looming up before them as the most knotty and formidable problem with which they have to deal, and in the attempted solution of which they are threatened with the resolute opposition of former friends and recent supporters, they may find a measure of consolation in the fact that their anxieties and perplexities on this score are shared to-day by the governing authorities of nearly all civilized communities and states the world around.

The familiar figure of Banquo's ghost fails as an adequate expression of the universal and pervading presence of the ominous drink spectre at the banquet tables of the nations, a spectre that refuses to "down," either at the bidding of temperance agitators or legislative reformers, and which refuses to fade away into nothingness before Gothenburg schemes, Maine laws, coffee-house systems, and hatchet crusaders. In the face of all this opposition, and much besides, the "drink bill of the nations" continues to come before us yearly with its astounding totals, usually showing an increase all around, while problems of excise and saloon regulation remain as thorns in the side of all legislative and governing bodies, sharp and irritating, and with no apparent likelihood of extraction.

Thus within the past few years we have seen various European governments take up the struggle with the drink question, forced thereto by the increasing and indubitable evidence that their people are in grave danger of moral, physical, and economic loss and deterioration from this source. Even wine-drinking France and beer-loving Germany have come to see the necessity of imposing severe checks upon indulgences which the people of these countries have long considered as fruitful of little or no harm, and government inquiries are now on foot in both of them, with a view of learning the full extent of the drink evil, the cause and the remedy.

In Germany the military authorities have come to the conclusion that too much beer-drinking is injuring the physical well-being and lowering the fighting qualities of the German soldiery, and an effort is being made to limit this fond indulgence in the army. In France much alarm is felt over the growing tendency of the people to indulge in absinthe and stimulants other than wine, resulting in an increase of insanity, and suicide, and in other deplorable consequences. In Sweden, what is known as the Gothen-

burg system, a form of government supervision, has been in operation for several years, but of its efficacy for good there seems to be room for doubt.

The Russian government has also instituted an extensive scheme of liquor reform in its wide domain for the special benefit of the peasantry, with results which have recently been described by Mr. George Kennan in the *Outlook*. Under this scheme the Russian government proposes to cover into its own treasury the profits derived from the manufacture and sales of intoxicants, to substitute pure liquor for the adulterated and injurious compounds often sold by private dealers, and to discourage intemperance by opening tea-shops, people's houses, libraries, summer gardens, and cheap theatres, where the common people may find diversion and entertainment without liquor.

How seriously the Russian government is addressing itself to the task may be judged by the fact that it proposes to spend during the present year of 1902 no less than \$2,000,000 in establishing these tea-shops and other counteractive agencies. That the system established has thus far been successful in a financial sense is shown by the fact that the Russian government expects to derive from liquor sales this present year the enormous sum of \$195,000,000, of which more than twenty-five per cent. will be clear profit. But this plan of government supervision, according to Mr. Kennan, has had, as yet, no appreciable effect in diminishing drunkenness and its attendant evils among the peasantry, and the main problem confronting the Russian reformers is still as ugly and apparently unsolvable as ever.

Turning to England we find the most astute and brilliant statesmen, legislators, prelates, and publicists of that favored land widely at variance among themselves over these same questions of the excise and liquor traffic regulation, both in the home land and in distant dependencies, these issues being foremost in ministerial programmes and parliamentary debates. How formidable the general problem appears as a matter of colonial administration is seen in the blue book recently issued by the British government, containing the plan outlined by Lord Milner, high commissioner of South Africa, for the control of the liquor traffic among the natives of that region. The solution of this question is admitted by Lord Milner to be a "tremendous undertaking," in which "the whole credit of the administration is at stake." And the success of his

policy, he says, "means a momentous triumph for civilization in that part of the world."

That Lord Milner has not overestimated the difficulties of the solution before him, may be judged from the testimony of many other competent witnesses, such as Bishop Hartzell, of the Methodist Church, who has been in Africa four years, and is quoted as saying that seventy-five per cent. of the demoralization of the natives in their home life and character comes from the use of intoxicating drink. And the Rev. Charles Satchell Morris, who has traveled extensively in Africa, declares that "no fewer than 2,000,000 savages go forth to die every year as a result of the traffic." It was Joseph Chamberlain himself, the British Secretary of State for the Colonies, who said not long ago that the liquor traffic among native races "is not only discreditable to the British name," but it is also "disastrous to British trade," as it destroys all trade by destroying the population. We might go on from this to show also how the drink controversy has invaded many other departments of human thought and endeavor in recent years, the scientific, the physiological, the educational, and the religious, leaving behind it everywhere a trail of personal estrangements, unseemly wranglings, unending disputes, and divided and antagonizing councils.

The whole problem thus presented to the civilized world has still too many dark and yet inscrutable phases to make it safe or wise to dogmatize upon it. Many remedies for the drink evil are proposed, some of which appear to have the elements of practicability, but of none of them can it be said that it is beyond the stage of trial and experiment. The situation is by no means hopeless, and much real and satisfactory progress has been made in temperance reform. In England and America at least drunkenness in its grosser forms is not as common as it was years ago, and drinking to excess is no longer regarded as a light and trivial weakness in any respectable class of society. As for the future, the best and only wise thing for the sincere and genuine friends of reform to do is to be patient and charitable with each other as new difficulties and differences rise and—work resolutely on.

And this counsel applies particularly just now to all who are making an honest effort to arrive at some practical solution of the excise problem in the American metropolis, where difficulties present themselves as large, as formidable, and as perplexing as they are in South Africa, Russia, France, or any other part of the world.

## Scandalous Revelations Regarding Diplomacy

DIPLOMACY in its relation to international intercourse has been defined as the practice of lying, treachery, and double-dealing reduced to a fine art, and it must be admitted that there is more truth than cynicism in the definition, so far, at least, as it relates to the diplomacy of the past. It is to be feared also that it applies far more than it should to diplomatic procedure in this present day and age. Long before the days of Machiavelli, as well as ever since, the false, abominable, and poisonous doctrines frankly set forth and taught by that apostle of craft and cruelty have permeated, to a greater or less degree, the dealings of nations with each other even in times of peace, and infinite mischief and disaster have been the result.

By a species of casuistry unknown in any other department of modern thought and endeavor, men of honorable life and high repute have persuaded themselves that they were justified under the guise of diplomacy in resorting to the arts of knaves and traitors, to low intrigue and foul deceit, to obtain possession of state secrets or other information which might prove useful to the governments whose interests they represent. For this purpose they have not scrupled to resort to bribery, theft, subornation, or any other means, however vicious and reprehensible, judged according to ordinary moral standards.

It will be remembered that the whole case of Captain Dreyfus, over which France went into convulsions a few years ago, and which left behind it roots of bitterness that it will take many years more to eradicate, revolved entirely around the alleged sale by that individual of state secrets to a German diplomat. The curious state of morals pervading this business was illustrated on this occasion by the fact that no obloquy seemed to attach to the official who obtained the information by secret and traitorous means, but only to the other party, the man who sold it. The bribe-giver retained his status, while the alleged bribe-taker was execrated as the vilest of scoundrels and hounded nearly to death.

That some professedly enlightened and civilized governments are not above these Machiavellian practices at this present time is shown by two incidents which have occurred in diplomatic circles recently, one in Europe and one in this country. The latter, as reported in the *New York Tribune*, was an incident where an attaché of one of the foreign legations at Washington was detected in the act of obtaining valuable information by surreptitious methods of our fortifications at Egmont Key, at the entrance of Tampa Bay, Florida, presumably for the use of his own government in case of war. The man is known as a technical expert in harbor defenses, and the reasonable presumption is that he was doing this work with the knowledge, if not under the express orders, of his superiors at home. It is said that if the relations between the United States and the country which this man represents were not apparently so extremely cordial, the offense would have already led to summary punishment.

Another case of the kind, more strongly illustrative of the moral paradox to which we have alluded, because of

the confessed connivance of government authorities in the scheme, is that of Colonel Grimm, a Russian officer recently found guilty of selling military secrets to the German government. Colonel Grimm, who occupied a high position, it appears, in the military intelligence department at Warsaw, fell into difficulties during a holiday spent at the gambling hell of Monte Carlo, and in his desperation offered his services to the German government. The intelligence department at Berlin, aware that from his confidential position his knowledge might be of a valuable kind, afforded him pecuniary help and promised him an annuity equivalent to \$3,000 a year.

Information was forwarded according to contract, and at last two documents were supplied of positively vital importance to the military chiefs in Berlin. One was the secret military convention between France and Russia, arranging the method of conjoint action in the event of war with Germany, and the other the actual plan of mobilization accepted by the two Powers, including the order in which each of them intended to strike. As the plan of defense would depend upon this order, it was most eagerly studied, and in consequence the disposition of the German forces in the East was so cleverly altered that the Russian staff, finding their most secret ideas anticipated, grew suspicious, and at last, after, it is said, months of inquiry, became satisfied that the point of leakage was the intelligence department in Warsaw. The actual discovery of Colonel Grimm's treason was due to his wife, who denounced her husband in revenge for his having paid court to another woman. The colonel's papers were seized, he was arrested, tried and convicted, and sentenced to be deprived of all rights and to be imprisoned at hard labor for twelve years.

Strict justice would require, it would seem, that Russia's displeasure at this act of treachery and violated confidence would be visited in some degree upon the accessory parties, the German officials who hired Colonel Grimm to betray his country. But since Russia and Germany are outwardly on terms of mutual peace and amity, it is difficult to see what could be done that would not give offense. The situation is further complicated by the general belief that Russia herself is constantly engaged in similar secret work among her European neighbors, either through her own emissaries or through a species of bribery similar to that exercised by the Germans, so that the chief offense of Colonel Grimm, after all, seems to consist in his getting found out.

In the open court of honor, truth, and fair dealing there can be no hesitancy as to the proper judgment to be pronounced on all this miserable, vile, and contemptible business. It is wholly wrong and absolutely indefensible. It is gratifying to remember that in the diplomatic proceedings connected with the Chinese trouble our excellent Secretary of State, Mr. Hay, took occasion to emphasize the fact that, so far as the American government was concerned in the affair, its course of action would be frank, open, and clear, and these features have marked, we are

glad to believe, the history of American diplomacy generally. If the case reported from Washington is capable of exact proof, it would seem as if our government was strong and independent enough to make an example of the guilty official, to demand an apology from the offending nation, and teach it a lesson in manners and morals which would have a salutary effect all around.

### Forbidding Unfit Marriages.

THE BILL proposed for introduction in the French Chamber of Deputies, requiring that parties seeking marriage shall first pass a medical examination, will probably meet with the fate accorded to measures of similar import introduced in the Legislatures of some of our States, and be promptly buried out of sight; but at the same time it will be denied by few intelligent persons anywhere that the proposed law is theoretically a good one, and that, if enacted and enforced, it would go far toward keeping the human race physically sound and normal, as well as stopping the appalling increase of criminals and degenerates. In fact, such a law strictly carried out through a period of years would go far toward eliminating from the race many of its inherited vices and other weaknesses, and bringing it measurably nearer an ideal condition, so far, at least, as physical qualities are concerned, and it could hardly be without an improvement in moral attributes also. For with sounder bodies will come sounder minds.

### Scientific Food.

THAT CURES PATIENTS QUICKLY.

"My experience with food has been considerable.

"For 20 years I suffered with chronic indigestion and bowel complaint which brought on general debility," says a gentleman of Danville, Ill. "I was very poor in flesh and every one thought I had consumption. I was treated by the best doctors of several cities, but to no benefit.

"At last, I went to the hospital and while there began using Grape-Nuts, the physician giving me permission, and from that day I commenced to gain. By careful diet, and using judgment, I gained in flesh and strength, my lungs got better, and to-day I consider myself as well as men in general at my age of 60 years.

"The other patients noticed that I gained faster under the same treatment and care and I told them to add Grape-Nuts to their diet and be careful not to eat meat, nor warm bread and starchy food. I can now eat anything in reason; I sleep well; bowels are regular and I have gained 22 pounds in flesh. Grape-Nuts food saved my life.

"It adds to the health and comfortable living, makes the mind clear and prolongs life." Name given by Postum Co., Battle Creek, Mich.

# Charity's Useful Work in Porto Rico

By Adam Haeselbarth

IT WOULD be difficult to find a more conclusive proof of the value of non-pauperizing charities than that which exists to-day in Ponce, Porto Rico, in the form of the industrial school of the Porto Rican Benevolent Society. Because of the obvious merits of the scheme the insular government has just given it practical indorsement in the shape of financial aid, thus placing the school under government supervision to a degree.

As good often develops from evil, so the Porto Rican Benevolent Society came into existence immediately after the terrible cyclone which swept the island four years ago. It was organized for relief purposes, especially for the distribution of food and clothing to the cyclone sufferers, but its promoters later realized that it might accomplish a broader mission. Hence its growth.

From the start the society has employed the poor in profitable work, paying cash for all labor and often furnishing the material. Then it carries the product and disposes of it to the best possible advantage. The society is now paying more than double for the same work that it paid at first, having increased the price as the quality of work improved and sales were more readily made in consequence. It keeps many native women busy making fancy or drawn work, or doing sewing, and finds employment for many men. It has established almshouses for the deserving indigent poor and has done much toward abolishing the mendicancy that prevailed in Ponce under Spanish rule. Then came the founding of the industrial school, which bids fair before long to attract attention beyond the confines of Borinquen. In this school boys and girls under the age of eighteen may be taught the common English branches and gardening, cobbling, sewing, cooking, carpentering, and other trades, and especially the various uses that can be made of native product. The work is then sold for the benefit of the workers and the school.

The school-house has only five rooms and the intention was to take only fifty

scholars; but on the day it was opened recently there were more than six hundred applicants, and it was decided

SHELTER-HOUSE FOR THE SICK AND INFIRM, SURROUNDED BY TYPICAL HOMES OF POOR PEOPLE.

THE NEW INDUSTRIAL SCHOOL WHICH TRAINS PORTO RICANS IN SELF-SUPPORT.

## Where Women Operate Cars.

WOMEN IN every part of the civilized world are rapidly making their way into occupations formerly regarded as belonging exclusively to men. Nowhere is this more evident than in the cities of the United States, where women are employed in almost all kinds of business establishments. The feminine invasion has not in the northern latitudes as yet extended to the actual operation of street-cars. In Valparaiso, Chili, however, women have entered into even this field. That South American city is well provided with horse-car lines, but while the drivers are all men, every conductor on the many hundreds of cars is a woman. The cars are double-decked structures and are often crowded. But nobody except the conductor is allowed to stand on the rear platform. This the woman fare-taker has all to herself, and besides she is not obliged to stand all the time when passengers are few, as there is a comfortable seat placed there for her use.

The conductors of Valparaiso wear a sort of uniform consisting of a navy-blue gown with a white apron and white plastron. They have proved themselves efficient and are treated by the traveling public with respect. Women were first employed in this line of work during the war several years ago between Chili and Peru, when men went into the army in such numbers that there was a shortage of them for peaceful pursuits. By the time the war had ended, the women had firmly established themselves in this new branch of labor. They work for lower wages than the men would demand, and there has been no attempt to oust them. Whatever conservative people may think of the innovation, it cannot be denied that there are many women engaged in callings whose duties are far less agreeable than those of a street-car conductor.

## Who Shall Reclaim Hayti?

A COLOGNE newspaper wants "one of the great Powers," the United States preferred, to supplant the barbaric negro regime in Hayti and reclaim it for civilization. If matters continue to go from bad to worse in that darkest republic, it may be incumbent upon the United States to interfere, in the interest of humanity alone, as we did in Cuba. As an instance of the capacity of the negroes for enlightened self-govern-

ment, the experiment in Hayti must be written down as a complete and wretched failure. The whole history of the island as a republic has been a continuous series of rebellions, revolutions and assassinations, with an occasional autocracy of the worst sort. No progress has been made in education, industry, or commerce, and the morals and manners of the people are little better than those of savages. The only thing, apparently, that can bring peace and civilization to the island is the firm rule of some outside power, and that power naturally could not be any other than the United States.

to admit one hundred pupils. The five hundred who were rejected were sorely disappointed, but the accepted ones are working with vigor. Only a lack of funds now prevents the rapid enlargement of the school. The school and its objects have been cordially indorsed by J. Samuel Lindsay, the commissioner of education; the Hon. William H. Hunt, Governor of Porto Rico; ex-Governor Allen, now of Lowell, Mass.; and Mr. William R. Corwin, representative of the Merchants' Association of New York.

The financial showing of the society is most creditable. Its receipts from its beginning to August 21st, 1902, were: Donations, \$6,106.20; dues and fines of members, \$2,068.84; sale of work made by society's poor, \$17,512.17; sale of merchandise, \$159.74; borrowed money, \$500; loans repaid, \$1,785.81; bazar, \$631.95; sundries, \$8.45; for school, \$11,523.39; total, \$40,096.55. The expenditures during the same period were: General expenses, \$1,339.83; cash given to poor, \$3,639.46; loans to buy sewing machines, \$2,324.72; labor, \$15,141.55; ready-made clothing, \$643.68; clothing made by society labor, \$1,330.32; garden seeds, \$339; payment of loan, \$300; almshouses, \$2,865.42; balance on hand, \$667.18; buildings and grounds of school, \$9,223.39; balance school fund, \$2,300. Total \$40,096.55. The labor items show a profit of \$2,370.62 over the \$15,141.55 paid for labor, this profit being expended for the needy poor.

Mrs. Louise Igoe Miller, the wife of the postmaster at Ponce, is president of the society, and her earnest co-laborers are American and Porto Rican women. An advisory board of men, including the Alcalde of Ponce, Mr. Gautier, Postmaster Miller, Major A. L. Meyers, U. S. A., Mr. Enrique Fritze, German consul, and others, have general supervision of the work. In the United States Mrs. W. H. S. Lothrop, of Boston, has been the principal worker, especially in selling the native women's products and in interesting philanthropic people.

## A Plan to End Strikes.

THE OPTIMISTIC spirit and buoyant faith in the virtuous motives and good intentions of his fellow-men which characterized President Roosevelt's Fourth of July speeches, as they do most other public utterances of our present chief executive, are traits which all who have occasion to address the public would do well to cultivate. "I don't believe," said Mr. Roosevelt, "that any considerable body of our people really wishes ill of any other considerable body of our people; and when there is an appearance of such a wishing ill, I am sure that it springs from some fundamental misapprehension between the two sides, and that the best way of removing the difference, be it real or assumed, is to try to get the two sides together." This utterance may sound trite and it is not phrased with Mr. Roosevelt's usual felicity, but it contains a truth that cannot be too frequently brought out and emphasized. Most of our labor troubles, like that which prevailed in the coal regions, might be settled amicably by a recognition of this get-together principle. In the last analysis both parties taking sides in these struggles are made up of men who only want what is right and just. The difficulty lies in the way they undertake to get it. To this, as to most other controversies which afflict the world, may be applied the remark once made by a New York business man in reply to an angry letter: "My friend, I am more and more impressed as I grow older as to the few things there are in this world worth quarreling about."

## For Nervous Women.

HORSFORD'S ACID PHOSPHATE.  
It quiets and strengthens the nerves, relieves nausea and sick headache, and induces refreshing sleep. Improves the general health. Its benefits are lasting.

## In Substitute Feeding

for infants, physicians agree that cow's milk is the basis for all beginnings. What is required, then, is the best possible milk product. Borden's Eagle Brand condensed milk is ideal, pure, sterile, and guarded against contamination.

## On Halloween.

UPON the night of Halloween,  
When graves give up their  
dead,  
A woman spirit drifted back  
By ways she used to tread.  
A wavering silver mist, she passed  
Through gates and meadow-bars,  
Until she saw the lights of home  
Shine out like golden stars.

"MY husband by his lonely hearth,"  
She sighed, "still sits and  
grieves,"  
And through the lattice window  
peered  
Between the ivy leaves.  
He lounged before the blazing logs,  
But oh! the bitter pain;  
Another's golden head reclined  
Where once her own had lain.

"ANOTHER GOLDEN HEAD RECLINED WHERE ONCE HER OWN HAD LAIN."

SHE glided through the oaken  
door  
Invisible as air,  
And, moaning softly, crossed the hall  
And climbed the nursery stair.  
"My child, he will remember yet,  
His love is still the same."  
But happy in his rosy dreams  
He breathed a stranger's name.

A WIND-BLOWN vapor, on she  
went  
Beneath the autumn moon.  
"My mother, has she too forgot  
The dead so soon, so soon?"  
She put the snowy curtain by  
And through the casement crept,  
And lo! above her pictured face  
The faithful mother wept.

MINNA IRVING.

## The Methods of Wall Street Sharpers.

IN SPITE of frequent exposures by the press of schemes that are plausible and fraudulent, the innocents of the world continue to be duped and fleeced. A recent, and almost startling, instance of the ease with which people can be swindled is offered in the doings of the so-called brokerage firm of John M. Fisher & Co., of Boston. The members of the firm, John M. Fisher and Frederick E. Betts, were indicted on the charge of defrauding customers by using the United States mails. Fisher, who was nominally the head of the concern, but who claimed that Betts was its ruling spirit, pleaded guilty when the case came up for trial and turned State's evidence. On the witness stand he made sensational disclosures that should be a warning to every would-be speculator in stocks.

Fisher testified that the firm began business without a cent of capital, and yet within a little more than a year it took from its dupes \$285,000. As its expenses were not large, the net proceeds of this levy on the public amounted to a comfortable fortune. The firm's method, the witness asserted, was to induce its patrons to deposit money for the purchase, on a margin, of stock in an alleged "pool." For every \$100 advanced the customer supposed that he had bought ten shares of stock at a certain price. It was printed in the order that more stock was to be purchased on every rise of three points. When a rise occurred a call would be made for more money. If the customer responded the firm pretended to buy more stock. On a reaction of the market additional cash would be demanded, and if it was not furnished the customer was declared to be "wiped out."

When an account seemed to show a profit some stock would be added to it, and in the fluctuations that followed, the customer would appear to have lost his money. Those who sent orders by mail were treated in the same

fashion as those who went personally to the office. Every customer under this plan was a loser. Fisher testified that to his knowledge the firm never bought any stocks, and, of course, never sold any, and that the accounts of supposed transactions were purely fictitious. From thirty to fifty persons frequented the firm's office daily, and yet, notwithstanding everybody was losing and nobody ever got back a cent, the firm was allowed to go along for more than twelve months without being brought to task, which indicates an astounding degree of credulity at the "Hub."

But this is not a circumstance to the state of affairs existing in New York City. Here any and every kind of a proposition which promises big and impossible profits is greedily snapped at by people who are in haste to get rich. Swindling financial schemes of all sorts flourish. Bucket shops are continually springing up to plunder deluded victims. Stock "pools," oil, mining, and other companies—all utterly fraudulent—are cheating "suckers" by the thousand. Promoters of worthless corporations find any amount of buyers for stocks which are advertised seductively. There is a widespread craze for investing in cheap stocks, sold at from one cent up to ten or twenty-five cents per share, and none of them worth the paper on which the certificates are printed. It is said to be a fact that several different alleged oil companies floated and sold stock based on a single bit of land in Texas less than an acre in area. By frauds such as these hundreds of thousands of dollars are annually filched from the unsophisticated, most of whom are too much ashamed of their folly to complain.

The trust idea even has been carried out in confidence games practiced in the financial district of this city. One man, whose record is asserted to be unsavory, is the head and front of perhaps a dozen concerns, masquerading under different names, some of them apparently respectable, but all devoted to the one endeavor to extract money

from the pockets of the people. It is intimated that several of these establishments intend to "fail" next spring if the winter proves sufficiently profitable. The men interested in them are smart and tricky, and manage to cover up their sharp practices with a show of legality. It is difficult to get legal evidence against them, but it is possible to do so, and the authorities should make every effort to convict and to crush them.

## To Prevent Strikes in New South Wales.

NEW SOUTH WALES is closely following New Zealand in the attempt to substitute a compulsory system of arbitration in place of strikes and lockouts, and thus assist in preventing a repetition of the disastrous conflicts between employers and employed which have been so frequently, as in other countries, productive of injury to the mutual interests of capital and labor. In framing the act several improvements, suggested by the working of the law in New Zealand, have been made. There are no boards of conciliation as in New Zealand. This means that there will be no preliminary investigations, the dispute being taken straight into court, thereby preventing delay and decreasing expense. The act makes it a misdemeanor by the employees to strike, or by employers to lock out, either before a reference or during its progress. There is to be no cessation of industrial operations pending the settlement of the dispute. The court is to be composed of a judge of the State Supreme Court as president, and two members, one each elected from the employers and the employees respectively. The orders of the court may be enforced, as in New Zealand, by injunction, or by fines and penalties, levied both on the corporate funds of the union and on individual members.

## British Soldiers to Teach Americans.

WHILE AMERICANS are noted for taking the initiative in many directions, they are not above accepting a hint or learning from other nations. Thus it comes to pass that our War Department will welcome the dozen British non-commissioned officers who are about to sail hither to give before American troops an exposition of the gymnastic training which has become a feature of the service in England. The consent of Lord Roberts and War Secretary St. John Brodrick to the idea of sending these soldiers to the United States was secured by General Young, U. S. A., who has been in Europe with Generals Corbin and Wood, and who was deeply impressed with the performances he witnessed in the military gymnasium at Aldershot, England.

The practice given there is peculiarly good and is of the greatest benefit in developing agility and vigor, qualities an efficient soldier needs in the highest degree. It makes those who engage in it models of physical development and at least the best features of it should be, and doubtless will be, adopted by our own army. It is probable, also, that a dozen American non-commissioned officers will be sent to England to get ideas in regard to training and drill. General Young, who is to be credited with this plan to improve the American soldier, has made the following statement in regard to it:

"The gymnastic exhibition we saw at Aldershot beats anything we have got in the way of smartness. The men who took part in it were non-commissioned officers qualified as gymnastic instructors. I feel sure that an interchange of experiences in this branch of military training will be of mutual benefit to both countries."

## A Year of Strikes.

THE DEPARTMENT of Labor has just issued statistics regarding the strikes and lockouts of the years 1881-1900, which are full of interest. During the period there were 22,793 strikes in 117,509 different establishments and 6,105,694 strikers. The last number does not include the strikers of thirty-three establishments for which no statistics were forthcoming. More than 65 per cent. of the establishments referred to—77,607 in all—were situated in the three States of New York, Pennsylvania, and Illinois, in which there were 11,946 strikes—more than

52 per cent. of the total. During the same twenty years 1,005 establishments locked out 504,307 workmen. The results of the strikes were as follows: The employers succeeded in 50.79 per cent. of the cases, partially succeeded in 6.28 per cent., and failed in 42.93 per cent.—the statistics of the remaining 1.44 per cent. of the cases lacking. Six trades suffered most; they were affected by 59 per cent.

GENERAL MODESTO CASTRO, "THE MOLTRE OF VENEZUELA," One of the best generals in the army trying to suppress the revolution in that country.

of all the strikes and had over 71 per cent. of the strikers. These were: (1) Building trades, (2) coal industries, (3) metal-working trades, (4) clothing manufacture, (5) tobacco trade, (6) transportation.

## Chinese Obliquity Illustrated.

THE LONDON TIMES correspondent at Shanghai sends some curious stories as to the way in which the Chinese provincial governors are raising their portions of the indemnity. They first impose extra taxation far in excess of what is required, on the plea that the indemnity must be paid, and then in addition borrow the money with which to meet the indemnity. As a result, the provincial officials are making huge fortunes. The consequence is to inflame anti-foreign feeling among the people.

## Are You Ambitious?

COFFEE MAKES SOME PEOPLE HELPLESS.

WE inherit our temperaments. Some children are happy and bright, while others are nervous and cross. Care should be taken that the child is given proper food and drink, so as not to increase natural nervousness or to bring it on; but this is often overlooked by mothers who permit their children to drink coffee without check.

The wife of a groceryman living in Siloam, Mo., says, "I was born with a nervous temperament, and this was increased by my parents giving me coffee when a child, unconscious of its bad effect on my nervous system. In time, a cup of coffee in the morning invariably soured on my stomach, and a single cup at night would make me nervous and wakeful and often cause a distressing heartburn. Last year I laid in bed all summer with nervous prostration, a complete wreck from coffee drinking. I craved a good, nourishing, hot drink and commenced to use Postum Food Coffee."

"There was a gradual improvement in my health almost from the commencement of using Postum. I could sleep well, the heartburn and nervousness disappeared, my stomach trouble stopped, and now (a year later) I have gone from the sick-bed into the store behind the counter day after day; from a helpless to a stirring business woman, with new life and strength, new hopes and ambition; from the pale, weak 102-pound woman to my present weight of 120 pounds. Thanks to Postum."

"We carry Postum in stock and recommend it to our customers; we love to sell it and often give a trial quantity to the faltering to induce them to use this health-giving drink." Name given by Postum Co., Battle Creek, Mich.

DAVID WARFIELD AS HIMSELF.  
Sarony.

## Behind the Scenes with David Warfield; OR, Cough-drops and Confidence with a Comedian

By Eleanor Franklin

DAVID WARFIELD AS "SIMON LEVI."  
Sarony.

"HERE, HAVE one. They're not the finest collection I might offer you, but if you have an irritation in your

throat you'll find them soothing."

"Write me a testimony and I'll sell it to the firm that makes them."

"Get my picture in the paper 'mid fits,' as Simon Levi says?"

"No; mid a bronchitis."

"Actor's sore throat. Ever have it? I didn't get it acting."

"No?"

"No. I got it swearing at the electrician. He tries to make me play in the dark. Breaks me all up. You see, I depend so much on expression for my effects in this part and that d—d—no, I won't say it. He thinks I'm too good to expose to the rude gaze of the public, I guess."

"Well, it's a star's prerogative to swear and throw things. It makes him interesting and gives him a reputation for being erratic."

"Yes; that's what you call artistic temperament."

"Or a manifestation of artistic temperament."

"Yes, and there are other unpleasant symptoms. I'm not really afflicted to any marked extent myself."

"No? It is usually the wild yearnings peculiar to the artistic temperament which lead most men like you to discover themselves. How did it happen in your case?"

"Do you know, I think I became what I am for spite."

"How was that?"

"Well, I'll tell you. When I was a callow youth out in San Francisco I used to do what I called imitations of famous stars for the benefit of the social circle in which I moved. I thought I was great, and that it was too bad to keep such a good thing away from the public, so I went one day to a manager of one of the variety theatres—called vaudeville now—and asked him to let me go on for a performance and try my act on an audience, and he said 'All right.' It was my first engagement and it lasted just two minutes and a half."

Mr. Warfield spread over his face one of those slow grins exposing all his teeth, a grin which never fails to "get a laugh" when turned upon an audience, and waited for me to insert an interrogation point, which I did.

"Say, I thought two thousand boilers had burst inside my head."

"Why, what was the matter?"

"Matter? Well, I guess I was pretty bad, that's all, and the audience didn't spare a single trick to let me know it. Oh, it was awful! And all my friends in front to see me triumph, too."

"No!"

"Yes, they were, every one of them. I hadn't failed to let them all know—told them to be sure and come; and some of them brought flowers! Oh, I'll never forget it! I stood in the middle of the stage a minute, then made a mad break for the stage-door and ran home through a dark alley as fast as my feet would carry me. And I didn't show up again for at least two weeks."

"Well, didn't it nearly put you out of the business? I should have thought it—"

"Oh, it threw me down hard for a little while, but I hobbled up with all my plans made for coming to New York,

and I made a vow—or boast, rather—that I should never return to 'Frisco until I became a star."

"And have you never been back?"

"Never! We're going there on tour this season, so you see by a strange order of destiny I'm to see my vow fulfilled. I said it in a spirit of bravado, you understand, because everybody guyed me, never dreaming it would come true. But, strange to say, it has."

"Well, we fooled 'um, didn't we, Esther? We fooled 'um,' as the auctioneer says to his wife."

"That's right! I'll speak those lines with a shade more meaning than they ordinarily convey to an audience when I get before those friends who saw me hissed off the stage."

"Tell me how the rest happened."

"Well, have another lozenge. Cough-drops and confidences. Don't you like 'em? Sorry they ain't chocolate creams. Now what do you want to know?"

"EIGHTY CENTS SECON' HANDIK'!"  
Sarony.

DAVID WARFIELD IN HIS DRESSING-ROOM.  
Lucky.

"You had your plans all made to come to New York. How did you get here?"

"That's another chapter. I came to New York all alone and I came looking for trouble. I was armed to the teeth with determination to win out and win out quick. I suppose all boys are like that when they get their lofty aspirations tossed back at them by a jeering crowd as I did. Such things only stimulate ambition if it's the right sort, and any way there is nothing recovers itself so quickly as the egotism of a youth of twenty. I was all self-confidence. In fact, I spent most of my time on the trip from 'Frisco here planning how I should spend all the money I was to make my first season. But the story of my disillusionment (?) has been told by every man who ever came out of the West to startle staid old New York out of the even tenor of her way. There were weary days and dreary days. My eyes, at first fixed upon the dizzy heights represented by the glittering Broadway theatres, fell round by round down the ladder until they rested with a degree of absolute longing upon a little joint over on Eighth avenue. That dirty little joint on Eighth Avenue. That is the only possible name for it. Nothing but a common saloon where they gave a little variety show of the worst possible description and charged an admission fee of ten cents to keep out the mob. There are no places like it in New York now. It was an awful hole, but it was the right turning at a cross-

roads in my life, and

I took it. I went

in there one night

in a fit of desperation

and asked the prop-

rietor of the place

if he'd object to my going on and giving a few imitations,

saying I was from the West and badly in need of an en-

gagement. And what do you think he asked me?"

"How much experience you had had."

"No; that's always the first question a manager asks,

but this chap took it for granted I was an old hand and

said 'All right; where are your trunks?' Trunks! Why,

the very sound of the word and the way he said it made

me get chesty right away. I knew it was up to me, so I

swelled up and threw my first big bluff. I said I had

been with a company playing out West, that we had strand-

ed in Denver, and that I left my trunks there with the ho-

tel-keeper as security for my board bill. I said,

'I'm awfully sorry I can't show you what I have

done, but all my press notices are in my trunks.' Oh,

'press notices be —' Well, he swore and

said he didn't care anything about press notices

—no manager ever does, you know—and told me

to go on and show what I could do. I examined

the exit nearest the little platform used for a

stage, to insure my own safety, and then I went

after them and, by George, I made a hit! Those

people liked me. They laughed every time I

smiled, and called me back until I didn't have

anything left. Of course it was a queer crowd,

well selected from the lowest strata of Eighth

Avenue society, but, bless them, they gave me

encouragement and a fair start, and I haven't

forgotten it."

"What then?"

"What then? You're worse than a small boy.

'Then what 'ud 'e say?' 'Then what 'ud you

say?'"

"Tell me what happened after Eighth Avenue."

"Oh, nothing much. It was not all roses by

any means, but I had received an impetus. I

got some of my self-confidence back, and after

that it didn't seem so hard. It wasn't such a

long time until I was with Weber & Fields and

there I got to create a lot of parts that gave

me a reputation—chiefly as a Hebrew imper-

sonator, of course."

"And then came Mr. Belasco and—"

"And 'The Auctioneer.'"

"Was the part all ready made to fit you?"

"Oh, by no means. That would be a thing impossible.

It had to be all worked out at rehearsal, and besides I spent

days down in the Jewish quarter studying 'types,' and

added to that we had the greatest stage director in

America."

"Mr. Belasco?"

"Undoubtedly. But say, don't you ever think I'm

going to play Hebrew characters all my life. I won't next

year. Fact, I think I shall play an Irish Biddy."

"Really?"

"Yes. Look at me. Don't you think—"

"There goes the overture and you haven't your whisk-

ers on yet."

"To say nothing of some other things necessary to—"

"Good-bye. Hope you don't miss your first cue."

"If I do I'll have another bad sore throat and you'll

—well, never mind! Remember, I've reminisced to-

night just because I felt like it, and for you alone. Don't

you dare publish anything I've told."

"Oh, I give you my word I'll not!"

"Thanks. Good-bye."

"Good-bye. There goes the curtain. You'll never

be on!"

"HOW MUCH AM I OFFERED?"

WORKMEN IN TREASURY BUILDING CANCELING BANK CHECK STAMPS WITH PERFORATING MACHINES.—*Chas. Lind.*MANY TONS OF STAMPED CHECKS IN STORE-ROOM AWAITING CANCELLATION.—*Cineclax.*

## Canceling Millions of Bank Checks

AN ECHO of the Spanish-American war is found in a novel task of herculean proportions now in progress at the home of the Treasury Department in Washington. This is nothing less than the cancellation of millions upon millions of blank bank checks which bear upon the face the impress of a government revenue stamp. It will be remembered that the plan of taxation evolved in order to help defray the expenses of the war with Spain included the levying of a tax on every bank check presented for payment. In order to facilitate matters the banks of the country discarded the adhesive stamps and had new checks printed, each of which bore, as a component part of the design, an internal revenue stamp.

When the war tax was repealed, almost every bank in the country was left with a greater or less stock of blank stamped checks on hand, and it is to reimburse the banking houses for the investment represented by the unused stamps that the present undertaking was entered upon. The period prescribed for the redemption of certain other classes of revenue stamps has long since expired, but by reason of the assistance rendered by the banks of the country in distributing the revenue stamps when they were first placed on sale, an extension of time was granted in the case of the class of stamps to which those affixed to bank checks belong, and the redemption will continue until July, 1904.

The magnitude of this work of cancellation is difficult of appreciation. It is estimated that fully 212 tons of

stamped checks have thus far been redeemed and that, while the greatest rush is now in progress, considerably over 100 tons additional will be received prior to the expiration of the time limitation. Indeed, over sixty tons of checks are now on hand awaiting cancellation. This tremendous mass of paper has reached such proportions that fears have been expressed for the safety of that part of the Treasury Department building in which it is stored and an outside building has been rented for storage purposes.

For the actual work of canceling the stamps there are employed two powerful punching machines, each of which is capable of punching a 3-16 inch hole through a package of fifty to one hundred checks at each operation. Two persons are engaged in the operation of each machine, one feeding the checks into the jaws of the big perforator and the other operating the machine. However, not less than sixty government employes are engaged in the work of canceling and redeeming these stamps, the greater portion of the force being employed in counting and tabulating the checks received.

The government officials have expressed a willingness to return to all banks, which may desire them, the canceled checks, which are not, of course, sufficiently mutilated to prevent their use, but only about one-fourth of the institutions which have presented paper for redemption have requested its return. The other checks are burned in Washington, and this in itself is a task of no mean proportions, as any person who has ever attempted

to burn closely packed bundles of paper will readily appreciate. During the past few months, when the work of redemption of the unused stamps has been at its height, the upper floor of the Treasury building, where are located the offices of the commissioner of internal revenue, have presented a most picturesque appearance. The checks bearing stamps designed for cancellation have come in bundles and boxes of every size and description, and this motley array has caused the corridors of Uncle Sam's treasure house to resemble the shipping room of a great manufacturing plant rather than the home of a branch of the government.

The present stamp cancellation is by far the most extensive in the history of the United States government. When in 1883 there was a repeal of a similar stamp tax three years were allowed for the redemption of the stamps, but the bulk of the stamps were presented for cancellation within two years. As indicating the greater magnitude of the present task, however, it may be noted that the total redemption on the former occasion did not greatly exceed half a million dollars, while the redemption now in progress is expected to foot up in the end not less than two million dollars. At present about one thousand claims for redemption are being filed every month, and the officials do not anticipate any diminution before the close of the year. It is safe to predict also that it will be several months ere there is any material reduction of the special force of employes engaged upon this work.

## California's Odd Industries

THE METAMORPHOSIS of the American palate and the influence upon it of dainty French cookery is nowhere better illustrated than in the springing up all over the country surrounding cosmopolitan San Francisco, of snail ranches, frog farms, and terrapin ponds, where these rare viands are raised to supply the market. Young America, particularly of the West, no longer hankers after the beefsteak, apple pie, and the traditional delicacies of Mayflower days. European influences have invaded the Western slope. European palates have demanded some of the Old World delicacies, and alert America has taken to raising, and also joining in the consumption of, everything in demand. The industries are still unique in that they are comparatively modern.

It is only within the last thirty years or so that frogs were universally considered a delicacy, and until recently folks who relished snails were looked upon as little short of barbarians. That notion has changed, however, and at the present time not only are snails served commonly at all the cafés and hotels, but they are also frequently seen upon the table of the ordinary laborer. So great has been the demand for this nutritious shelled delicacy that

during the past few years snail ranches have come into existence and are flourishing in various portions of the Western slope, and the thrifty snail raisers are realizing fair incomes with little or no labor. It is almost ridiculously easy to maintain one of these industries; one can take the rest cure while in full charge of a million or so of the well-behaved little creatures. All that is necessary to go into business, is to import from France or Italy a few hundred snails, put them in a box turned on one side, or even under a board or piece of shingle. If there are a few shrubs or green vegetables growing in the immediate vicinity, it will not be necessary to furnish food at all. The accommodating creatures will take care of themselves and will grow large and plump in no time. In fact one could almost conduct a farm in an ordinary window garden, so small a space is required. Within a radius of ten feet, ten thousand or more snails can visit their next-door neighbors and gossip about their comfortable quarters and the broad expanse of their acres.

It is not a bad idea for a boy or girl to start a snail or frog ranch, for any one on a small capital can soon realize

an income without the work seriously interfering with other duties. Snails thrive best in mellow climates with plenty of fog or dew. The market price of the imported snail ranges all the way from one dollar to two dollars and sixty cents, according to size. The native American snail, that is, the wild variety, is not relished by the epicurean palate. In spite of protracted boiling, it still remains tough and leathery, while on the other hand the foreign article will, with very slight cooking, become tender and ready to serve. Frogs and terrapin require larger space and plenty of fresh water. The ordinary frog ranch is a cement pond about twenty feet in width and thirty in length and perhaps three in depth. This must be covered by a stout wire screen to prevent the intrusion of the various birds and snakes with fastidious tastes. Watercress and a weekly allowance of chopped raw liver and bread crumbs suffice as food.

Terrapin retail at twenty-five cents each, and frogs from one dollar to three per dozen. As to the latter, the ordinary rain frog is just as good for table use as the domestic raised; it is therefore no uncommon sight to see in

# "Kindness of Bobby"

A Story of Halloween. By Ruby Douglas

DARLENE FROWNED at the reflection of her own face in the mirror.

"I must not look this way to-night," she said to herself. "I haven't cried for an hour and my eyes are as red as ever."

She carefully dabbed each lid with powder. "It's no use. I look like a fright. Every one will know it!" Again she looked intently into the glass.

"No!" she cried, stamping her foot impatiently. "They won't! I will be merry! I will look pretty, and he'll never know I missed him."

She turned to her wardrobe and selected a dainty gown of pale blue. Darlene understood color effects.

As she spread it on the bed a withered violet tumbled from its hiding place in a fluffy bow. Darlene picked it up, and perhaps the big, shining tears which rushed to her eyes understood that flowers thrive on water. One round drop rolled down her cheek and fell on the blue frock.

Vehemently she threw the withered flower to the floor and brushed away the tears. "I won't cry! I won't!"

"No one will tell him I looked lonely or depressed because he did not choose to come to my party," she mused to herself as she arranged the pretty accessories to her gown. "He'll repent when he hears what a success it was. He will have a lonely Halloween any way, and it's his own fault!" Perhaps it was, but Darlene said it in a half-wavering fashion, as if not wholly confident that she was right.

Why was the very ribbon she needed for her dress lying across the face of a photograph she did not wish to look at? Why, as she removed the ribbon, did Gray Blackwood's laughing eyes look into her own? Had she not put the picture in the drawer a few days ago to avoid its staring at her?

Darlene slammed the drawer with anything but gentle pressure. "I hate this room!" she cried, looking vindictively at the offending drawer. "Everything in it is horrid!"

As she sat on a low stool drawing a piece of ribbon into a still more dainty bit of frilled wearing apparel her eyes wandered to the withered violet on the floor. Frills and ribbons fell from her hands. "Poor little violet!" she murmured, picking up the blossom. "It isn't your fault that he is so—so—" She hesitated. Her voice seemed to dislike the words she asked it to say. "So what, violet?" she asked, kissing it tenderly. "So what? I will not visit his sins upon you, little innocent flower."

Sins? Was jealousy a sin?

The cuckoo clock reminded Darlene of the hour. Her guests would soon arrive. She hoped her ghost party would be a success. Would he come? No—how could he, after all the cross things they had said to each other two days since? Well, he had no right to ask her not to dance so much with Dick Hamilton. She could and would dance as much as she pleased with Dick, and she had told Gray Blackwood so. But that was hardly sufficient cause to make him so cross, was it? And he said he would not come to her party. No, he would not; it was out of the question.

Once, as Darlene stood in the dimly lighted drawing-room receiving her white-robed guests, she thought a familiar hand held hers. Could it be he? In the yellow light of the pumpkin lanterns she tried to distinguish him, but in vain. Slowly, silently, the ghostly figures passed her and he was lost.

Down the wooden steps into the cellar each ghost was led, while queer noises and shrieks emanated from mysterious nooks and corners. Long, uncanny hands reached out to grasp the spectres as they passed the haunted spots and witches shook their brooms from lofty seats about the cellar.

A fortune-teller disclosed the future, past, and present life of every ghost. Hers was the only voice which sounded.

Darlene was impatient; she was nervous. Would the time never come to discard this ghastly garb? She could almost hear her own heart throb in the silent, ghost-inhabited cellar.

Suddenly the lights flashed and merry laughter pealed forth from the mock spectres as they threw off their sheets and pillow-cases and mounted the stairs. Darlene looked about, dazed and disappointed. He was not there. Yet,

surely that was his hand which had held hers so warmly, so tenderly.

Perhaps she had forgotten that ghosts can walk, and that they are even capable of making an exit through a cellar door on Halloween night.

All that night a picture of a pair of laughing eyes, together with a withered violet, lay under a wet check.

In the morning, when Darlene looked out of the window, kernels of corn, old tin cans, and other debris lying about the window-sills and yard below, reminded her of the many Halloweens she had spent doing the same happy things, instead of having grown-up parties and quarrels with sweethearts.

She started as a dilapidated old vehicle, standing under the trees, caught her eye. Some boys had taken it from its place and hidden it beneath the trees.

A pretty pink suffused her cheek as she looked at it more intently. Yes, it was Gray Blackwood's old buggy, the one his little brother Bobby drove about in.

Darlene felt a sudden and uncontrollable desire to get out of doors. And somehow no other place in the spacious yard seemed to appeal to her as did that one spot where the small boys had wheeled their prey.

Of course the vehicle itself did not appeal to her—of course not! The idea!

But once she was close to it the cushioned seat, though worn, did look comfortable and inviting. Yes, Darlene was tired from the effects of the night before; she would get in and wait for breakfast. She did not feel chilly.

"What's this?" she said aloud, as her hand came in contact with the corner of an envelope sticking from under the cushion. Pulling it out she read, in a familiar handwriting: "Miss Darlene Buckingham. Kindness of Bobby."

"Kindness of Bobby?" she thought. Then, like a flash it came to her. Thoughts of Halloween pranks had so fully occupied Bobby's time that—well, it interfered with his "kindness."

At least she could read it now.

The clicking of the gate startled her. Putting the letter behind her she looked around. It was Gray Blackwood coming to rescue his property. He appeared tired and rather pale. Perhaps he had been searching all morning for the lost vehicle.

He stood looking at the girl in the old buggy. Surprise hardly defines his expression—surprise is seldom tender.

"You'll pardon my intrusion, Darlene," he began, "but boys will be boys on Halloween."

Darlene could not think of anything appropriate to say, but she did not offer to get out of the seat. "Will they?" she asked at last. Her hands, with the letter, were still behind her.

Slowly she brought the letter out and looked at it. Gray came close to the wheels.

"Bobby's 'kindness' isn't always as safe as Uncle Sam's, Gray," she said, moving over to one side of the seat. "I have just found this note."

Perhaps the small boys were wise when they dragged the old vehicle into the shadow of the trees the previous night, for—well, trees prevent passers-by from seeing things which are not intended for their eyes.

"ONCE . . . SHE THOUGHT A FAMILIAR HAND HELD HERS."

## \*Phoebe and the President . . . By Frances M. Abbott

PHOEBE IS a market-woman. She has a little place a few miles out, where she lives all alone, and twice a week, beginning with the asparagus season and ending with the late tomatoes, she pays us a visit. When she came in the other day with her corn and shell beans, the town was gay with bunting, every house was hanging out flags, and people were bubbling over with enthusiasm; for the President was coming to the State fair.

I asked Phoebe if she were not going to see him. To my great astonishment, she appeared indifferent. She said she didn't think she cared, because she had seen him before. As Phoebe has never been ten miles from home in her life, I could not understand.

"Why, don't you remember?" she said. "He was here two or three years ago with the Wild West show."

"Phoebe," I said, "Roosevelt and Buffalo Bill are not the same."

"I know it," she replied. "He ain't Buffalo Bill, but he was Buffalo Bill's best rider. I know, because I see him on his horse."

Phoebe is a woman of convictions, which are difficult to dislodge. I argued and explained, but I know she doubted. However, I persuaded her to go to the fair. Next Saturday she came in radiant. She had had the time of her life. She had seen, heard, and was conquered.

\*A true incident of President Roosevelt's New England trip.

"He ain't very pretty," she began—"that is, nothin' 'cept his hair. He's got gold hair when the sun strikes it. He ain't no great on clothes, either. His trousers was baggy an' skewed an' creased. He looks as if he worked real hard. I see lots of men there better dressed than he was, on the stand and on the grounds; but I didn't see one that looked the least mite like him. He's good," she added, solemnly. "I knowed it the minute I set eyes on him; and he talked religion to that crowd. He spoke jes' like a Methodist minister. He's ben one, ain't he?"

Circus riders and circuit riders! I said that, while Roosevelt had undoubtedly had the most varied and comprehensive training of all our Presidents, I was quite sure he had never filled a pulpit.

"How do you know?" she said. "You ain't acquainted with him, be you? He might 'a' preached some time, an' you never heard of it. He's a Methodist, any way. I guess I know that doctrine I ben brought up on all my life. He told 'em to be good, an' do their duty, an' each man was his brother's keeper."

"You felt paid for going, then, Phoebe?"

"Oh, yes! It cost me a dollar, but I'm glad. They charged fifty cents for the grand stand, an' I hadn't but a quarter, an' I asked the man couldn't he let me in for that, an' he said he couldn't; so I hunted round till I found Mis' Bennett, an' she lent me the money. I ain't paid her yet, but I will before Sunday. I got acquainted with a

lot o' real nice people. There was a woman from Hen-niker, an' she said, 'I lost my husband; hev you seen him?' An' I told her no. Then she asked a policeman, an' he told her to stan' right where she was an' the man would come round. So she wanted me to stan' with her, an' bunby she see a crowd, an' she hollered right out, 'See here, you, my folks, come here!' An' he come. Then she said, 'Where you ben these three hours?' an' he said he'd a ben lookin' at the cattle. Then she said, 'You stay right here long o' me, an' don't you git lost agin!' The policeman he sorter snickered.

"Then I went to see the drawn-in rugs; an' they was some jes' beautiful—better'n I can make; an' I saw the little pigs, a whole lot of 'em, an' the man in the balloon, an' the music, an' the girls an' fellers, an' the merry-go-round, an' a whole lot o' things. I got my dress all tore off the gethers, an' a fat man squeezed me up agin the picket fence when we was all lookin' at the fire-works, an' if it hadn't ben for the pickets, I couldn't 'a' breathed, an' I was most dead walkin' so fur; but I don't care. I sot on the grand stand, an' I saw him, an' he's good."

"Had you ever seen him before, Phoebe?" I asked, maliciously.

"Wa-al, no, I guess I was mistook thet fust time; but I could pick him out anywhere in a crowd now. His hair's jes' the color of my cat, Bill, an' he's good."

JULIAN RALPH,  
Author of "The Millionaire."

## Books and Authors

By Lasalle A. Maynard.

WE ARE informed by the Paris correspondent of the *London Sketch* that there is an honest admission among French publishers that no book of good and pure intent has the slightest chance in Paris. The books issued for the sea-side season this year in France, it is said, were absolutely unspeakable. It is but just to

add, in this connection, that while many contributions to current literature by American authors may be weak, some crude and some practically worthless in a literary sense, it is the rare exception here, and not the rule as in France, that a positively immoral book is produced by an American author. It is equally gratifying to know that when such books appear here, either of domestic or foreign origin, they fall dead on the market. The American people have many sins to answer for, no doubt; they are, perhaps, too much absorbed in money-getting and too garish in their tastes, but it should be said to their credit that they have no love for prurient and rotten literature, nor will they tolerate its presence in the land. This may be ascribed to a puritanic tendency in the American blood, but if so it is surely a kind of puritanism that we will do well to cherish and to perpetuate at any cost.

WHILE OUR critics of the day are inclined to scold and rage, often with justice, over the weakness and poverty of much that is put out in the name of literature from American sources, including, for example, many of our so-called historical novels, it is worth noting and remembering that no book of any class has achieved popularity in America in recent years that has not been absolutely beyond reproach so far as moral tone is concerned. Such notable successes as the novels of Mr. Churchill, Mr. Batcheller, Mrs. Catherwood, Dr. Van Dyke, "Ralph Conner," and Mary Johnston may be faulty in some respects, judged according to the highest literary standards, but that they all inculcate purity of character, the sanctity of the home, and the inviolability of the marriage vow will not be denied. Neither by hint nor suggestion, directly or indirectly, in plot or dialogue, can anything be found in these books to give offense to the most refined taste, nothing that may not be safely and freely placed before the youngest and most susceptible minds. It may be charged by some of the art-for-art's-sake school that by our insistence upon these very qualities in the literature designed for American consumption we lose some of the alleged brilliancy and artistic finish characteristic of French fiction, but, if so, it is a loss for which we cannot be too grateful. Far better dullness, if it must be so, than indecency; far better a thousand times that the pictured art on our walls and the imagery set forth in our books should be wanting, if need be, in some features of artistic realism, than that the minds of our young men and maidens should receive in them the seeds of shame and death from such art or such literature as France has been sending out, to the curse of her own people and the world, for many years past.

WHILE WE may be justly proud and grateful over the fact that the dominant and prevailing note in American literature is one of absolute purity, and that the American public will tolerate nothing else, no matter whence it comes, we have reason to regret that the same note, the same spirit, is not observable in much that achieves popularity on the American stage. There is, indeed, a curious and almost inexplicable condition here which makes it possible to produce scenes, dialogues, and situations on the stage before crowded and applauding audiences, of a character which, if introduced in the pages of a current novel, would awaken a storm of just and righteous indignation and very likely invoke the offices of Comstock's society. It is quite true that few, if any, plays of strictly American origin are open to this reproach and that nearly all the filth on the stage, like our bad books, is of the imported variety, but the sad feature of it is that while the bad books rarely meet with success or with profitable sales, the lewd and dirty plays not infrequently enjoy long runs at our theatres and apparently command the admiration of large numbers of the American people. It must be conceded, however, that things are not quite so bad in this quarter as they were a few years ago, and we may hope that an era of cleaner things in the dramatic world has set in. This hope finds encouragement in the fact of the success recently accorded to the dramatization of many popular novels of the day of the very character of which we have been speaking. Unless the dramatizers of these stories should consider it necessary, to insure success for the work on the stage, to incorporate elements not found in the stories themselves, it would seem that one result would be to elevate the American stage to somewhere near the moral level of American literature.

JULIAN RALPH, who has been described as "more kinds of a writer" than any one else in the profession, has now written an absorbing novel called "The Millionaire" (Lothrop Publishing Company, Boston). It is the tale of a young girl worth millions, who has no one to

guide or control her and who sets forth to achieve a place in what is known as "the Four Hundred." She has many adventures on the way, some of them thrilling, and all the time her heart goes begging for a mate. She finds happiness in the love of Courtlandt Beeckman, a wealthy Knickerbocker, who is something of an explorer and writer and a great deal of a hero. They make a fascinating couple, with whom readers of both sexes will fall as much in love as they are in love with one another. The young owner of millions has some shocking experiences with a fast set on the edge of high society in New York, but she comes out of all of them a sweet, sensible, high-minded girl. "The Millionaire" has been declared an immediate success. One circulating library ordered seven hundred and fifty copies the first week the novel was published.

CLARA LOUISE BURNHAM, whose Christian Science novel, "The Right Princess" is causing so much discussion, belongs to a remarkable family. Her father was the late George F. Root, the most popular song writer America has produced. Her mother also has unusual musical gifts. Mrs. Burnham is the eldest daughter, and was born in Newton, Mass., but lived for several years in North Reading, until, when she was nine years old, the family removed to Chicago, which has been her home since. She made music a subject of serious study, intending to make a specialty of it. She married

A GLEMPSE OF ALDBURY VILLAGE,  
Which adjoins "Stocks," Mrs. Humphry Ward's English home.

when quite young, and soon after her brother urged her to try writing stories. She laughed at the idea, but her brother persisted; and one day, finding her in a room with paper and pencil, he playfully locked the door, telling her she could not come out until she had written a story. It was largely to be rid of his importunity that she began to write, but her work soon became more interesting than anything she had ever attempted. The decision of the reviewers to whom she submitted her first stories was unfavorable, but that did not deter her from trying again. A poem sent to *Wide Awake* was her first accepted work, while "No Gentleman" was her first novel. This book, with the long list of very popular novels which have followed, was published by Messrs. Houghton, Mifflin & Co. In personal appearance Mrs. Burnham is tall and slight, with light hair and blue eyes. She is merry, sparkling, and vivacious, and is likely, in a social group, to be a central figure, for she entertains a circle delightfully with well-told anecdotes and brilliant wit. Her interests are varied, her manner winning, and her quick sympathies make her a charming companion.

READERS OF the *Atlantic Monthly* have no need of being informed of the excellent quality of the story, "Our Lady of the Beeches," which has run its way through the pages of that magazine during the past year, but they will be pleased to know that the story is soon to appear in book form from the press of Houghton, Mifflin & Co. The author, the Baroness von Hutten, has achieved a distinct success in this novel. It is the story of the romantic attachment of a famous scientist and a clever American, the wife of an Austrian nobleman, and grows out of a prologue of letters which present the characters of the two writers admirably and form the basis of their friendship. The narrative proper begins with their actual meeting. The situation is handled with such skill, humor, and delicacy, and in so charming and distinguished a manner as to make the tale exceptionally attractive. The Baroness is an American by birth, and her earlier books have been well received in America and England.

WE CAN personally vouch for the highly entertaining character of the new book on the Hudson River, from its source to the ocean, just published by G. P. Putnam's Sons. The author is Mr. Edgar Mayhew Bacon, who has lived among the historic and picturesque surroundings of Tarrytown all his life, and who writes, not only from richness and fullness of knowledge, but also with the grace and charm of a man gifted with rare poetic sensibilities and a love for all that is good and beautiful in art and nature.

ALL FRENCH history is interesting, but there are few of its pages more fascinating than the kaleidoscopic career of La Grande Mademoiselle, whose biography has been rendered in English by L. G. Meyer and published by the Putnams. Mademoiselle was related to Louis XIII. by both father and mother; she was the richest heiress in France; she aspired to be an empress, a nun, a political power. Her memoirs give unique and valuable pictures of life at the court of Anne of Austria, and of the wars of the Fronde, in which she played a manly part.

ONE OF the important illustrated books of the holiday season will be "Social New York under the First Georges," which has been written by Esther Singleton, author of "The Furniture of our Forefathers." The Messrs. Appleton produce it in very attractive form, with one hundred illustrations of the furniture, china, plate, and costumes during the years when George I. and George II. were on the throne. It thus embraces that part of the colonial period in New York which was most highly cultured. What it will, perhaps, do more than anything else is to surprise the public with the degree of social splendor and richness of living that prevailed. In the years 1714 to 1760 the three cities of the country ranking foremost in the arts and refinements of domestic life were New York, Philadelphia, and Boston. Towns which have since grown up as rivals in some instances did not then exist, and the others were small communities. Closely linked as the large towns then were with the life and spirit of the mother country, more closely linked with London than with each other, they offer essentially the same picture in respect to domestic manners. In these pages are presented the results of a study from authentic records of conditions that prevailed in New York. These conditions may well serve as a type of those which prevailed in all three towns, and for that purpose the record is presented. This period in the social history of North America has not heretofore found a historian. Miss Singleton's work sheds light on it that will come as a revelation to all readers. She has combined the hard facts of history with the minor things in social and domestic life in a singularly happy and effective manner.

A BOOK which all lovers of outdoor sports will be glad to possess has just come from the press of Charles Scribner's Sons. The book is entitled "Cross Country with Horse and Hound," and is the first book to be published in America on cross-country riding. The author is Mr. Frank Sherman Speer, who is a recognized authority on this subject. Mr. Speer's special object apart from the exploitation of cross-country riding in all its phases, is to give the novice an insight into the game from the point of view both of hunting and riding, with the hope that many who "hunt to ride" may, by a more intimate knowledge of its pleasures, be inspired to "ride to hunt;" the lasting pleasure, the real sport, in the author's opinion, coming from a thorough knowledge of the hunt itself, of the workings of the hounds, the plots laid by the artful Reynard to fool them, and the counter plots of the clever huntsman.

I AM INDEBTED to the *London Sketch* for the illustration on this page giving a glimpse of the pretty little English village where Mrs. Humphry Ward, the author of "Robert Elsmere" has her home, to which she has given the name "Stocks." In many of her books, Mrs. Humphry Ward has shown her keen delight in nature, and she must be indeed happy in a neighborhood which includes in immediate vicinity this Old-World village of Aldbury, with a village green still containing the wooden stocks and whipping-post where rural malefactors were once corrected, while close by is the pond where, till comparatively lately, village scolds received good duckings. Mr. and Mrs. Ward were both well known in London society long before "Robert Elsmere" made Mrs. Ward's name familiar to the whole English-speaking world; but Mrs. Ward has kept her personality very distinct from her work, and she is said to be the only author of world-wide repute, if Mr. George Meredith be excepted, who has never granted an interview to even the most distinguished of journalists or newspapers. This is the more interesting when it is remembered that Mrs. Ward is an active philanthropist as well as a writer, and that the Passmore Edwards settlement owed its being to "Robert Elsmere." Mr. Ward is a successful journalist, and is art critic for the *London Times*.

## In the World of Sports

**JOCKEYS' EXTRAVAGANT SALARIES—BALL-PLAYERS' INCOMES INCREASE.  
GOSSIP OF THE GRIDIRON**

**SPORTING TALENT COMES HIGH.**—These are the days of large salaries in nearly every branch of professional sport. Never in the history of horse-racing have such remunerations been paid to jockeys and high-class trainers. This game is slowly, but surely, becoming the pastime of kings and millionaires on both sides of the Atlantic Ocean. The time is coming when the man with an average income will be unable to keep up with the racing pace. Men of wealth will pay almost any price for promising yearlings and animals

stom, but many of them have been knocked off their stools by the big plungers. It is not an infrequent sight to-day to see betting commissioners going down the betting line at the tracks handing to each bookmaker about all that he will take on the chances of a certain horse. If the gambling craze continues to increase, a man who wagers \$100 on a race will be regarded as a "piker." The Jockey Club must take hold of the betting proposition and sift it down to sensible lines. If nothing is done, the scandals of the present season will be as nothing compared with those sure to crop up on the turf next year.

**THE BASEBALL LAMENT.**—Professional and amateur baseball goes on the even tenor of its way year in and year out. There is more sentiment in baseball than in any other sport outside of the college competitions. The club owners of the big leagues are doing less scheming and pyrotechnic oratory at present than for several years, which argues well for the future of the game. The principal grievance of the magnates at present is the fact that players' salaries are getting close to the ruinous stage. Salaries are higher to-day than they were during the unfortunate Brotherhood uprising of a dozen years ago. Then a player who received a salary of from \$3,500 to \$4,000 considered himself lucky, yet such salaries are to-day too common to cause comment. Some fortunate players have already signed for next season at salaries ranging from \$4,500 to \$7,000. First-class managers will also draw larger incomes than ever before. Ned Hanlon, of the Brooklyn club, is undoubtedly the best-paid manager in the world. Hanlon recently signed a two-years contract with the Brooklyn club for \$25,000 for two years. As the club owner who signed it said: "We pay Hanlon \$12,500 a year, but he saves us over half that amount each year by his clever handling of the players."

**AUTOS GROWING IN FAVOR.**—Owners and manufacturers of the horseless vehicle have had their troubles this year, but the industry is prospering as few of the enthusiasts anticipated. The enemies of the sport and industry are rapidly becoming reconciled to the vehicle. The recent 500-mile reliability run between New York and Boston was really the most satisfactory test so far made either in this country or abroad. The American-made machines stood up nobly, making a much better showing than did any of the foreign-made vehicles. The increase

made in the efficiency of the machines during the year was most marked. Next year the Automobile Club of America will have a run to Montreal and return, and arrangements are already under way looking toward a run to the St. Louis exposition in 1904.

**LESS "MASS PLAY" DESIRED IN FOOTBALL.**—The great mass of enthusiasts who have watched college football for years are of the opinion that the game has not been improved in recent years. As played to-day it is little more than a line-bucking match with little punting, less open play, and comparatively few of those electric long runs which brought the onlookers to their feet in days gone by. Tackleback and tandem formations and constant line-bucking have their advantages, but they are not spectacular and they do not stir up the enthusiasm of the onlookers. But the present style seems to suit the college man. Those who have seen Harold Weekes, the captain of the Columbia team, play this year are beginning to talk of him as being about the best football player that ever lived. Weekes is certainly a wonder as a ground gainer, and he can do a 100 yards in ten seconds. He is also one of the strong men of the college, which accounts for his strength in throwing off the tackles. With the ball under his left arm, he mows down his tacklers with his right as few players have ever been able to do. Still there are those who will point to Bull, Heffelfinger, Hinkey, and Butterworth of Yale; Emmons, Ellis and Lewis of Harvard; Osgood and Knipe of Pennsylvania; Homans, Riggs, Cowan, Church, Wheeler, King and the Poes of Princeton, and hesitate before giving the palm to the football player of this year at least. Weekes to-day has the interference which was practically unknown a few years ago. **GEORGE E. STACKHOUSE.**

WALTER STILLMAN,  
Quarter-back of Yale eleven.  
Seigensick.

with records, and the poor man of the future will be able to start his horses only in overnight handicaps and in selling races. Jockeys of the class who a few years ago were content to sign with a stable for a \$3,000 to \$5,000 yearly contract, are turning up their noses at offers of \$10,000 yearly retainers. Some of the jockeys are demanding \$20,000 a year for first call on their services, reserving the right to obtain extra pay for winning mounts and the additional privilege of getting another big retainer for second call on their services. Danny Maher, now riding in England, is probably the best-paid jockey in the world to-day. His yearly income cannot be much short of \$30,000 a year. In this country Shaw, Wonderly, Redfern, Lyne, Burns, and Bullman have incomes of anything from \$10,000 to \$25,000 a year. The poor horse owner consequently must take the best that he can get in the jockey line, realizing always that as soon as he brings out a particularly bright boy, some millionaire will come along and take the youngster away from him. The betting proposition will be given a close overhauling by the members of the Jockey Club this winter. Never before has money been wagered in such tremendous amounts as has been the case this year on the Eastern turf. Most of the big bookmakers have weathered the

NOT LONG ago we heard a good deal about "a new high level" for stocks. Everybody conceded that the market had had an abnormal rise and that prices of gilt-edged securities were so high that they yielded less than could be obtained by an investment from a savings-bank, but the boomers had all sorts of Vanderbilts, Goulds, and Harriman combinations—"in their minds"—on which they were predicating the most fanciful prices on "a new high level." It was at this time, particularly, that I advised my readers to keep out of the market, to take their profits, and to set their money aside in bank, for the rainy day that was bound to come. The storm and the rain have appeared, though the cyclone has not struck us yet, and the talk in the brokers' shops now is, not about "a new high level" for stocks, but about new low levels.

The settlement of the coal strike will not afford a basis for any more "high level" talk. What the stock market needs is money—cash, plenty of it, and at reasonable, not necessarily cheap, rates. Those who persisted in predicting that there would be only a little flurry in the money market were the individuals who predicted a new "high level." It is now realized that money to loan is scarce in New York, in the West, in the East, as well as in Europe; that our credit is badly strained, and that great industrial concerns are feeling, as they always do, the bad effects of this situation.

The *London Times* says: "The speculative account in American securities is so big and the great financial magnates are committed to such large schemes, that all concerned are a good deal at the mercy of accidents." The death of a great operator, the collapse of a prominent financial institution, three or four heavy failures, the collapse of some big trust, a notable political upheaval, might constitute one of these "accidents" which the market so much dreads, and it is always the unexpected that happens.

Business conditions are not as prosperous as they were, not even in the iron market, for more and more it is becoming the fashion to reduce prices for finished products. The demand for iron and steel of certain kinds is still very large, but increasing competition in sheets and wire products has led to reductions in price, and similar conditions in the tin-plate trade are expected to be met by similar action, so says the *Iron Trade Review*. This is not because of a falling off in trade, but because of the increased capacity beyond the needs of the country, a factor that must be reckoned with, sooner or later, throughout the iron and steel business.

Those who believe that prosperous conditions in general trade must continue have only to look at the situation in the stock market, and observe how different it was a few weeks ago, when money was easy and boomers plentiful. When adverse circumstances begin to operate the culmination sometimes comes quickly. I am no prophet of evil, but many years' experience indicates that the swing of the pendulum is away from prosperity and toward opposite conditions. The disposition of labor to strike in all branches of trade is another evidence of the zenith of prosperity, for, strange as it may appear, our greatest strikes usually come with the culmination of high prices and activity in trade and manufacture. I wish it were possible that we might always be prosperous, but history shows that there is an ebb and flow of the business tide, as certainly and surely, if not as regularly, as the ebb and flow of the sea. The successful man is he who takes advantage of his opportunity when things are at high tide, and waits, content, for what may happen at the ebb.

"S." Brooklyn, N. Y.: Not rated.  
"M. E." Buffalo: You are on the preferred list.  
"W." Tioga, Penn.: You are on the preferred list.  
"D." Jacksonville, Fla.: Boston municipal bonds are all of the strictly investment class.  
"C." Bellefonte, Penn.: I do not believe in the plan, or in any other of that character.  
"H." South Norwalk, Conn.: I regard the proposition as highly speculative and not an investment.  
"H." Red Creek, N. Y.: I would draw the

money as quickly as possible. I do not believe in the enterprise.

"H." Allegheny, Penn.: Delay in delivery caused by temporary derangement in mechanical department, now obviated.

"Ni-Wot": I do not regard any of the propositions with favor. Unless you are a subscriber at the home office, at full rates, you are not entitled to a place on my preferred list.

"Finance," Detroit: (1) The official statement shows that of nearly \$800,000,000 of our government bonds, only about \$4,000,000 are held by foreigners. High prices have evidently led to heavy sales of our securities abroad. (2) The course of the beer companies, in entering into competition with the American Sugar Company at Eastern as well as Western points, indicates that competition in the sugar business is likely to become more strenuous.

"Prudence," Indiana: I would not advise the sale of the shares of the United Gas Improvement Company of Philadelphia. Gas stocks of our largest cities, that are on a good dividend-paying basis, are highly regarded from the investment standpoint and would be less affected by industrial depression than almost any other shares. They are generally held by local investors able to stand the stress of circumstances. Many thanks for your letter.

"J." Concord, N. H.: It has long been reported that the New York Central would absorb the Delaware and Hudson. The revelation in the annual report of the Erie, that it has been taking over the Delaware and Hudson's coal business at terminal points, has revived the rumor that the Erie may take the coal properties of the Delaware and Hudson and the Central its railroad properties. On declines, a number of investors have been buying Delaware and Hudson.

"L." Hartford, Conn.: (1) The earnings of Western Union, during the past fiscal year, showed a little over 6 per cent. on the stock. The effect of the transfer of a part of the Pennsylvania Railroad's business to the Postal company has not yet been disclosed. (2) It is said that the New York Central paid \$150 a share for its large holdings of American Express Company's stock. In case of a panic in the market, therefore, American Express around 150 ought to be safe.

"R." Richmond, Va.: (1) The second annual report of the Crucible Steel showed a very small increase in the surplus and also that a million dollars had been charged off for depreciation and allowance. This shows how the steel stocks can wipe out their margins without much difficulty. (2) The suit was brought against J. Overton Paine & Co. and asked that the account in reference to stock dealings between the defendant and plaintiff be declared false, fraudulent, and erroneous.

"L." St. Louis: (1) The affairs of the General Carriage Company and of the Manhattan Transit Company threaten to be involved in litigation of rival interests, embroiling the receiver of the General Carriage Company on one side and Joseph Lester on the other. It is always well to take a profit. (2) St. Paul preferred is an excellent investment stock. The close traffic arrangement between St. Paul and the Union Pacific shows that earnest efforts are being made to maintain peace among the great railroad interests.

"D. W." Cleveland: One dollar received. You are on my preferred list for three months. (1) I think well of Pittsburgh Coal preferred, if the reports of its earnings, recently made, are confirmed. (2) The proposition of the Douglas Shoe Company is certainly not as highly capitalized as are most of the industrials of the period. (3) The difficulty with such concerns as The Booklover's Library is that they are subject at any time to competition and to adversity if they fall into the hands of incompetents. Investors do not like this speculative quality.

"H." Seattle: (1) It looks as if the promoters of the Pacific Coast Company were trying to advance the shares so as to unload them on the public. The increase of the dividend on the second preferred and the common to 5 per cent. hardly seems justifiable in the face of the declining earnings reported. (2) The declaration of the semi-annual dividend, at the full rate, on Southern Railway preferred ought to release to those stockholders who have not assented to a continuance of the Missouri trust, the actual control of their own certificates. I still believe that those who voted to continue this trust and thus took it out of their power to control their own property, were short-sighted.

"S." Roanoke, Va.: (1) The bituminous coal roads will profit permanently as the result of the coal strike. It is expected that anthracite will continue to sell much higher than its customary price for a long time to come, and that an effort will be made permanently to put it on a higher selling basis. Some of the anthracite roads are also producers of bituminous, and will be very glad to force the latter on consumers. (2) I do not believe in the wireless telegraph stock until the commercial value of the new invention has been disclosed. During the recent naval maneuvers in the Mediterranean the wireless telegraph system broke down completely and was absolutely useless.

"Trustee," Burlington, Vt.: (1) I believe that on recessions St. Paul will give you satisfactory returns. The recent new Rockefeller-Harriman agreement, which enables the St. Paul to participate with the Northwestern in the traffic of the Union Pacific, ought to be very helpful to St. Paul. It signifies a good deal. (2) American Locomotive preferred cannot be regarded as a gilt-edged investment. It is a well-managed industrial, showing large earnings at present, but it is meeting increasing competition. Suppose all the railroads followed the example of St. Paul, which has just decided to equip its own locomotive works and to make its own engines, what would become of the American Locomotive Company's business?

"L." Chattanooga, Tenn.: (1) Tips to purchase United States Realty shares have been generally circulated. The common around 30 has been picked up pretty freely on the decline. Some of the largest men in the Street seem to be behind the movement to advance it. It is a new proposition and I cannot speak from knowledge as to its real merits. (2) The use of the mails has been denied to Bruce & Seymour, 140 Nassau Street, New York, who have been offering to make "co-operative investments" and promising 60 per cent. a year to its patrons. I am tired of warning my readers against all such "investment" syndicates. "Co-operative" institutions, and "advisory" concerns that offer enormous returns on small investments. They are all out after the same pattern, and it's a bad one.

"S." Detroit: Your letter went astray because it was addressed to *Leslie's Magazine*, a publication with which we have nothing to do. Your dollar received. You are on my preferred list for one year. (1) Not at this time, though a violent movement would no doubt result from panicky conditions. (2) Not unless the money stringency should become very much worse. (3) Yes, I see no prospect of a bull market at present. (4) The money stringency is liable to continue until December, and many believe it will extend over into the new year. (5) It looks like it now. (6) Stocks are liable to fluctuate, with a declining tendency, but there is danger in selling them short, because of the strength of the parties who still have plans for combinations and deals that have not been fully disclosed.

"D." Denver: (1) Earnings of Pressed Steel Car for the nine months ending October 1st, were \$3,300,000 net, and the surplus, after the payments

of dividends, \$7,250,000. Only \$210,000 was charged off for depreciation, which is altogether too little. (2) It is said that under the compulsion of threatened litigation, some of the former directors of the Rubber Goods manufacturing company have paid into its treasury \$500,000 in cash and taken up certain unmarketable stock, which had been loaded on the company. This will go a good way toward paying off the bonded indebtedness of \$1,300,000. It is estimated that the surplus earnings this year will be more than sufficient to pay the dividend on the preferred and a good dividend also on the common. Smart speculators are interested in the property, however, and their statements are not always to be accepted as unadulterated truth.

"Dix," Dallas, Texas: Two dollars received. You are on my preferred list for six months. (1) Manhattan Elevated, United States Realty, Wabash & Debutenue, Toledo, St. Louis and Western, American Ice preferred, and Kansas City Southern. (2) Apparently leans toward the tea side at present. (3) A speculative movement in United States Leather common has long been promised, but the men behind the gun do not seem to be able to fire it off. (4) I only judge from the reports of the earnings of Corn Products. (5) I prefer Union Pacific convertible 4s to the common shares at prevailing prices. (6) I hardly expect cheap money during the remainder of this year, excepting possibly for a very short interval. If tight money continues over New Year's, when annual settlements are made, it may result in even more serious conditions. (7) I thank you for your information about the Beaumont Oil field. I agree with you that if the Standard Oil had been in charge of the field it would have been far better both for producers and consumers. The terrible waste and loss and the ruin of so many wells would not have followed. (8) Impossible to anticipate action of directors. Differences of opinion exist among them. (9) Thank you for your offer. Always glad to hear from you.

"H." Danville, Quebec: The Consolidated Lake Superior Company is a Connecticut corporation, organized in 1897, and controlling, through stock ownership, two power companies, one organized in Canada and one in Michigan, a pulp and paper company, a water and light company, and lands and water at Sault Ste. Marie, Mich., sufficient for the development of 60,000 horse-power, half of which has been leased by the Union Carbide Company for twenty-five years, for \$200,000 per annum. It is claimed that this will pay the interest on the bonded indebtedness and leave, as profit, the revenue from leases of the remaining power amounting to nearly \$300,000 per year. The company also owns the water rights on the Canada side, estimated at 100,000 horse-power, of which 20,000 has been developed by the construction of a canal and power-house. Three-fourths of this power is used by the pulp and paper company and the remainder by the nickel steel works. The profit of the pulp mills is estimated at \$150,000 annually, and the net earnings of the machine shops and foundry at \$35,000. The company also has nickel mines, an iron mine, a sulphur and plant, a sulphate pulp mill, and it controls the Algonia Railway, commercial company, steel company, and tube works, besides a lumber grant. In 1901 the original corporation was consolidated with the Ontario Lake Superior Company on favorable terms. The capital is \$35,000,000, 7 per cent. preferred, and \$82,000,000 common; \$67,000,000 of the latter and \$19,000,000 of the former outstanding. It is a popular speculation in Philadelphia, where the shares are being traded in. I presume a prospectus would be sent you by the company if asked for. The capitalization looks very high.

## The Clock That Keeps Wound

THE Clock Without the Key—the clock that needs no winding—the clock that is right, goes right, and stays right—and the price is right—was gradually perfected until it was a complete mechanical success, and at once gained public approval. This clock wonder is appropriately called the

**"KEYLESS" (TRADE MARK) CLOCK**

and is made only by

The United States Clock Company of New York

It goes for one year without attention, and it keeps time—the best of time. It's a beautiful clock—a novel clock—a safe clock—an economical clock—a clock that never goes wrong. The "KEYLESS CLOCK" is made for public buildings, business purposes, home use. For anyone, everywhere, for everywhere and anywhere. The "KEYLESS CLOCK" is not sold at clock stores, but only at the offices of THE UNITED STATES CLOCK COMPANY, which are being established everywhere. Parties living in New England can now see and purchase clocks at our BOSTON BRANCH, 49 Broadfield Street. Go and see the "KEYLESS CLOCK."

**"KEYLESS CLOCK" SHARES ARE NOW \$7.50**

Par value \$10.00, full paid and non-assessable

The stock of the "KEYLESS CLOCK" Company sells as rapidly as the clock. If you want an investment that is absolutely safe, unusually profitable, free increase in value, and your subscription, sell telephone stock went from nothing to \$4.00. UNITED STATES CLOCK stock will be a bigger investment in the very near future. More orders at 50 per cent. profit are now on hand than the manufacturing departments can turn out.

REMEMBER: This is not a scheme or project, but an established, probably organizing company, with factories in full operation, goods in great and growing demand, no debts, mortgages, or other obligations, and with a big deposit and surplus in National Bank in New York. WRITE OR CALL.

**A. E. Siegel, Secretary, The United States Electric Clock Company**  
Main Office, 407 Broome St., New York. Boston Branch, 9 Bromfield St.

## OFFICIAL LEGAL NOTICES.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF October 14 to 27, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessments for OPENING AND ACQUIRING TITLE to the following named streets and avenues, in the BOROUGH OF THE BRONX:

23D WARD, SECTION 9. LANE OPENING AND EXTENDING, BETWEEN MOTT AVENUE AND WALTON AVENUE, from East 150th Street to the New York Central and Hudson River Railroad. Confirmed July 28, 1902; entered October 13, 1902.

23D WARD, SECTIONS 9 AND 10. ELTON AVENUE WIDENING, between East 161st Street and East 162d Street. Confirmed July 15, 1902; entered October 13, 1902.

23D WARD, SECTION 10. HEWITT PLACE OPENING, from Leggett Avenue (East 156th Street) to Westchester Avenue. Confirmed August 4, 1902; entered October 13, 1902. MANHATTAN STREET OPENING, from Garrison Avenue (Mott Avenue) to the United States bulkhead line of the East River. Confirmed July 28, 1902; entered October 13, 1902.

23D AND 24TH WARDS, SECTIONS 10 AND 11. LONGFELLOW STREET EXTENDING, from the north line of the L. S. Samuel property to Woodruff Street. Confirmed July 10, 1902; entered October 13, 1902.

24TH WARD, SECTION 11. EAST 181ST STREET OPENING, from Aqueduct Avenue to Webster Avenue. Confirmed July 28, 1902; entered October 13, 1902.

24TH WARD, SECTIONS 11 AND 12. EAST 196TH STREET OPENING, from Jerome Avenue to Marion Avenue. Confirmed July 8, 1902; entered October 13, 1902.

EDWARD M. GROUT, Comptroller.  
City of New York, October 13, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF October 18 to 31, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessments for OPENING AND ACQUIRING TITLE to the following named street in the BOROUGH OF THE BRONX:

24TH WARD, SECTIONS 10 AND 11. EAST 174TH STREET OPENING, from Jerome Avenue to Park Avenue (Vanderbilt Avenue West). Confirmed July 28, 1902; entered October 17, 1902.

EAST 182D STREET OPENING, from Arthur Avenue to Boston Road; confirmed August 4, 1902; entered October 10, 1902.

24TH WARD, SECTIONS 11 AND 12. EAST 192D STREET (formerly Primrose Street) OPENING, from Jerome Avenue to Kingsbridge Road; confirmed July 16, 1902; entered October 10, 1902.

EDWARD M. GROUT, Comptroller.  
City of New York, October 10, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF October 18th to 25th, 1902, of the confirmation by the Board of Assessors and the entering in the Bureau for the Collection of Assessments and Arrears, of assessments for LOCAL IMPROVEMENTS IN THE BOROUGH OF MANHATTAN:

12TH WARD, SECTION 6. EAST 117TH STREET PAVING AND CURBING, 125 feet at the foot of said street, at East River.

12TH WARD, SECTION 8. AMSTERDAM AVENUE FLAGGING, east side, from 185th Street to Washington Bridge.

19TH WARD, SECTION 5. AVENUE "A" (Sutton Place) SEWER, between 34th and 56th Streets; also 56TH STREET SEWER between Avenue "A" (Sutton Place) and East River. 44TH STREET SEWER ALTERATION AND IMPROVEMENT, between East River and 2d Avenue, and to CONNECTION AT 1ST AVENUE.

EDWARD M. GROUT, Comptroller.  
City of New York, October 10, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF October 10th to 23d, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessments for OPENING AND ACQUIRING TITLE to the following named street and avenues, in the BOROUGH OF THE BRONX:

23RD WARD, SECTION 9. EAST 167TH STREET OPENING, from 3rd Avenue to Brook Avenue. Confirmed July 24, 1902; entered October 8, 1902.

23RD WARD, SECTION 10. AVENUE ST. JOHN OPENING, from Prospect Avenue to Tison Place. Confirmed June 19, 1902; entered October 8, 1902.

24TH WARD, SECTIONS 9 AND 11. UNDERCLIFF AVENUE OPENING, where the same joins Boulevard Place as laid out under Chapter 640 of the Laws of 1897. Confirmed July 24, 1902; entered October 8, 1902.

24TH WARD, SECTION 11. ARTHUR AVENUE OPENING, from East 175th Street to East 177th Street. Confirmed July 21, 1902; entered October 21, 1902.

EDWARD M. GROUT, Comptroller.  
City of New York, October 8, 1902.

## Banking by Mail

5 per Cent. Interest on Savings.

Owing to the wonderful prosperity of the Indian Territory, exceptional opportunities for investment are continually arising which enable the Territory banks to pay a higher rate of interest with a larger margin of safety than is possible in almost any other part of the world.

## The State Bank of Wyandotte

allows 5% annual interest, compounded every six months, and accepts deposits in any amount by mail, from one dollar up.

If you have money lying idle, or invested in any way that does not yield you five per cent. return, we trust that you will feel perfectly free to take advantage of the facilities offered by this institution.

Be thrifty and progressive. Don't wait for a lucky turn to raise you above your fellows. Success is always waiting for the man who can do things. Start a bank account and build up a surplus that will enable you to take advantage of opportunities and protect you against misfortunes.

## STATE BANK OF WYANDOTTE

WYANDOTTE, IND. TER.

## BETTER READ THIS

Would you buy NOW at 5 cents if you could sell for a dollar later on, or stay and enjoy dividends? You have this option. If you investigate you will invest.

A ten-ton trial car gave gross value of \$372.30. More to follow.

This is only a starter. Why not buy in a mine at a prospect price? For a sure money maker, write

WM. HUGHANAN, Secretary

Room 41, Bank Block DENVER, COLO.

## THUNDER MOUNTAIN

AMERICA'S TRANSVAAL.

Ten Million Dollars

Gold Ore in Sight.

The Golden Rod Mining Co. owns outright, absolutely free of debt, what we consider two of the richest gold claims ever staked. They are located only a short distance from the world-famous Dewey Group (estimated as having 10,000,000 of gold ore in sight), Thunder Mountain, Idaho, which the latest official reports indicate as being the richest gold territory in the United States, if not in the whole world. Unlike many companies which are selling stock to buy and pay for their properties, we sell treasury stock only for active development work, which will at once increase the value of stock.

To obtain further capital for this purpose we offer for a very limited time

\$1.00 TREASURY STOCK

fully paid and non-assessable

At 8 Cents Per Share.

Capital stock, 1,500,000 shares, par value \$1.00, full-paid, non-assessable, 80 per cent., or \$1,200,000 shares, treasury stock. There are no debts, no bonds and no salaries offered.

This is no "wild-cat" scheme, but as honest, bona-fide mining proposition which YOU will do well to investigate. Write for prospectus No. 420, Map and Engineers' reports. Booklet "How to Judge Mining Stocks" free.

City of New York, October 23, 1902.

## Jasper's Hints to Money-makers.

Continued from preceding page.

"B." Louisville, Ky.: You are on the preferred list. Large edition delayed the paper, but difficulty overcome.

"W." Providence: Of course all such propositions must be speculative. For that reason I do not favor dealing in them. I would rather have something that is sold on the Stock Exchange so that it can be disposed of at any time.

"B." Allentown, N. J.: (1) I do not regard the United States Steel common as a good stock to buy at present prices. There are evidences that large holders have been quietly selling at every opportunity. (2) I am not advising purchases of the nickel stock.

"L." Pittsburgh: While the demand for pig iron and crude steel is heavy, the Iron Age reports a downward tendency in many finished lines, and lower prices for wire, sheets, tin plate, and pipe. Within a year, I believe, we will produce more iron than we can consume.

"V." St. Louis: (1) It is an industrial proposition regarding which nothing is known on Wall Street. A mercantile agency would probably give you an accurate report. Usually such bonds are not desirable for permanent investment. (2) I do not believe in the Storey Cotton Company's propositions.

"B." Peoria: (1) Legally, the stocks in the broker's hands would belong to you, but it might be difficult to secure them promptly in case of his failure. Better have them put in your own name on the books of the company. (2) I cannot answer. (3) Simply direct the broker to have the certificates put in your name and forward them to you.

"B." Des Moines, Ia.: (1) I have no doubt that American borrowers of funds abroad, whose loans were secured by collateral in the shape of American stocks and bonds, have been selling the latter freely, both in London and in New York, in order to pay loans, which were not renewable. (2) The tremendous speculation in real estate in the West, as well as in the East, has tied up large amounts of money and contributed to the stringency of the money market.

"F." Dover, N. H.: (1) The suit asking for a new receiver for the National Salt Company alleges that the present receivers were named as the result of conspiracy and collusion on the part of the directors and officers interested in the bankrupt corporation. The stockholders of the National Salt have reason to be indignant at the juggling of their affairs in the interests of the International Salt Company. (2) I would not sacrifice my Colorado Fuel until the outcome of the litigation is revealed.

"P." Wilkesbarre: (1) The new bond issue of the St. Louis and San Francisco road is for the purpose of satisfying the company's bonded debt and to provide funds for improvements, new equipment, and enlargement of the system. I do not see that this will jeopardize the dividends of the first preferred. The issue of the latter is only \$5,000,000. (2) Not an investment. (3) The edition was so large last week that there was delay in publication.

"A." Columbus, O.: (1) The proposed reduction of the capital stock of the Standard Chain Company, by half, means simply that some of the water in it is to be squeezed out of this over-capitalized concern. (2) Rumors of the absorption of the East Coast Railway by the Southern are not new. (3) On the basis of earnings, Erie common seems to be a better purchase than Reading. But I am not advising any purchases at present. It would be wiser to wait and see how the coal strike has affected the anthracite trade.

"Banker." Buffalo, N. Y.: (1) The rumor of a merger of the Missouri Pacific, Wabash, St. Louis Southwestern, Texas Pacific, Lake Erie and Western, and the Denver and Rio Grande railroads in a gigantic Gold securities company has been frequently heard. There is no doubt that several combinations have been withheld until a decision could be reached in the Northern Securities litigation. That decision may be some time in coming. (2) The purchase of large tracts of iron lands in northern Michigan and Minnesota, by the independent steel concerns of Pittsburgh, indicates that the United States Steel trust by no means controls the raw product.

"L." Little Rock, Ark.: Those who are thoroughly familiar with the iron and steel trade are dubious regarding the future of United States Steel stocks. It is not true that all the mills of this great institution are busier than ever. The dullness in the manufacture of sheets, wire, and tin plates, due to excessive production, has resulted, it is said, in closing some of the sheet mills and nearly half the tin-plate mills. The wire mills are kept from closing by a reduction in price. The cuts of independent concerns have been met by the United States Steel Corporation. Every cut, of course, means a reduction in net earnings. I should sell my Steel preferred, if I could sell it without a loss, and I would not buy the common with any idea of holding it as an investment.

"G." Lincoln, Neb.: (1) The reported purchase of the St. Joe and Grand Island by the Harriman interests no doubt accounts for the recent rise. The new purchasers will find it easy to unload the property on favorable terms on some of the large railroad corporations which they control. This is the advantage the insider has over the outsider. He knows where he is to land. (2) The fight of the Cigarette International Union against the American Tobacco Company on account of the latter's better warfare against the retail tobacco dealers of the country may lead to such a general boycott of the American Tobacco Company's goods as to seriously affect the earnings of the latter. More than that, it may invite the interference of the courts against the tobacco trust, which is always a bad thing for a stock.

"G." Savannah, Ga.: (1) The slump in American Agricultural Chemical is said to be due to the fact that the banks are not loaning as freely on industrials as heretofore. I have pointed out the evidence of manipulation, to advance the price of these shares, and on this manipulation, no doubt, there was a good deal of unloading. (2) The announcement that the Southern Pacific Railroad has abandoned the use of oil as fuel and returned to the use of coal, knocks finally in the head the preposterous statements made to boom the stock some time ago, that it would save millions every year by substituting oil for coal. A similar rumor was used effectively to advance Atchafalca common.

## "This Beats New Jersey"

CHARTERS PROCURED under South Dakota laws for a few dollars. Write for corporation laws, blanks, by-laws, and forms to PHILIP LAWRENCE, late Asst. Secretary of State, Huron, Beadle Co., South Dakota.

## DIVIDENDS

Risk a postal. Send us your name for prospectus of the Rayo Mining and Developing Co. of California. Every dollar invested in these shares will return you regular, handsome, dividends. MILLIONS of ore values ready to mine; Electric Water-Power Plant in connection. Not the ordinary mining proposition. Shares now selling at ground-floor price. Bank References.

## ROANOKE INVESTMENT CO.

516 Marquette Building, Chicago.

## I Will Cure You of Rheumatism

Else No Money Is Wanted.

After 2,000 experiments, I have learned how to cure Rheumatism. Not to turn bony joints into flesh again; that is impossible. But I can cure the disease always, at any stage, and forever.

I ask for no money. Simply write me a postal and I will send you an order on your nearest druggist for six bottles Dr. Shoop's Rheumatic Cure, for every druggist keeps it. Use it for a month and, if it succeeds, the cost is only \$5.50. If it fails, I will pay your druggist myself.

I have no samples, because any medicine that can affect Rheumatism quickly must be dragged to the verge of danger. I use no such drugs, and it is folly to take them. You must get the disease out of the blood.

My remedy does that, even in the most difficult, obstinate cases. No matter how impossible this seems to you, I know it and I take the risk. I have cured tens of thousands of cases in this way, and my records show that 10 out of 40 who get those six bottles pay gladly. I have learned that people in general are honest with a physician who cures them. That is all I ask. If I fail I don't expect a penny from you.

Simply write me a postal card or letter. I will send you my book about Rheumatism, and an order for the medicine. Take it for a month, as it won't harm you anyway. If it fails, it is free, and I leave the decision with you. Address Dr. Shoop, Box 949, Racine, Wis. Mild cases, not chronic, are often cured by one or two bottles. At all druggists.

SENT ON APPROVAL TO RESPONSIBLE PEOPLE

**LAUGHLIN FOUNTAIN PEN**

IS THE PEER OF ALL PENS AND HAS NO EQUAL ANYWHERE

Finest Grade 14k Gold Pen

YOUR CHOICE OF THESE TWO POPULAR STYLES FOR ONLY

**\$1.00** Postpaid to any Address.

Effectual in over 1,000 cases. Address: **OREN ONEAL, M. D., Suite 157, 52 Dearborn St., Chicago.**

## Jasper's Hints to Money-makers.

Continued from preceding page.

"Toledo": Do not advise it as an investment.  
 "C. N. P." St. Louis: Anonymous communications not answered.  
 "T." Mingo Junction, O.: Not in present condition of the money market.  
 "H. B." Mount Kisco, N. Y.: I do not regard the shares with favor for investment.  
 "G." Camden, N. J.: Two dollars received. You are on my preferred list for six months.  
 "R." Shiremanstown, Penn.: Neither is paying. Both speculative. Impossible to give preference until development work completed.  
 "S." New York: I know of no good reason, excepting that some large holders have had to sacrifice some of their bonds, so I am told.  
 "Cecil." Baltimore: Market conditions unfavorable for speculation or investment. On sharp declines, Kansas City Southern and Manhattan Elevated still have merit.  
 "E." Oswego, N. Y.: (1) I would buy nothing at present, excepting well-established dividend-payers; on reactions, Consolidated Gas and Manhattan Elevated. (2) Ontario and Western and Chicago Great Western are speculative. One is an anthracite, and the other an important independent western railway. Both have possibilities, but I am not advising purchases except on reactions.  
 "L. C. M." Bethlehem, Penn.: You have an excellent profit in your Swift & Co. stock, and a good profit is always a safe thing to take. If business conditions continue as prosperous as they are, the new stock to be issued in place of the old, by the combination, might bring you higher returns, but if money continues scarce, and new stocks are not accepted with favor, you might lose by waiting.  
 "D." Jacksonville, Ill.: You are on preferred list. New York Central ranged last year from 140 to 175; this year, thus far, from 150 to about 160. It is strongly held for investment and you probably will be able to sell at what you paid, if you hold it long enough. If it has a serious decline even up. The little book of statistical tables published by Spencer Trask & Co., 27 Pine Street, New York, gives the information you seek. A copy will be sent you, without charge, if you will inclose a two-cent stamp to them and mention **LESLIE'S WEEKLY**.  
 "L." Chicago: The officers of the Para Rubber Plantation Company include some very noted and successful business men. John Cudahy, of the Cudahy Packing Company, is the president. The company owns a million acres bordering the entire length of the Casiquiare River, 175 miles, obtained after negotiations with the Venezuelan government, and especially adapted to the cultivation of rubber of the highest quality. Judging entirely from the character of the management, it would look as if the company was in the hands of skillful and competent men. All the facts regarding this promising corporation are embraced in an interesting leaflet, which will be sent you free of charge if you will inclose a one-cent stamp and address the Para Rubber Plantation Company, 52 Broadway, New York, and mention **LESLIE'S WEEKLY**.

### American Textiles in Demand.

TEXTILE fabrics of various kinds of American make are said to be in demand in Holland and Belgium. The classes of goods wanted are chiefly woven fancies, linings, antens, drills, and prints. If the right methods are adopted to secure this trade it is believed that within a short time American goods will crowd out the English market.

On coaching parties don't overlook a few cold bottles of *Cook's Imperial Extra Dry Champagne*. It will double your pleasure.

For coughs and colds, the best remedy is Pico's Cure for Consumption.

**Advice to Mothers:** Mrs. Winslow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

By an original and improved method of constructing the frame, the far-famed Schmier Piano acquires extraordinary strength, and is enabled to sustain the enormous tensional strain of the strings.

Use BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.

## THROUGH AND THROUGH A LIFE-SAVER

Lifebuoy is not a transparent soap but a sanitary, antiseptic, disinfectant soap which purifies while it cleanses.

Lifebuoy Soap has life-saving qualities, and can be used like any other soap throughout the household, thereby ensuring a clean and healthy home.

At dealers, five cents; or by mail, two cakes for ten cents  
LEVER BROTHERS LIMITED, NEW YORK OFFICES

### An Exposition Postponed.

ACTING Consul L. Nicolaides reports from Athens that the International Exposition of Industry, Commerce, Art, and Hygiene, which was to have been held in that city in October, has been postponed to the 7th of April, 1903, so as to enable American products and industries to be represented. Mr. Nicolaides is informed that many German, French, and Italian firms have written to the committee of organization that they will take part in the exposition.

The proper ripening and maturing of whiskey depends on the care and method of storage. The warehouses of The Hayner Distilling Company are of the most modern and improved style, constructed entirely of brick and steel and equipped with the hot-air system of heating and ventilating, which keeps the whiskey at a uniform temperature the year round. As a result their 7-year-old is as fully developed as 12-year-old aged in the ordinary old-fashioned way, and it's better, too, for an uneven temperature of extreme heat and cold destroys the quality and flavor.

During the entire process of manufacture and from the time it is stored in barrels in their warehouses until, seven years later, it is bottled and shipped, Hayner Whiskey is under the watchful care of ten of Uncle Sam's government officials. It goes direct from their distillery to you, with all its original richness and flavor, carries a United States Registered Distiller's Guarantee of Purity and Age, and saves you the enormous profits of the dealers. Read the Hayner Co.'s offer elsewhere in this paper.

## Bust Developer. MME. SANS GENE

Latest French discovery; will positively develop your bust 5 to 8 inches. Price \$1.00; sample 25c.  
B.N.Co. 422 Townsend Bldg. N.Y.

## Would You Invest \$100.00 to make \$10,000.00? If so, BUY HIDDEN FORTUNE

Stock of Lead, South Dakota, at \$1.00 per share. Property surrounded by the mines of the Horne-Make Company, whose stock advanced from \$1.00 to \$100.00 per share and pays 10 cents per share monthly in dividends. Hidden Fortune should do as well. They have \$7,000,000 in sight and will be on a dividend paying basis as soon as a new mill, now building, is completed. Wonderful discovery of ore running \$5,000.00 per ton just opened. Absolutely safe, as there is over \$2.00 worth of gold ore in sight for every share issued.

### HONEST FLAVOR

and perfect purity are found in

GREAT

WESTERN

CHAMPAGNE

The New York Commercial Journal says:

"There is one mark in American champagne

which should find it especial favor as compared

with the French. It makes and carries its

own honest flavor, whereas the French champagne

has no flavor until it is added through the medium

of other liquors at the end of the fermenting

process. In other words, the French flavor is

made, the American is born."

Hence the popularity of "Great

Western," the gold medal winner at the Paris Ex-

position.

## Jasper's Hints to Money-makers.

Continued from preceding page.

"S." Fort Sheridan, Ill.: (1) I do not believe in the proposition. (2) It is highly speculative; not an investment.

"R." Hastings-on-Hudson, N. Y.: None of the propositions can be considered in any sense as an investment. All have speculative possibilities. As a rule, the chances are against the purchaser.

"Small Investor." Kansas: Two dollars received. You are on my preferred list for six months. (1) I would not sacrifice it. Talk of a new combination to advance it is heard. Earnings, I am told, are good. (2) That is what many have done.

"S." New York: (1) The probabilities favor an assessment on the stock. Until the plan of reorganization is disclosed I cannot advise you. At this writing no action has been announced. The controlling interests have it in their power to assess either the common or preferred, and they are not inclined to take the public into their confidence.

"X. Y. Z." Thomaston, N. Y.: (1) Too speculative at present. (2) The Engineering and Mining Journal of New York is five dollars per year. You might buy a single copy and see if you like it, first. (3) Speculative activity in the market might advance it. I therefore would not advise its sacrifice at present.

"W. G. W." Brooklyn: Two dollars received. You are on my preferred list for six months. (1) If the information is absolutely reliable, it would certainly be of value, if you could interest, confidentially, some man of means in the purchase or sale of the stock. (2) Brokers retain the right of changing interest according to market rates.

"S." Lewiston, Mont.: Two dollars received. You are on my preferred list for six months. (1) I do not regard the industrial federation proposition very favorably. (2) It has meritorious features, but why not take out an endorsement policy in some leading company, well established, and doing an investment as well as an insurance business?

"J." Johnstown, N. Y.: Our consul-general at Havana informs the State Department that a Cuban land company is distributing in the United States circulars containing false statements about its property, for the purpose of inducing American farmers to buy Cuban lands in the province of Santa Clara, on the Zapata peninsula, which General Bragg says is largely a swamp.

"W. H. W." Brooklyn: (1) A leading stockholder tells me that it is. (2) The preferred is always better for investment, the common usually for speculation. (3) The value of Hidden Fortune shares depends upon the development of the property. It adjoins one of the richest gold mines in the country. (4) John M. Shaw, 30 Broad Street. (5) All New York dailies publish the list.

"Bee." New Orleans: One dollar received. You are on my preferred list for three months. (1) I would not sacrifice my Ontario and Western at present. This is one of the cheapest of the anthracite coal stocks and has a good speculative opportunity. (2) Considering the tremendous advance of Atchafalpa common, it does not look cheap, but on the basis of earnings it is selling below other similar properties.

"K." Oswego, N. Y.: (1) The suit brought by Mrs. Nellie C. Adams against Henry Cress & Co. is to recover \$5,000 deposited as a margin, and alleges that no stocks were bought or sold by the defendants for the plaintiff, and that her margin had never been exhausted. These allegations are stoutly denied by Cress & Co. (2) The earnings of St. Louis and San Francisco last year showed about 5 per cent. applicable to the common stock, and the earnings of Erie showed about 14 on the common, and that its business is constantly growing. The settlement of the coal strike ought to materially help the Erie.

New York, October 30, 1902. JASPER.

## Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of *LESLIE'S WEEKLY*. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.]

THE AGITATION among the members of the Modern Woodmen, a leading fraternal order, over the proposition for a readjustment of the rates of assessments, on a basis that it is hoped will guarantee the permanency of the order, shows the trend of events. There is only one salvation for the fraternal beneficiary orders, and that is to compel the members to pay assessments sufficiently large to provide not only for the present but reasonably for the future. It has been the claim of these orders that they furnish cheaper insurance because they simply provide for the present and let the future take care of itself. The old-line companies, under compulsory statutes, are required to set aside a reasonable amount to guarantee the future as well as the present. Let my readers bear in mind that this is the fundamental difference between assessment and old-line insurance. In the one we pay for the present, with no guarantee for the future; in the other we pay for the present and also sufficient to guarantee the face of the policy at maturity. In the former the payments at the outset are low, but they increase with the increasing risk which comes with added years; while in the latter the payments are substantially the same from first to last, with a possibility of dividends as you grow older and with the value of the policy increasing year by year. The thoughtful man provides not only for the present but for the future.

"S. R." Baltimore: Your inquiry should have been addressed to "The Hermit," *LESLIE'S WEEKLY*. I regard the plan favorable.

"S." Columbus, O.: I regard the proposition favorably. It is no better, however, than any one of the great New York companies.

"J. J. N." Homestead, Penn.: Your policy in the New York Life is an excellent investment, and the rate is reasonable for a policy of that kind.

"C." Batte, Mont.: I have had other inquiries regarding the plan. You will observe that the

## Over a quarter million satisfied customers

JUST—THINK—THAT—OVER. Think of the immensity of such a business—OVER A QUARTER OF A MILLION CUSTOMERS. Think of its unusually gratifying feature—ALL SATISFIED.

Do you think such an enormous business could be built up, sustained and continually increased, if our goods did not have exceptional value and merit?

Do you think we could hold the trade of over a quarter of a million people, if our reputation for doing exactly as we say wasn't firmly established?

Actual experience and trial have proved to them that we and our goods are both all right. Won't you give us a chance to prove it to you, too? Remember, HAYNER WHISKEY goes direct from our distillery to you, with all its original richness and flavor, carrying a UNITED STATES REGISTERED DISTILLER'S GUARANTEE OF PURITY and AGE, and saving you the big profits of the dealers. Your money back if you're not satisfied.

## Direct from our distillery to YOU

Saves Dealers' Profits! Prevents Adulteration!

## HAYNER WHISKEY

PURE SEVEN-YEAR-OLD RYE

4 FULL \$3.20 EXPRESS  
QUARTS PREPAID

We will send you FOUR FULL QUART BOTTLES of HAYNER'S SEVEN-YEAR-OLD RYE for \$3.20, and we will pay the express charges. When you receive the whiskey, try it and if you don't find it all right and as good as you ever drank or can buy from anybody else at any price, then send it back at our expense and your \$3.20 will be returned to you by first mail. Just think that over. How could it be fairer? If you are not perfectly satisfied, you are not out a cent. Shipment made in a plain sealed case, with no marks or brands of any kind to indicate contents.

**THE HAYNER DISTILLING COMPANY**

DAYTON, OHIO ST. LOUIS, MO. ST. PAUL, MINN.

27 DISTILLERY, TROY, O. ESTABLISHED 1866

company was organized not many years ago and that it has still to demonstrate the success of its plan. In life insurance I do not advise experiments.

"R." Brooklyn, N. Y.: You ought to know that the old adage to the contrary notwithstanding, figures do lie when they are in the hands of experts at twisting them. The best way for you to satisfy yourself would be to invite the agents of the companies you mention, each to submit his guarantee, on an unqualified basis, and see whether your favorite would do better than the others. Of course you must take the policy as a whole, including all special restrictions and privileges that may be involved.

"N." New York: The test of the fraternal order to which you allude can only come later on, when its increasing death rate, with the increasing ages of its members, must compel the levying of heavier assessments. If you are seeking protection only for the present, it offers you a cheap opportunity to do so, but I do not believe in the system. When you take out a life insurance policy, you ought to take one which will increase rather than decrease in value from year to year.

"C. W." New Orleans: I might add to my former answer that at your age it would cost you \$521 annually for the next eight years to secure an annuity of \$300 a year as long as you live thereafter. As this is about 3 per cent. on the money after, and as the investment is absolutely safe, this would be a good way to dispose of your surplus earnings. By an expenditure of \$524 annually for ten years you can receive an annuity of \$400 a year as long as you live. All the great New York companies sell these annuities and they are becoming more popular every year.

"R. B. M." Memphis: (1) Whether the members of a fraternal benevolent order are accountable for its liabilities or not, depends on the by-laws to which the members have subscribed. The courts have held that this liability exists where it is stipulated that the membership assumes the burdens of the order. (2) I certainly should not continue my membership in any assessment organization having insurance benefits attached. If your expectation of life is short, and you are not insurable elsewhere, you might retain the membership for the present.

*The Hermit.*

## Remarkable Skye Terrier.

CONSIDERABLE surprise was expressed by several experts that the skye terrier, "Wolverley Wallie," which attracted so much attention at the Exhibition of the Ladies' Kennel Association of America, should receive only the third prize, a number of those best qualified to judge claiming that on many accounts this dog was one of the most remarkable ever shown at an exhibition in this country. The dog is owned by Mrs. Robert H. McCurdy. The coat of the dog counts fifteen points in the trials. Wolverley Wallie has a coat such as has never been seen in this country before, the hair from the middle of his back reaching to the ground, and beneath this comparatively coarse outer coat is a soft under coating of short hair, which marks the skye terrier and is very soft and downy. Wolverley Wallie was imported from England, and as a prize winner in English exhibitions his record is unequalled. He was the winner of two challenge prizes, and of the first prize and special prizes in the Ladies' Kennel Association, Botanic 1900, Manchester 1901, Harrogate 1901, and several others.

## A Photograph in a Crevasse

THERE ARE glaciers in many parts of the world, and their unexpected elements of

beauty are a delight to all visitors. Hallett glacier, in the Mummy range near Estes Park, Colorado, is one of the most beautiful ice masses in the world. The form, the color, and the crevasses of this glacier led Mr. Frederick H. Chapin, of the Appalachian Club, to give it an entire chapter in his delightful work, "Mountaineering in Colorado."

Much of the ice in this glacier is blue, or sea-green color, and when

seen in its framework of wild crags beneath the light of a turquoise sky it forms a

picture of rare beauty and magnificence. An artist recently descended into a

crevasse, and in one of its icy halls made an excellent photograph of the colored crystal cave. The cave has many graceful forms and figures in ice—panels, clusters of frozen drops, stalactites and stalagmites, coral forms in the edges of clear pools, arches, filigree work, screens, niches, and graceful arches. The whole, lighted by the softened, colored, light of the sun's rays through a translucent blue-green roof is a hall—a blue

MAGNIFICENT ICE GROTTO IN HALLET GLACIER, ESTES PARK, COLORADO.—Mackie.

grotto—of entrancing loveliness and splendor, excelling any creation of art.

## Business Chances Abroad

DEALERS IN telephones and telegraphic apparatus will find it to their interest to open communication with our consul at Funchal, in the Madeira Islands, T. C. Jones, who says there is an opening in the islands for such goods. The last census gives Funchal a population of 50,000 people. The city is spread over a large area, and yet it has no public telephone. The postal service is not of the best. The common communication is by note and messenger. An English company obtained the concession for the electric light plant, and Consul Jones says that he understands that it pays well.

Representatives of commercial houses throughout Europe have been rushing to South Africa since the war closed, in efforts to secure the large and promising trade in that country, and it behooves American dealers and manufacturers to be doing likewise if they would secure their share. The Germans are making special efforts to secure a large portion of the importations, but advices from the Kimberley district show that American goods sell much better in that country than German, even at prices ten or fifteen per cent. higher.

American horses are in demand in France. The French army purchases annually a large number of these animals, and on the farms they are gradually displacing cattle for draft purposes. For many years the soil has been cultivated almost entirely with the aid of cows and oxen, but for this work the superiority of the horse is fully acknowledged. The introduction into France of American agricultural machinery—such as mowers, reapers, drills, rakes, etc.—has also led to the use of horses in greater number, than ever before. The exodus of laborers from farms to the cities is still another explanation of the increased demand for draft animals. This exodus is also responsible for the increasing use of farm machinery. The scythe is giving place to the mower, the old-fashioned method of sowing to the modern drill, and these machines are

worked best by horses. A leading agriculturist stated recently that "the demand for agricultural machinery to replace hand labor on the French farms will be greater this year than ever before."

The director of the agricultural experimental station in Corfu, A. E. Mavrojani, has asked that catalogues and price-lists of petroleum and steam engines and gas motors of low horse-power, suitable for running pumps, be sent him.

## California's Odd Industries.

Continued from page 443.

the suburbs of any large Western city, parties of small boys armed with nets and a few cooking utensils with which to prepare the game after it is caught. The average small boy is an expert in catching, killing and dressing the palatable creatures. Often from a car line one can see a jolly little bonfire around which are gathered a few sturdy sons of America busy preparing the feast. On these occasions the frogs will not be served on silver shells. They may be garnished only with a spray of fresh watercress, but I wager they are as much enjoyed by the youngsters, who are their own chefs and waiters, as a similar dish otherwise cooked and served would be by grown-up, bewhiskered epicures. One of the jolliest picnic parties of the season was a crowd of Berkeley University folk who followed in the lead of the small boy and went frog hunting. They not only enjoyed the exercise, sport, and novelty, but also the knowledge that their entertainment was an innovation in its way added zest to the fun. Other parties followed, and next season, no doubt, the first prejudice will have worn away and frog picnics will be so numerous that they will cease to be novel; and then, in all probability, snail parties will be the order of the day, the only difficulty in the case of the latter being the intricacies in the cooking.

## A FREE EDUCATION

The Directors of the Correspondence Institute of America have decided to award a limited number of Free Tuition Contracts, in the following courses for home study: Illustrating, Cartoons, Ad. Writing, Journalism, Proofreading, Stenography, Bookkeeping, Practical Electricity, and Electrical Engineering (including Interior Wiring and Lighting, Electric Railways and Telephone and Telegraph Engineering). No Tuition Fee will be required until our Institution has educated you and secured for you a position. Write for Free Tuition Contract, and mention the course which interests you. CORRESPONDENCE INSTITUTE OF AMERICA, BOX 352, SCRANTON, PA.

# BEER is Healthful

But a "green beer"—beer insufficiently aged, half-fermented—ferments on the stomach, causing biliousness and headaches.

Schlitz Beer is well aged.

There is beer that's not pure—not free from bacilli. It's not good for you.

But Schlitz Beer is pure.

None but the costliest materials go into Schlitz Beer—the best of barley, hops and yeast. A partner in our business selects them.

We spend more on cleanliness alone than the whole cost of brewing without it.

We cool Schlitz Beer in plate glass rooms, and filter all the air that touches it.

That's an extreme precaution.

We age it for months, at a temperature of 84 degrees, before we market it.

That's a heavy expense.

Then we filter the beer, then sterilize every bottle after it is sealed. Sterilized beer can't have germs in it.

Yet Schlitz Beer—brewed with all these precautions, that double the cost of the brewing—costs you no more than common beer, if you will ask for it.

## How To Get at the Trusts.

WITH ALL due respect to the views of such gifted and astute men and loyal party leaders as Senator Quarles and other Republican speakers now engaged in a public discussion of the trust problem, we must say that we fail to agree with them that an amendment to the Federal Constitution and a national system of regulation is either expedient or necessary as a safeguard against such evils as now exist or may arise from great combinations of capital. If we must go to the national government at all in seeking a remedy for these evils, it would be more reasonable and much more practicable to adopt the suggestion of Attorney-General Knox that Congress be required to amend and extend the interstate commerce law so as to control these combinations.

It is Mr. Knox's contention, and we believe a sound one, that if Congress, under its power to regulate interstate commerce, may utterly destroy a combination and forfeit its property in interstate transit, as the Sherman act provides, it can, in the exercise of the same power, deny to a combination, whose life it cannot reach, the privilege of engaging in interstate commerce except upon such terms as Congress may prescribe to protect that commerce from restraint. In other words, it is only necessary to give a fair and common-sense interpretation to statutes already existing and to the decisions of the courts, to extend the authority of Congress over business concerns whose operations may be shown to be inimical to the general welfare and in restraint of trade as defined by the common law. But before any resort to Federal legislation is had, either in the shape of a constitutional amendment or an extension of the interstate commerce law, it would seem to us the wiser and certainly the more expeditious method to throw the burden of trust regulation upon the States where, by enactments similar to those which now work so successfully and effectively in the case of life-insurance companies, all the ends sought may be directly and quickly gained.

Over-capitalization, lack of publicity of operation, insufficient personal responsibility of officers and directors for corporate management, tendency to monopoly and lack of appreciation in their management of their relations to the people—for whose benefit they are permitted to exist—all these and other real or alleged abuses connected with the existence of trusts might also exist in connection with the great corporations engaged in life-insurance business had these latter combinations not been brought under the regulation of State laws for the specific purpose of preventing just such abuses. And there is no apparent reason why the regulation that has proved so efficacious in the one case might not prove equally so in the other. The solution thus proposed, if adopted, would work out its benefits in the course of a few years, whereas the way to better things through a Federal amendment would be long and tedious, and of doubtful expediency even at the best.

On this point of constitutional amendments, as a remedy for trust abuses, we observe that out of forty-four professors of law and political economy in our leading educational institutions interrogated by the *Evening Post* on the question of the desirability of such amendments, a large majority, including such well-known and expert authorities as Henry Carter Adams, of the University of Michigan; Henry C. Emery, of Yale; Winthrop M. Daniels, of Princeton; John Bascom, of Williams College; Daniel Collins Wells, of Dartmouth, and others equally eminent, express themselves positively and emphatically against such a proposition; while others, including Professor Franklin H. Giddings, of Columbia University, a foremost authority on questions of this character, would make such amendments conditional only upon a failure to control corporations in other ways. Among the adverse opinions expressed on this point, none are more succinct and comprehensive than that of Professor Wells, of Dartmouth, who objects to a constitutional amendment because he "does not believe in further centralization of governmental control." "Obviously," he continues, "the bigger the machine the more difficult becomes the management of it. As an owner, the government has shown that it does not handle its affairs economically; it has had frequent difficulty in handling them honestly." Professor Dealley, of Brown University, is strongly of the opinion that "the power to control corporations should be left, as it is, in the State governments." Several others,

including Professor Kessbey, of Bryn Mawr, and Professor F. H. Dixon, author of "State Railroad Control," declare solution by Federal amendment to be "cumbersome and roundabout," and probably ineffective if attempted.

These are the opinions of thoughtful, conservative, and impartial men, and they voice, we believe, the deepest insight and the highest wisdom to be found on this subject. Common sense itself would dictate that we first make an attempt to bring the powers ready and at hand to bear in this matter of trust regulation before we go to the length of making a change for this sole subject in the organic law of the nation.

## Ohio's Hundred Years.

THE APPROACHING centennial of the State of Ohio will, of course, command national attention. The committee which has charge of the centennial celebration reckons March 1st, 1803, as the State's birthday, that being the time when the State Legislature first met in Chillicothe, Ohio's original capital. As March 1st, 1903, comes on a Sunday the celebration has been deferred to a later date, and it will take place in Chillicothe on Wednesday and Thursday, May 20th and 21st, 1903. The census authorities, however, reckon the date of Ohio's existence as a State from November 29th, 1802, the day on which the State's constitution framers at Chillicothe finished their work. That day in 1902 will be the one at which most of the papers of the United States will doubtless place the completion of Ohio's hundred years.

For many reasons Ohio is one of the most interesting of all the States. As the first of the divisions of the old Northwest Territory to be endowed with the privileges of statehood and to give concrete expression to the provisions of the ordinance of 1787, under which that territory was organized, Ohio's entrance into the list of States forms an important date-mark in the country's history. Its early settlers comprised some of the choicest blood of New England, the Middle States, and the South, Virginia furnishing the bulk of the Southern ingredient of its population at the outset. As the only State at that particular place between the Canadian boundary and the Ohio River, the latter marking the northern line of the slave section, it formed the connecting link between the free States of the Atlantic seaboard of the old days and the free section of the Mississippi valley and the far West. All the lines of travel between these sections passed through Ohio. The "underground railroad" of the slavery days had more "lines" and "stations" in Ohio than it had in any other State. No commonwealth of the era which ended with the adoption of the Thirteenth Amendment took a larger part in the slavery controversy.

At a very early day Ohio began to be a potent force in the politics of the nation. Its great men, prior to the Civil War period, comprised St. Clair, Tiffin, Meigs, Worthington, William Henry Harrison, Shannon, Corwin, Ewing, and many others who hold a high place in the list of the country's celebrities. During 1861-65 it contributed, by birth or residence, to the service of the nation, such eminent personages as Chase, Stanton, Wade, John Sherman, and Generals Grant, Sherman, Sheridan, McDowell, Buell, McCook, McClellan, Rosecrans, O. M. Mitchell, Gilmore, McPherson, and others. It has won as good a right as Virginia to be called the mother of Presidents, as the two Harrisons, Grant, Hayes, Garfield, and McKinley were Ohio's sons either by birth or residence, or both. The Ohio man has been omniscient, omnipresent, and omnipotent, and he is still a power in the nation. On Ohio's soil the East and the West, the North and the South, meet and mingle. It has the good qualities and some of the special attributes of each. This and its strategic situation is the secret of its influence in the country's affairs. November 29th, 1902, which marks the completion of Ohio's century of life, will have an interest for every intelligent, patriotic American.

## Riches in Desert Places.

THE QUESTION has often been put, in a querulous tone, as to the practical good likely to result to mankind from all the vast expense in human life and treasure involved in Arctic exploration. What real benefit, it is asked, will accrue to the world even if the long quest for the pole is at last successful and the hopes of explorers are realized at least so far as that point is concerned? It will still be the same dreary, desolate, forbidding waste as before with no apparent use in the economy of the world.

But who can be sure of this? In recent years many so-called desert portions of the globe, some almost as sterile and forbidding naturally as the polar expanse itself, have disclosed resources of various kinds, chiefly mineral, which have already added enormously to the wealth of the world. Thus, among the wintry solitudes of the Klondike and along the ice-clad shores of the Arctic sea vast and apparently inexhaustible deposits of gold have been discovered which have already turned hundreds of millions, worth of the yellow metal into the markets of the world. Within a year or so coal mines of promising richness and extent have been opened in Nova Zembla, Iceland, and near the coast of northern Russia. Rich deposits of copper and iron have also been announced in such remote corners as northern Kamchatka, southern Patagonia, and in certain portions of Alaska. Within the past weeks it has been reported in the daily press that enormous deposits of borax had been discovered by officials of the United States Geological Survey in Death Valley and the Mohave Desert of California, regions rendered practically uninhabitable by their intense heat and lack of water. But the deposits of borax and salt to be found there are so large and valuable that it is now

proposed to adopt means that will make possible the development of these industries.

Returning to the polar circle itself, we have the suggestion of Lieutenant Peary that the region is the best possible place to send consumptives, the clear, pure air and prevailing low temperature being acknowledged as the best curative agent with this disease. It would be entirely feasible, he thinks, to establish sanitariums in these high latitudes, where marvelous cures might be wrought. Surely if the Arctic country should come to be in the future a great health resort for the cure of scourges like consumption all the sacrifices made in exploring that region could not be considered as vain.

It is to be remembered also that modern science has supplied many appliances, devices, and methods whereby the wildernesses and the desert places may be rendered more habitable if they are not literally converted into gardens. Artesian wells, irrigation, and electricity in its many and increasing forms and applications may be relied upon, in most cases, to bring the comforts, conveniences, and even the luxuries of civilization into places where the natural conditions have been such as to make them unknown before. With the aid of such agencies it is entirely within the bounds of belief that such regions as the Desert of Sahara and the ice-clad wastes within both the polar circles may in process of time be converted into the home-lands of a happy and contented people.

## The Plain Truth.

SIGNIFICANT AS it was timely and impressive was the recent protest of the Roman Catholics of Brooklyn against blasphemy. Twenty thousand members of the Holy Name Society took part in the demonstration, one feature of which was mass meetings in the churches, at which addresses were made by the vicar-general of the Brooklyn diocese and other clergymen, dwelling upon the evil of blasphemy and the need of a higher feeling of reverence for divine things. It is a deplorable fact that the silly and vicious practice of using profane language of the worst sort on any and all occasions seems to be on the increase among men of all ages and classes, and particularly among young boys. It is only necessary to listen for a few moments to the casual conversation of boys and young men who congregate on the street corners and other public places, to be aware of this. The practice is not only silly but vicious and degrading to the last degree, and parents, religious leaders and teachers, and all others who have oversight and guidance of the young cannot too strongly reprobate and discourage the habit. No man who would have the least respect of those whose respect is worth having will indulge in blasphemous language, no matter whether he has any religious scruples or not. It is never the mark of a gentleman any way.

WITH THE feeling pervading the country in regard to so-called trusts it is hardly good business policy, to say the least, for these combinations to pursue a policy of avarice and greed such as that, for instance, which characterizes the operations of the American Tobacco Company, and which is very justly arousing the resentment of independent retail dealers all over the country. To live and let live is a principle which has always been recognized among fair and upright business men in this country, and no amount of wealth or political influence will save from ruin and ultimate extinction a commercial enterprise that endeavors to reap gain to itself in opposition to this just and honorable rule. As long as the tobacco trust is satisfied with a legitimate profit on its goods and pushes its trade by fair and open-handed methods it probably will not be disturbed, but when it seeks, as it has been doing recently in many localities, to take advantage of its financial strength and influence to drive thousands of self-supporting men out of business, it will soon kill the "goose that lays the golden egg." Combination is a game that two can play at, as the tobacco monopolists are soon likely to find out to their cost. The attention of the Attorney-General of the State has very properly been called to this matter.

WE ARE in thorough accord with the views recently expressed in a public speech by Frank Moss, former president of the New York police board, to the effect that the churches are chiefly responsible for the evil conditions existing in the metropolis and especially for the existence of a public sentiment that tolerates the rise to places of power of men like Devery, who set at naught all principles of honor and decency. "The chief criminals in this city of ours are the churches themselves," says Mr. Moss, and he is right. The churches collectively represent a vast amount of capital in the shape of money, influence, and energy which, if utilized to its full extent, and as it ought to be, would soon revolutionize the social, moral, and political conditions in the city. The great trouble is that a large part of this capital is practically dead, tied up in formalism, old and useless conventionalities, and worn-out methods and teachings. Let the churches declare themselves clearly and pointedly on the great moral issues of the hour and gear all their machinery on to the activities of the present-day world, and we shall soon see a new and far better state of things the country over. There must be more insistence upon righteousness in public and business life, a wider and closer application of religious principles to the needs of men in their everyday trials, burdens and perplexities, an extension of helpfulness, sympathy, and uplift here and now in the places and directions where these things are truly needed. The way to peace, contentment, and true and abiding prosperity for the American people lies in the practical recognition and enforcement of religious principles in all the relations of life, and the churches are constituted to secure this recognition and enforcement, and they can do it if they will.

## PEOPLE TALKED ABOUT

THE DUBBING of the Japanese as "the Yankees of the East" finds much justification in the career of

HOBSON SANJIRO SHIMIZU,  
Prize-winning Japanese student at  
the Armour Institute.

Hobson Sanjiro Shimizu, a bright young man from Japan, now studying in this country, who shows all the grit and ambition of a regular New England boy. Mr. Shimizu has just been awarded for the second time, the Catherine M. White scholarship for excellence in the mechanical engineering department of the Armour Institute of Technology at Chicago. This is a continuation of the honorable record as a student which he made in Tokio, where he took a three years' course in mechanical engineering in one of the leading colleges of Japan. He came to the United States in 1898 to acquire a knowledge of American engineering methods, and after spending a year in San Francisco he entered the Armour Institute, from which he will be graduated next June. Mr. Shimizu has been obliged to earn the money which pays his way. For the first two years at the institute he served as waiter and house servant and as a tutor in mathematics, and during the summer he has worked in mechanical and electrical shops. His rank in mathematics is of the highest. He proposes to settle permanently in this country for the practice of engineering.

MOTHER ENGLAND is indebted to her dutiful and thriving daughter, the new Commonwealth of Australia, not only for many brave and loyal servants in times of stress and danger, but also for not a few men and women of truly noble character and brilliant genius. Among these may be numbered the Countess of Huntingdon, the second daughter of Sir Samuel Wilson, the great Australian millionaire, whose son, Captain Wilson, is the husband of the plucky Lady Sarah, whose

THE COUNTESS OF HUNTINGDON,  
One of Australia's beautiful women.

bravery and endurance during the siege of Mafeking was a notable incident in the South African war. The present Lord Huntingdon, fourteenth of the famous line of Hastings, which can trace its pedigree directly from Robert de Hastings, the steward of William the Conqueror, married Miss Wilson just ten years ago. Both the young earl and his countess are deservedly popular in Ireland, where they spend much of their married life at Shamvogue, one of the most charming places in King's County. If their example in this respect were widely imitated there would be less complaint about "absenteeism" and less misery and dissatisfaction in Ireland.

SINCE THE establishment of our diplomatic relations with China that country has never had a representative at Washington who has united in himself so many notable and engaging qualities as Minister Wu Ting-fang, who has been recalled by his home government to accept an equally high post in his own land. In all qualities of mind and heart, in all things which enter into the make-up of a true gentleman, according to our Western ideas, Dr. Wu will compare favorably with the finest products of our American homes and schools. As a diplomat under peculiarly delicate and difficult circumstances, such as those prevailing during the Boxer outbreak, he has displayed the utmost tact, wisdom and dignity, maintaining through all a cordial attitude toward this country. As a public speaker Dr. Wu has made a rare and exceptional record, his success, popularity, and influence in this capacity being greater than that of any other member of the foreign corps at Washington during the present generation. The doctor has done more than any other citizen of China has

DR. WU TING-FANG,  
Who is retired as Chinese minister  
at Washington.

ever done to break down the prejudice existing in some quarters of the United States toward his fellow-countrymen. He has announced it as his purpose to spend the remaining years of his life in endeavoring to secure for China agencies and institutions which shall bring his nation up to the highest level of modern civilization.

CLINTON ROGERS WOODRUFF, of Philadelphia, who was recently elected president of the American

MR. CLINTON ROGERS WOODRUFF,  
New president of the American Park  
and Outdoor Art Association.

Park and Outdoor Art Association, belongs to that class of strenuous Americans of whom President Roosevelt is the acknowledged leader, and the two men have been associates and co-workers for years along various lines. It may well be doubted whether any young man of thirty-four now living has had so wide a range of public activities, and has led as useful a life as Mr. Woodruff. He has been a chief promoter and a guiding spirit in nearly all the great civic and political reform movements of the day, and in all service of this character is as energetic and indefatigable in action as he is wise and tactful in counsel. Among the public movements in which he has been conspicuously identified are ballot reform, civil-service reform, and municipal reform. He has been secretary of the National Municipal League from its inception, and to his enthusiasm and unwearying effort that organization is chiefly indebted for its present strength and success. He is also secretary of the Pennsylvania Ballot Reform Association, an executive officer of the Mohonk Conference on International Arbitration, and is also identified in an official way with various other civic and educational bodies. He has served two terms in the Pennsylvania Legislature, and in many a hard-fought campaign in Philadelphia he has been a leader of the forces struggling for honest and truly representative government. Mr. Woodruff is a graduate of the University of Pennsylvania and a member of the legal profession with a large and lucrative practice.

ABDUL HAMID, Sultan of Turkey, has just celebrated his sixtieth birthday. Thirty-four Ottomans have reigned in Turkey, and the longest reign was less than fifty years, so that Abdul Hamid, should he live and reign till he is eighty, will have broken the record of Solymen I., who sat upon the throne from 1520 to 1566. Only one Sultan in the nineteenth century, only one in the eighteenth, and only one in the seventeenth, ruled longer than he, and most of his predecessors have been slain or put in chains before their friends were able to wish them many happy returns of their sixtieth birthday.

EVERY EXPERIENCED newspaper man is familiar enough—much more familiar than he would like to be—with the person who "never, never" wants his name to appear in the papers and all the while is full of raging fear within that some wretched and discriminating editor will leave it out. For a recent instance of this we have Marie Corelli, the author of several alleged novels, who has succeeded in getting a good deal of free advertising for herself and her books by her loud and frequently declared detestation of book-reviewers, reporters, and newspaper men generally, many of them being specifically forbidden to put her august and sacred name into type. It seems that the innocent editor of an English fashion journal recently took Miss Corelli and her ideas on "snobs" seriously, and purposely left her name out of the list of notables who had been invited to some social function among the royalty. Whereat the innocent editor was soon served with a letter from Miss Corelli marked "private and confidential" so hot with indignation over the "insult" that had been put upon her by the omission that it nearly melted the wax on the seal. From which it appears that, after all, there are no "snobs" quite so "snobbish" as those who make capital of their alleged anti-snobbery.

THE ANNOUNCEMENT that when Lieutenant-General Nelson A. Miles shall retire on account of age, in August next, he will be succeeded by Major-General Samuel B. M. Young as chief officer of the army calls attention anew to the grand opportunities offered to capable and deserving men under American institutions. For General Young, without the advantage of an education at West Point, has risen by pure merit from the very lowest rank in the army. Enlisting as a private at the outbreak of the Civil War, he rendered such excellent service that he came out of the conflict as a brevet brigadier-general of volunteers. Afterward he secured a commission as second lieutenant in the regular army and served faithfully in the West for many years. Later he won laurels in Cuba and the Philippines and was made a major-general on February 2d last. He commanded the troops engaged in the opening fight on Cuban soil at Las Guasimas, and he conducted a brilliant and successful campaign in Lazon. He is at present the head of the Army War College in Washington. In

GENERAL S. B. M. YOUNG,  
Who will succeed Lieutenant-General  
Miles as chief of the army.

military knowledge, experience and capacity General Young is concededly competent for the high position he is soon to attain. Regret will be felt generally that under the law so worthy a soldier can retain the office for only about six months before he will have to go on the retired list.

ONE OF the severest afflictions that can come upon a human being some time ago befell Sir Edwin Arnold,

SIR EDWIN ARNOLD,  
The famous poet who has become  
totally blind.

the editor and poet. He has become totally blind, and unable to continue his literary work except in a very limited way. Sir Edwin's literary activities have been extended over nearly half a century and have been varied and important. For the last forty years he has been connected with the London *Daily Telegraph*, and much of the success and great influence of that journal are attributed to his energy and ability. He has visited the United States several times on lecturing tours which have added much to his popularity in this country. Sir Edwin resided in India for a long period, and is one of the best Asiatic scholars in the world. One result of his studies and researches in that country was the elaborate poem, "The Light of Asia," a work on which his title to literary fame chiefly rests. In spite of his afflictions, the editor-poet is said to be still cheerful. He says: "My condition would be a sad one without patience and resignation. I never despair, and thank heaven for my unimpaired mental powers." Since he lost his eyesight Sir Edwin has published a poem of some length.

NO ONE of the increasingly large group of American women who have been won over to England to become the wives

of titled men in that fair country has taken with her a richer dower of grace and beauty than Miss Elizabeth French, formerly one of the belles of the metropolis, and now the wife of Lord Cheylesmore, otherwise known as General Herbert Eaton, and a gallant and distinguished officer in King Edward's service. General Eaton held an important command in South Africa during the course of the Boer war, and is regarded as a military leader of more than ordinary ability. Lord and Lady Cheylesmore are the fortunate owners of a splendid art collection brought together by the father of the former, the first peer of his line. Lord Cheylesmore's great hobby is the collection of medals, and some years ago he wrote a valuable work entitled "Naval and Military Medals of Great Britain." Lady Cheylesmore is a devoted mother to her two little boys, of whom the eldest is nine years old, the youngest seven. It was reported recently that Lady Cheylesmore would visit the United States this autumn.

LADY CHEYLESMORE,  
One of the most beautiful Anglo-American peeresses,  
expected soon to visit America.

UNDER THE new apportionment adopted last year in Pennsylvania, the office of Congressman-at-large from that State will be abolished. The present incumbent is the veteran Galusha A. Grow, who has been a member of the lower house almost continuously since 1851, for the first six years as a Free Soil Democrat and since as a staunch Republican. He was speaker of the House during the Civil War and made a brilliant record during that critical and eventful period. From 1871 to 1876 Mr. Grow was president of the International and Great Northern Railroad. He was tendered the mission to Russia in 1879 but declined the honor. Mr. Grow was born in Ashford, Conn., in 1823, and moved to Pennsylvania when a lad of eleven years, and has resided there ever since. He was recently proposed as a candidate for Congress in his home district, but refused to be considered in that connection. "I have appreciated highly the honor that has been done me in electing me Congressman-at-large," said Mr. Grow, "and I am satisfied with the record that has been made already."

HON. GALUSHA A. GROW,  
Who retires from Congress at  
the age of eighty.

RECENT MEETING IN NEW YORK OF THE INDEPENDENT TOBACCO DEALERS.—Lacey.

## A Novel War Against the Tobacco Trust.

A UNIQUE battle is on against one of the trusts. A great corporation, with millions back of it, has undertaken to control one of the most prevalent customs—the tobacco habit—in other words, it proposes to do the

tised on every bare wall, in every newspaper, on every bill-board throughout the country, and advertised to be sold at a certain specified price, are offered for sale in the new stores of the trust at a much lower rate. This cut

in the price is announced in conspicuous placards in the stores' windows. Old brands of cigars which formerly were sold for ten or fifteen cents, but which have not of late been on the market, are revived and brought forth and sold for five cents only. The retailers say the name alone remains the same as formerly, while the tobacco is of a much lower grade.

The new store has yet another method of drawing customers. The manager sends to men who are known to be regular smokers a free box of good cigars. The box is accompanied by a letter asking the smoker's opinion as to the cigar and inviting him to the new store. In Chicago alone, it is said, 60,000 cigars have already been given away through the operation of this plan. But there is another inducement still. The new store offers prizes. For each five cents spent in the store the purchaser receives a coupon valued at one-fifth of a cent.

For five of these coupons a certificate is given, and a certain number of certificates presented at one of the stores entitles the holder to a premium. For instance, forty certificates are worth a pair of roller skates for a boy or girl. In order to obtain that number of certificates a man must spend \$10 in the store. For 20,000 certificates the purchaser will receive a grand piano. This would mean that he would have to buy \$5,000 worth of cigars. There are many other prizes, jewelry of all sorts, for instance, and many of these are displayed temptingly in showcases in the stores.

These methods have aroused to determined opposition the retail cigar dealers. In New York alone are 10,000 of them, and at least 7,000 men whose sole means of livelihood is by selling cigars at retail. These men are all more or less affected by the invader. The sentiment against the trust crystallized in a large meeting in New York, where a committee was appointed to devise means of fighting the new cigar trust. The call to this meeting was picturesque; and it expresses the strong feeling of the men who are most deeply concerned.

The weapon to be used against the tobacco trust is the boycott. The retailers have decided to keep in the background all the goods made by the American Tobacco Company, which is said to be the parent of the United Cigar Stores Company, and to sell as much as possible the cigars manufactured by independent manufacturers. "We will throw the trust goods under the counter," as one of the retailers expressed it at the meeting, "and only sell them when a customer demands them. We will display the goods of the independent manufacturers in our windows and showcases."

It is on the cigars made by the American Tobacco Company that the low prices are advertised by the United Cigar Stores Company. The retailers believe that by reducing the sale of "trust" cigars they can eventually force it to abandon its retail stores, for at the same time that they are refusing to sell its goods, the retailers are

giving substantial encouragement to the "trust's" competitors, the independent manufacturers. It is said, however, that the tobacco trust at one time spent four million dollars in advertising and pushing a single brand of plug tobacco, and that after that brand was established it alone made a profit for the "trust" of twelve million dollars. So the fight will be a long one and a hard one, with thousands of men on one side fighting for their livelihood against one of the wealthiest, greediest, and most highly inflated corporations of the country.

### Greeley's Hatred of Dead-heads.

MOST editors will appreciate the feeling which prompted Horace Greeley once to remark to Dr. Cuyler, as recorded in the latter's recent biography: "I am continually beset by various clubs and societies all over the land to donate to them the *Tribune*. I always tell them that if it is worth reading, it is worth paying for. The curse of this country is the dead-head. I pay for my own *Tribune* every morning."

Good health is real wealth—Abbott's, the Original Angostura Bitters, is a veritable fortune to the weak.

A SURE DEATH FOR THIS TRUST.

WHERE THE TRUE CURB OF MONOPOLY LIES. APPEAL TO NATION'S LEGISLATORS AGAINST AN OPPRESSIVE COMBINATION.  
Hamilton's Cartoon in Judge.

retail cigar business of the large cities. Against this company the cigar dealers of New York and Chicago and other cities have united, and the conflict is raging. The United Cigar Stores Company, or the cigar trust as it is called, has made a spectacular attack. It has opened stores in several of the large cities of the country. In New York there are thirty-three, in Chicago a somewhat smaller number, and fewer still in Pittsburgh, Baltimore, Philadelphia, Providence, R. I., Syracuse, N. Y., and Newark, N. J. These stores have expensive fixtures and are made as attractive as possible. But these are not the only methods of the company in obtaining trade and driving out competition.

The system of the new cigar trust, the dealers complain, is something like this: The agents of the trust approach the proprietor of a prosperous cigar store and offer to buy him out. They accompany the offer with a threat that unless the retailer sells at the figure which the agents name, the trust will open a cigar store near him and steal away his customers. If the dealer refuses to sell, the next step of the company, it is said, is to obtain his lease, when it has expired, at a higher price than the small dealer can afford to pay for it. If this step is successful, the big company takes the store, puts in its own fixtures, advertises in its own way, and sells cigars and tobacco to the customers of the dealer who has spent years in building up a trade. This dealer, his location gone, his customers buying their cigars of his enemy, is discouraged, heart-broken, and ruined.

Suppose that the dealer is successful in holding his lease, the cigar trust opens a store near by and enters actively into competition. Having established its store the trust begins putting into practice several plans for obtaining business. Brands of cigars extensively adver-

ALI BABA AND THE FORTY THIEVES.

REVISED BY "JUDGE."

Once, in a prosperous country, lived two brothers named Cassim American Tobacco Trust and Small Dealer Ali Baba. The younger, Cassim, was very rich, while Small Dealer Ali Baba was poor and struggling. In the house of Small Dealer Ali Baba lived a faithful servant called Republican Party, who discovered the smooth tobacco merchant in hiding with his notorious band, known as the "Forty Thieves." Cassim American Tobacco Trust and the aforesaid forty thieves were, as they supposed, safely concealed in large jars which were standing in Uncle Sam's back yard. She went one evening to investigate, when a voice from within the jar (supposed to contain good things for the public) asked, "Is it time?" The captain had been waiting for quiet in the house, that he might tell his comrades in the jars that they were ready to kill Small Dealer Ali Baba and all his family. She kept her own counsel, however, but started to do things. She lighted the fire of investigation of accumulated evidence and set the pot a-boiling on the fire of righteous indignation. As soon as the pot had boiled and its music had been heard in Congress this faithful servant, known as the Republican Party, dipped from the said pot a good supply of boiling anti-trust liquid and poured it into the big trust tobacco jars. Of course the robbers were smothered within their jars and could not survive the ordeal, which was exquisite torture. They squirmed and twisted like Greco-Roman wrestlers, and howled and shouted until they were done to a turn, and their voices were forever after still, for they were dead. Then Small Dealer Ali Baba's business grew and prospered until all things were as they used to be in the good old days.

HAMILTON'S FAMOUS ANTI-TOBACCO TRUST CARTOON IN "JUDGE."

We reproduce this recent cartoon in *Judge*, the comic weekly, which has been hung in the windows of over 10,000 independent cigar dealers in the United States.

BADGE OF THE UNITED DAUGHTERS OF THE CONFEDERACY.

# The United Daughters of the Confederacy

By KATE MASON ROWLAND

THIS SOCIETY, which held its first meeting in Nashville, Tenn., September 10th, 1894, with but two chapters organized, No. 1 of Nashville and No. 2 of Savannah, Ga., now numbers, in 1902, 555 chapters, and has a membership of 26,277. Such a marvelous growth in a period of eight years shows

sidered throughout the South as most offensive and insulting, as applied to the action of the Confederate States, and the chapters everywhere are doing much toward collecting and preserving material for the future historian of the Confederate period.

The memorial work of the society includes the sodding and marking of soldiers' graves, the fencing and keeping in order of Confederate cemeteries, the placing of tablets and the erection of monuments to the men of the 'sixties who fought for the South, or directed her councils in civil life. A gold star inlaid in the stone of the balcony

Confederate States had no general government to bestow medals or other honors upon their heroes, the United Daughters of the Confederacy conceived the idea of presenting them with a cross of

EMBLEM, FLOWER, AND MOTTO OF THE ORDER, COMBINED IN ONE DESIGN.

how strongly the aims and ideas of the association appeal to the hearts of Southern women. No other patriotic society arouses the enthusiasm that does this one. Doubtless the secret lies here: Not only are these women interested because they are nearer in time—though its form has so completely passed away—to the period held in remembrance than to the era commemorated by the Colonial Dames and the Daughters of the American Revolution, many of the older members remembering well "the grace of a day that is dead," but also they represent a cause which is misunderstood by more than one-half of the American people, a cause which it is part of the mission of the United Daughters of the Confederacy to explain and to defend. And not as a "lost cause" do they hold it, but as one embodying undying principles, the principles of 1776 applied to the conditions of 1861.

A society reaching the numerical proportions here indicated, and yearly on the increase; a society extending not only throughout the late Confederate States and Maryland, but also to be found in the District of Columbia, California, Indian Territory, New York, Pennsylvania, Ohio, Indiana, and Oklahoma Territory, is naturally attracting attention. An invitation, which was, however, declined, was received last year by the president of the United Daughters of the Confederacy to appoint a Daughter of the Confederacy Day at the Pan-American Exposition in Buffalo. And the unveiling of the Lee tablet in the Hall of Fame, New York City, was conducted under the auspices of the United Daughters of the Confederacy, their president being invited on from Florida for this purpose.

Eligibility to membership in the United Daughters of the Confederacy embraces descent from all men who served the Confederacy in any way, the wives, widows, sisters, and nieces of the same, and all women who aided the cause, and their lineal descendants. The objects of the United Daughters of the Confederacy are five-fold—historical, educational, memorial, benevolent, and social. In furtherance of their historical and educational aims, the

at the State Capitol at Montgomery, Ala., placed there by a local chapter of the Daughters of the Confederacy

honor, their woman's organization representing the federation of States for which these soldiers had fought. This iron cross of St. John, with the Confederate battle-flag on its face, surrounded by a wreath of laurel, bears the inscription, "The Southern Cross of Honor." On the reverse is the motto of the Confederate States of America, and the date, "Deo Vindicta, 1861-65," with the inscription: "From the U. D. C. to the U. C. V." Over 12,500 of these crosses have already been presented, and the greatest appreciation of the testimonial is shown by the old soldiers. In Georgia the Confederate veterans have memorialized the Legislature to make the wearing of this decoration by any unauthorized person a penal offense. The cross of honor, in one instance, was pinned on the breast of a dying man. In another case, by his last request, the decoration was placed on the stilled heart of one who had already "fallen asleep." Doubtless these simple, unofficial tokens of well-deserved respect for soldierly valor will be treasured as heirlooms by the descendants of their recipients for many generations.

GENERAL ROBERT E. LEE, Leader of Confederate forces.

JEFFERSON DAVIS, President of Southern Confederacy.

STONEWALL JACKSON, Southern military hero.

MRS. BASIL W. DUKE, Kentucky, president Kentucky division, 1898-99.

MISS WINNIE DAVIS, "Daughter of the Confederacy."

MRS. EDWIN C. WEED, Florida, President United Daughters of the Confederacy, 1900-01.

## Many New Post-offices.

FEW THINGS afford a better index of the progress of this country in population, and also of the character of the increase, than statistics of the Post-office Department showing the number of new post-offices created during the year. Thus it appears that in the year ended July 1st, 1902, there was a gain of two hundred and ninety-four post-offices in this country, involving an increase in the salary accounts of \$541,300. Accepting the view of the venerable Edward Everett Hale that every post-office is equivalent to a public school as an educational agency, these figures have a still larger meaning and significance.

## The Finest Drink

WHEN YOU ARE EXHAUSTED.

HORSFORD'S ACID PHOSPHATE in a glass of cool water, revives, strengthens, and permanently benefits. Far better than lemonade. It induces restful sleep.

## Baby's Diary.

A unique and handsome publication wherein to record the important events in baby's life has just been issued by Borden's Condensed Milk Co., 71 Hudson Street, New York. It is not given away, but is sent on receipt of 10 cents.

TELEPHONE SERVICE is the twentieth-century means of communication. Rates for residence service in Manhattan from \$48 a year. New York Telephone Co., 15 Dey Street, 111 West 38th Street, 215 West 125th Street.

MRS. KATE CASELL CURRIE, Texas, president United Daughters of the Confederacy, 1897-98.

MRS. M. C. GOODLETT, Tennessee, first and honorary president United Daughters of the Confederacy.

Daughters of the Confederacy in South Carolina have placed medals in the colleges, to be given to the best essayist on subjects connected with the Confederacy, the doctrines of States rights, secession, etc. In every Southern State the Daughters have assisted the Confederate veterans in their efforts to secure Southern or non-partisan histories in the public schools of these States. The association, following the precedent of the United Confederate Veterans and the Daughters of the American Revolution, has passed a resolution on the name of the war, protesting against the phrase, "War of the Rebellion," which is justly con-

marks the spot where President Davis delivered his first inaugural address. And the Daughters of the Confederacy in every State are now working to complete the collection of funds for the erection of a noble memorial arch to Jefferson Davis, to be placed in Richmond, the Confederate capital.

Through the benevolent work of the Daughters of the Confederacy many indigent veterans and their families are aided. Employment is found for those who need it, the daughters of veterans are educated, beds in hospitals supported for Confederate veterans, and assistance given in the support of soldiers' homes. Southern women who have formed chapters in Northern cities, as in New York and Philadelphia, have naturally accentuated the benevolent and social features of the society, entertaining the Southern stranger and providing for the young Southern girl in search of work. In Philadelphia positions have been obtained at Wanamaker's and other large stores for protégées of the society, and the Daughters there, as well as throughout the South, pledge themselves to deal, as far as possible, with these establishments. So much custom came to one of these firms on this account that they wrote to the Chapter: "Give us another Daughter of the Confederacy!"

Touched with the thought that the veterans of the

MRS. A. M. KAISER, Georgia, vice-president and acting president United Daughters of the Confederacy, 1895-96.

MISS KATE MASON ROWLAND, Virginia, corresponding secretary United Daughters of the Confederacy, 1897-99.

MRS. JOHN P. HICKMAN, Tennessee, recording secretary United Daughters of the Confederacy for seven years.

# Aboard an American Training Ship

NAVAL APPRENTICES ON FARRAGUT'S HISTORIC FLAG-SHIP.

FARRAGUT'S FAMOUS old flag-ship, the *Hartford*, is still one of the most useful vessels in the United States navy. Although she is no longer of avail on the fighting line, being, with her wooden walls, unfit to cope with a modern armor-clad equipped with big guns, she is serving a most excellent purpose as a training ship for naval seamen. Antiquated as she is, she is staunch and spacious, and, as ships go, furnishes comfortable quarters for those aboard of her. Supplied with engines, she retains her masts and sails, and as a fine specimen of the old-fashioned type of American war craft, she would attract attention apart from her historic career.

The *Hartford* returned recently to the Brooklyn Navy Yard for repairs, after a cruise of six months in West Indian waters, and was an object of interest to thousands of visitors. Her southern voyage was begun on February 2d at Newport, R. I. She carried three hundred apprentices and a regular crew of one hundred and ninety men, and there were in all five hundred and eight persons on board; a pretty large contingent for a vessel only two hundred and twenty-six feet long and of only 2,800 tons. Yet there was space enough for all, and the old ship proved herself as reliable as a sailer as she was roomy, weathering a hurricane in good shape and getting back in very seaworthy condition. Her captain on the trip was Commander William H. Reeder, who was formerly in charge of the school-ship *St. Mary's*, an officer whose ability and experience in such work render him particularly fitted to be at the head of a naval training school. The captain was aided in his responsible task by a corps of intelligent and capable officers. The apprentices on board consisted mainly of former boys from the West and Northwest, and dozens of them beheld the sea for the first time after they had enlisted. Yet they proved to be excellent material for seamen, and Captain Reeder declared that he never saw a better lot of sailor boys in his life. They qualified rapidly for advancement to a higher grade and are now serving on various vessels of the navy. It is no wonder that the young fellows took so zealously to their work, for under the act of Congress there is in each one of them the possibility of an admiral.

The *Hartford*, after stopping at a number of ports en route, spent five weeks sailing about the Gulf of Perea, near Port Spain, Trinidad. The weather was exceedingly warm, but the apprentices were worked hard in handling the ship, drilling, and target practice with the large guns and small arms. The boys were kept so busy that they had no time to get homesick, and there was no serious illness among them. Port was usually made on Saturdays and the lads were given shore leave on Sundays. On at least one occasion one hundred and fifty of the youngsters displayed their mettle in a lively and successful fight with three hundred negroes who had attacked some members of the *Hartford's* crew. It is believed that this latest batch of "*Hartford* graduates" will be a distinct accession to the personnel of the navy.

After leaving the West Indies the *Hartford* came home by way of Galveston, New Orleans, Mobile, and Pensacola. At no port in any of her cruises was the old war-ship greeted more enthusiastically than at these Southern cities, upon some of which during the Civil War she trained her guns. At New Orleans and Mobile the welcome was extremely warm. Ex-Confederates would come aboard in troops and say to Captain Reeder: "Well, we tried our best to sink her during the war, but we're mighty glad now that she's still afloat." The officers and crew were treated most hospitably and every evidence was given that the Southern people take as much pride in the navy of the reunited country as do their brethren of the North. The *Hartford* got back to the coast of Massachusetts during the celebration of "Old Home Week" in that State, and the apprentices were paraded at Marblehead, Salem, and Beverly. Their marching and evolutions evoked cheers from large crowds. Secretary Moody boarded the vessel and complimented the embryo admirals on their appearance and proficiency in the exercises. A number of members of Congressional committees also inspected the youths and were favorably impressed. Altogether the cruise and its results were regarded as successful beyond the average.

Although the discipline on a training ship is quite as rigid as on other naval vessels, the apprentices when off duty manage to secure a good deal of enjoyment aboard ship. It was an interesting sight when the hundreds of youngsters swarmed their share of the deck, skylarking in various ways, or climbed the rigging with the agility of monkeys. The staid members of the ship's company were very cheerful over their return to their own country once more. The watermelon season was at its height when the *Hartford* reached the navy yard, and there will not often be witnessed a happier group than the sailors

gathered about a dismantled gun, eagerly partaking of their first watermelon feast of the season. The *Hartford* is now on another cruise in European waters with a fresh crowd of apprentices. A very attractive itinerary was planned for this trip by Captain Reeder.

The *Hartford's* trip to Europe last year, under the command of Captain J. M. Hawley, was more than an ordinary event. When the ship dropped anchor in Plymouth harbor, England, in the spring, the three hundred landsmen were still comparatively fresh. It was the first port in the cruise. The ship received honors due by reason of her history. When, however, naval etiquette had been satisfied, the tars of the war-ships in the English port and the people of the town paid Captain Hawley's school a compliment seldom bestowed upon men of years of service. From Plymouth the *Hartford* went to Leith, Scotland, and then, in the order named, to Christiania, Copenhagen, Stockholm, Kiel, Gravesend, La Rochelle, Lisbon, Madeira, Tenerife, St. Thomas (West Indies), and San Juan. In each one of these ports the compliments of Plymouth were repeated.

The crown prince of Denmark visited Captain Hawley when the *Hartford* was at Copenhagen. Most of the school had had shore leave and the hospitality of the city. The

of the *Hartford* during the stay at La Rochelle was the subject of praise by French officers and the French navy.

Admiral Higginson, who visited Captain Hawley a few days before the latter gave up his ship, said the record of the *Hartford* as a training ship was worthy of the record she made for herself and the American navy during the Civil War. And what a record it was! When the war-ship sailed away from Hampton Roads in February, 1862, as the flag-ship of Farragut, the rivers and seaports of the South were in the hands of the enemy. New Orleans was the Richmond of the Mississippi department. Until it fell the Confederates controlled the Mississippi River and impeded the invasion of the South by the Federal army. The approach to New Orleans from the sea was blocked by forts and chains and what were at that time modern appliances of war. The *Hartford*, accompanied by what was then called a fleet, passed the forts by night; the Confederate gun-boats and ironclads were destroyed; the city was compelled to surrender, and General Butler was placed in command. The *Hartford* continued on her way up the river and attacked the batteries at Vicksburg. It was a remarkable occurrence—the American navy pounding away at a fortified inland town! The backbone of the Confederacy had indeed been cracked, and the writers who had been keeping the record began calling the *Hartford* the "Old Ironsides of the navy of the Civil War." There is not an American schoolboy who does not know the story of the *Hartford* at Port Huron, while her dash over the torpedoes in Mobile Bay in 1864 is only minimized by the brilliant victory in Manila Bay.

The glory of the *Hartford* cannot be diminished by the statement that she was rebuilt in 1899. The framework is that of the flag-ship of Farragut. The hull is the same which passed the forts at New Orleans; which went to Vicksburg; which went over the torpedoes in Mobile Bay. The two wheels which steered her in her memorable battles are the same now shown to visitors, and are, at some time in the cruise of the landsmen, a part of their naval education. The bell which rings out the time familiar to seamen is the same bell to which Farragut and his invincibles listened. Everything else which the visitor sees in connection with the *Hartford* has been put in since the ship's history was made. The quarters of Captain Reeder, in which have been received many distinguished visitors, are the handsomest in the navy.

There is no training other than a good physical constitution and character necessary to going out in the *Hartford* as an apprentice. It is taken for granted that the landsman can read and write. In most cases those who have been advanced from the *Hartford* have been young men from good homes. No apprentice is received without the consent of parent or guardian. Sometimes there have been desertions. In such case, unless there is good intention to reform, the apprentice is dismissed when the training ship returns. Leaning against one of the guns of the *Hartford*, one of the crew, who has made many cruises—a cruise to an old seaman is the time of an enlistment, four years—said in his simple and honest way:

"These boys who come on to learn to be seamen are green enough at the start, and nobody blames 'em, sir; for it's a world of its own and we have a language the landsmen don't understand. Many a boy who comes on to learn has to be told over and over again what we call things. We tell him to go above; he calls it up-stairs. We tell him to go below; he calls it down-stairs. There's no stairs on a ship. We tell him to go to one of these ports, sir; he calls 'em windows. It takes many a day for him to forget the talk he learned at home. Each petty officer takes a certain number of the landsmen and drills 'em every day in ship work. You may not know that when we are at sea we sail the *Hartford*. It's only when there's a storm or big headwind that they use steam. In this way the youngsters learn all about going aloft; all about reefing sails; all about bending sail; and spar drill. No boy is ever allowed to go aloft the first time unless a petty officer is with him. It's just the same here as it is in anything. Some boys learn it right off; some never learn."

"But there are some things they must learn. There's the watch system—the first, second, and third watches. The first watch is from noon till 4 p. m., the second from 4 till 6 p. m., the third from 6 till 8 p. m. Then there's the dog watch from 4 till 8 p. m. Then comes the first watch at night from 8 up to midnight; and the second from midnight to 4 a. m.; then the third from 4 a. m. up to 8, when the first watch I mentioned begins again. Seven bells is breakfast; eight bells is breakfast for the relief watch. Nine-thirty o'clock is quarters, and then drills up to 10:15. The drill consists in handling small

crown prince said to Captain Hawley that he had taken pains to inquire concerning the conduct of the young Americans and had learned from his officers and the officials in the city that there had not been a single infraction of propriety. He thought this very remarkable and said that he could understand, after what he had heard, why the navy of the United States was the most effective in the world. The *Hartford* chanced to be at Kiel at the season of mourning in Germany caused by the death of the Dowager Empress, mother of the Emperor. The Emperor was consequently debarred from visiting the vessel. He sent a representative, high in German naval ranks, who extended the freedom of Kiel to Captain Hawley and his ship. Every consideration was bestowed upon the school during its shore leave. Just before the *Hartford* weighed anchor the Emperor's representative sent a message to the ship complimenting the crew and the school on the "most excellent conduct" of both. Not a single reprimand was in waiting after the visit to Kiel.

At La Rochelle the flower of the French navy was in the Bay of Biscay. It was during the manoeuvres of the ships of the European republic. There the great guns roared a welcome to the historic *Hartford*—in appearance insignificant. The demonstration was regal. General Andrae, one of the most popular men in France, visited the *Hartford*, with his staff, and inspected her. At a banquet tendered General Andrae and the officers of the ships in the bay, Captain Hawley appeared as a specially invited guest, being accorded first place at the right of General Andrae. The conduct of the crew and the school

# Thunder Mountain's Great Gold-field

By Watson Wilder

HOWEVER FRE-  
QUENT the dis-  
coveries of rich de-  
posits of gold may be,  
they never fail to ex-  
cite the pleased inter-  
est of mankind. The  
quantities in evidence  
of this precious metal  
have increased vastly  
during the past few  
years, but as the need  
keeps pace with the  
supply there is no dan-  
ger of a glut in the pro-  
duction. The wide-  
spread desire for the  
commodity shows no  
signs of decreasing.  
Hundreds of mines are  
being developed and  
worked to their fullest  
capacity, and myriads  
of prospectors are con-  
tinually looking, in fa-  
vored regions, for new  
placers and veins,  
with the firm assurance  
that the world will gladly absorb for its  
uses an unlimited output of gold.

In various sections of the United States gold-mining is the leading industry, and new localities that promise good yields are being found yearly. A most valuable recent addition to these gold-producing areas has been made in Idaho, whose importance as a mining State is not generally appreciated. This latest territory to be exploited is the Thunder Mountain district in central Idaho, and to it at present the attention of multitudes of miners and scores of capitalists is directed. Gold was first discovered in that region many years ago, but owing to the rugged and almost inaccessible nature of the country, the difficulty of mining the metal without modern appliances, and its low grade, the early prospectors decided that it would not pay to operate there. They gave out unfavorable reports as to the possibilities of the place, which deterred others from venturing to it and thus postponed its development until a year or so ago. Eventually, however, some enterprising men made their way to Thunder Mountain, were impressed with their "find," staked out claims, partially tested their value, spread the fame of them abroad, and finally sold them for a large sum—\$100,000 or more—to the Thunder Mountain Gold and Silver Mining and Milling Company, of Pittsburgh, Penn., of which Colonel Dewey is the leading figure, the company's mine being named after him. This company's doings first brought the district into great prominence. It has dug out considerable ore, has a ten-stamp mill at work, and is apparently making an ample profit

on the money in-  
vested.

Other companies as well as individuals have acquired mining tracts in the district and have begun operations. Good strikes are being reported from all directions and there is every indication that this will be one of the biggest mining camps in our history. A town, named Roosevelt, has been started and is already replacing its tents with substantial cabins. A wagon road to the outside world has been completed, and soon a large amount of machinery, it is said, will be freighted to the mines, to add to the district's bustle and productivity. But lit-

tle gold can be secured in the district without the use of machinery, though with the latter very profitable results are obtainable. It is probable that most of the work will have to be prosecuted by corporations which start well financed or which secure the necessary means by the sale of stock. There will doubtless be not a few of the latter sort, for the district, being twenty-five miles long and twenty wide, offers scope for many enterprises.

Thunder Mountain, the centre of the district, is 8,700 feet high, and it has a near-by companion in Rainbow Mountain, which is also of high altitude and, as some claim, richer in gold ore than Thunder Mountain itself. Thunder Mountain is surrounded at a distance of seven to ten miles by an amphitheatre of higher elevations, principally crater cones and basins. Evidently the whole district was once a depression which afterward was filled with volcanic matter. Gold pervades this matter extensively, as if a great volcano had formerly poured forth a mighty flow of golden lava. The material is quite easily excavated and the ore is free-milling. Its value generally is estimated at not above \$6 per ton, although there are streaks that run up to \$1,000 per ton, while one four-foot vein is said to average \$20 per ton. The ore, however, where it is worth handling at all is so abundant, so readily mined, and so tractable to treatment, that even at the lowest figure mentioned it returns an adequate profit. Thus, in spite of the exaggerated statements that have been made, there seems to be substantial grounds for predicting prosperity for the new camp.

### The Drama in New York.

A SUCCESSION of novelties continues to mark the progress of the dramatic season in New York. Much interest was felt in the opening of Mrs. Osborn's "Play House," as she chooses to term it, the handsome little handbox of a place on Forty-fourth Street, near Fifth Avenue, intended principally for the "400" and those who aspire to that distinguished social set. Curiously enough, no revival of Shakespearean plays or of the modern refinements of the histrionic art were singled out for the programme at the new theatre. On the other hand, a burlesque and variety performance, unfortunately entitled "Tommy Rot," was selected as the opening attraction. It is not much to say for it that it is a better performance than can be found at the much-vaunted and very much disappointing Weber & Fields' theatre. But "Tommy Rot" succeeds because the company embraces several very clever people, at the head of which stands Miss Blanche Ring, whose cleverness in singing, coupled with her winsome smile and saucy air, captures the house every night. There is no reason why Mrs. Osborn's play house should not succeed. It certainly starts off well, though some of the critics have not been entirely fair in their treatment of it.

Another of the newest attractions is "The Silver Slipper," John C. Fischer's musical play at the Broadway. Edna Wallace Hopper, Sam Bernard, and several other popular artists help to make this gorgeous presentation quite as attractive as it is brilliant. The music is lively, the chorus is good, and the two sextets go "Florodora" "one better." The people seem to fancy such productions, and "The Silver Slipper," no doubt, is booked for a long stay. The tuneful Chauncey Oleott, in "Old Limerick Town," a better play than he usually has, is filling the Fourteenth Street Theatre, and Duse, the great Italian actress, by many regarded as the greatest artist of her time, has begun her engagement at the Victoria. Martin Harvey, the English actor, has substituted "The Children of Kings" for "The Only Way" at the Herald Square, and it has met a cordial reception. Mary Mannering, in Clyde Fitch's latest play, "The Stubbornness of Geraldine," has taken possession of the Garrick, and William Gillette has successfully revived "Sherlock Holmes" at the Knickerbocker. Weber & Fields have very wisely brought out "Humming Birds and Onions." Their "musical absurdity," with which they opened the season, was voted a dead failure by every one who saw it. To see it once was to wish that it had never been seen.

"A Chinese Honeymoon" is approaching its two hundredth successive performance at the Casino, which signifies the record number for a musical comedy in this country. It is good enough to last the season through. Other continuous successes include "A Country Girl" at Daly's; Leslie Carter in "Du Barry," at the Belasco, where she is repeating her remarkable success of last year; Henrietta Crossman, in "The Sword of the King," at Wallack's; Ethel Barrymore, as demure and attractive as ever, at the New Savoy; Miss Harned in the closing weeks of her very successful engagement in "Iris," at the Criterion; the lively comedy, one of the best in town, at the Madison Square Theatre, "The Two Schools"; the rattling melodrama, "The Ninety and Nine," at the Academy, and first-class performances at the vaudeville houses of Keith and Proctor. The appointment of Frederick Bond, for many years of the Daly company, as general stage-director of the Proctor stock company, adds much to the efficiency of the latter. JASON.

### Army Men Win Laurels at a Horse Show.

FROM OCTOBER 14th to October 18th there was held in the city of Atlanta, Ga., what was probably the greatest horse show ever witnessed in the South. Coming, as it did, during the Interstate Fair, it was assured of a very large attendance. One of the most interesting features of the show was the performance of the detachments of cavalry and light artillery of the Regular United States Army. Colonel T. A. Baldwin, commanding the post at Camp George H. Thomas, Chickamauga National Park, Ga., received permission from the War Department to have a detail of forty-eight enlisted men and four officers of the Seventh United States Cavalry, and two officers and one section (two guns and caissons) of the Third Battery, Field Artillery, attend the show and give exhibition drills similar to those held in the military tournament at Madison Square Garden, New York City, in order that the civilians might see the sort of work the regular army does in camp and garrison.

Four picked men from each of the twelve troops of the Seventh Cavalry, under command of Captain Edward Anderson, with Lieutenants Kendrick, Commiskey, and Hayden for chiefs of platoons, drilled daily for a month before the show opened and became proficient in difficult feats, which were enthusiastically applauded at the show. The movements in column of fours, the bareback riding, the Cossack riding and sabre exercises while riding Cossack, the throwing of the horses and firing over them while t'rown, were especially good, and reflected great credit on Captain Anderson and his lieutenants, as well as the men.

The section of artillery under Lieutenants Nones and Strong did hard work in camp practicing the six-horse team in making the figure 8 at full gallop and driving through's stakes. These feats also raised the enthusiasm of the lookers-on at Atlanta. Unfortunately the arena at the horse show was not large enough to permit the exhibition of firing that the men wanted to give. The fact that the detachment of cavalry was from the regiment

known all over the United States as "Custer's Regiment," and that the section of artillery was from the "Grimes Battery," made famous in the Spanish-American war, added great interest to the exhibition.

### Hiding the Unfitness of Tainted Food.

THE BUSINESS of concealing and offering for sale food adulterations for deceiving the public into buying food-stuffs rendered unfit and deleterious by reason of age or other causes has surely been carried beyond the bounds of decency and forbearance in advertisements of a compound by the use of which butchers are informed that they will be enabled to keep meats of various kinds "exposed on a counter for a long time without being affected by the changes of the weather." It is also declared, as an additional inducement, that this stuff can be used with "surprising and pleasing results in the washing of poultry and meats that have become slightly tainted." It may go without saying that no civilized being would ever buy meat that had been treated in this way if he knew it, unless forced to do so by hunger or some other dire necessity, and that no dealer, known to be using such stuff, would receive the patronage of respectable people. The only promising revenue for the exploitation of a secret compound like that advertised would be among the meat-dealers in the crowded and poverty-stricken districts of our great cities, where opportunities are always open for taking advantage of the ignorance or the necessities of people to palm off rotten and unfit food upon them at no less price than they would be asked elsewhere for the wholesome articles. And these are the very people who need protection, more than others, from these frauds and trickeries of the food business.

### Pennsylvania—The Coal Queen.

WHILE other States may sow and reap,  
Or forge the sabre bold,  
Or on a heap of glittering quartz  
Sit counting up their gold,  
Or weave the silk or cotton cloth  
To wrap Columbia's form,  
Tis Pennsylvania tends the hearth  
That keeps the country warm.

HER court is in a darksome mine  
Below the light of day,  
And troops of sturdy miners march  
Her mandates to obey.  
Black diamonds crown her dusky brow,  
She never seeks to roam,  
But for the nation keeps aglow  
The sacred fires of home.

HAIL! Keystone State, upon thy throne  
Of ebony anthracite,  
The proudest rulers of the earth  
Bow low before thy might.  
Bright altars to thy name and fame  
From azure sea to sea,  
Twice fifty million blazing hearths  
Send up their smoke to thee.

MINNA IRVING.

### Only Picture of a Dynamite Explosion.

WHILE THE blowing up of buildings with dynamite has often been resorted to to check the progress of fires, or, as in the coal-strike region of late, for purposes of intimidation or revenge, it is probable that the best actual and clear photograph ever taken of such an explosion in its very process is the one reproduced in this issue of LESLIE'S WEEKLY. This picture vividly shows the deliberate destruction of an old mansion in New York City to make way for park improvements. The building belonged to the Bolton homestead, which was situated near the Bronx River, and which was among the pieces of property purchased by the city in order to create a great park in the Borough of the Bronx. The mansion was constructed of stone and brick, and was erected in 1826 by the late James Bolton, proprietor of a dyeing and bleaching establishment, and in his day a prominent business man of that section.

The building had about twenty rooms, and was a fine specimen of old-fashioned dwelling-house architecture. Up to the time of its sale to the park department it was well preserved, having been occupied by none but members of the Bolton family. While not very ancient nor historic, it was a sort of landmark and its disappearance was regretted by the older inhabitants. Recently the building was condemned by the building department and the New York Zoological Society, and instead of being taken down piecemeal in the ordinary way was blown up with dynamite. One hundred and twenty pounds of the explosive was used in destroying the structure, which was heaved up and completely shattered, the process being eminently a labor-saving one for those who had to remove the material. Of course the tearing down of the building in this novel manner was made feasible and safe only by the fact that it stood at some distance from any other dwelling.

### The Fastest Growing Cities.

A RICH MINE of gold, silver, or copper is discovered; it is developed, the ore is mined and milled, and this is the foundation of a little city. The birth and progress of cities among the mountains of the West from beginnings like this is one of the most interesting and picturesque phases of American growth. In other parts of the country are found towns which depend entirely or largely for their population and their existence on a single industry. Health foods are made in Battle Creek, Mich.; shoes come from Lynn, Mass.; collars are nearly all manufactured in Troy, N. Y.; Gloversville, N. Y., is the glove city of the country, and there are several other instances of the same fact; but no cities are so exclusively devoted to a single industry as the mining cities of the West. Denver itself was at the outset little more than a great mining camp; Cripple Creek is a mining centre; a single mine, the Anaconda, of Marcus Daly, made Butte, Mont.; the Camp Bird mine at Ouray, Col., owned by the famous millionaire, Tom Walsh, is responsible more than anything else for the existence of that little city among the Rocky Mountains. And not far from Ouray and near the great continental divide, is the newest mining town site, possessing the alluring name of Goldmont. These mining towns spring up rapidly. Their growth is like the increase in the fortunes of the men who discover gold. To-day there is a barren waste; to-morrow there is a mining camp with its shanties and tents; and next day there is a city.

In Colorado the mine is father of the town. The result of a rich discovery is the opening of a mine, the building of a mill, and the employment of armies of men. These men must live and have their homes and provide for their families, so the town is started. Its location leads to the further development of mines within its district, and these mines become tributary to the town. Instead of founding smaller villages the population of the surrounding country becomes tributary to the city, which already has the start and, consequently, the necessary facilities. It is essential first to have timber and water, and next a railroad. These things are not always available in the tremendous rugged stretches of the Rocky Mountains. The richest mines are sometimes the most inaccessible, and a favorable opportunity for a city is quickly recognized. This is the situation at Goldmont, Col., which has become prominent through the fame of the mines of the Goldmont Mining and Milling Company. It has wood and water and the Denver and Rio Grande Railroad. For the beginning of its population it has the people of the mine. For its future it looks to the development of the rich district in which it is located.

E. C. ROWE.

### The Best Way To Teach History.

THE IDEA of object-teaching, the foundation of the Froebel system of instruction, has in recent years met with general acceptance and adoption in almost every branch of education, high and low, with resultant benefits which are beyond question. Even such subjects as grammar and arithmetic are now taught in this way so far as practicable, and with marked advantage over the old dry and abstract methods. The practice of teaching history by making pilgrimages to the very scenes where great historical events have occurred is an application of the same principle and much more valuable in the way of impressing the reality of history upon the minds of the young than any amount of mere text-book instruction could be. A recent issue of the "Four-Track Series," published by the New York Central management, gives a description of the historical sites in the immediate vicinity of New York, which will be of exceeding value for the guidance of teachers and others who desire to adopt this method of historical study. One of the best ways to develop civic pride and promote good citizenship lies in this very direction, an increase of knowledge of local history being accompanied with an increase of interest in matters of local government and a higher concern for what affects the welfare and good name of the community.

### School Teachers Learn

JUST LIKE OTHER PEOPLE.

BAD food and overwork wreck many a life, but the right food makes sure and complete happiness, for one must be happy if perfectly well.

"Grape-Nuts saved my life, and changed me from a nervous, sick, despondent woman to a healthy, strong and cheerful one," writes Mrs. Alice Riegel of Pontiac, Ill. "I had not been well for several years and I thought, as did my friends, that 'my days were numbered.' My ill health was caused from drinking coffee, eating improper food and overwork in the school room; I had become very weak, tired and nervous, and nothing I ate agreed with me. Medicine made me more nervous and impaired my digestive organs.

"It was with difficulty that a neighbor induced me to try Grape-Nuts and I liked it from the first with thick cream and sugar. I lived on it exclusively with Postum Food Coffee until my digestion was so much improved I could eat other foods. My friends soon noticed the improvement in my looks, and I am now healthy, strong and happy. I attribute the change in my health solely to the change of diet.

"Husband and I both like Grape-Nuts and Postum. I think they are the most helpful and strengthening of all foods and drinks and suitable for the weak as well as for the strong."

SMASH-UP.

## Exuberant Alice Fischer a Healthy Star

By Eleanor Franklin

VIVACITY IS God's most gracious gift to woman. Show me the woman who sparkles and bubbles, who talks with a breezy air of self-command, and listens with earnest, sympathetic interest; who laughs at everything and nothing, and weeps with one upon the slightest provocation; and I will show you a woman whose house is overrun with friends, whose calling list is too long for comfort, and who plays nerve-force supply station

Dresses "severely plain," and has a waist line which points upward in front. I say she is usually like this, but once in a while there is a glittering exception, and then Sunday-school becomes much less uninteresting. Alice Fischer was born in St. Stephen's Episcopal church in Terre Haute, and every old lady and old gentleman in the parish stands ready to claim her as her or his very own because each of them had something to do with her bringing up. We all know about the evolution of a girl baby. If I could draw I'd waste few words in descriptions. A variety of facial expressions and dress lengths, and there you have a "song without words."

As Alice Fischer developed a shock of curly hair and a boisterous laugh she began to show signs of great dramatic talent. She became star reciter at all the church entertainments, and prime mover in all the amateur theatricals in town. She got up entertainments to pay off old debts not only for her own church but for others.

A hospital was much annoyed by a debt of six hundred dollars which the directors could not pay. Young, exuberant Alice, being a personal friend to some of the sisters and the parish rector, took the matter in her own hands, got up a dramatic recital in which she played the principal parts, managed the stage, and recited between the acts; and it was so successful that next morning after having paid all expenses, she was able to send a

LISTENING FOR HER FIRST  
ENTRANCE CUE.

for a list of less blessedly exuberant people as long as from here to the banks of the Wabash.

That's Alice Fischer! I say exuberance is God's most gracious gift to woman, and that sounds like passing up a number of time-honored blessings which at first sight seem to deserve precedence. There is virtue—which some cynic says "is its only reward"; gentleness—which "turneth away wrath"; beauty—which is a very poor thing in itself unless it gleam from an inwardness; patience—practiced by simple-minded women whose husbands call their Pecksniffian inactivity by the same gentle title, humility—which belongeth not to the twentieth-century woman, and others. Yes, a list that would have to be put down in alphabetical order if one would get them all. Indeed, I had forgotten one of the most important already. Modesty—a blessing which men like not, since they do all in their power to eradicate it.

"The life of woman," says an epigrammatic Frenchman, "is one long dissimulation; candor, beauty, freshness, modesty—a woman has each of these but once." But Frenchmen make epigrams for Frenchmen. Vivacity is God's most gracious gift to woman because it is merely the sparkle of a cut diamond soul. A bad woman is never happy, and an unhappy woman is never healthily vivacious. She may be feverishly so, but doesn't it make one ache? Doesn't it make one cold?

It's the woman whose laugh has still a child note in it, whose "soul's windows" are wide open and unblurred by any earth smudge, who has truth written in every healthy line of her being, who "scatters sunshine all along the way" as the old Sunday-school song tells us all to do.

When Alice Fischer was a child out in Terre Haute, Ind., they say—those who knew her then—that she was exactly the same overgrown girl that she is now, after years of hard work in a profession which almost invariably, and in a short space of time, takes the ring out of a woman's laugh, the elasticity out of her step, and the lustre out of her eye. She is the most striking illustration I know on the stage to-day of how to be healthy though an actress. Health! What an exhilarating word. I wonder how in the process of language-building it ever came to rhyme with wealth. It always makes me think of a big red apple which one may eat with a certain feeling that "there ain't goin' to be no core."

Every child should be brought up on the motto, "Keep Healthy." Medical skill can do much for us, but "thou canst not minister to a mind diseased," says the Great Teacher. Alice Fischer was thrust into the dramatic profession by a clergyman, and if the church really desires to "uplift the stage" one might suggest that it open a theatrical agency through which a few more such bright spirits might drift into a business which needs them sorely enough. In every town, or rather in every church circle in every town, there is always one young woman who is known as the "moving spirit." She is usually president of the Y. P. S. C. E.; she teaches a class in Sunday-school, the most ruffianly bunch of from ten to fourteen-year-old boys, as a rule; she superintends all the children's day exercises, teaching the precocious members of the infant class little pieces—thereby doing great good work toward developing early vanity. She always recites, sings, and plays the Sunday-school organ herself, and likewise has a head chock full of schemes for raising the deplorably necessary wherewith to keep the church doors open and the fire in the pastor's study aglow.

This young woman usually wears glasses, has straight mouse-colored hair, and a wart somewhere in full view.

check down to the hospital for the full amount. Then it was the Rev. Mr. Dunham, the rector of Miss Fischer's Episcopal church, decided that she must have a career. He said she ought to be on the stage and that he intended to take measures to put her there.

That was rather a unique position for a girl to be in, don't you think? Rather a difficult one too, since failure in such a case would have borne so much greater sting than ordinarily. Miss Fischer came to New York and Mr. Dunham took her himself to a school of acting and there left her with a supposedly open road to success in front of her. Success! The word seems to recede as one writes it. For most of us it is spelled out in letters of burnished gold on the horizon of the future—a horizon which seems always broadening, broadening! In all the schools of acting in New York the girl students are very much in the majority, and it is a constant question of interest to the teachers where to get boys to play all the male parts in the plays that are used as studies. There are not enough, that's all; consequently the girls have to play boy's parts, and the indiscriminate way in which they are sometimes cast results in burlesque. For instance, I have seen a tall, gangling, over-grown girl playing Lady Tenzle to the Sir Peter of a piping little soubrette who danced through that gruff gentleman's righteous indignation on tiny, high-heeled boots and with an expression on her face which plainly said: "I'm the only person in school who could do this—but for me? pouf! I could just die doing it."

Now there is a great deal of Alice Fischer in every way. A small friend of mine said one day after basking a short time in the glow of her large geniality, "My! she reaches all the way down to the ground, doesn't she?" Yes, she does, and I can imagine that in a school of acting she would be a natural target for all the impossible parts and unpleasant duties.

By way of "getting experience" a great many students in the schools of acting do "supe" duty at the down-town theatres, and it is in this way some of them get their first engagements. During Miss Fischer's student year Lawrence Barrett was playing "Julius Caesar" and he sent to the schools of acting for people to go on in the mob scene. Miss Fischer volunteered, and when she marched up to the great star with all her magnificent Romanesque beauty he exclaimed: "Ha! she is the noblest Roman of them all!" and placed her where she would "dress the scene" to the best possible advantage. After the rehearsal he asked another student who the tall girl was and she answered, "We call her the tall sycamore from the Wabash." This caught Mr. Barrett's fancy and he began to take a personal interest in her, so much so, in fact, that through him she received her first engagement and counted him a warm friend to the end of his life.

The family opposition to Miss Fischer's adopting the dramatic profession was rather peculiar. "My mother," she says, "had always heard and read about so many actresses dying in garrets—you know. Well, now, of course she didn't want me to be going and doing anything like that right away—you know how mothers are!" Yes, mothers are like that sometimes, but it must have made this particular mother's heart swell with pride when, the day following her daughter's departure for New York to begin rehearsals for her first engagement there, every minister in the town where she was born paid tribute to her from the pulpit, praising the beauty of her happy, useful girlhood among them, and wishing her God-speed on her way through life and success in a profession in which every woman must climb a rickety, dangerous ladder.

# The Man Who Came Home

By Charles Gordon Rogers.

THE MAN in gray tweeds had walked a long way, it seemed, for the dust was thick on his boots. Though in the eye of the country-folk upon the road he was a stranger, he appeared to know his way well, if he were going to Littleton; for within the last mile or so he had made short cuts by meadow and lane. He smiled as he noted that almost every landmark was the

realization intact of the impression which for seven years had remained indelible upon his mind. For he had walked the ten miles intervening between the city and the village because every rod of highway and byway was dear to him.

When he came to the top of the last hill of his pilgrimage he stood for a while looking down upon the little town that had been the Mecca of his thoughts and dreams for seven years in far Brazil. He had changed; but the village, save for here and there a modern house-top, and perhaps the spire of a new denomination, was the same—the same as when he had taken the long white road, over which he had just returned, leading out to fortune and the world. And the earth—not the world—had given him fortune. His Brazilian mine had made him rich enough to raise every mortgage in the county. And now he craved of the Fates one thing more—that for which he had come—that for which he had striven seven years—the hand of the girl who lived in the house behind the poplars over there, under the hill—the redemption of the promise she had made.

It was a Sabbath evening, beneficently calm. The red of the setting sun lingered upon the river winding leisurely through the town, and burnished auriferously the westward windows of the houses on the hill. To right and left of the man who had come home stretched the meadows of his boyhood and his youth, as green and pastoral as then. They were dotted with cattle and sheep, vague blotches of red and white; for twilight, violet-hued, was gathering over all, and in the darkening blue one star, above the house behind the poplars under the hill, blossomed and grew.

The bell of the church below him, in tones mellow and melodious, began to ring; the auricular symbol, it seemed to his imagination, of the Sabbath peace pervading all. Perhaps unconsciously the bronzed and bearded man who stood at the top of his last hill removed his hat.

"She is sure to go to church," he said aloud, the present tense of speech linked with the reminiscence of thought. "She always went. She is going now, down the lane, perhaps at this moment with her hand upon the five-barred gate at the end." He passed a brown hand over his eyes. In a moment he made his final plan. He had made a score in the last three hours. "I haven't been to church in seven years," he said. "Not since—" he nodded toward the distant spire. "I'll go."

He would sit unseen, or at least unguessed, in the back pew, where he had sat when a boy. He would see her come in—he thrilled as of yore. It did not occur to him that she must have changed. He thought of her now as he had thought of her for seven years; the image in his mind's eye was the reflection of her face, a girl's face, as he had seen it last. So it had been during all the years of exile. He had lived, though his life had been strenuous, in a groove. He knew he had changed from a stripling to a man; but that time could have changed her did not occur to him at all.

Well, when the service was done, he would watch for her by the gate. It would be dark then. His pulse

quickened as he stepped out with the old-time stride that had carried him as a youth so often and so well over this very bit of road.

As he reached a large, newly finished house of red brick that stood aggressively above the neighboring roofs, a man who had been looking up at the new house stepped out and parallel with him.

"Good-evening!" said the man who had been looking at the house. He was dressed in black, and carried a couple of large, leather-bound books. He walked erect and carried his head high. He cast a keen glance at the man with the brown beard.

"A stranger, I presume?" he said.

The "stranger" smiled, and murmured an affirmative reply. He remembered his questioner very well.

"Going down to the village?" said the man in Sunday black, shuffling his feet to get in step with the stranger's stride.

It was a self-evident fact, but the man in tweeds smiled again. The moods of the men were in tune; each was elated, though the exhilaration of either differed from that of the other in form.

"Yes," said the man who had come home. "I had thought of going to church; if," he added, and smiled as the idea traveled from brain to tongue, while he glanced at the books carried by the man in black, "if the stranger is welcome to a seat."

The man in Sunday black clicked his lips. He beamed. "I can assure you of that!" he said. "I'm one of the trustees." His head inclined a little sideways, his glance from the corner of an alert and questioning eye searching perhaps for a sign of the impression made by this bomb of information upon the man in dusty tweeds.

The latter nodded appreciatively. "So?" he said. He was smiling in his beard at the idea of this man, as he remembered him, having become a trustee.

"You come and sit in my pew," said the trustee. "I won't take a 'no.' Lots of room. I'm glad you came to-night, though," he added, "for there won't be quite so much room in another fortnight, you see." He laughed outright.

"So?" said the man who had come home, his interest quickened.

The trustee jerked a thumb over his shoulder. "That house," he said, "the big, new one—" He broke off. "You noticed it?"

"It's very fine!" said the other with real enthusiasm. He had caught the inferential significance of the trustee's words.

"The finest in the township!" said the trustee. "And I've spent a thousand dollars in furnishings, too! It's fit for a queen; and she's a queen that's going into it, too! The handsomest woman, I take it, in these parts."

"You are a lucky man," said the one who had come home. He was wondering if all lovers thought alike.

"I'm self-made," said the trustee. "You may call it luck if you like. My name's Atherton." His chest swelled, and he swung his arm with the books. "Five years ago—no, seven—I hadn't a cent. I was just a hand in a small brick-ya d. But I got my eye on a bit of land down the river—I knew it for the right sort of clay—and I raised the money and bought it for a song. Then I got another chap to go in. I had the experience and he had the cash. Then after a while he dropped out." The trustee paused and laughed.

"I see," said the man who had come home. "Then he had the experience and you had the cash." He had seen the same thing done in Brazil.

The trustee stared hard, but the other man looked serene. "Well, then the railway came," he said, as if with an effort, resuming his tale. He was still turning over the stranger's last remark. He would get even for it. "And after that came the building boom in the city. They couldn't get brick fast enough. I guess that's about all," he added, lamely, in a tone at once abstracted and abrupt.

"You'll come right into my pew," he said, with decision, as they reached the church gate; and together they entered the church.

"If he has not recognized me, no one else will," thought the other, as they entered a pew half way up the little aisle.

The church was filling, and the organist had begun to play. The man who had come home, sitting by a window, looked out upon a remembered scene of wood and meadow, now grown dim in the dusk. He caught the familiar perfumes from field-flower and wood; he heard the old-time chirrup and chirp of insect and bird; and sight and scent and sound in the balm of even and the atmosphere of home thrilled him with a pleasure as poignant as pain. Then a sound, the sound of a woman's skirts—the rustle of silk—brought him back from his memories and the dusk, and looking up he saw—her.

It was she—she, but changed and glorified. He could only stare. The fact that he had not in his constant thought of her calculated upon the inevitable transition from girlhood to womanhood, the change of seven years, struck him now, perforce, and he reflected that he had been singularly blind. Yet he would not have had it otherwise. He had been blind to all else; he had been faithful to the memory of the girl's face stamped upon his vision at that last parting, and he could not, had he thought of it, have imagined her changed. But now—and it seemed a tender mockery of his devotion to the face of the girl—he saw her grown a woman, the apotheosis of beauty to his yearning eyes.

Stirred and vibrant with emotion, now that he was almost face to face, he was unconscious of the fact that the man at his side was alternately watching him and the woman who was the target of all eyes. The glance of the trustee traveled quickly from the conscious woman to the first profile of the unconscious man, and the expression of his small eye was at once malicious, fatuous, and shrewd.

"I'd like to tell him," he said to himself, with a proud proprietary feeling. "It'll knock him when he hears!"

The man who had come home grew tired of waiting. He was impatient, feverish. That she should sit there, almost within arm's reach, and not know; that he could not speak to her—it was becoming unendurable. Would the dreary little curate never have done? Ah, the Magnificat now! The same old tune, beautiful, that the choir had sung seven years ago. "And the rich he hath sent empty away." Well, he was rich now; richer than Littleton had ever known. Not that he cared for himself for the riches, though the getting of them—he remembered with regret—had become a fever. But she would never have to send any one empty away. She had always been good, like that. And she should have such a house, on the hill—wherever she listed—he thought of the architecture and the art of the house of the man at his side, and of the one thousand dollars in furnishings, and smiled. The curate saw him, noticed that the stranger was a man of intellect, and flushed.

"IT WAS SHE—SHE, BUT CHANGED AND GLORIFIED. HE COULD ONLY STARE."

MISS ELEANOR GATES,  
Author of "The Biography of a  
Prairie Girl"—Gentle.

ALL WHO have enjoyed the charming descriptions of child-life on the great Western plains, as they have been unrolled in the successive chapters of Eleanor Gates's "Biography of a Prairie Girl," in the *Century*, will be glad to have them in the more permanent form in which they now appear from the publishers of that magazine. The book is charming because of its simple and felicitous style, its fidelity to child-life as we all see it and know it in its general aspects, and more than all because the scenes pictured have a setting altogether unique and probably without a parallel anywhere in the world to-day. For nowhere have times and men changed more swiftly than on the Dakota prairies during the twenty-five years since the experiences chronicled in this book came to pass, and the value of the work for many will lie in the fact that it gives the home and hearthside view of a phase of American civilization already to be numbered among the things that were and now are not. The prairies are there yet, a wide and wonderful ocean of billowy grass and wheat and corn, and the harvests wave and the blizzards blow the same now as then, but the railroads and the ever-booming towns have pushed back and driven out most of the things that entered into the wild, free, and eventful existence pictured forth in the pages of this biography. Such thrilling adventures and hair-breadth escapes as those recounted here with prairie fires and thieving Indians are no longer possible, at least in Dakota, and highly entertaining as they are to read about, they are features of life one could hardly wish to have perpetuated even for story-telling purposes. But there are other scenes described here, such as gopher hunting, the breaking-in of wild ponies, attendance upon harvest weddings and frontier christenings, to give wholesome spice and variety to a prairie girl's life twenty-five years ago, which, I fear, could hardly be found in the same region to-day. Memories of our own play-time days are revived in the description of the roof of the country school-house as "not too high for a game of 'anti-I-over,'" though we knew it as "anti-over" in our little world. A remark to this effect in the hearing of a Virginia colonel of my acquaintance led that personage to observe that it was "Anthony-over" down his way, and it reminded him also of a curious circumstance in the siege of Petersburg, Va., during the Civil War. The lines of the opposing armies were so near together on one occasion there, that, as the men fired the shells from the mortar guns, they would call out "Anthony-over, here she comes!"

WILLIAM MORRIS, of active, varied, and interesting life, has been the subject of several biographies, written from different points of view. Nevertheless, there is need for an account that gathers together the chief facts of the life in a condensed form and connects them with comment and criticism of an informing character. Such an account we have in the work by Elizabeth Luther Cary, just issued by the Putnam. Miss Cary has emphasized the essential unity of purpose underlying the numerous and diverse pursuits in which Morris was engaged, and has sought to distinguish the peculiar and enduring qualities by which his genius was marked.

IT IS an interesting coincidence, and, so far as I am aware, without precedent, that two books by two sisters should appear from the same publishers at the same time, and both on topics akin to each other. I refer to the books "Sundials and Roses of Yesterday" by Alice Morse Earle, and "Furniture of Olden Times" by Frances C. Morse, issued recently by the Macmillan Company. The parallel is carried still further in the fact that both volumes are issued in ordinary style and also in limited *de luxe* editions. Miss Morse is not so well known in the world of letters as Mrs. Earle and her book appeals to a smaller circle of readers, but it has the same charm of quaintness and romantic interest which has given the writings of Mrs. Earle their value and popularity. It is a work, moreover, of an expert collector and authority on antique furniture, and in text and numerous photographic illustrations seems to cover every conceivable point of interest connected with the subject. As for Mrs. Earle's book, nothing could be more delightful to any lover of the quaint, the curious and romantic, than the record here given of the author's studies and researches among the roses and sundials of ancient and modern times. Why sundials and roses should be linked together as they are in this book may seem strange to many, but the reason appears when we find the two things associated together, as they were often in ancient symbolism and the philosophy of the mystics. The two were united, for example, in the sundial of Aha, made memorable in rites of the Rosicrucians down to our own day. Mrs. Earle seems not only to have ranged the world for the folk-lore and the legends which enrich her book, but also to have drawn upon the same rich and varied range of resources for the photographic illustrations. The treasures of the British Museum and the Bodleian Library were laid under requisition for this purpose. The largest collection of sundials in the world is that of Lewis Evans, Esq., of King's Langley, England. He has furnished to Mrs. Earle fifty photographs of his finest dials, taken expressly for her use. The Countess of Strathmore did the same with her sundial at Glamis Castle, scene of romance and mystery. This is deemed the most beautiful dial in the entire world. Over one hundred choice sundials in England were photographed for the book.

VISITORS TO Suffolk, England, may come across a curious and not agreeable memento of Brandon, the hero of Charles Major's "When Knighthood Was in Flower," when they visit Leiston (or Leystone) Abbey. This abbey was confiscated by Henry VIII. at the time of the suppression of the monasteries, and was given to his favorite and brother-in-law, the Duke of Suffolk. Tradition has it that a special Papal curse upon the destroyers of the monasteries demanded that God "might crush them in all their days until He finally blotted them out of the earth." Tradition goes on to insist that Brandon's family died out in the second generation, that his last two surviving sons were victims of the sweating sickness, and that his granddaughter, Lady Jane Grey, met her death upon the scaffold.

MR. ROBERT A. WOODS has been widely and favorably known for years as a practical sociologist and a worker in the social settlements of Boston and other cities. The new book, therefore, "American in Process," edited by Mr. Woods and soon to be published by Houghton, Mifflin & Co., is certain to be of great value to all who are interested in sociological problems. The work is the result of study, by experienced settlement workers, of the process of turning foreigners into Americans in the North and West Ends, the two principal immigrant districts of Boston. Here, within the last fifteen years, an Irish population has given way before a large influx of Jews, Italians, and negroes. The chief traits of the twenty or more different nationalities are analyzed, and their capacity for American citizenship estimated. The efforts on the part of the city to cope with the sanitary evils of these crowded quarters are traced and further steps suggested. There are chapters on industrial conditions, the technique of local politics, criminal tendencies, and the amusements of the people. It is a book full of intimate knowledge of its subject, for it is based upon long and intelligent study.

THE SCRIBNERS announce a new and beautiful edition of Robert Louis Stevenson's "An Inland Voyage," freely illustrated from photographs, taken especially for the purpose by Mr. James B. Carrington, of scenes along the way and mentioned in the text. It will be printed from a new setting by De Vinne.

I MUST confess to a feeling of apprehension rather than of any real literary interest in the announcement that a "new" romance by Milton is soon to make its appearance in England. The discoverer of this long-lost production by the author of "Paradise Lost" is one Rev. Walter Begley, who has given to the *British Weekly* an account of it. The title of this romance is "Nova Solyma, the Ideal City of Zion; or, Jerusalem Regained." "My aim," says Mr. Begley, "has been to gather books which are not in the British Museum or in the Bodleian Library. When traveling on the continent I always go first to the booksellers' shops and to the public libraries. I make acquaintance with the booksellers, and arrange for them to send me their catalogues. It was in this way that I came upon the Milton romance." The book, which is said to be "full of adventures by sea and land," and to include plenty of "brigands, robbers, and pirates," and "a stirring account of a pirate fight," will be published shortly in two volumes in London, and will doubtless be reproduced here. It was first published in 1648, having lain for twenty years on Milton's desk. "He began it," Mr. Begley says, "as a young student at college, continued it during his stay at Horton, but did not give it to the world until the stirring year which preceded the execution of Charles I. It has been a constant pleasure to me to note how full the book is of Milton's ideas. The passages dealing with love and jealousy could not have been written by any one except Milton. Curious light is thrown on his first love, the 'Queen of the May,' whom the poet saw on May morning, and whose memory never faded from his heart." While this find may be genuine enough, it may well be doubted whether it will add anything to Milton's fame. We cannot recall any discovery of this character that has been of any real value to literature, while there are several painful instances where crude and immature stuff produced by noted writers has been dug up and exposed to view, which might far better have been left to dust and oblivion. It would be a pity to see Milton's noble name attached to any weak and mawkish stuff, if he was ever capable of perpetrating anything of that kind, and no true lover of literature would be guilty of dragging such material into public view.

PROF. GEORGE E. WOODBERRY.  
The latest biographer of  
Hawthorne.

IT WAS by no means a happy chance that led to the selection of Professor George E. Woodberry as the biographer of Hawthorne, the latest addition to the "American Men of Letters" series, but, rather, a happy though deliberate choice, for Professor Woodberry's known tastes and tendencies and his range of literary service are such as to qualify him in a special and emphatic sense for the work of writing the life story of America's first and greatest romancer. That he has accomplished the task worthily and met every just expectation, all the world may now judge. Professor Woodberry had the one qualification, among others, for this particular work, of being a New Englander himself by birth and education and familiar from childhood with the scenes, traditions, and associations of the places wherein Hawthorne lived and moved. He made his *entrée* into literature while yet an undergraduate at Harvard as a contributor to the *Atlantic*, then edited by Mr. Howells. It was a poem first, and after that a series of book reviews which were continued after the magazine came under the charge of Mr. Aldrich. It was not, however, until the biography of Poe appeared, in 1885, that Professor Woodberry gained general recognition in the world of letters as a writer of unusual gifts. And the Poe biography, as he himself confesses, came to him by mere chance and was started practically as a piece of "hack work." But the subject grew upon him as he studied and worked upon it; his sympathies were aroused at the gross and manifest injustices that had been done to Poe's memory and reputation, and the result was the work which has righted the wrongs and led the world to a more just estimate and more generous appreciation of the service rendered by the brilliant but ill-fated author of some of the finest short stories and sweetest lyrics in the English tongue. It also brought deserved and enduring fame to the biographer himself, a fame which must surely be enhanced by his latest achievement in the same department of literature. Professor Woodberry has held the chair of literature at Columbia University for the past eleven years, and between his duties in that institution and his numerous literary engagements is one of the busiest of busy men, but never too much occupied to be courteous to all comers and a delightful companion in a favored circle of chosen friends.

THE CHINESE proverb, to the effect that "something is to be learned from every book," quoted by Mr. Edward S. Morse on the opening page of his volume, "Glimpses of China and Chinese Homes" (Little, Brown & Co.), holds good in regard to this work itself, wherein not one thing only, but many that are worth knowing, may be learned. We have had almost a surfeit of looks on China since the Boxer affair brought that far-off land into such unhappy prominence before the world, but since Mr. Morse devotes himself almost wholly to the domestic side of Chinese life he finds much to describe which is fresh and interesting to Occidental ears. The description here given of a Chinese kitchen, for example, will be a surprise to most American readers, I fancy, who are under the impression that the Chinese are neat housekeepers, whatever their other failings may be. But in all the kitchens that Mr. Morse saw—and he seems to have penetrated into many—"clutter and dirt had the upper hand." These rooms are chairless, floorless, matless—less, in brief, almost everything that ought to be in a kitchen, plus almost everything that ought not to be there. "The dirt, too," says Mr. Morse, "was not ordinary clean dirt, but what appeared to be pathogenic dirt," all of which confirms us in the determination never to accept an invitation to dine in China until a wave of kitchen reform has swept over that benighted land.

THE FIELD of private finance is a fertile though, till recently, an almost neglected one. The work of producing a literature in this virgin soil was some years ago undertaken by Dr. Frederick A. Cleveland in co-operation with Dr. Edward S. Mende. The book which bears this title, "Funds and Their Uses," is the first of a series, and the Appletons will soon publish it. Dr. Cleveland is its author. Its purpose is to give a preliminary survey, to mark out the ground, and establish lines for future development. Looking upon the subject as one which has to do with the getting and spending of funds for private enterprise, the materials are grouped around three central ideals, viz.: (1) What are Funds? (2) How Funds Are Obtained; and (3) Institutions and Agents Employed in Funding Operations. The chapters are replete with engravings of the financial instruments discussed. In obtaining illustrations of notes, drafts, documents, bills, private and corporate bonds, trust agreements, and so forth, actual bills and securities on the market have been largely used. Over one hundred and fifty exhibits are employed to illustrate the text.

HARVARD'S LOSS OF THE ATHLETIC CHAMPIONSHIP—DISPUTES BETWEEN FOOTBALL MEN—UNLUCKY TURF MAGNATES

THOMAS LEONARD SHEVLIN, World's champion twelve-pound hammer-thrower, first freshman chosen on Yale's new eleven.—*Sedgwick.*

**WILL SCHICK CASE CAUSE TROUBLE?**—The recent disqualification of W. A. Schick, of Harvard, by the Intercollegiate Amateur Athletic Association seems destined to cause more or less hostile feeling between Yale and Harvard. The question of Schick's eligibility to compete in the college athletic championships proved to be one of the hardest nuts the youthful rule-makers have been called on to crack. The decision takes the athletic championship away from Harvard and gives the laurels to Yale. As Schick finished second in both the 100- and 220-yard runs, his disqualification deprives Harvard of six points and adds two to Yale's score, making the totals: Yale, 32; Harvard, 28; Princeton, 27; the closest actual finish in many years. The Cornell delegate cast the deciding vote in favor of Yale. If the question had been left to the Amateur Athletic Union to settle, Schick never would have been disqualified, for according to all athletic precedents the Harvard man, when he competed in the Diocesan games at Holyoke in 1900 and in Fitchburg a year later, took part in closed games, which apparently should not have counted against him. Incidents seem to require changes in the present order of things. While Schick competed under protest, he should not have been allowed to take part if he had been guilty of breaking any of the athletic rules. The question of what constitutes a closed game could have been settled definitely before the championship contests. The average Harvard man feels disgruntled over losing athletic honors so late in the day, while the Yale men do not take much satisfaction in winning premier athletic honors through a technicality.

**GRIDIRON HEROES SQUABBLE.**—It is deplorable that squabbles should take place between the football elevens, such as occurred at Princeton on the eve of the starting of the battle between Columbia and the Tigers. The Columbia forces charged professionalism against Captain Davis, of the Princeton team, and the Tigers made similar charges against three of the Columbia team. Such conduct is unsportsmanlike in the extreme. Charges of ineligibility and semi-professionalism have been entirely too frequent in college sport during recent years. There have been cases where ineligible men and professionals have been played on teams knowingly, but the cases have been extremely rare. It is cruel, however, to stain a young athlete's name with suspicion needlessly. The poor showing of the Pennsylvania and Columbia teams this year is not a surprise to those who have watched closely the preliminary work of the teams. Brown's improvement in the game is one of the noteworthy happenings of the season. Cornell tumbled just when she thought she had a good team, the Indians giving the check. Princeton established her station by her trouncing of Columbia, which she did so thoroughly as to leave no doubt of the strength of the Nassau eleven. While Yale did better against Brown than did Harvard, those who saw both games do not place much reliance on the fact that Yale scored the greater number of points. As the situation looks at this writing, Yale men feel reasonably sure of defeating Harvard, while the followers of the crimson hold that they have a much better chance to lower the colors of the sons of Old Eli than the latter will admit. Those who have watched the work of Carl Marshall, Harvard's storky little quarter-back, think that he is the best quarter-back seen in years.

**POOR LUCK OF TURF MAGNATES.**—William C. Whitney, August Belmont, and James R. Keene are the real rulers of racing in this country. Yet with all of their money and turf power it is a significant fact that all

three men have been woefully unsuccessful on the running turf this year. Mr. Whitney's stable went all to pieces early in the season, and Mr. Belmont's thoroughbreds have not come up to expectations. The Keene horses have also done poorly. While Mr. Belmont, the president of the Jockey Club, has shown no disposition to race abroad, the extensive arrangements being made by Messrs. Whitney and Keene show that these two expect to cut quite a figure on the English turf next season. Mr. Keene has shipped many promising youngsters already, and more will follow later on. By getting the services of Matthew Allen, Mr. Keene will have a trainer abroad, the equal of the best of them. Lyne, the jockey who will ride abroad for Mr. Keene next season at a salary of \$20,000 a year, became prominent at a bound this year. Lyne is, however, a big boy, and he looks as if he will have trouble in the near future in keeping down to riding weight. Still the weights are higher in England, which will help him. Mr. Keene contemplates an elaborate campaign abroad, and every American will wish him well.

**BASEBALL WORM TURNS.**—The club owners of the powerful baseball leagues have for so long used the members of minor associations throughout the country merely for cat's-paws that it looks like just retribution when the

**GOLF NOT LOSING FAVOR.**—In every branch of sport a time arrives when the unbelievers have their inning. At present golf is the target for the shafts of the faddists, but the grand game of the Scots will not be injured. The faddists have been pretty effectively weeded out of golf, and it is better for the game that such is the case. It is equally true that the enthusiasts love the game better and the attendance at the various links is as great as ever. There may not be as many open competitions, nor as many scores turned in, but the games are played just the same. There is a strong probability that Harry Vardon and James Braine, the latter from Rumbold, near London, will visit the United States next season. The rush of the fashionable folk to the South has already begun, and in the baggage will be noticed golf paraphernalia for both men and women.

**CRICKETERS TO GO AHEAD.**—It is the intention of the committee in charge of selecting the players that the cricket team to go abroad from this country next spring should consist entirely of Philadelphia cricketers. There are some fine players in New York, Boston, and Ottawa, and an American team made up of the best selected players in this country would not only make a better showing on the field, but their reception in England would be more hearty and the general interest in the contests would be greater on both sides of the Atlantic. The "Gentlemen of Philadelphia" sounds all right, but "Gentlemen of America" would sound better.

**THE FIGHT IN THE L. A. W.**—There is a delightful little controversy in the New York division of the League of American Wheelmen, and if the same dispute could be injected into national affairs of the organization the grand old wheelmen's body might be brought back to life. There will be a few personalities, but even that is better than dying of dry rot, as the league has been doing during the last two years. There is plenty of work for this organization to do, but the present officials seem to think work unnecessary.

GEORGE E. STACKHOUSE.

## Sporting Queries Answered.

**G. K. A. BOSTON.**—Maxey Long is the only athlete who has ever covered a quarter of a mile in 47 seconds. He did it at Guttenburg, N. J., two years ago, and the record has never been questioned.

**M. E. R. ST. LOUIS.**—There is little chance that Hermis, the three-year-old champion of the East, will meet McChesney, the Western crack this year. Mr. Bell will not send Hermis West and it is too late for a race in the East.

G. E. S.

## Children's Home.

### A WELL RUN PLACE.

At a children's home in Fort Wayne, Ind., they have entirely abandoned coffee because of the bad effect of it. Mrs. M. B. Gorsline, who is the matron, is meeting with grand success. She was compelled four years ago to discontinue the use of coffee and after making several experiments concluded that Postum filled the bill and has used it ever since.

She has charge of a family of children numbering from 22 to 30 and writes us, "I give Postum Coffee freely, using no coffee at all. The children are always well; we have had no sickness for two years, except such as they contract at school, like whooping cough, measles, etc. No bilious attacks, no fevers, no skin diseases. The children are all plump and in good condition. Clear complexions, no sallow or muddy looking faces, such as result from the use of coffee. We always make Postum strictly according to directions and it gives pleasure and health to all."

MALCOLM FARMER, Half-back and full-back of Yale varsity eleven.—*Sedgwick.*

FOSTER HARRY ROCKWELL, Promising candidate for 'varsity' quarter-back at Yale.—*Sedgwick.*

smaller leagues get together and practically repudiate the big fellows. The bringing together of all of the minor leagues was one of the cleverest things that P. T. Powers ever did. Together they are a power in the baseball world. Previous to consolidation they were mere puppets in the hands of the wealthier club owners of the big leagues. Now the little fellows tell the National and American leagues to settle their fight between themselves. After they have done this, and are willing to let in the minor league on equal representation, they will be ready to talk about a new national agreement.

**SIR THOMAS AND THE CUP.**—Sir Thomas Lipton's third challenge for the America's Cup is welcome and he himself will be greeted most cordially when he arrives with his new boat, *Shamrock III*. Some pessimists are inclined to believe that international contests of this kind engender bad feeling between the two nations, and that the contests should not occur oftener than once in five years. That is all "tommyrot," as the popular expression goes, for every race in which we have engaged with Sir Thomas Lipton has done much to cement the friendship existing between Great Britain and the United States. If he should be lucky enough to "lift" the cup in 1903, there are many Americans who are good enough sportsmen to say "he fought fairly and won it fairly."

E. P. KINNEY, Yale's right-guard, member of the freshman class.—*Sedgwick.*

FIELD COACH SWAN INSTRUCTING YALE BACKS.

Swan in uniform behind the backs; Coach Ely, in citizen's clothes, at left; Winslow, quarter-back, taking ball; Chadwick, left half-back; Ward, right half-back; Farmer, full-back.—*Sedgwick.*

STAR COLORED PITCHER and left half-back at Hyde Park, Chicago.—*Sedgwick.*

# Jasper's Hints to Money-Makers

**NOTICE.**—This department is intended for the information of the regular readers of *LESLIE'S WEEKLY*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always include a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *LESLIE'S WEEKLY* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.

**DISTANCE** lends enchantment only to an enchanting view. The disagreeable is never materially improved by distance. The farther we get away from Wall Street the worse the speculative conditions appear. While brokers anxious for business, and stock gamblers eager for victims, continue to predict lower money and higher stocks, the conservative, experienced bankers abroad, with their strong boxes full of American bills which they have discounted, continue to declare that money must be higher until the stock market undergoes a decided and general liquidation. They feel, as one writer expresses it, that "the speculative account in the United States is so large and the financial magnates have committed themselves to such schemes that all concerned are considerably at the mercy of accidents."

Our perambulating and loquacious Secretary of the Treasury, who had been dividing his time between Wall Street and the stump, did his best to relieve the strain on the money market and to help make conditions easier all around before election day. There was no concealment of a fear on the part of many observant financiers that the election might indicate a popular demand for a change, and be the first evidence of an uprising against not only illegal trusts and monopolies, but against lawful and reputable corporate enterprises, railways and industrial included. Dealing with such a mercurial people as ours, it is easy to understand the reason for this apprehension on the part of leading investors, many of whom had absolutely taken themselves out of the market until they saw which way the wind blew on election day.

The relief that Secretary Shaw has extended to the money market has not materialized to any extent at this writing. Call money has fluctuated and declined, but time loans are still grudgingly granted and only at stiff rates. The banks, with their customary shrewdness, are doing their best to accommodate manufacturers and the merchants, upon whose success a continuation of prosperous conditions so largely depends, and are curtailing banking loans to speculators on Wall Street, and thus compelling liquidation of many lightly-margined accounts. The fear of gold exports shortly on the maturity abroad of large American loans, also leads to apprehension, and the resumption of anthracite mining is a prospective call for much more money for the resumption of a business which has been so long suspended.

The lack of confidence abroad in our financial conditions is a very serious matter, because, as this distrust continues to grow, the accommodations which our great borrowers have been having from banking houses of Berlin, London, and Paris will necessarily be restricted. If we should be called upon to liquidate accounts by the exportation of a considerable amount of gold, at a time when our surplus reserves in all the bank-reserve cities are abnormally low, and when money all over the country is in increasing demand, a situation of some gravity would inevitably result. The first appeals for relief which were made to Secretary Shaw came from New York. We were told that they were caused by the speculative fever of Wall Street. I pointed out at the time that this fever was all-pervading. The justification of that assertion is found in the fact that all our large cities are now seeking relief at the secretary's hands.

The plain fact is that during the past ten years stocks have had an enormous advance, ranging from 150 to 500 per cent. It may be true that the depression of 1893 carried many railway shares far below their intrinsic value, but a rise of several hundred per cent. has certainly carried most of them far beyond their real worth. A loss of confidence in 1893 was responsible for the decline at that time. Suppose the public should lose confidence in the market with the present extraordinary range of prices. What would happen? Would not a repetition of the experience of 1893 be quite natural? But it is said that the rate of

interest is so much lower than it was ten years ago, that a new valuation has been placed upon securities. This is not true. Money was quite as cheap ten years ago as it is now, and call money decidedly cheaper.

Stocks are on a fictitious basis of valuation whenever they realize in dividends no more than the rate of interest paid by the savings banks, and that is the condition of many of our securities to-day. These high prices are the stumbling block in the way of the liquidation of our heavy indebtedness abroad. If stocks were cheap we could sell them to foreigners to pay a part of our obligation. Instead of this, we are ourselves buying foreign bonds, or have been until of late. While our indebtedness abroad must be met, we are adding to it by increasing our importations, especially of iron and steel. A company in Germany recently announced the receipt of one order from America for 40,000 tons of steel rails, and the rapid growth of our imports of iron and steel from England and Belgium, as well as Germany, is attracting much attention.

In the height of the boom we were told that because of a gentleman's agreement between railways, rates would be maintained hereafter and larger dividends would consequently be paid by the railways. I said at the time that peace between the competitive and contending railway interests of this country could not easily be established. Here we have the Wabash fighting to get into the Pennsylvania's territory; the Chicago Great Western a thorn in the side of competing trunk lines, and Moffat's New Denver and Northwestern and Pacific Railway building its line between Denver and Salt Lake City and becoming a factor of strife in a field where competition had been supposed to be closed.

Stock brokers are predicting another year of boundless activity ahead. They fail to see the signs of the times in the organization of the telegraphers, the expressmen, and other workers in various unorganized industries, for no other purpose than to demand increased pay and shorter hours. While this sort of thing is going on all over the United States, the London chamber of commerce points out that wages in England, for the first time since 1895, are now declining, the computed amount of the reductions during the past year being eight times more than the total reductions recorded in the previous eight years—this in a country which is among the foremost industrial nations in the world; but with wages scarcely half what they are in the United States. Plasterers of New York, I understand, receive from \$4.50 to \$5 a day. The English plasterer receives \$2, while the English bricklayer, mason, carpenter, and plumber, receives only \$10.50 a week, engineers \$9.50, moulders \$9.75, and cabinet-makers \$11.50. It is well that the American workman should think of these things and realize that he is a good deal better off than his brother workman across the ocean, and that the protective tariff laws are mainly responsible for the difference.

"B." Washington: The firm has a fair rating and good standing.

"R." Auburn: I do not recommend either of the propositions. Better leave them alone.

"W." Cleveland: I would not sell at present. The new combination might be helpful, if what I hear about it is true.

"R." Auburn: Have made inquiries regarding the Vera Brandenburg Mining stocks and the Thunder Mountain proposition unfavorable.

"S." Grand Rapids: There are several companies bearing the name to which you refer. Please give me the home office and the name of the president.

"G." Baltimore: If the money were mine I would not bury it where it would not be easy to get at it in an emergency. There will be inquiries in Wall Street before long.

"E." Buffalo: The capitalization of the Western Mines Company is very large, considering the character of the place where it owns and the amount of improvements the prospectors require.

"C." Washington: One dollar received. You are on my preferred list for three months. This will give you also a preference in the matter of the paper as the preferred list is the first to go out of the office.

"Lamb." Philadelphia: (1) I have referred several times to the suits brought by customers against the party. He has no rating. (2) I do not believe in the copper property. (3) The mining proposition is highly speculative.

"S." Germantown, Penn.: I regard Clover Leaf 4, around 80, and the Mexican National 4s, around 70, both as fairly good speculative investments. The former is preferable because of the uncertainty attending all Mexican investments.

"D." Philadelphia: Two dollars received. You are on my preferred list for six months. Thank you for your compliance. If monetary conditions continue as they are, lower prices may be anticipated before the holidays, but I do not advise short sales because of the control that large interests still exert in certain directions.

"H." Minneapolis: You are evidently regarded as an easy mark. After two such experiences as you have had, the third ought to settle you for all time against such an absurd proposition as a chance to trade your capital in twenty days. How many warnings against these Wall Street shams

must I print before my readers will come to their senses?

"M. D." Saugerties, N. Y.: (1) There is always risk about such deals with any concern. (2) Can learn of none. (3) Not quoted on the curb and not sold on the regular exchange. (4) I doubt it. (5) No. (6) I should have to report doubtful on every one of the propositions to which you refer. Unless you are a subscriber at the home office at full rates, you are not entitled to a place on my preferred list.

"D." Reading, Penn.: (1) The suit against the American Iron and Steel Company asks that it be enjoined from declaring further dividends until the impairment of its capital be made good. It is asserted that there were no earnings out of which the recent dividends on the common could have been declared. (2) The surplus of the Tennessee Coal and Iron Company for the nine months ended October 1st was over three times the entire surplus of last year.

"C." Kansas City: (1) The decrease in the earnings of the Atchafalaya indicates that the high-water mark in railroad earnings has probably been reached. The earnings of Erie for September decreased nearly \$150,000 net. (2) The net earnings of the Toledo, St. Louis and Western last year showed an increase of about \$35,000, but the percentage of operating expenses was very generous. (3) The Colorado Fuel and Iron Company's situation is too intricate for an outsider to meddle with.

"F." Jacksonville, Fla.: (1) I would not sacrifice my Greene Consolidated. Strong interests are apparently securing control. The proceeds of new issue ought to pay off a good part of the floating debt. I cannot speak with knowledge of its affairs, as the recent annual report is far from being complete. (2) The discontinuance of dividends by several leading copper properties and the reduction of dividends by others will probably make easier the plan of the Amalgamated Copper kings to secure control of the copper output in due season.

"S." Albany: The condition of the copper stocks generally is such that the chances for an improvement in the outlook, if prosperous conditions generally continue, are better than the prospects of a further serious decline. If you can hold indefinitely, the time will probably come when you can do better with it. I would not sacrifice on a declining market, after the decline has been severe. In four cases out of five, it is wiser to buy additional stock on the lowest tide and, by this "evening up" process, finally get out whole on the first substantial rise. Of course the property is so purely speculative that I cannot treat it from the investment standpoint.

"Anxious." Battle Creek, Mich.: (1) There is no doubt that anxiety is felt regarding the physical condition of President Schwab, of the United States Steel Corporation. If, for any reason, he should sacrifice his large holdings in that company, it might lead to serious liquidation. (2) The report is renewed that the Toledo, St. Louis and Western's control has fallen, at least partly, into the hands of the Vanderbilts. This may signalize the end of the advance in the stock. (3) I have no doubt that some day the Amalgamated Copper Company will come to terms with Reineke, their bitterest opponent in Montana. It is only a question of price.

"Iron." New Orleans: (1) I am inclined to believe that the iron and steel industry will not be as profitable for several years to come as it has been during the past few years. So good an authority as the *Iron Age* intimates that the crest of the wave of prosperity has passed. (2) The decision against the steel trust merger is on a technicality, which, it is said, will be easily overcome. (3) The report of Beach, showing a deficit for September of \$640,000, reveals how hard the strike has hit the coal stocks. (4) There are evidences that the bear sentiment on the stock exchange is growing. Some of the bull leaders are beginning to change their tactics.

## OFFICIAL LEGAL NOTICES.

### IMPORTANT TO TAXPAYERS.

DEPARTMENT OF FINANCE.  
BUREAU FOR THE COLLECTION OF TAXES,  
NO. 57 CHAMBERS ST. (STEWART BUILDING)  
NEW YORK, NOVEMBER 1, 1902

NOTICE IS HEREBY GIVEN to all persons whose taxes for the year 1902 have not been paid before the first day of November of the said year, that unless the same shall be paid to the Receiver of Taxes, at his office in the Borough in which the property is located, as follows:

BOROUGH OF MANHATTAN, No. 57 Chambers Street, Manhattan, N. Y.

BOROUGH OF THE BRONX, corner Third and Tenth Avenues, The Bronx, N. Y.

BOROUGH OF BROOKLYN, Rooms 2, 4, 6 and Municipal Building, Brooklyn, N. Y.

BOROUGH OF QUEENS, corner Jackson Avenue and Fifth Street, Long Island City, N. Y.

BOROUGH OF RICHMOND, corner Bay and 8, 10th Streets, Stapleton, Staten Island, N. Y.

before the first day of December of said year, he will charge, receive and collect upon such taxes so remaining unpaid on that day, in addition to the amount of such taxes, one per centum on the amount thereof, as provided by sections 916 and 918 of the Greater New York Charter (Chapter 378, Laws of 1897).

DAVID E. AUSTEN, Receiver of Taxes.

## OFFICIAL LEGAL NOTICES.

ATTENTION IS CALLED TO THE ADVERTISEMENT in the City Record of October 14 to 27, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessments for OPENING AND ACQUIRING TITLE to the following named streets and avenue, in the BOROUGH OF THE BRONX:

23D WARD, SECTION 9, LANE OPENING AND EXTENDING, BETWEEN MOTT AVENUE AND WALTON AVENUE, from East 150th Street to the New York Central and Hudson River Railroad. Confirmed July 27, 1902; entered October 13, 1902.

23D WARD, SECTIONS 9 AND 10, ELTON AVENUE WIDENING, between East 161st Street and East 162d Street. Confirmed July 13, 1902; entered October 13, 1902.

23D WARD, SECTION 10, HEWITT PLACE OPENING, from Leggett Avenue (East 156th Street) to Westchester Avenue. Confirmed August 4, 1902; entered October 13, 1902. MANHATTAN STREET OPENING, from Garrison Avenue (Mott Avenue) to the United States bulkhead line of the East River. Confirmed July 28, 1902; entered October 13, 1902.

23D AND 24TH WARDS, SECTIONS 10 AND 11, LONGFELLOW STREET EXTENDING, from the north line of the L. S. Samuel property to Woodruff Street. Confirmed July 16, 1902; entered October 13, 1902.

24TH WARD, SECTION 11, EAST 181ST STREET OPENING, from Aqueduct Avenue to Webster Avenue. Confirmed July 28, 1902; entered October 13, 1902.

24TH WARD, SECTIONS 11 AND 12, EAST 196TH STREET OPENING, from Jerome Avenue to Marion Avenue. Confirmed July 8, 1902; entered October 13, 1902.

EDWARD M. GROUT, Comptroller  
City of New York, October 13, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT in the City Record of October 18 to 31, 1902, of the confirmation by the Board of Assessors and the entering in the Bureau for the Collection of Assessments and Arrears, of assessment for OPENING AND ACQUIRING TITLE to the following named street in the BOROUGH OF THE BRONX:

24TH WARD, SECTIONS 10 AND 11, EAST 174TH STREET OPENING, from Jerome Avenue to Park Avenue (Vanderbilt Avenue West). Confirmed July 28, 1902; entered October 17, 1902.

EDWARD M. GROUT, Comptroller  
City of New York, October 17, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT in the City Record of October 18 to 31, 1902, of the confirmation by the Board of Assessors and the entering in the Bureau for the Collection of Assessments and Arrears, of assessment for LOCAL IMPROVEMENTS IN THE BOROUGH OF MANHATTAN.

12TH WARD, SECTION 7, 131ST STREET PAVING, from Amsterdam Avenue to Convent Avenue.

EDWARD M. GROUT, Comptroller  
City of New York, October 17, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT in the City Record of October 18 to 31, 1902, of the confirmation by the Board of Assessors and the entering in the Bureau for the Collection of Assessments and Arrears, of assessment for LOCAL IMPROVEMENTS IN THE BOROUGH OF THE BRONX.

24TH WARD, SECTION 12, WOODLAWN ROAD SEWER, from Bainbridge Avenue to East 210th Street.

EDWARD M. GROUT, Comptroller  
City of New York, October 17, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT in the City Record of October 24 to November 7, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessment for OPENING AND ACQUIRING TITLE to the following named avenue in the BOROUGH OF THE BRONX:

24TH WARD, SECTION 11, MONROE AVENUE OPENING, from Claremont Park to the Grand Boulevard and Concourse. Confirmed July 10, 1902; entered October 23, 1902.

EDWARD M. GROUT, Comptroller  
City of New York, October 23, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT in the City Record of October 30 to November 13, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessments for OPENING AND ACQUIRING TITLE to the following named streets in the BOROUGH OF THE BRONX:

23RD WARD, SECTION 9, EAST 162d STREET OPENING, from Teller Avenue to Park Avenue, West. Confirmed August 12, 1902; entered October 29, 1902.

24TH WARD, SECTIONS 12 AND 13, WEST 232D STREET OPENING, from Riverdale Avenue to Broadway. Confirmed August 8, 1902; entered October 29, 1902.

EDWARD M. GROUT, Comptroller  
City of New York, October 30, 1902.

## New York City 3½% GOLD EXEMPT BONDS

\$6,500,000 Payable Nov., 1952

\$1,000,000 Payable Nov., 1942

TO BE SOLD TUESDAY, NOV. 11, 1902

## Life-insurance Suggestions

[NOTICE.—This department is intended for the information of readers of LESLIE'S WEEKLY. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be included, as a personal reply is sometimes deemed advisable. Address "Hermit," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.]

THE STABILITY and permanency for all time of the Prudential Insurance Company has been guaranteed most effectively by the steps taken by President Dryden and his associates in the management of this prosperous and growing institution. The capital of the Fidelity Trust Company, one of the strongest financial institutions in the country, is to be increased from \$1,500,000 to \$3,000,000, making its surplus \$13,000,000, besides its undivided profits. Of this new stock, sufficient will be taken by the Prudential to give it, in connection with its present holdings, the control of the Fidelity Trust Company. A large part of the remainder of the Fidelity's stock is to be taken by the Equitable Life, one of the greatest of our great insurance associations. This connection will add materially to the increasing business of the Fidelity. The money received from the sale of the Fidelity's new stock is to be used by it in the acquisition of a controlling interest in the entire capital stock of the Prudential Insurance Company. This absolutely safeguards the interests of the Prudential's four and a half million of policy holders, as it fixes the control of the company for the future, regardless of any changes that may be caused by death or otherwise, in the management. Concentration of stock in the hands of strong owners, is the method that has been so successfully pursued by all the greatest corporations, and it has always accomplished the desired results. A large majority of the stockholders of the Prudential have contracted to sell their holdings, or as much as may be necessary, to the Fidelity, on or before May 1st, next, at \$600 for every hundred dollars of par value of the Prudential stock. This offer is open to every stockholder of the Prudential, and its very general acceptance is anticipated. While by this arrangement the Prudential will control the Fidelity, and, on the other hand, the Fidelity will own a majority of the Prudential stock, the latter will forever be the dominant factor, as of course it should be. Perhaps the happiest outcome of this

combination of capital and brains is the continuance of the present excellent management of the Prudential, both in its home office and in the field.

The significance of this coalition of interests between the Prudential and the Equitable insurance organizations and the Fidelity Trust Company must not be misunderstood. It does not signify that the Equitable in any way assumes control of the Prudential, or even shares in its management. The disassociation is as complete as it ever has been. The change simply indicates that some of the leading stockholders of the Equitable have availed themselves of a rare opportunity to obtain a good investment by the purchase of the Fidelity's shares.

"Premium," New York: Anonymous communications not answered.

"B," South Bend, Ind.: I would prefer the New York Life to the company you mention.

"S. J. F.," Meriden, Conn.: If you would write a letter of inquiry to the presidents of New York insurance companies, I have no doubt that if the missing policy could be traced you would hear from it.

"L.," Beaumont, Tex.: I doubt if you can get a better proposition than has been made you by the Mutual and the New York Life, embodying the annuity feature, which you say they have offered you. In such matters, companies are to be recommended for their conservatism. It is the best guarantee of their careful management. They are not only safeguarding their interests, but also those of their stockholders.

"Herman," Asheville, N. C.: The case of Crosby against the Mutual Reserve was heard before Justice Truax, New York City. The question had never been passed upon in this State. The

Federal courts and the courts of Georgia and Virginia, I am told, sustained the right of the association to increase its assessments. An inquiry of Justice Charles H. Truax, Supreme Court, First District, New York, might be made by you direct. The Mutual Reserve is now operating as an old-line company. How well it is succeeding its annual report will help to disclose. I have had many complaints similar to yours.

## The Hermit.

### Jasper's Hints to Money-makers.

Continued from preceding page.

"M.," Oshkosh: I am unable to find a report of the earnings of the American Asbestos Company and do not recommend the purchase.

"C.," Marblehead: That is the way that a great many look at it, but it is too treacherous a market for any one to speculate in who is not on the ground and familiar with the situation.

"G.," Denver: The projected great steel plant of J. J. Hill at Great Falls, Mont., will be the first of its character between Denver and San Francisco. Evidently the United States Steel Corporation is not to have a monopoly of the business.

"S.," Indianapolis: (1) Neither stands high. (2) Yes, it is a good district, but the proposition you speak of proposes simply to speculate with your money; not to invest it. (3) The shares in the good mines in that country are not being hawked around for sale.

"Ottawa": (1) I should think you might be able to sell without loss if money conditions improve, but I would not hold it for too much of a profit. (2) All the coal concerns shares are more in favor, especially the bituminous, since the recent demand for that quality of coal. I am not, however, advising purchases in such an unsettled market.

"M.," Hiawatha: One dollar received. You are on my preferred list for three months. (1) I do not advise the purchases at present. The entire market must get down to a lower plane. (2) I have always advised against intrusting funds to strangers, with such risks. I doubt if you are able to do much except to bring suit. That might hardly pay.

LIGHT AND AIRY CONSUMPTIVES' WARD ON BLACKWELL'S ISLAND—SIDE ROOMS HAVE NO DOORS. Luckey.

## Better Care for the Consumptives

THE MOVEMENT to prevent consumption by removing the conditions which breed the disease has acquired a strong momentum in New York City during the last year. Charitable organizations have co-operated with the city in making a study of the best methods to be followed. The reform has taken effect in the institutions for the city's poor on Blackwell's Island in the reconstruction and improvement of the ward for consumptives, under the direction of Mr. Homer Folks, Commissioner of Charities. As absolute cleanliness is the chief necessity in a surgical operation, so it is the greatest enemy of consumption. The reconstructed part of the city ward for consumptive patients presents the least possible opportunity for the accumulation of germs. In the building devoted to these charges of the city are several floors, each containing a long, broad hall, with smaller rooms opening into it from the sides. The unusual feature of the construction is that

these side rooms have no doors and the openings into the main hall are broad and without a frame of any sort. This unique construction, as illustrated in the photograph, removes one breeding-place of germs. The ward is bare of furniture, with the exception of the necessary slender iron beds and a few tables and chairs. The floors and all furniture are kept spotlessly clean.

Another reform which has been introduced by the new commissioner is in dressing in neat and serviceable uniform all the attendants and officers employed in the Department of Charities. This not only improves the appearance of the institution, but is conducive to the best discipline. The department provides at its own expense uniforms for all employees receiving salaries of not more than fifteen dollars a month. Others buy their own uniforms. Hitherto the matter of uniforming has been most irregular, most of the employees dressing as they pleased.

UNIFORMS OF DEPARTMENT OF CHARITIES EMPLOYEES.

Reading from left to right—1. Deckhands. 2. Mechanics, stokers, gardeners, and laborers. 3. Kitchen and dining-room men. 4. Orderlies and hospital helpers. 5. Hall men, watchmen, orderlies, and drivers. 6. Clerks, supervisors, mates, and engine-men. 7. House staff and apothecaries. 8. Superintendents, stewards, pilots, and chief engineers.

IS HEADQUARTERS for some of the best mining investments in the world. We need a little more capital for something good and safe. Why not inquire about it, as well as some which are handled on this market. Ellis & Haasner, 117 Columbia St., Seattle, Wash.

## Would You Invest

\$100.00 to make \$10,000.00? If so, BUY HIDDEN FORTUNE

Stock of Lead, South Dakota, at \$1.00 per share. Property surrounded by the mines of the Homestake Company, whose stock advanced from \$1.00 to \$20.00 per share and pays 50 cents per share monthly in dividends. Hidden Fortune should do as well. They have \$1,000,000 in sight and will be on a dividend paying basis as soon as a new mill, now building, is completed. Wonderful discovery of ore running \$50,000 per ton just opened. Absolutely safe, as there is over \$200 worth of gold ore in sight for every share issued.

Send for Fully Illustrated Prospectus.

511 Wainwright Bldg., St. Louis.

### Great Is Texas.

AND THE EYES OF THE WORLD ARE UPON HER.

THE home-seeker wants to know about her "matchless" climate and her cheap lands. The investor wants to know about not only her cheap land and low taxes, but, as well, her wealth of mine and forest, and this is to let you know that the International and Great Northern, the Texas railroad, traverses a thousand miles of the cream of Texas's resources, latent and developed, penetrating the heart of the East-Texas Gold Mine—the fruit and truck-growing section—and that you can learn more about the great International and Great Northern country by sending a two-cent stamp for a copy of the "Illustrator and General Narrator," or 25 cents for a year's file of same; or by writing D. J. Price, G. P. & T. A., Palestine, Tex.

TWO NOTABLE SIGHTS IN TEXAS—THE STATE'S ONLY TUNNEL AND ITS "PAINTED CAVE."

## Texas' Tunnel and Curious Cave

THE STATE of Texas possesses in her rocks two cavities, one partly artificial, the other natural, which are of peculiar interest. The first of these is the only railroad tunnel anywhere in the State. Formerly, and for over twelve years, the main line of the Southern Pacific, Sunset Route, ran through this passage in the rock, which is located on the bank of the Rio Grande River, near the celebrated Pecos Cañon. The tunnel was abandoned some years ago because of the dangerous condition of the bluffs under which the line was built, and the track was carried from the bank of the river, and now crosses the Pecos Cañon eight or ten miles further north.

The other hollow formation is the "Painted Cave," the opening of which is at the right of and higher up than the mouth

of the tunnel. To make the latter, a part of the cave was utilized. The remainder of the cavern, however, remains intact and forms a remarkable curiosity. The size of the entrance gives no idea of the spaciousness of the interior, which expands from the portal on either hand and rises to a lofty dome. The cave derives its name from the rude drawings of men and animals which decorate its walls, and which were undoubtedly made by Indian artists ages ago. The colors of the pictures are still almost as fresh as when they were first drawn, showing that the aborigines had knowledge of pigments of value. Owing to its distance from the railroad, the cave is now seldom visited by the ordinary tourist, but the traveler whose itinerary includes it is well repaid for the trouble he takes in getting to it.

### Jasper's Hints to Money-makers.

Continued from preceding page.

"M." Jackson, O.: I do not advise either. "F. S. A." Parley, Ia.: Nothing that commends it. "C. D." Jacksonville: All the bonds you mention are gilt-edged.

"B." St. Louis: I do not regard it as a substantial investment, though it is attractive. "C. H. S." Lynn: Two dollars received. You are on my preferred list, which means also the preferred mailing list.

"M." Lileadun, N. C.: A slump in the stock market usually acts in a depressing way upon all speculative commodities.

"F." Lowell, Mass.: At present keep out of the market. Watch for a decided slump and then buy any substantial dividend-payer.

"M." Sioux Falls, S. D.: I see nothing in the statement of the California King to warrant the belief that it is a much better mining proposition than many others. The fact that an ex-United States Senator is connected with it counts for little.

"S." Brooklyn: A dispatch to Prof. E. D. Treadwell, from Prescott, Ariz., reads as follows: "Five feet are three hundred level Iron Queen. Seven feet two hundred level East. Better and bigger than ever."

"M. E." Boston: One dollar received. You are on my preferred list for three months. (1) Wisconsin Central may be of considerable value to a larger road some of these days. Its business is developing and the property is being improved. (2) I am not so favorably disposed to Copper Range at present.

"A." San Francisco: The reorganized railroads, such as the Atchafalaya, Union Pacific, and so on, have had a good deal of the over-capitalization squeezed out of them, but some of it is being put back again. The growth of the country is building up these properties in a substantial way. I still have faith in the Union Pacific Convertibles.

"M." New London, Conn.: (1) The introductory note at the head of this column explains the meaning of my "preferred list." (2) Kansas City Southern 3 per cent. bonds, around 70, offer a good investment. I think well of the Oregon Short Line collateral 4s and the Chicago and Alton 3½s. (3) I would sell them when you have a profit. (4) Henry Claws & Co. are in good standing.

"G." Cincinnati: (1) The fact that Western Union has paid dividends continuously for so many years gives it favor, though its capital represents a great deal more than the cost of construction and equipment. It is a fairly good speculation, not a first-class investment. It is hardly expected that there will be a rise in the market, excepting in a few specialties, within the year. (2) I am not favorably disposed to Mexican Central.

"L." Baton Rouge: Do not regard American District Telegraph stock as an investment, but the capital is small and it is in the hands of those who can materially advance it if they choose. (2) Child preferred, between 90 and par, sells higher than most preferred industrials. The common has been advanced because of the increase of the dividends to 1 per cent. a month. (3) No. Everything depends upon market conditions.

"A." Detroit: The difficulty in which the New

Fox coughs and colds, the best remedy is Piso's Cure for Consumption.

**Advice to Mothers:** Mrs. Winslow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhea.

THE Soother Syrup is so honestly made that continuous severe use will not impair its splendid qualities of tone and action.

**PISO'S CURE FOR CONSUMPTION**  
CURES WHERE ALL ELSE FAILS.  
Best Cough Syrup. Tastes Good. Use in time. Sold by druggists.

England Gas and Coke Company is involved with the Dominion Coal Company in over the contract between the two companies, the latter claiming that Mr. Whitney, as president of both, made a contract binding the Dominion Coal Company to deliver coal to the New England Gas and Coke Company at an inequitable price. The recent advance in coal would make this contract of great value to the New England Company if it were upheld by the courts.

"F." Hoboken: (1) I do not believe in the shares of the Jupiter Steel concern. The statement that its dividends come from the sale of patents and not from regular earnings, ought to be enough for you. (2) I do not advise the mining enterprise unless you are looking for a pure speculation. In the long run you will be better satisfied and have more money if you stick to investments.

"Inquirer," Louisville, Ky.: (1) The revelation that Morgan's shipping trust purchased the shares of the White Star Line, on the extravagant basis of \$50,000 for each \$5,000 share, has led some of the London financiers to warn the public against subscribing to the new shares. (2) The charges against the American Bank Note Company allege that its officials are being overpaid, that information is denied to stockholders, and that unintelligible statements are issued. You can obtain further information from Louis H. Porter, 45 Broadway, New York, who represents the dissatisfied stockholders.

"Banker," Minneapolis: Money is in demand in England for precisely the same reason that it is in demand here. Never before in the history of the London Stock Exchange, has there been so much English capital tied up in unprofitable gold, silver, and diamond mining schemes. One authority estimates that one billion and a half of dollars is tied up in South African securities, and not yielding a half per cent. dividend on the capital. Every one knows how much money has gone into purely speculative enterprises, lands, mines, oil wells, and watered stock in the United States. A billion dollars will not cover it.

"Widow," Savannah, Ga.: (1) I have no hesi-

tation in saying that many of the New York City banks and trust companies' shares are selling at what seems to be very high prices, though most of them are closely held. The difficulty is that weaker institutions have profited by the advance in the shares of the strong ones. The recent sudden drop in the shares of the Trust Company of the Republic, from \$155 to about \$195 attracted general attention. (2) The promoters of industrial enterprises are not always winners. The securities of the United States Shipbuilding Corporation have dropped to a price less than that at which they were taken by some of the original subscribers. It looks as if the period of industrial inflation was about over.

New York, November 6, 1902.

## EAT COOK'S FLAKED RICE

### DON'T COOK.

1. Pour the dry flakes from the package into a colander.
2. Put a liberal amount of salt into a little boiling water.
3. Pour the boiling salted water on the rice, through the colander.
4. Drain, shake slightly, and turn out on a hot dish; serve with sugar and milk. That is all—and the rice is perfectly prepared in less than a minute.

Salt the water

Pour water through

### FOR BABY TOO.

NEW BORN INFANTS—One cup of Cook's Flaked Rice, one quart water, boil ten minutes, add a pint of milk, pinch of salt, and a very little sugar, and strain.

THREE MONTHS OLD CHILD—Use double the quantity of Cook's Flaked Rice (two cups) and do not strain.

Empty into dish

COOK'S FLAKED RICE CO.,  
1 Union Square, New York.

BEAUFORT CASTLE, A FINE SHOOTING BOX IN THE SCOTTISH HIGHLANDS, RECENTLY OCCUPIED BY MR. HENRY PHIPPS, OF NEW YORK.

## Expensive Shooting Boxes

GROUSE-SHOOTING in Scotland is a sport only for wealthy men. To rent a fairly good estate for the short season costs \$12,500. And this is only the initial expense.

Gillies and beaters, dogs and guns, all run to money. Everything is dear. That is the time of the year when the native, whether gillie or hotel keeper, merchant or yachtsman, has to make sufficient to tide him over the year. Americans rent many grouse moors and deer forests. Mr. Choate, American ambassador to England, stayed during the grouse season at Balmakerr as the guest of Mr. Whitridge.

There are extremes to be had in the Highlands. Beaufort Castle, the palatial home of Lord Lovat, of Lovat's Scouts, was let to Mr. Henry Phipps, of New York, at a high rental. A diminutive cottage attached to a small but satisfactory shooting ground rents at \$3,500 each season. Some estates consist of 60,000 acres (nearly one hundred square miles); but it is not according to size that the rent goes. Access is to be taken into account. There are parts of Scotland nearly as far in point of time from London as Russia.

The price per grouse shot sometimes works out to fifteen dollars per bird; so that a grouse moor is an expensive amusement. There is a vast amount of fatigue, too, in climbing the hills and rough surface all day, for a moor is usually anything but flat, as the name would imply. Some records have been achieved in the way of "bags." Prince Dhuleep Singh (who has just appeared in the bankruptcy court) once killed two hundred brace in one day. This season the sport was very good. A

typical bag may be given as that of Captain Rhodes, at Rannoch, in Perthshire. He and his party bagged in all ninety-four and one-half brace of grouse, one ten, one golden plover, two hares, and five snipe. It is interesting to note that Mr. Phipps, while at Beaufort Castle, donated, with the hearty consent of Mr. Chamberlain, \$100,000 for the relief of the destitute Boer widows and orphans, on condition that "nothing will be done which could be justly described as unfriendly to Great Britain." General Botha, in accepting the gift, expressed the gratitude of his people and promised to observe the quoted stipulation. The generous millionaire is one of the most interesting examples of the successful American who reaches fortune through hard work from small beginnings. Before he was of age Mr. Phipps was a partner in a small steel mill in Pittsburgh, "poor and honest," as he expresses it, contributing his experience and practical knowledge for his share in the partnership. Thomas Carnegie, the elder brother of Andrew Carnegie, not long afterward became associated with Mr. Phipps, and later the younger brother himself joined the concern, building then the foundation of his splendid fortune. Mr. Phipps is extremely modest about his substantial answer to the petition of the Boers and regrets the publicity which it has given him. He retired from business a few years ago and is building a \$1,000,000 residence for himself on Fifth Avenue, this city, and also homes for his children. He is credited with a number of important acts of philanthropy.

HENRY PHIPPS,  
The American millionaire.

A HUNTER'S GOOD LUCK.  
"Did Biggs have any luck hunting lions in Africa?"  
"Yes. Great luck."  
"How?"  
"Didn't meet any lions."

EASY TRAVELING NOW.

## Business Chances Abroad

**N**ORTH CHINA, Mongolia, Manchuria, and that part of Siberia bordering on the Pacific are destined soon to become consumers of American agricultural implements. The greater part of this country is susceptible of cultivation. The production of wheat is already a leading industry in various localities. It is carried on without the use of any modern machinery, but in spite of these crude methods the wheat usually sells at about half the price in the United States. In speaking of the situation Mr. Henry B. Miller, our consul at Nanchang, China, gives several reasons why he considers this territory a good field for marketing agricultural implements. First, because the country is not, as a rule, thickly populated; this is especially true of Mongolia, Manchuria, and Siberia. Laborers are imported each season to assist in planting and harvesting crops. There exists, therefore, more of a disposition to save labor than is generally found in other parts of China. Second, all of this country is abundantly supplied with animal power. Ponies, mules, donkeys, and cattle are used in every way to relieve the burdens of men. Third, the country is generally cultivated in much larger fields than in middle and

southern China, and the employment of improved machinery would involve no change in the nature of their industry. Fourth, the opening of the country by railroads will reduce the cost of getting products to market and at the same time increase the supply. In concluding his observations on the subject, Mr. Miller says that the field should be carefully studied, and, in order to satisfy the prejudices of the people and create a market, implements should be designed especially for this trade and should be cheap and substantial.

A great deal is done in Norway to improve and preserve the provisions produced in the country and to procure a market for them abroad. The fisheries represent one of Norway's chief industries, and quantities of fish are sold at very low rates, particularly during summer. One way in which these are utilized is by means of an invention which quickly dries and pulverizes the flesh of fresh fish. The resulting product, called fish flour, is easy to transport from one place to another and has great nutritive value. A new and profitable branch of industry might be established in America, by utilizing fish in this way.

PECULIAR AND REMARKABLE PEAK OF NATURE.

View taken just before the Spanish-American War shows trees at left so growing as to form the word "Spain." With the picture turned lengthwise, trees to right, the sheep make an interrogation point.

## Aboard a Training Ship

Continued from page 462.

arms, single stick and sword exercise; great guns; three-inch rifles for landing purposes. Eight bells at noon is dinner. Then come instructions from 2:45 till 3:30 p. m. Two bells at 5 p. m. is supper. After supper it's scrub and wash down decks. That catches the landsman first pretty hard, but he soon comes to it. Seven bells at night means swing hammocks. At eight bells watches relieve watches and all others turn in.

"But we have some amusement with it all. The band plays in the evening and the boys dance and sing. Sundays, after quarters and the captain's inspection, the chaplain holds service on the half deck, in the morning, and on Friday nights the chaplain gives a lecture, after which somebody gives a recitation or sings a song. At 9 in the morning there is court if there is any cause for it. We call it going before the mast. The court consists of the cap-

tain, the first lieutenant, and the chaplain. They bear any charge which any officer may make against any of the men, and then the captain gives the punishment. They're pretty strict, sir, but I've never yet seen an American sailor flogged. I'm an old one, but I know that discipline is necessary. You can't make a seaman without it."

After a cruise of six months the landsmen, or seamen, are transferred to receiving ships and thence to battle-ships, unless there should be occasion to transfer to the battle-ships immediately. The story of the old gunner of the *Hartford* is given for the benefit of such as contemplate becoming apprentices on a training ship. The *Hartford* carries thirteen 5-inch guns, eight 6-pounders, and four 1-pounders. As understood by the landsman the *Hartford* is a wooden ship. People forget this in recalling her glorious history.

## The Man Who Came Home

Continued from page 478.

But would the service never end? Why did country curates not learn to read? The curate, a slim, white hand over his mouth, coughed.

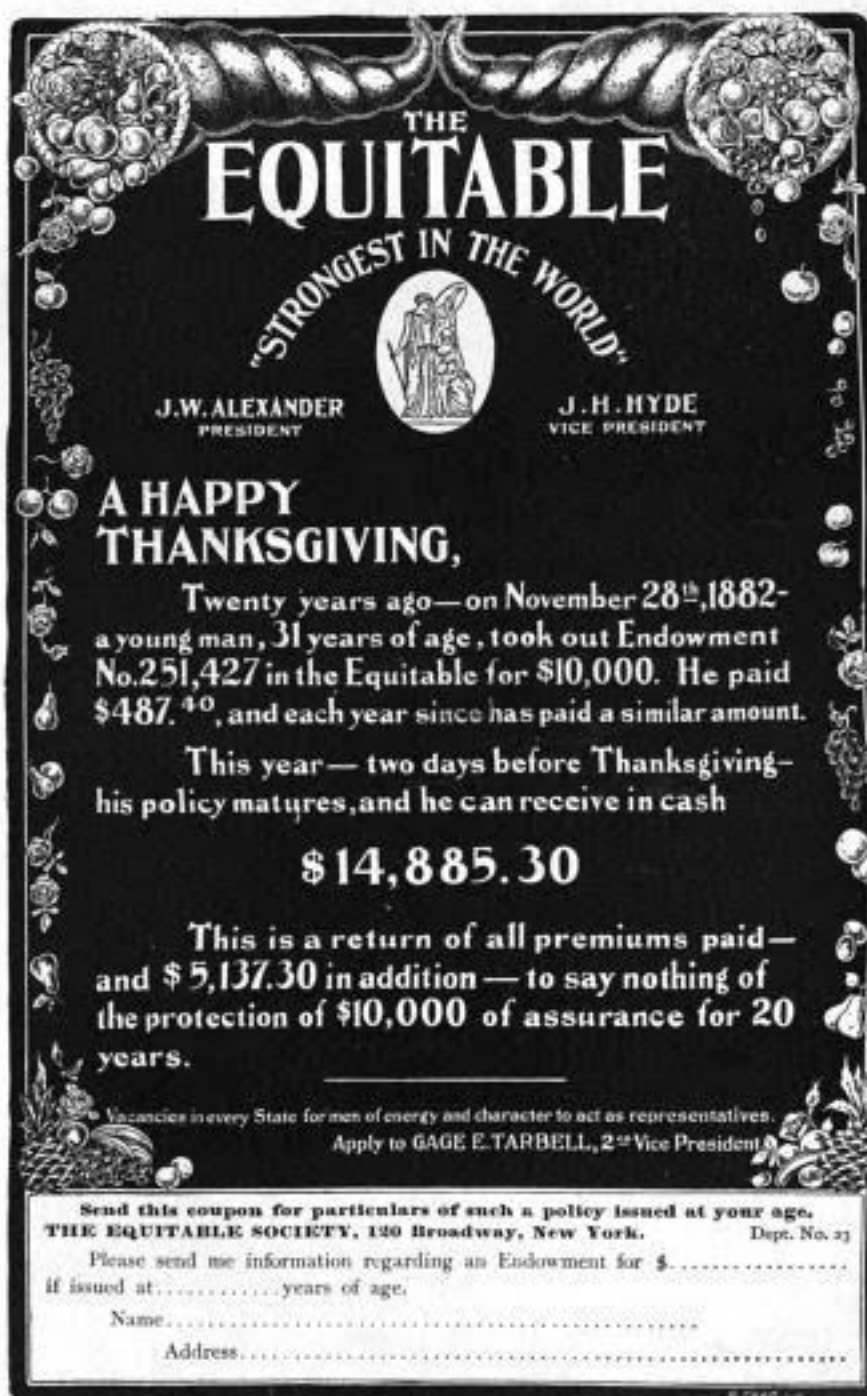

"I publish the banns of marriage," he said, and people turned their heads—a sudden and strange fear went through the man in the trustee's pew—"between James Atherton, of Littleton, and Laura Leigh—"

To the man who had come home the little curate seemed away in a mist; his voice, mild and monotonous, seemed to come from a far distance; the lights of the little church were in a blur, and the colored memorial window in the chancel danced kaleidoscopically before his burning eyes. He was conscious of a terrible desire to spring to his feet and cry that "just impediment" of which he knew—her promise—and the seven years of toil—and his strong nails bit blood as they cut into his palms.

How he got away, past the man in black, without looking at him, he never knew. Had he looked into the other man's face he would have strangled him, for there was hate in his heart—the tenderness of seven years, pent and poignant, turned in one swift and yet eternal moment to illimitable hate. The man in black sat aghast, fearful, for he had never seen such a look upon a man's face. But in a little while curiosity, the courage of triumph, mastered his fear, and he followed as far as the gate.

The man who had come home was far up the dusty road over which he had come. The trustee, standing by the gate, looked after. He smiled; and the blood came back to his face.

"The fool!" he muttered. "He thought I didn't know, but I knew him, by his walk, from the first. I thought it would knock him," he added, as he turned on his heel and walked back to the church.

## Reforms at Our Gateway.

IT HAS been a notorious fact for many years that some of the methods of the immigration office at the port of New York, the point at which the vast majority of the immigrants to this country make their entry, were not of a character creditable to the intelligence and humane feeling of a civilized community. From time to time startling "revelations" and charges have been made in the newspapers concerning the petty swindles and extortions practiced upon poor and ignorant foreigners passing through this station, some committed by government officials themselves, or their subordinates, and others permitted and connived at by these same persons. It has been charged also that immigrants have been brutally treated, kept in filthy and unsanitary shelters, and fed on rotten and unwholesome food. These disclosures, however, seem never to have produced any marked effect in the way of reform of methods or a betterment of conditions surrounding the newly arrived aliens, and until recently matters were allowed to move along in the easy old groove worn deep by a course of official corruption, inhumanity, and injustice.

But the first annual report of the new commissioner of immigration, Mr. Williams, recently submitted to the government, shows that a decided turn has come at last, and that this important office will be administered in the future on a basis of honesty, humanity, and sound business principles. The report furnishes official confirmation of the worst abuses of which we have spoken, the brutality, the robbery and extortion, the rotten food, the filthy surroundings; and shows that they have been in active existence right up to the time of the present administration. The state of affairs thus disclosed shows that newspaper reports have not been exaggerated, and that the bureau, as formerly administered, was in truth a shame to the whole country. Why the higher officials at Washington, who could not have been wholly ignorant of these things, allowed such abuses to exist so long is a marvel.

Commissioner Williams has only been in office since April first of the present year, but during that time, and in the midst of an almost unprecedented rush of immigration, he has found time to correct many of the worst evils, to weed out unfit and dishonest subordinates, and to practically institute an entirely new and improved system in the care and treatment of immigrants. He has secured for them better food privileges, cleaner accommodations, and has reduced to a minimum the time during which they are detained on Ellis Island. And this is only a beginning in the line of improvements which the commissioner proposes.

This is as it should be. It would seem that if there was any one time when, more than at any other, an opportunity offered itself to impress a lesson in good citizenship and respect for law and order upon a newly arrived immigrant and prospective voter, it would be during the period when he is passing through the hands of our immigration officials. Too often, we fear, in the past the impressions given have been quite the opposite of this. It is not at all surprising, when we think of it, that a large number of these aliens who, after their experiences in getting in the country, have remained in New York to fall into the clutches of Tammany rulers, with all their shameless and brutal exactions and tyrannies, have, in time, taken up the same practices and gone to swell the ranks of bribe-givers and bribe-takers. The marvel is that so many of them, in such an atmosphere and with such example before them, have turned out to be honest and reputable citizens.

## Criminals Who Go Unpunished.

THE MOST refreshing feature of the "boodle" exposures in St. Louis thus far has been the vigor and promptness with which the guilty parties have been followed up and brought to the bar of justice. Whether the penalties meted out to the thieves will be entirely adequate remains to be seen. It is to be greatly hoped, for the sake of the example in St. Louis and the country at large, that the punishment in these cases will be made to fit the crimes, and a valuable precedent thus be established for offenses of this sort.

For it is just at this point of adequacy in the penalties inflicted that most cases of this kind have broken down and miserably failed. Here in New York, for example,

we have had exposures of official rottenness and corruption from time to time during the past fifteen or twenty years, some fully as startling and shameful as those in St. Louis, and a good many rascals have been caught, indicted, and threatened with punishment, but that is as far as the matter has gone. For reasons mysterious and unknown to any save, perhaps, the prosecuting authorities, the worst of these cases of malfeasance seldom get beyond the stage of indictment. Some influence, political or otherwise, seems to intervene at this point, the indictment is pigeon-holed, and the indicted party goes his way as free and apparently unconcerned as before.

This has been the history of nearly every case of a public official charged with crime or misconduct in office in the metropolis since the days of Tweed up to the present time. Many persons, such as police captains, convicted or dismissed from the force as the result of the Lexow investigations, meet with a still kinder fate; the courts order their reinstatement in office with back pay for the time they are out. Thus, by one sort of legal legerdemain or another, the exposure of rascals in New York has only served to confirm some of the worst of them in their rascality and give them a new lease of power. Since Tweed no thief and bribe-taker of his stripe has actually been made to feel the lash of the law, although a number are now at large who have probably stolen as much as he, and who could doubtless be convicted and punished were their cases prosecuted with the same vigor and determination that characterize the proceedings against ordinary criminals.

It is to be hoped, as we have said, that a severe example will be made of every member of the "boodle" gang in St. Louis, that the prosecution will not be "called off" at some later stage of the proceedings, nor anything allowed to intervene between the guilty men and the punishment they so richly merit. They should be treated precisely as other thieves are treated, with the added penalty attached to the crime of a gross betrayal of public trust. Similar treatment should be accorded to certain men here in the metropolis, some of whom are now under indictment. Many would like to know why, for instance, the district attorney does not proceed with the case of ex-Fire Commissioner J. J. Scannell, who is under indictment for a grave breach of trust and who deserves severe punishment, if found guilty. And there are others.

Unless stern and vigorous measures are taken here and everywhere with men found guilty of plundering the public treasury and betraying the interests confided to their care, there will be no cessation in crimes of this character, the extent and frequency of which have been the reproach and shame of our municipal government during the past few years. As long as the impression prevails, as it confessedly did among the St. Louis "boodlers," that the acceptance of bribes, and other surreptitious methods of private enrichment at public expense, are a part of the "regular and understood thing" among public office-holders, and that political influence can be generally depended upon to ward off punishment in case of detection, just so long may we expect that selfish, cunning, and unscrupulous men will foist themselves into office for the opportunities for plunder which office gives.

It is right enough, no doubt, that we should pursue with all the terrors of the law the wretch who picks a pocket or steals a loaf of bread, but let us be just and mete out a proportionate penalty to the men who pick the pockets of taxpayers to the tune of thousands, and who steal not one loaf but clean out whole larders which the public has intrusted to their care.

## A Hayseed Victory.

FOR THE first time in thirty-six years a Republican Governor has been re-elected in the State of New York, and only by the slender plurality of a little over ten thousand. Governor Odell's election, like his nomination, was due to the confidence of the Republican party in his sterling integrity, his splendid independence, and his high qualifications as an efficient executive officer.

But it is in order to call attention to the fact that the much-despised and too-often-reprobated hayseeds of the rural districts saved the State of New York from the renewed domination of the corrupt and corrupting forces of Tammany Hall. The rural voters saw in the reduction of their tax bills the result of the removal of the direct State tax, accomplished for the first time in the history of the State, and they gave due credit to the Republican Governor and the Republican Legislature, which brought about this business-like and striking economy. Senator Depew, in his complimentary letter to Chairman Dunn, of the Republican State Committee, on the result in New York, made this acknowledgment: "Our success is in a measure due to the fact that both organizers and fighters were largely men born and brought up in the country, and who know how country folk think and act. I have always had, as you have, an intense admiration for the fighting and staying qualities of the farmer, who, this time, has won our eternal gratitude." No public man is better entitled to speak on this subject than Senator Depew, for no one in this State keeps in closer touch with the people. It is significant that at the close of the canvass Senator Depew declared, as the result of his observation during his extended speaking tour of the State, that the salvation of the Republican ticket would be found in the conservatism and stalwartism of the rural voter.

All honor, therefore, to the despised hayseeds of the rural districts. Once more they have been the saving salt of the Excelsior State, and if the great city of New York is to be finally and utterly redeemed from the blight of Tammany Hall, the work will only be accomplished by a Legislature dominated by these same hard-headed, sober-minded, and everlastingly Republican hayseeds.

## The Plain Truth.

ONE RESULT of the recent election was to bury the Nebraska corpse, which has been dragging after the Democracy for the past few years. The selfish Populist from Nebraska undertook to stump several Western States, but wherever he appeared the Republican vote grew larger. His home precinct, normally Democratic, gave a Republican majority; his prototype in Ohio was snowed under by a hundred thousand; the Republican State ticket in every Congressional district but one in his own State of Nebraska was victorious, and, on top of it all, silver was quoted in London at the lowest record price. And now, if the Associated Press and the great newspapers of the country will only let this political Lazarus lie unnoticed in his tomb, he will never hear the voice of resurrection again. Let him lie.

CURIOUS THINGS may grow out of the New York State election. Already Tammany Hall is talking of nominating Mr. Coler for mayor of greater New York next fall. His success as a candidate for that place, his friends believe, would make him available in 1904 as a Democratic candidate for Governor again, or as the Democratic candidate for Vice-President, in case the presidential nomination goes to some other State. But the election of Mr. Coler as mayor would probably settle his chances for further political preferment, for no mayor could hold the favor of Tammany Hall who did not descend to its level, and when he does that, the cleaner elements of the Democracy will cast him out. A more likely candidate for the governorship in 1904 will be Judge Parker, who, realizing what an opportunity he sacrificed this year, might be in a better frame of mind to run his chances in the presidential year. He could well afford to expect, in case of his election, a renomination and re-election, and then the possibility of the presidency in 1908.

WE ARE gratified to observe that the municipal authorities of St. Paul, Minn., have framed an ordinance designed to mitigate the nuisance of bill-board advertising. The measure will require that bill-boards be placed ten feet back from the sidewalk and that a bond be given to protect the city from damage suits. In addition to these requirements it is proposed to prohibit absolutely the erection of bill-boards in residence districts and to couple with this a provision making public hearings a prerequisite to the granting of any permit in the portion of the city where bill-boards are allowed. The ordinance would be strengthened, it seems to us, if it also provided that a small tax be paid on each square foot of bill-board surface, as is now done in some European cities, and that a prohibitory tax be placed on all advertising in street cars. But as it stands, the St. Paul ordinance is a long step toward the abolition of the sign-board abomination; a step, we may add, which other cities and communities ought to take in the near future.

THE FACT that \$34,000 in cash was found in the desk of a New York police captain who died recently should surprise nobody familiar with the revelations of a Tammany police department in recent years. It is probably true that few even of our multi-millionaires are in the habit of keeping that amount of cash lying around their desks, but for that matter no men outside of Tammany office-holders are such masters in financial arithmetic that they can make a salary of about three thousand a year yield a fortune of several hundred thousand in the course of two or three decades. The *World* recently published a list of thirty New York police captains and inspectors whose fortunes range from \$20,000 up to \$800,000, the average being about \$60,000. Of course the most of these accumulations are explained under the head of "lucky investments," a term sufficiently elastic and ambiguous to cover anything in the range of Tammany's business activities from the enforced tribute of poor push-cart men to the fat "protection" fees of the big gambling houses. The Tammany police captain who testified before the Lexow committee that his sudden rise to great wealth came about through real-estate investments in Japan probably came as near telling "where he got it" as any of his fellows have ever done or ever will do as the course of New York justice runs.

WISER OR weightier words in condemnation of vulgar and ostentatious wealth and the evils it engenders have not been spoken in these days than those recently uttered by Senator Lodge in an address at the opening of the collegiate department of Clark University. "When wealth," said he, "expends in a single evening upon a vulgar, brainless entertainment an amount of money the income of which would mean affluence to thousands of families; when it is used to promote corners in the necessities of life or for desperate gambling in the stock market; when it is engaged in an effort to debauch elections or control Legislatures; when it considers that everything is for sale—Legislatures and courts, public officers, the honesty of men and the honor of women—it is hard to over-estimate the peril which it portends." This is not the cry of the demagogue or a vain alarmist, but the voice of one of the keenest and most clear-eyed statesmen of our time, and it were well if the warning note were sounded until it should penetrate even to the brains of the dullest and most vapid of the creatures who are dawdling away their lives in the midst of luxuries and extravagances purchased with inherited money. It is these living sponges, the shallow, heartless, aimless men and women in marble palaces, who constitute the greatest menace to our existing social order, and whose ways of life are the deepest reproach that lies against Christian civilization. Worthy of more respect is a Zulu savage than a rich degenerate who finds no better use for his money than the indulgence of his vices and vanities.

## PEOPLE TALKED ABOUT

SOME OF the commonly accepted theories as to the influence of heredity fail utterly in their application to the character and tendencies of Sir Ganga Singh, the young Indian potentate who has been favoring England and other parts of Europe with his presence during the past summer. Although twenty-two years old and a pure-blooded native, Sir Ganga, since he succeeded to the ruling office of Bikaner four years ago, has displayed qualities of both heart and mind which would do credit to any youth who

SIR GANGA SINGH,  
The Maharaja of Bikaner.

has enjoyed all the advantages of Western civilization. He speaks and writes English like an educated Englishman, is proficient in all manly sports connected with horse, gun, and rifle, and has charming manners. The Kaiser-i-Hind gold medal awarded to his highness two years ago for liberal and energetic relief measures in time of famine was no empty compliment; nor was it earned by merely signing papers, but by active supervision and personal attention to details. The Bikaner State maintains for imperial service a camel corps of five hundred trained camels and men qualified to act as infantry, and when disturbances broke out in China the Maharaja eagerly proffered the services of the latter with his own, an offer which the government of India accepted, to his great delight. Besides being colonel of the corps he held, at this time, an honorary commission as major in the British army, attached to a regiment of Bengal lancers. On his return from China his highness was decorated as K. C. L. E.

A GOOD story is told of the late Senator Evarts which we do not remember to have seen in print. It relates to an incident which occurred at a Cabinet meeting in the early days of the Hayes administration, when Mr. Evarts held the portfolio of State. The members of the Cabinet were sitting about the room discussing matters in an informal way when President Hayes remarked that he had just made a few appointments to certain offices without consulting his associates, the appointees being personal friends and he being sure that they would give satisfaction all around. As these particular appointments happened to fall within Secretary Evarts's department, that official was taken somewhat aback by the statement, and turning to Secretary Sherman, who sat by, said with a twinkle in his eye: "I have often heard and read about the Western reserve of Ohio, but I must confess that I have never seen any of it."

HONORS ACCUMULATE upon the head of Professor Simon Newcomb, the oldest and most eminent of living American scientists. The degree of doctor of philosophy has just been conferred upon him by the University of Christiania. He had before received similar distinctions from ten or twelve institutions including the degree of doctor of divinity from Yale, Harvard, and Columbia. He is a member of the leading scientific societies of Europe and America, and is author of many scientific text-books.

BAVARIA SOME time ago celebrated with every evidence of true joyfulness the eightieth birthday of Prince Luitpold, who is virtually the King, although nominally only regent of the kingdom, the nominal ruler being Otto, who has for many years been hopelessly insane. The life of Luitpold was formerly embittered by much unjust criticism and vilification, by reason of the circumstances leading to his assumption of the regency, circumstances over which he had no control. But in late years popular feeling toward him has been completely reversed and he has become the idol of the people. He has managed the affairs of the kingdom with a prudence and success which are all the more highly appreciated because they contrast so favorably with the condition of affairs during the reign of Otto. The prince has also won the admiration of all Germany. He is the second son of King Louis I. and brother of King Maximilian of Bavaria, and was born at Wurzburg. Joining the army as a young man, he became a fine soldier and rose to be field-marshal and

PRINCE LUITPOLD,  
The regent and actual King of Bavaria.

inspector-general of the Bavarian forces. During the Franco-German War he was attached to the headquarters of the King of Prussia, and in the name of his nephew, King Louis II., handed to King William the letter which invited him to assume the title of German Emperor. In personal appearance Prince Luitpold is rather unassuming. One day as he was walking down a Munich street, a young soldier, a raw recruit, passed him without giving the usual salute, upon seeing which an officer who was close by made frantic signs to him to do so. Unfortunately the soldier, who had no idea who the simple-looking old gentleman really was, mistook the hint, and running after the prince regent, tapped him not too gently on the shoulder, and said: "Come back at once. Alter (literally 'old one'); the captain wants to speak to you."

WITH THE exception of General Kitchener, no prominent leader of the British forces in the Boer war came out of that long and critical struggle with a more creditable record than Lord Methuen. He entered the war at the very beginning and remained to the end, and was the commander in numerous hard-fought battles, in all of which he displayed the highest qualities of generalship. He was captured and severely wounded by the Boers, it will be remembered, in one of the last engagements, but was kindly treated by his captors and soon

LORD METHUEN,  
The wounded Boer war hero, out for an airing.

returned to the British camp. Since his return from South Africa, Lord Methuen has been living in strict retirement at his Wiltshire seat, Corsham Court. Recently, however, he was able to attend a complimentary dinner given in his honor at Corsham, and, in response to the toast of his health, replied in a speech which should be welcome reading to both Briton and Boer. Lord Methuen's chivalry and generosity are appreciated as well

COLONEL ROOSEVELT,  
With his favorite lieutenant, John C. Greenway.

by his former foes as by his own fellow countrymen; indeed, he has been assured of a hearty welcome if he will return and settle down in South Africa.

THE REPORT of the engagement of John C. Greenway to Miss Alice Roosevelt, which has been authoritatively denied, has served to call attention to the interesting career of the gentleman mentioned. Mr. Greenway, who is about thirty years old, is a graduate of Yale, class of '95, and while at that institute made a name in university athletics, that will be handed down for many college generations, as Yale's greatest baseball catcher and one of her best football end rushers. He was the only college catcher who could be found who was able to handle the delivery of the famous "Dutch" Carter. He was quick to enlist at the breaking out of the Spanish-American war and received a lieutenant's commission in the rough riders. He was the first man up San Juan Hill and was afterward known as Colonel "Teddy" Roosevelt's favorite lieutenant. The accompanying picture shows Colonel Roosevelt and Lieutenant Greenway in uniform at the rough riders' camp and on their mustangs. Lieutenant Greenway is

well regarded personally and has a host of friends. is an intelligent but unassuming man of action. Desq his athletic and military record he has never gone in politics or accepted office from the present administration but is quietly engaged in a successful business near Pittsburgh.

MR. EDWARD CLARK POTTER calls his statue of General Slocum, recently unveiled at Gettysburg his "hoodoo," having had more ill luck with that particular piece of work than falls to the lot of most sculptors in a lifetime. It was modeled at Mr. Potter's summer studio at Enfield, Mass., in clay on an iron frame, and after eight months of the hardest kind of work he said as he left the studio at night: "One day's work more and it will be done." Imagine his feelings on going to his studio the next morning

EDWARD CLARK POTTER,  
And his "hoodoo" work of art.

ing to find that the iron had rusted off and the tons of clay lay in a heap on the floor, all of his long labor gone to naught, and his assistant, who had done the preliminary work and who was responsible for the downfall, having literally taken to the woods. Finally the statue was done over again and finished, boxed up, and sent to the station, where it was found it was too big for the car. It had to be unboxed and repacked, and at length was shipped to the foundry, but on the way got lost, and for over a month no trace of it could be found. It finally reached the foundry. Months afterward Mr. Potter received a large box and on opening it found the head of Slocum, which had been shipped back to him, but why he was never able to find out. Mr. Potter is one of the best animal sculptors in this country. His horses on the Peristyle and his colossal horses and bulls on the Court of Honor will be remembered by all who visited the world's fair in Chicago.

ANECIDOTES AND recollections of the author of "Festus" are now in order, although his name was scarcely mentioned for years before his death. It is interesting to remember that Browning was fascinated by many passages in Bailey's poem, which he described as "unsurpassed in grandeur and quite unsurpassable." At an evening party in Piccadilly twenty years ago Browning, discovering that somebody in the room knew Bailey, sought out the poet's friend and talked for half an hour on "Festus" and its author, whom he had come to regard, he said, as a myth. Tennyson's estimate of Bailey's poem may be taken, perhaps, as the general opinion of it. "I have just got 'Festus,'" he wrote to Fitzgerald; "order it and read it. You will most likely find it a great bore, but there are really very grand things in it." Bailey was often accused of having merely copied "Faust," but the charge was quite unjust. At the time he began "Festus" Bailey had not even read the poem which he afterward discovered so closely resembled his own.

IN A CERTAIN district in Kentucky it is proposed to revive the good old custom of conveying the mails in a stage-coach with outriders and postilions. The proposal comes from General John B. Castleman, a noted Kentucky horse lover and whip, who has a plan to carry the mails in this style between his home, Pleasant Hill, and Burgin, a distance of six miles.

Few SOME years past two of the brightest stars in the galaxy of lovely women who adorn English society have been Lady Londonderry and her sister, Lady Dudley. They are both grand-

A famous beauty and social leader in London.

mothers, but, like Queen Alexandra, they seem to possess the secret of eternal youth. Lady Londonderry, who is the eldest of Lord Shrewsbury's three sisters, is very popular in Ireland, for she was an ideal Vice-reine, and is devoted to Mount Stewart, Lord Londonderry's Irish home. She has very literary and artistic tastes, and some few years ago contributed a valuable historic paper on the great Lord Castlereagh to the *Anglo-Saxon Review*.

THE POPE, wealthiest of modern rulers, spiritual or secular, has been happy in sharing the fortunes of other men. It has been reckoned that during his pontificate a sum of over five million dollars has been bequeathed to him in various ways, \$600,000 having come to him in one year, and one recent bequest being for no less than two hundred thousand dollars.

## Brothers Who May Be Foes at Football

ALFRED STILLMAN,  
OF HARVARD.

WHEN YALE meets Harvard in the culminating football game of the season, November 22d, two brothers may line up against each other. This has rarely happened in American universities, where older brothers generally hand down the younger members of the family as an inheritance to the same college in which the older sons have made a name. The three sons of Mr. Stillman, a New York business man, have been divided in their allegiance between Yale and Harvard, and consequently the parents have trouble when they attend a Yale-Harvard football game about the colors they wear. No matter what their selection may be, their choice will not be satisfactory to all of their sons. George, their oldest son, played tackle on the Yale eleven for two years, graduating in 1900. He was head coach last fall,

WALTER STILLMAN, YALE QUARTERBACK, IN PRACTICE, TAKING BALL FROM MORTON, CENTRE-RUSH.—*Sedgwick*

and has been a leading coach this season. He was hammer-thrower for the Yale track team for two years. Alfred, his younger brother, is one of the best all-round athletes at Harvard. He is the pitcher for the 'varsity baseball nine and alternates with Captain Clarkson between the pitcher's box and centre-field. He is the heaviest batter at Harvard. He is full-back on the Harvard football team, having played that position two years. The youngest of the three brothers is Walter, a Yale sophomore. He was manager of the Yale freshman team last year. This season he has been substitute quarter-back and end-rush at Yale. He may be obliged to tackle his brother Alfred to prevent Harvard making a touchdown against Yale at New Haven next Saturday.

# All About the Great Horse Show in New York

By Charles P. Sawyer, National Horse Show Association.

THE MOST successful of all horse shows in this country is that of the National Horse Show Association, which is held annually in the Madison Square Garden during the week preceding Thanksgiving Day. It marks the real opening of the New York social season, and "Queen Woman" is there in all her glory of new gowns to vie with what the newspapers are pleased to call in big headlines "King Horse." With each year the interest has increased and the opening show of the new century was a record breaker in many ways, especially in regard to attendance, for the exhibition of 1901 was given to something like 20,000 more spectators than were in the garden the previous year. With an increased number of horses this year, many new exhibitors, and a record-breaking sale of boxes, there is every prospect that this year's show will be even greater than those which have preceded it.

To those who watch the running of the machinery and see how smoothly the show goes on its way, it would seem an easy task to prepare for the hundreds of horses and thousands of people, no hitch being apparent to the closest observer. It is by no means simple, however, or the thought of a moment. The experience of seventeen years has to be added to with each show, and the exhibition of one year is scarcely over before plans are laid for the next. Lessons are learned every year, and there is always something not apparent to the lay mind that needs to be cared for. During the progress of one year's show the officers, judges, and even attendants, have on their thinking-caps and make suggestions which are listened to and jotted down for future reference. Some of these are in regard to management, others relate to classification, and others to the thousand and one things that go to make up the harmonious whole.

Early in the summer work is begun upon the premium list and the selection of the judges which must go out with it, as the intending exhibitors are very particular as to whom they send their horses before. Classes of which much has been expected may not have filled well, and the cause has to be sought in an effort to remedy possible defects in the conditions and increase the interest in a class, or to drop it altogether. Conditions under which well-filled classes are formed may not be just what are needed to bring into the ring and give the blue ribbon to the best type, and need changing, and new classes may have to be formed to meet new conditions. Then comes the question of judges. It is manifestly impossible to please every exhibitor, so when judges give an average amount of satisfaction they are retained from year to year if possible. Some classes require three judges, while others have but one, for it has been found with years of experience that some classes actually require three, while in others the best results are obtained when the decision is left to one man. With these things settled the premium list goes to the printer, and about two months before the day for closing the entries it is sent out all over the country.

The entries come in slowly at first, and then, as the time of closing approaches, the clerks who receive and tabulate them are swamped by each mail, and day and night they are kept busy getting the horses in their proper classes and preparing the "copy" for the printer of the catalogue. The time between the closing of the entry list and the day for the opening of the show is so short that every effort has to be made to get the elaborate catalogue ready for the first day. As soon as the entries are closed the work of the press agent begins, and he must familiarize himself with the horses and their records, so that he will be ready at all times to give out the information and call attention to special features of the year.

The programme of the week comes next, and for some time the secretary is at work arranging the classes so that there shall be no tedious waits between them or contests prolonged far beyond the hour of closing. To do this he has to take into consideration the size of the classes, the speed of the judges, and the necessity for giving the morning to weeding-out processes among

jumpers and the less interesting animals. When it is ready the large and small classes are so sandwiched in that rarely does the time come for closing the morning, afternoon, or evening session with the judges still at work.

Next is the sale of boxes, for which there is so great a demand that they have to be disposed of by auction. An afternoon is given to this, and when the auctioneer is through the boxes that are desirable are disposed of, and for the whole week. The allotment of seats to members comes next, and there are so many in the association that in a day or two few of these are left. Then the box office is thrown open for two days for the sale of seats for the week, followed by the sale of seats for single performances, which does not stop until the show is over, although the first two and the last night's seats are the only ones left on the opening day.

One week before the show opens a small army of men is put at work preparing the garden for one of its many metamorphoses during the year. The big ring is laid out and earth to cover the ground is brought from a long distance, carefully selected, so that it shall be the virgin soil, free from taint of gas. It is carefully rolled and then covered with a thick layer of tan bark, which is rolled and re-rolled until it is as smooth as a barn floor, and raised a little at the turns to prevent accidents. The yellow and black decorations are put in place, and the boxes and seats are refurbished and cleaned up, in order that the daintiest gowns may not be injured. Finally the big board-walk around the ring, where everybody goes to be seen and to see in the great society promenade, is put in place, and the garden is ready for the visitors.

During this time the secretary has his hands full allotting the stalls and boxes, of which there are altogether too few to accommodate the eight hundred or more horses, and his task is by no means easy, for no one will be satisfied with what has been given. Box stalls are wanted by many more than can be accommodated, and those who do get them are envied by those who do not, and are likely to make "remarks." Then, too, the garden stalls down in the basement will not take more than half of the horses entered, and it is necessary to seek quarters outside. In other years it was necessary to build an annex in Twenty-seventh Street covering half the street, but the abandonment of the Thirty-second Street car stables has given the Association a place to accommodate the overflow much better, although exhibitors do not care particularly for the quarter-of-a-mile trip to the garden to be judged.

The horses begin to arrive on the Saturday before the show, and all that day and night and the next day and night they come in, the veterinaries being kept busy all the time examining the animals, for with the thousands of dollars' worth of horse-flesh great care has to be taken that only well horses are brought among the exhibits, for if disease creeps in it would be an expensive proceeding. The men who do the examining are keen observers and watch every arrival like hawks, and so far no horses have been hurt, although, of course, an occasional cold is developed and the horse is promptly isolated.

Next in order is the private opening of the show on the Sunday prior to the public opening. Then comes the annual luncheon, which has become an important feature of the show. In the restaurant, grouped around the big horseshoe table, will be found representatives of almost every walk in life, horsemen, judges, and newspaper men being found in greatest numbers. It is a time of jollification, for the show is ready, the hardest of the work is over, and the celebration of the event is on. After the luncheon an adjournment is taken to the side of the arena and the pick of the horses in the show are brought out for inspection, the grooms, class callers, stable hands, and messengers, all in neat uniforms, are paraded, led by the ringmaster in immaculate dress, and ushered in by the bugler.

At nine o'clock on Monday morning the doors of the garden are thrown open. The four ring grooms station

themselves at the four corners of the judges' stand, the ring committee take their places within, the judges are ready, the ringmaster stands at attention, and the bugler sounds "boots and saddles." The first class comes into the ring at the call and the show is on for a week. From 9 A. M. until 1 P. M., from 2:30 P. M. until 6 P. M., and from 8:30 P. M. until 11 P. M., the ring is rarely empty, horses of all types and sizes passing in procession before the judges. For some unknown reason the greatest number of spectators visit the show on Thursday, possibly because in one year an exalted personage was there on that day, although Wednesday and Friday nights generally test the capacity of the great amphitheatre. Monday, Tuesday, and Saturday, the attendance, although large, is less than on the other three days.

Frequently classes under inspection are so large that it would require a ring ten times as great as that in use to accommodate all the entries, so they are brought in in squads. Each division is called in by the bugler separately and each has its chance at a drive around the ring under the inspection of the judges and is then lined up in the middle of the ring. Those that look the least promising are placed on the east side of the stand and the best are put on the west side. Some, of course, are by no means up to the standard set by others, so they promptly get the "order of the gate" and retire at once. Then, when all are in, those on the east side are sent around again and generally are promptly dismissed, although one or two may be left for a time. Then the lot in the west half have their trial, and they are sifted down again. This weeding-out process goes on until four or five are left on the west side and none on the east. Then these are put through their paces over and over again, until finally the judges decide upon the winner of the blue, whereupon he is triumphantly driven up to the stand for the plaudits of the crowd and his rosette. Then quickly follow the red, the yellow, and the white, and the next class is called.

Once in a while there is a dispute over the height of a horse, or the judges suspect that something is wrong with an animal before them, and again the veterinary is called upon; he makes a careful examination of the animal, and his judgment is final. The measurement is also made to settle that dispute, and sometimes the horse has to be measured several times before he is accepted in the class or turned out as over or under size. The complaints over the judging are few and far between, and not one was made in the show of last year.

The importance of the show in the public estimation is told readily by the press room. Up at the end of the garden in the first balcony, where every movement of a horse under inspection may be seen, is a long row of desks for those who keep their eyes glued on the ring while the judges are at work, while off the gallery is a big room where writers may work in peace. It is a busy spot at all times, and on some occasions fully one hundred and fifty men have been at work there, each city newspaper having specialists in the various well-known types of horse, who see nothing but horse and can talk nothing but horse. Among them, too, are the "star" writers, who are there to get local color for the "introduction," while down on the floor are the society reporters taking notes, and the artists looking for material for sketches, which will be worked up in the quiet of the press room or down town in the newspaper offices.

All the week this whirl goes on, and one by one the winners are selected, until Saturday afternoon comes, when the blue-ribbon winners come together again to select which shall be the best of the breed without regard to special conditions, and by eleven o'clock that night all the championships are awarded, the lights go down, the bugler blows "taps," and the band plays the last stragglers out with "Auld Lang Syne." They are scarcely out of the place before the workmen swarm in again, and before the midnight hour strikes the place is being dismantled for the next show in the garden, which may be of an entirely different nature.

## Ancient Fables for the Horse Show

### Ye Olde Horse.

AN OLDE horse who for twenty yeares hadde notte so much as pawed ye earthe or even snorted in a loud tone one day happened along where some colts were kyeking uppe their heels & having some funne.

"Ho, Ho!" nickered ye olde horse prancing uppe & looking devilish. "Verrie goode, boys, verrie goode! But watch me & see howe we used to do itte fortie yeares ago!"

Thenne ye olde horse snorted ferrely, arched hys taile & rose uponne hys wobbly hind legges, pawing ye air & squealing raucously.

& all ye colts putte their beddes behind one another's shoulders & smiled. "Gad-zooks!" they snickered, "Watch ye Olde Manne gette gaye!"

Just thenne ye olde horse stubbed hys toe uponne a corn cobbe & turned a flippe-floppe, rolling uponne ye grounde alle tangled up, with hys fore legs in a bow knot & one hind legge over hys eare.

"Alas!" he wheezed after he hadde unravelled himself & was limping away. "Itte took me forty yeares to learn that a youthful spirit can notte loosen uppe olde joints!"

& all ye colts kicked one another inne ye ribs & laughed gleefully.

& this is ye lesson:

- (1) Never gette gaye inne your olde age.
- (2) Whenne Time scores onne you, throw uppe your handes & confess it.
- (3) Never butte inne whenne you are out of ye gayme.

### Ye Horse and ye Ass.

YE HORSE and ye Ass once hadde a dispute as to whych was the better known.

"I," said ye Horse, "am ye star actor of ye whole coon show. I coek my taile and prance, and all who pass by regard me with awe and say, 'Lo! What a wonderful Horse!'"

And ye Ass said nothing—though hys under lip trembled slightly. Also hys eyes were sleepy and he looked sad.

"And whenne people fayle to notice me," continued ye conceited Horse, "I rise uponne my hind legges and paw ye air and snort! Yen, I snort with exceeding greate vigor and many people see and admire!"

Then did ye meek Ass give a tired sigh.

"Behold!" he murmured. "Itte is true I am but a lowly Ass, modest and retiring inne my habits. I am seldom seen of menne."

"Yette am I welle-known."

"I rise notte uponne my hind legges and prance;

neither do I do stunts to catch ye eye of ye rabble. But whenne uponne some lonely hillside I lift my voice inne a little song, thenne verily there is something doing. Yen, of a truth ye rocks are jarred loose uponne ye mountains and ye beasts and foules falle over themselves trying to gette in ye clear; also ye sky cracketh and ye milk soureth in ye cellars!"

"And it cometh to pass as I warble, that all ye people of ye whole country-side pause to listen; and they say one to another:

"Lo! itte is ye Gentle Ass singing himself to sleep uponne yonder hillside fourteen miles away!"

Thenne ye conceited Horse laid hys ears back uponne hys neck and walked away switchng hys taile spitefully; for well wotted he thatte ye Meek Ass was It!

(Ye Lesson.)

First Wise Bunch: True worth can notte be hidden—even though itte be buried inne obscurity.

Second Round: If thy talents wille notte of themselves bring thee fame it booteth notte to do stunts in ye public eye.

Third Sneeze: Ye song of ye obscure poet cutteth more ice than ye cake-walk of ye Mountebank.

## Tars on Shore-Leave Buy Many Mascots

WHEN ANY vessel of our navy after a cruise reaches port there is always a strong desire among the men on board to obtain "shore-leave." A naval seaman's lot is largely one of hard work and much monotony. He is separated for months, sometimes for years, from the cheerful influences of home life, and while his ship is at sea he rarely or never gets a real good sleep. Owing to the system of dividing the crew into "watches," the sailor is allowed only four hours continuous slumber before he is aroused for four hours of duty. At the end of that period he is permitted to take another nap of four hours, but the break "between watches" has tried his nerves. The officers also have to submit to this unnatural mode of living. The consequence is "that tired feeling" in the case of all concerned. The officers often grow melancholy and some, as was the case lately, commit suicide. The men, too, chafe under the irksome conditions, and whenever they are released for a time from their floating prison they are irrepressibly happy. In the exuberance of their joy they frequently, when once on land, indulge in what is almost a free fight. They engage in rough horse-play and fall to pummeling one another. Occasionally in the mêlée hard blows are struck and knives are drawn, and the wild frolic ends with a number of bruised or cut and bleeding participants. When the frenzy abates, amicable relations are resumed and the men scatter to other scenes of amusement as if nothing had happened.

Jack Tar is notoriously improvident, and most of our naval seamen, when they get ashore, spend their money, be it more or less, with a lavish hand. Shore leave is limited to twenty-four hours, but in that brief time the unrestrained sailor manages to run through about all the cash he carries with him. He plunges into a whirl of dissipation and is oftentimes cheated or robbed of a good share of his ready assets, but a percentage of the latter is also apt to go for anything that happens to strike his almost childish fancy. Mascots are the seafarer's delight, and whatever he may come across which seems to him to have a talismanic property he is bound to buy if he can. Hence, when the "pier jumpers," as those on shore leave are technically called, return in well-filled barges to the ship and under direction of the master-at-arms climb up to the deck, they are likely to bring with them a miscellaneous collection of goats, dogs, parrots, monkeys, roosters, etc. One sailor on the *Kearsarge*, either in or out of his senses at the time, went so far as to purchase as a mascot a colored baby from its mother for the sum of forty cents and came aboard with it in his arms. He was not allowed to retain it, however, and the child was eventually restored to its repentant and hysterical parent.

How many of the mascots may be kept on board lies within the discretion of the captain. A liberal policy is pursued in this matter. But manifestly there is a limit to the number of those that can be accommodated. The surplus is sent ashore without delay. When the returned "pier jumpers" are lined up while the ship's writer calls the roll to discover the luggards, it is one of the most perplexing duties of the officer of the deck to decide what dumb creatures may or may not be added to the vessel's menagerie. If the vessel is on her way homeward from the tropics she usually carries a large variety of living presents for the home friends of the sailors. But these are only temporary tenants of the hold and would not be permitted to remain on board long.

The permanent pets simmer down to comparatively a few, and some of these have become famous throughout the navy. One of the most notable of them is Mike, the wonderfully intelligent goat of the *Kearsarge*. Mike is the ever-ready playfellow of the sailors and he is daily provoked into exhibitions of his battling abilities. He is the terror of all other mascots and, if not prevented, at once attacks any dog, monkey, or other goat that he spies on deck. When weary of skylarking Mike retires to the quarter-deck for rest, the officers being less given to teasing and disturbing him. When the marines prepare for a march on shore Mike is all eagerness and excitement, and bleats loudly as if giving orders by bugle. He dashes down the gangplank with the expedition and sticks close to the officers wherever they go. A forty-mile jaunt does not lessen his pluck. If there is practice firing he swells the noise with his bleating. Mike is particularly fond of battling with mascots of his own species. Should the *Kearsarge* be moored at a wharf near another war-vessel Mike will steal ashore and take up a position on the gangplank of the other ship until an adversary appears. The two of them butt away at each other until one of them has had enough, when both return to their quarters. On days of target practice, when the big guns are fired, Mike, who is troubled by the concussion, runs down into the hold, where he stays until the discharges cease. For his many accomplishments Mike is regarded by the entire crew with pride and affection.

Another highly valued mascot on the *Kearsarge* is a huge rooster. He came to his noble estate in a peculiar way. A case of eggs for the vessel was secured at Martinique just a week before the disastrous eruption of Mont Pelée, and one of these hatched in the intense heat of the tropics without aid of incubator or hen. The chick developed into the *Kearsarge's* chanticleer, which is kept in the baker's department. He is a great favorite with the men, and has many a bout with them. He likes to be up with the bakers while they work at night, and his interest in the proceedings and his lusty crowing enliven the hours for the nocturnal workers. In addition to the two described the men of the *Kearsarge* have several pets of lesser note.

Every other vessel of the navy has its mascots, some

of them having as many as a dozen. Bulldogs are quite numerous on our naval ships, and the goat is a general favorite.

## Timely Praise for American Public Schools.

JUST NOW, when the introduction of our American public-school system in our new dependencies is being bitterly opposed in certain quarters, it is important to note the valuable testimony to its efficiency which comes in the shape of a census report covering the decade from 1890 to 1900, showing a steady increase in the proportion of children between ten and fourteen years of age able to read and write in this country, notwithstanding the large infusion of a foreign element during this same period. The figures in this report show that in 1890 there were thirteen States, and in 1900 twenty-seven States, in which the percentage of children of the ages named able to read and write was more than ninety-eight. These twenty-seven States in 1900 included 62.2 per cent. of the population. The rapid decrease of illiteracy among children in many of the Southern States is especially noteworthy. Alabama, for instance, gaining seven points in the decade, South Carolina nine, and Louisiana ten. On the whole, the report shows a far higher average grade of intelligence than any other civilized country on the globe, a result unquestionably due to our free public schools.

Another tribute to the efficiency of our public schools, equally timely and significant, appears in the recently published results of an investigation into our educational system by experts detailed for the work by the London board of education. In the judgment of these experts the moral and educational value of American public schools is incalculable. The attachment of the whole people to them is attributed partly to their high level of intelligence and partly to their perception that the public schools constitute a bulwark against plutocracy and all

## Indiana—The Mother of Great Men

BETWEEN the blue of inland seas  
And sunset's golden gate  
She sits among her fertile farms  
And weaves the web of state.  
The weft and warp of power and fame  
Slip smoothly through her hands;  
The whirring of her busy loom  
Is heard in distant lands.

FORTH from her log-built cabin-door,  
With running roses red,  
Full many a sturdy son has gone  
The nation's halls to tread;  
So when on fame's immortal scroll  
You place the good and great,  
Among the Union's glorious names  
Write high the Hoosier State.

MINNA IRVING.

subversion of the spirit of American institutions. One of the investigators, Sir Joshua Fitch, notes that "the exclusion of sectarian and clerical influence from the common school appears in many places to have had the incidental effect of quickening the zeal of the churches, making them more sensible of their responsibility." It is this very exclusion of sectarian influence, it should be noted, which is made the chief basis of opposition to the public schools by certain elements in the United States. In commenting on the report in question, the *London Daily News* expresses the frank opinion that it would be an immense gain to England if the American public school system could be transferred to that country where it would help to do away with what it calls "the fabric of mediæval feudalism," still preserved in England.

Intelligent American citizens generally have no need of testimonies like these from foreign or domestic sources to heighten their sense of the practical value of our common schools, but it is well, for various reasons, to give special prominence to the facts thus adduced at the present time. Our educational methods have their faults, no doubt, and we may profitably take some lessons from Germany, for instance, in the matter of technical instruction, but taken as they are to-day our institutions of learning, from the lowest to the highest, constitute a feature of American life and activity of which we may be justly proud. It may be positively affirmed that one can not be a true and loyal friend to our system of government and our free institutions, and at the same time be an enemy of our free public schools.

## Sending Letters by Electricity.

THE CHILDISH delusion that telegraphic messages are conveyed bodily along the wires in some mysterious fashion bids fair to be not so much of a delusion after all, according to a reported invention in Italy, by which letters are to be sent from one point to another by electricity. Experiments are to be conducted under the Italian postal authorities with this very novel apparatus between Rome and Naples.

## The New York Dramatic Season.

HOW LONG can a comedian continue to be funny? Many remember the success of Harrigan and Hart's eccentric Irish comedies, which were the vogue for several years. There were crowded houses, high prices, and new plays every year, but in the course of time the Harrigan and Hart strain ran out. Poor Hart died in an asylum and Harrigan was left to seek engagements, I believe, on the vaudeville stage. Will a similar fate overtake Weber & Fields? Thus far this season they have given the expectant public nothing but disappointments. "Twirley Whirley" is a farrago of nonsense, and the addition of "Humming Birds and Onions" does not make the performance more attractive. Those who see the show once are satisfied not to see it again. It is too bad that, with a company embracing so much talent and with the originality that Weber & Fields themselves have displayed in other years, a better and more satisfactory entertainment cannot be given.

A bright young woman, Doris Keane, and an admirable student of eccentric acting, Miss Helen Travers, both made a hit in "A Young Scapegrace," the three-act comedy which had its first performance at the Empire Theatre, at the recent entertainment of Sargent's dramatic students. The programme was long and rather heavy, but the young ladies and gentlemen acquitted themselves very well.

A performance that rivals the Passion Play, as a religious lesson, is "Everyman," now running at the New York. It is a singular entertainment, a revival of the most notable of the fifteenth-century English "morality plays," and has attracted in New York City, as it did in London, large and fashionable audiences, mainly from among church-goers. No applause is permitted, the names of none of the actors are printed on the bill, and the whole performance is more like a mediæval service than a performance of the modern stage. Miss Edith Wynne Matthison, who plays the title rôle of "Everyman," has remarkable gifts, and the sincerity of her acting makes a lasting impression.

A distinct success is scored to Mary Mannering, in Clyde Fitch's new and very original four-act play, "The Stubbornness of Geraldine," which, under the management of Frank McKee, is running at the Garrick. Mr. Fitch aims at stage novelties and he certainly secures one in the first act of his new comedy, in which he gives a very correct representation of the deck of a great passenger steamer. Miss Mannering has plenty of work to do and does all of it exceedingly well. The play is clean, bright, lively, and interesting. The honors of the star are shared by Miss Amy Ricard, who takes the part of the vivacious *V. Thompson*, and Arthur Byron and Mrs. Hone are both emphatically good. I predict a long and successful run for Geraldine.

Those who had the pleasure of seeing John Drew in "The Mummy and the Humming Bird," at the Empire, before this admirable comedy was withdrawn, appreciated the distinct and clear enunciation with which the two principal ladies in the cast spoke their lines. I refer to Margaret Dale and Marie Derickson. It is too bad that other leading ladies, not to mention the gentlemen of some of the New York theatres, cannot be taught the art of elocution a little better.

Thanks are due to William Gillette for his decisive action in behalf of the comfort of theatre-goers who take their seats on time. The curtain at the Knickerbocker rises promptly, whether the seats are empty or full. This should be the rule in every theatre. The revival of "Sherlock Holmes" by Gillette is most satisfactory and is attracting crowded houses.

Duse, the great, had a superb welcome at the Victoria. This famous artist, regarded by many as the most eminent actress of her period, is always assured of a cordial greeting by those best qualified to appreciate the highest dramatic genius. The earnestness of her work, her profound attention to every detail of her art, her fine elocutionary attainments, as well as her graceful acting, give her a charm that few possess.

JASON.

## Turks Again Persecuting Christians.

IT IS unfortunate that the world Powers that are so insistent upon preserving the integrity of this or that weak, rotten, and effete monarchy that curses and darkens some spot on the globe should not be able to inspire the tyrants who rule over these countries with a little integrity of another sort. This is apropos of the reports, now of frequent occurrence, of a renewed and growing persecution of the Christians by the authorities in the Asiatic provinces of Turkey. It is to be hoped that our government, at least, will get prompt and accurate information from its agents as to what is going on, and that resolute measures will be taken. At present we hear of justice being systematically denied to Christians in the courts, and generally of the paralyzing influence of the officials on their communal and private affairs, and things are steadily growing worse. Resentment against the attempts to initiate reforms after the Armenian massacres is said to be at the root of the present persecutions, as no doubt it is. The tiger whose lair is by the Bosphorus has not changed his stripes. Those who think so should read his biography, written by a former member of his court and recently published in this country. The actual truth of the matter is, a more cruel and bloodthirsty despot has not lived since the days of Nero and Caligula than the present Sultan of Turkey.

# A Famous Singer's Stories about "On the Stage and Off"

By Zelig de Lussan

EVERY SINGER has a collection of amusing experiences, but the trouble of it is that, while away from the stage one has the advantage sometimes of being able to give way to laughter, on open scene no such happy chance presents itself. To make things still more aggravating in this latter situation, funny things seem bound to happen at the gravest moments, moments when the slightest touch of the humorous would turn tragedy into laughter.

The very worst of these that I recall happened in a "Carmen" presentation, in the final tragic scene between *Don José* and *Carmen*. The lighter moments of the opera and gradual development of the tragedy had gone without a ripple to break the performance. Had anything happened earlier we might have been on our guard to meet humorous episodes, for on the stage, as everywhere else, misfortunes never come singly. The scene arrived where *Don José*, heartbroken and desperate, comes back to beg the woman who has ruined his life to return to him, and, mad at her refusal, stabs her. In that critical moment, with its swift action and passionate music, what do you think happened? *Don José's* wig caught in the buttons of my sleeve, and to make things more unfortunate, his hair was sparse. A gesture, a movement, no matter how slight, and the youthful luxuriance of *José's* curls would have dangled from my waist. The music was beating relentlessly on; a pause, however short, was impossible. Have you ever thought what advantage actors in the spoken drama have over singers? They may delay, may pause, may act in silent pantomime until the memory of the situation is recovered. But in the case of the singer the baton of the conductor beats on, a little black imp that knows no rest, and gives us none into the bargain.

That night, to save the scene was the one thought dominant. Not a moment was left for reflection. "Come," gasped *Don José*, darting between the curtains of the tent where the bull-fight was supposed to be in progress. I strode after with raised arm to avoid the catastrophe of scalping him. All the time we were singing as if our lives depended upon it. There was a swift wrench. He was free! Back we went again, and the scene, which had not been broken for a moment, went forward. After *Carmen* had died that night and gone to her dressing-room, she found hanging from the buttons at her waist a tuft of *Don José's* once luxurious tresses.

Rehearsals, tiring as they may be, though the artist is generally cheerful to get the best opportunity to perfect himself in his rôle, give one a chance to indulge in a little fun. And how a little fun does bring sunshine to the darkest stage. We were rehearsing Verdi's "Otello," in which I created the rôle of *Desdemona* in English, and the moment had arrived for the cruel Moor to smother me. In that instant a London bobbie on duty at the theatre, and not knowing that the stage was set for dress rehearsal, peered in.

"Not vet!" I cried to *Otello*. "I'm saved! Here comes the bobbie."

Even the orchestra was convulsed, not to mention the bobbie, who had, doubtless, never expected to figure in Shakespeare.

In the cathedral town of York something less apropos happened, and in the public performance at that. The scenic resources of the theatre were none too rich, and

in the balcony scene of "Romeo and Juliet" I had to stand on a soap-box placed behind the pictured railing that the audience saw. As the music grew more impassioned I stepped on a weak spot in my pedestal, and through went one foot with an accompaniment of crack-

Copyright by Dupont.

*Zelig de Lussan*

ing wood. That foot stuck quite fast, but with the other safely on the ledge of the box I sang ahead. When the time came for *Juliet* to leave the touching scene I simply sat down on the soap-box, and raised up when she was again needed in the music.

At some theatres of this same type in the English provinces I found it always wise to be prepared against surprises. One night, I know, I came out for the last act of "Carmen," which is, of course, supposed to be in Seville—and what do you think I saw? Chester Cathedral, and in the side wings a shop over which was flaringly painted the sign, "Jones, Baker." But it is not only that which happens behind the footlights, but in front of them, which tends to upset the poor singer. Never shall I forget the night that some kind admirers, whom

I did not know, brought me a big basket of flowers that caused all parties distinct embarrassment. They sat in an upper box, and every movement was quite visible to the audience; certainly a disquieting state of things considering what followed. When an aria of mine would come they would lift up the basket in the middle of it, rest it conspicuously on the box rail, and then take it down. Presently it would bob up again, and again disappear, the donors evidently deciding not to present it just yet. This went on for half the performance until I had an uncomfortable feeling that the people in the parquette were making bets as to when I should get it—if at all. Suddenly it shot downward, missed the stage, and landed with a lunge in the lap of a violin player. How the audience applauded! And I am not certain to this day whether it was because the donors had at last made up their minds to part with the basket or because I finally got it.

Once, at a country fair in France, I strayed with some friends into a booth where a pantomime was announced for performance. A nurse and two children made up the audience when we arrived. We waited and we waited. The curtain still dropped its limp folds on the stage boards, and there was no sign of its eventually rising. Going to a side curtain leading behind the scenes, I interviewed my colleagues.

"Why don't you begin?" I asked.

"The accompanist has gone to tea," came the answer.

"I will play in his place," I proposed.

"But you don't know when to stop and when to begin," was the reply, in a tone of mild rebuke.

Remembering the nurse and the two children in the audience, I felt ashamed of my forgetfulness of professional etiquette. But the next words lightened my conscience.

"You see we want our tea, too. But if many people come and we don't get it, and the accompanist doesn't get back, we'll be glad if you do play for us."

So I went and sat down—and waited, and knew how an audience felt when the artists were contrary.

Not the least entertaining things in a singer's life are the letters she has sent her. In seeing and hearing an artist on the stage a degree of sympathy is established that, I suppose, makes the auditor appreciate a certain kind of acquaintance with the singer. This seems, at least, to account for many letters I get. But sometimes they do seem a little personal. One gentleman, I remember, wrote: "You remind me of a lovely purring cat. You come on the stage and never look at the gallery." Another wrote that he neither smoked, chewed, nor drank, and that when I came his way he would show me about the town. One practical letter I recall, and the compliment it contained was of the kind that is always dear to the singer's heart. I had given the man a pleasure in life by my songs, and he wrote me a letter of advice. He said he knew singers were a careless, frivolous, spend-thrift lot of people, and that I ought to save my money. Following was a list of safe investments that he recommended, bearing three per cent. interest. "You have given me some happy hours that I shall never forget," he said in conclusion. "Perhaps as a man of experience I have given you some advice that will be useful."

And did I take it? Who knows? Perhaps I did.

## A Notable Example in Civic Duty.

IT HAS often been a source of just and well-founded complaint that men of large wealth in this country pay too little attention to their civic and political duties, many of them not exercising even their right to vote. It was not many years ago that on the occasion of a critical election in New York City it was found on investigation that only fifteen votes were cast by the electors in a mile of brownstone fronts on a fashionable up-town avenue. This neglect of the commonest public duties is felt, perhaps, more keenly in the suburban communities surrounding all large cities, the saying here being that men of wealth and fashion only make a sleeping room of such places and take no interest whatever in local concerns, religious, social, political, or educational.

A refreshing and noteworthy exception to what we believe to be the rule in such matters occurs in the case of Mr. Adrian Iselin, Sr., and his sons, all of whom are well known in business and financial circles in New York, and who together are worth many millions. The Iselins have their country homes and voting residence at New Rochelle, on the sound, a few miles from the metropolis. Here they have been known for years not only for their intelligent and conscientious exercise of their citizenship rights in every detail, but also for the equally conscientious and generous interest which they manifest in everything that concerns the development and progress of the town and the well-being of the community, and their quiet, modest, and unostentatious manner of life. During the past fifteen years the members of this family have given to local churches and schools nearly half a million dollars, and an immense sum besides, in the total, to such institutions as the Young Men's Christian Association of the town and to local charities and philanthropies. No worthy and well-approved cause of local benefit appeals to them in vain. The elder Iselin for years maintained at his own expense a model street through the centre of the town as a standing object-lesson in highway improvement.

More noteworthy still, perhaps, as an illustration of their interest in the civic affairs of New Rochelle, was the work undertaken within the past year by Columbus

Iselin, one of the sons, in bringing to light the corrupt and extravagant management of the city's finances by a local administration modeled on Tammany lines. To accomplish this, Mr. Iselin, at his own initiative as a citizen and taxpayer, and at his own expense, brought to the town a corps of the most expert accountants in the United States and set them to work on the town books turned over to him by the officials of a new and honest administration. It required months of hard and continuous service to get at the facts and figures in all the muddle into which two years of studied crookedness and wilful stupidity had thrown them, and to put them into coherent shape and where their true meaning and significance could be understood by all the people. The results of this investigation were finally published a few months ago by Mr. Iselin in a neat pamphlet, a copy of which was furnished free to every voter and taxpayer in New Rochelle.

No comment whatever accompanied the publication; it was simply a putting together in a systematic and tabulated form of the figures showing how the finances of the town had been administered during the two years of the local Tammany government. These figures interpreted themselves and told their own story so plainly that he who ran might read. It is not known how much this expert investigation cost Mr. Iselin, but it is believed that it could not have been less than \$20,000. The example is well worth recording for the possible inspiration it may give to wealthy citizens in other communities suffering, as did New Rochelle, from the rule of vicious, incapable, and dishonest men. The pity is that there are not enough men of the Iselin fibre to go around.

## A Tramping Bishop.

BISHOP LEIGHTON COLEMAN, of the Episcopal diocese of Delaware, is a man who believes that the surest and most direct way to get at the masses of the people and know their needs and how to meet them is to go down among the people and live their life, as near as may be, and see for yourself. Every year the bishop dons a rough suit of clothes and starts on an expedition out somewhere in some remote region away from the

beaten routes of travel. His latest tour was two hundred miles in the mountains of Virginia, Tennessee, and North Carolina, all on foot. He travels incognito, stopping over night wherever he finds it most convenient, and mingling with all sorts of people. The result of years of these experiences has been to make the worthy bishop of Delaware one of the broadest, most far-sighted and great-hearted men in the ranks of his profession.

## New Coffee

FOR THE U. S. ARMY.

SOME soldiers are badly affected by coffee drinking. The Hospital Steward in one of the Army Posts in the West, says: "Though in the medical service of the Army, I suffered agony for two years from a case of chronic gastric indigestion, and now that I am free from all the tortures attendant upon it, I attribute it to the good effects of Postum Food Coffee, both as a food and as a beverage."

"I used medicinal and mechanical means to relieve myself during those two years and even though I had left off the use of coffee, I did not find myself in any measure free until I had commenced using Postum."

"Being in charge of a detachment of the Hospital Corps, U. S. A., I, of course, had supervision of the mess, and by degrees I have initiated into using Postum, every member of the mess, some of whom were formerly very loud in their denunciation of anything 'manufactured.' And, going still further, I have supplied it to our patients in lieu of coffee; none have found fault, while many have praised it highly, and when returned to duty, have continued the use of it when it was possible, for a soldier has an extremely hard time in trying to choose his own food."

"For the past eight months, not a grain of coffee has been used in this Hospital, and—thanks to a cook who prepares Postum just right—there is a brilliant prospect of coffee taking a permanent seat in the background."

"One who has passed through the horrors of indigestion as I have, shudders as he looks back upon his sufferings and when cognizant of the cause, will shun coffee as he would a rattlesnake." Name given by Postum Co., Battle Creek, Mich.

# Educating Awkward Sea Lions and Seals

By Oliver Shedd

A HALF dozen slippery, shapeless seals and sea lions floundering about on the stage, croaking and barking—and doing some very wonderful things besides—do not seem in the least dangerous or formidable, but there is hardly anything more painful and serious than the bite of one of these curious beasts. Mr. Charles Judge, who has trained them for years and has a company of them in the Hagenbeck show, is badly scarred from the attacks of these peculiar half land-animals, half fish. The bite of the sea lion is poisonous; besides, it is an ugly wound from the manner in which it is inflicted. Although the creature moves painfully and slowly on land, the motion of its head and neck is extremely quick. The neck seems to have an almost elastic quality. One is surprised at its reach. The sea lion is like a bulldog. When he has caught hold he does not let go at once, but sets his teeth firmly in the flesh. Then he twists his head, the teeth being still embedded in the flesh; and without relinquishing his grip he gives a quick jerk. The result is to pull out a rugged piece of flesh, if the animal has gotten a deep hold.

The seal's method of attack is different. He snaps like a collie and is, therefore, not so dangerous as his big brother. The seal in Germany is called the sea bound or dog. His bark is the same, which is probably the most conspicuous likeness. The big brother has in him more of the lion. His mode of expression is a roar, and he is stronger, bigger, and more ferocious than the seal. They attack a man, however, in substantially the same way, striking at his legs or stomach. And no one excepting the man who has trained seals and sea lions appreciates the peril there is in it, particularly at the beginning of the course. Mr. Judge ("Alaska" on the programme) says that no one ever attempted to train a full-grown sea lion, because of the great risk there would be in it. The instruction begins always when the animal is young and before it has reached its growth. It is individual teaching and nothing else. A horse or an elephant, or even a lion, the trainers say, will follow the example of others of his species which have been thoroughly tamed and taught. They are to a certain extent imitative, and conduct themselves under new circumstances and in new surroundings as they see others of their kind doing. But each sea lion or seal requires a special and individual course of training.

This fact impresses upon one the wonderful patience of the man who trains these beasts to the skill which they possess. Among the most remarkable feats of the troupe which obeys the signals of Mr. Judge are the juggling and balancing. One sea lion tosses to another a clown's cap. The other catches the cap on his nose and tosses it back. Another beast of the same awkward tribe balances a large ball on the end of its nose and throws it up in the air continually, without allowing the ball to fall to the floor. Another tosses and turns about in the air

a lighted torch—and lighted at both ends, by the way—catching the flaming thing repeatedly in its mouth and not dropping it until the command to do so comes from the master. These feats are the most difficult for this

REMARKABLE SKILL OF THE JUGGLING SEA LION.

water beast to learn. Mr. Judge told me recently how he went about teaching a sea lion to be a juggler.

"The first thing you have to teach one of these chaps," said Mr. "Alaska," "is to come out of the water. Whenever he sees anything unusual in which he thinks there may be danger the sea lion plunges under the water. You have no idea how hard it is to get him out. It has to be done by coaxing him with fish. If there are several of the animals in the tank, I call each by name as I try to lure him out with a fish. It is necessary to keep this up a great many days in some cases—calling the sea lion by name and giving him a fish when he comes out of the water. This has to be done until it becomes a habit with

the animal, so that when he hears his name called, untarably he leaves his pool.

"Then I take the sea lion into a room and begin training him. We go by ourselves so that we won't be disturbed, and sit hour after hour together, a private session I am just teaching Charley, over there, to toss the ball. He's a hard one to handle, too. The first thing with him was to drop the ball on his head." The spoken of was of leather, very light, and nearly a foot in diameter.

"Charley dodged it at first and tried to get a continued Mr. Judge. "You notice he doesn't now. I kept tossing it at him over and over again, at a time and day after day as we sat alone together. Finally he began to hit it with his nose instead of turning his head to one side and allowing the ball to strike his body. But he didn't toss it up and catch it again as he will do later. He simply struck it with his nose and knocked it away from him as far as he could."

"I sit close to him and catch the ball when he hits it, immediately tossing it back again. If you follow his training as I will you would see that he is to comprehend that whenever the ball strikes him it is to come back again, and he begins to do his part bring that about."

"It will take about six months of almost daily practice to get the sea lion to understand this. When he learned it, the next thing is to get him to perform, ever you want him to. These are the two things—training and the execution. In the training it will do to use a whip or punishment of any sort. The reason is that it would distract the sea lion from what he is doing. Instead of having his eyes on the ball he would be watching the trainer's whip. The thing is to make the animal repeat over and over again the same action it becomes a habit, so that whenever you toss the ball at him he knows what to do with it. If he is a little born then, you may have to remind him to be up doing. Sea lions and seals have a good deal of affection. They will do more, I think, through friendship than through fear. Yet they differ in dispositions."

"One of the best seals I ever had—I mean one of the best performers—was so ugly that it was dangerous to go near him. He would perform his tricks with break, but he had no affection to give away. Others are as gentle as babies. They are hard animals to for they are very susceptible to sickness. Your seal, to all appearances, in a perfectly healthy condition and eating his food as usual; and then in an hour he will be dead. And you won't know what killed him. Nobody seems to know much about the diseases of seals. Not long ago I lost five seals and sea lions at once. All died, I think, from colds. Such accidents as this

## J. E. Dodson on the Deceptive Art of "Make-up"

By Eleanor Franklin

WITH POWDER puff, hare's foot, paint stick and pencil, to say nothing of rouge-pots, cosmetic spoons, orange sticks, curled hair, wigs, false beards, nose-putty and the thousand and one other things which bestrew an actor's dressing table—it is with these he brings about each change in the many-colored life he lives. With these and an India-rubber personality, perhaps, which can be stretched to fit any character he may be called upon to portray. Yes, perhaps—and perhaps not; usually "not," one is sorry to admit—but that is a detail to come to in the discussion of the evolution and importance of the art of theatrical make-up.

"Yes, I know, but why don't you have one made of papier-maché or something, so you wouldn't have all that trouble every night?"

Mr. Dodson laughed and gave his putty nose a vicious tweak which turned him into the most grotesque figure imaginable.

"Not a bad idea!" he said. "Why not have a whole face of papier-maché? What a deal of bother it would save and how natural and flexible the effect would be."

"No; but really, don't you find that rather an arduous task every night of your life, to say nothing of matinees?"

He was squeezing his nose back into classic lines and his voice in consequence took on a nasal twang as he answered.

"Oh, I don't know. It's a part of the business."

Just so! It is part of the business and until Mr. Dodson granted me this little heart to heart talk on the subject, I didn't half realize how important a part. And yet not so very important a part either, one might contend, since Garrick, Macready, the Kembles, and their great contemporaries won undying fame in the sputtering glim of candle footlights and without the aid of either the costumer or this wonderful art of maquillage.

It is said that even during Phelps's day at Sadler's Wells in London—and that is not so long ago since Phelps but just preceded Irving in the history of the English stage—the actors in his supporting company, and they were the best of their generation, used to come into the theatre just before time for the rise of the curtain, take a little whitewash from the wall and spread it on their faces by way of a foundation powder, scrape some dust from a red brick for rouge, and burn a match with which to blacken their eyebrows or make any necessary lines, and amble forth into the "glare" of flickering candles and cover themselves with glory.

Now the question naturally arises, were they better actors than those of the present generation, or was the public less exacting in its demands? But it must be remembered that all this delightful inattention to artistic detail was before ye actor knew what it meant to stand in the searching glare of the calcium light. If the value of "make-up" materials had not been discovered before the era of electricity, the advent of the electric light would have proven the truth of the adage "necessity is the mother of invention," and the art would have developed in natural sequence. Did you ever see anybody without "make-up" on, standing in the lime-light? If Venus, Minerva, or Juno should step down from ancient mythology and fall into the clutches of Charles Frohman, as they undoubtedly would, you know, they would have to be smeared their lovely features with modern "make-up" or be a great disappointment in a world where their reputation for marvelous beauty would have preceded them some centuries.

When grease paint was first invented or concocted or discovered, it was used only for the purpose of joining a bald wig on to the forehead so as to cover up the line and make it look natural. It was used first in the German theatres, and according to most authorities the honor of its invention belongs to one Carl Baudin, a member of the Leipziger Stadt Theater. It seems most natural, doesn't it, that after a paint was made with which to join wigs to the forehead, any actor using it should discover that by spreading it on down over the face, he would have a fine foundation on which to lay his powders and rouge; and after this discovery the coloring of this same paint to produce any kind of complexion would seem

to follow naturally, would it not? But "make-up" is an art, and the mere possession of materials with which to work hardly ever makes a workman.

"Make-up," properly understood, covers the entire scope of dramatic representation or characterization. Mr. J. E. Dodson is without doubt past-master in this art, and presents the best possible illustration of what remarkable changes may be wrought in a human face by the clever application of grease paints and powders. When Mr. Dodson first announced to his family and friends his intention of adopting the dramatic profession he was laughed at, scoffed at, and discouraged to the greatest possible degree. He succeeded on the stage! Impossible! He was small and unprepossessing. He had at that time, so he says, a little voice of an unpleasant quality and he was without friends or influence in the ranks of the profession. And yet he might have been a perfect specimen of physical manhood, like some of the so-called "matinée idols", who cloy upon one so easily. He might have had the voice of the ideal Claude Melnotte and the face of Apollo; but without that which he does possess in his seemingly insignificant self, he never could have attained the success which crowned his ambition some years ago.

To be a successful anything in this busy world one must have a bit of impressionable gray matter behind one's eyebrows, and five wits kept keenly sensitive, through right living and right thinking, to every influence that may touch one. Who is it says "If you would know the world, look within yourself; and if you would know yourself, look about you"? Now the principal word in that bit of advice is look. Look, look and listen. We may all hear "voices" and know what is to know if we will listen.

We most of us look about and we look within ourselves. We know somewhat of life and we will not accept from those who seek to teach through the medium of book—any automaton specimens of humanity without blood-vessels or vital organs. We must have known them, else we don't care to spend three hours in their society of an evening. That is why, when we are satisfied with a characterization, we so often exclaim, "How true to life!" Just so—"true to life"; and that must be the thought uppermost in the mind of the actor who seeks to portray humanity in its strongly drawn phases.

"How do you first begin to make up a character?" I asked Mr. Dodson.

"By finding the character in real life I wish to study."

There are few faces which lend themselves as readily to the art of make-up as does that of Mr. Dodson, as there are few minds capable of actually taking on or leaving off at will the peculiarities, the eccentric characteristics of the many and widely diversified types of humanity.

The importance of this mental conception of a character cannot be too strongly emphasized. An actor should know somewhat of the influences that may have been at work in the life he wishes to present to us. He must be able to feel and appreciate these influences and to reach his audience through this conception of the mental life of his character. This might seem to bring up the much-bruited question, "Should an actor feel what he is acting?" but that this question has been discussed at all seems to me to be due to the fact that every one approaches it from a distinct and individual standpoint, whereas there should be but two sides to a question and one of these should be the wrong side.

Every actor who has played a part successfully, knows he must feel a peculiar and intense sympathy for, and have a well-defined understanding of, the character he is personating, else he builds a stone wall between himself and his audience and becomes a mere automaton, speaking an author's lifeless words. Make-up is of first importance if the portrayal of a character, but not by any means of greatest importance. It is of first importance, because the actor appeals first to the eye of his audience. Let him first look the part and then be able to play it, but if he must lack either requisite to complete success let it be by all means be the former, for how quickly we tire of an actor, however satisfactorily he may impress the eye, who lacks that subtle and indefinable quality which must appeal to the mind alone.

HE CALLED to one of his passing warriors, said a few rapid words to him, and the latter, on the instant, raised his tomahawk and buried its blade in the head of the prostrate man. Then he bent over him, and with a yell of exultation tore off the scalp. Nor was that all, for a moment later two other warriors coming up, under orders from the first one, ripped open the body, cut out the heart, and divided it into a dozen pieces, one, as I afterward learned, for each of the tribes present." The foregoing is a passage from Burton Stevenson's latest story, "The Hermitage" (Houghton, Mifflin & Co.), the incident being one of the many savage and blood-curdling deeds committed by the Indians and their white allies in the massacre that followed the rout of General Butler's forces in the ill-starred expedition in northern Ohio a few years after the Revolution. The fiend who orders the commission of the particular atrocity narrated in the paragraph quoted is Simon Girty, the notorious renegade, and the victim is General Butler himself, who had fallen mortally wounded in the fight. The whole story is full of the sound of conflict, the breath of the trackless forests, and the romance of the wild and eventful life of the brave and hardy men who led the vanguard of civilization out over the prairies, the lakes, and forests of the West. While the story, located amid such scenes and at such a time, must necessarily have a sanguinary and adventurous flavor, it would be unjust to give the impression that it belongs to literature of the dime-novel order. On the contrary, "The Hermitage" is a piece of historic fiction above the average in skill of construction, in real interest, and genuine literary grace and charm.

IT HAS long been known that the present head of the Roman Catholic Church, Pope Leo XIII., in addition to other rare attainments, had a genuine poetic gift, as evidenced by various productions in verse given to the world during the past few years. As these poems, however, have been composed in Latin or Italian, they have remained outside the range of the great mass of English readers until now, when we have a collection of them translated by Dr. Hugh T. Henry, principal of the Roman Catholic high school of Philadelphia, and published by the Dolphin Press of that city and New York. The first poem in the book was written in 1822, eighty years ago, a quarter of a century before, in days that now seem ancient history, Landor, in his classic letter, hailed the present pontiff's predecessor, Pius IX., as the saviour of society. But the next, "De Invalitudine Sua," is even more striking. At twenty the Pope despaired of long life, almost of life at all, so feeble was his health:

"Pulvis hic densos Josaphat ex cinis in annos,  
Mortuorum heu quanta vi muner obsequia."

He confronted the prospect of an early death with Christian resignation and fortitude, and seventy years later was writing his remarkable "Ode to a New Country." The secret of his life, and the most beautiful thing in the book, is not a poem, but a short piece of prose composition—it is the vow which he made when he became Pope. We give it in English. In it he resolves—"For the rest of my life daily to offer the Sacred Host, and so cleave closer and closer to God, and with ever-increasing diligence to labor with watchful spirit to procure the eternal salvation of mankind."

ALMOST ANYTHING from the hand of Edgar Allan Poe is certain to have a wide reading nowadays, and more than ordinary interest attaches to the letters, written by him, recently brought to light and soon to be published by the Century Company. They were written to Dr. Chivers, a Southern poet, who was quite as erratic as Poe, and whose career was almost as remarkable. Along with Poe's own letters are to be presented in an early number of the magazine documents by Chivers concerning Poe. The material to be published is being carefully edited by Professor George E. Woodberry, the author of the best biography of the poet yet written. Apropos of Poe, I have on several occasions recently passed by the cottage at Fordham where that unhappy and ill-starred genius lived during the closing years of his life, and have been interested to note the changed and changing conditions of the neighborhood, now rapidly filling up with a fine class of suburban homes in the midst of pretty parks and noble boulevards. Immediately across the street from the cottage is Poe Park, a beautiful little breathing space adorned with groups of stately and ancient trees and lovely stretches of open lawn whereon, I am glad to see, are no impertinent and unnecessary "Keep off the grass" signs. In Poe's day this locality was "way off in the country," and it must have been a long and weary tramp for the poet to cover the distance between the cottage and the office of Griswold's magazine, near City Hall Park, where he performed so much excellent but thankless and ill-requited work. Thanks to a recent extension of the elevated road this distance of ten miles or more can now be made in a little over an hour.

ELLEN THORNYCROFT FOWLER'S latest book, "Fuel of Fire" (Dodd, Mead & Co.), has to do chiefly with the fortunes of a young Englishman by the

name of Laurence Baxendale, whose ancestral home at Baxendale Hall is under a curse pronounced upon it some centuries before by a young woman falsely accused of witchcraft and burned at the stake, her dying malediction being put in these words:

First by the king and then by the State,  
And thirdly by that which is thrice as great  
As these, and a thousand fold stronger and higher,  
Shall Baxendale be made fuel of fire.

Twice in the course of time had the doleful prophecy pronounced by the dying victim of fanatical hatred and superstition come true. "First by the King and then by the State" had Baxendale been reduced to a heap of ashes, and then comes the period of this story when history repeats itself once more in the lives of Laurence Baxendale and Nancy Burton, the woman whom he loves. That is, it repeats itself so far as the fulfillment of the third part is concerned, the burning down of Baxendale Hall by means of a power "a thousand fold stronger and higher" than King or State, the heat of a midsummer sun. Laurence himself is suspected of firing the old mansion for the sake of the insurance money, and things look dark for him for a while, although Nancy's love and faith remain true and unshaken. At last the mysterious origin of the fire is discovered by a scientific expert, and all ends happily in the marriage of the devoted lovers and the lifting of the curse from Baxendale Hall, the prophecy having been fulfilled to the letter.

THERE ARE many excellent "take-offs" on current fiction in "Condensed Novels," the latest volume of the lamented Bret Harte (Houghton, Mifflin & Co.), but none so good in my opinion as the skit, "The Stolen Cigar Case," in which Sherlock Holmes, who appears under the thin disguise of "Henlock Jones," is made to figure in a light which must be somewhat disconcerting, to say the least, to Dr. Doyle, the creator of that remarkable individual, for the story winds up by severing the tie that binds the great discoverer of crime and criminals to the doctor who has hitherto served as the narrator of all his wonderful and never-to-be-forgotten deeds. In the course of proceedings in "The Stolen Cigar Case" we are told of a room in Henlock Jones's apartment wherein are to be seen "small glass jars containing earthy substances, labeled 'Pavement and Road Sweepings' from the principal thoroughfares of London, with the sub-directions 'for identifying foot-tracks.' There are several other jars labeled 'Fluff from Omnibus and Street-car Seats,' 'Cocoanut Fibre and Rope Strands from the Mattings in Public Places,' 'Cigarette Stumps and Match Ends from Floor of the Palace Theatre, Row A, 1 to 50.'" In the ending the astute and never-to-be-baffled Henlock Jones proves to his own satisfaction that the real thief in the case is none other than the doctor himself, who is therefore taken "firmly by the ear" and thrust from the sight of the aforesaid Jones, never to return, even, we are led to infer, to tell another story.

WHILE ALGERNON SWINBURNE'S true place among the poets of his day is a question still open to discussion, it is the general agreement among good critics that in melodic sweetness, lyric beauty, and warmth of color, his verse has rarely, if ever, been surpassed in the history of English literature. The gravest charge against him is that his poetry is often vague and meaningless, and that certain of his writings border close upon open sensuality. Mr. Swinburne lives at Putney, a suburb of London, in a house called "The Pines." Of later years he has lived in great retirement, neither seeking nor desiring the attentions of the age. His great love is still the sea, though he lives far from it, and to this day nothing delights him more, it is said, than a good swim. He reads omnivorously, but his heroes have always been Victor Hugo and Walter Savage Landor. With the latter he spent some months at Florence just after leaving Oxford, and the memory of that happy time is always with him. Mr. Swinburne's income is said to amount to \$5,000 a year—not an enormous sum to be gained by a muse which, as E. C. Stedman says in his "Victorian Poets," "is in his hands like the violin of Paganini."

MRS. SARA BEAUMONT KENNEDY, of Memphis, Tenn., whose new novel, "The Wooing of Judith," was published recently by Doubleday, Page & Co., had an amusing experience lately with her great-great-granddaughter. This may seem surprising to friends of Mrs. Kennedy, but she herself claims to be the great-great-grandmother of a friendly reader in Memphis. It fell in this wise: The woman of Memphis read Mrs. Kennedy's novel, "Joselyn Cheshire," a Revolutionary story laid in North Carolina. She was pleased with the heroine, in whom she recognized a revered ancestor, and wrote to the author of this interesting fact. She inherited, it seemed, among other things, many of Joselyn Cheshire's traits of character. Then Mrs. Kennedy replied to say that Joselyn was entirely the child of her imagination, and that, therefore, the descendant must be still more the author's descendant. But the contemporaneity of these disparate generations is rather unsettling—as the Idiot of "Coffee and Repartee" would not say—to certain minds.

ONE WHO bears a very close relation to William Stearns Davis, the author of three successful novels, the latest of which is "Belshazzar" (Doubleday, Page &

Co.), tells me that the first of these productions, "A Friend to Caesar," was accepted and in the hands of the publishers before the young author, then a student at college, knew that its publication was contemplated; surely a most remarkable incident in the history of authorship. The story was written by young Davis from a pure love of literary diversion and with no thought of immediate publication at least. He sent it home for perusal to his father, who, being himself a man of fine literary tastes, thought he saw in the story the evidences of real genius, an impression which was quickly confirmed when he forwarded the manuscript to a well-known firm of New York publishers, by whom it was accepted at once with a goodly sum in payment cash down. How different this experience was from that of many young and unknown authors with their first books one hardly needs to say.

ALFRED H. HENRY, whose novel, "By Order of the Prophet," is issued by the Fleming H. Revell Company, completes a trio of brilliant contributors to American letters, all of one family. Mary Henry Rossiter, his sister, has written a life of her mother that has gone to five editions, and there is now in press a work of collaboration entitled, "The Story of a Living Temple," a study of the human body, in which she joins effort with her husband, Dr. F. M. Rossiter. Mr. Arthur Henry, well known to the newspaper world of New York, has lately issued through McClure, Phillips & Co., "An Island Cabin." The mother of these three young authors during her life wrote several books, all of which attained a high place in their respective field of effort, and her influence is now making itself felt through her sons and daughter in the production of literature of the distinctively constructive sort.

UNTIL A long-felt want is filled and some author appears who can write stories for girls and boys with the abiding interest, sweetness, and charm of Louisa M. Alcott's work, the publishers of Miss Alcott's stories (Little, Brown & Co.) will continue to find a host of eager readers for successive editions of "Little Women" and "Old-Fashioned Girl," such as they have recently issued. The first is brought out with fifteen full-page illustrations by Alice Barber Stephens, and the second with twelve full-page pictures by Jessie Wilcox Smith. It is doubtful, indeed, whether any writer of future days can displace Louisa M. Alcott in the affections of the young, no matter how brilliant, original, and otherwise captivating he, or she, may be. It is certain that no writer of recent times, with the possible exception of Mary Mapes Dodge, has approached Miss Alcott's standard.

IT IS A fact not generally known that Neltje Blanchan, the author of that most charming of out-door books, "Bird Neighbors," is none other than the wife of Mr. Doubleday, one of the firm by whom the book is published. That Mrs. Doubleday is a close and sympathetic student of the lives of the people in "tree-top country," this work furnishes the best attestation. It has already run through several editions and is doubtless destined to appear in many more.

DAU'S "Society Blue Book" for Albany, Troy, and vicinity, handsomely printed and bound, is out for 1903. It maintains the reputation of this publishing house for careful and accurate work and is the most complete publication of its character that we have seen. Dau Publishing Company, 54 West Twenty-second Street, New York, publishers.

## Made a Turn Over.

ANY ONE CAN DO IT.

A PRINCIPAL in a public school in Ohio had a food experience that will be familiar to many school teachers.

"The hard work of the school-room was so wearing that I was completely worn out and could barely walk home at night, and at other times I was so nervous that it was with much difficulty I ate or slept. I attributed my failing health to improper food, and felt that it would be necessary to quit my profession or get some food that would sustain my nerves.

"Fortunately enough at this juncture I discovered Grape-Nuts and am very grateful that I did. After using the food for a month I felt decidedly better and like a new man resurrected from the grave. The sluggish feeling, headache and nervous spells have all left me and I feel young and active.

"I can better concentrate my mind upon my work because my nerves have been strengthened and my health and energy have returned and I take interest in my work which before seemed a burden.

"I use Grape-Nuts every day because it is the best food for my system, has restored my health and I am correspondingly grateful." Name given by Postum Co., Battle Creek, Mich.

# DRAMATIC EVENTS OF IMPORTANCE.

THE LATEST OFFERINGS IN DRAMA AND MUSIC NOW BEFORE THE METROPOLITAN AUDIENCES.

# In the World of Sports

FONDNESS FOR SPORTS INCREASING—BIG FOOTBALL EVENTS IN PROSPECT.  
RACE-TRACK IRREGULARITIES.

**SPORTING FEVER RAGING.**—The football fever is raging at present as it probably never raged before in this country. The great college game, in the estimation of the college enthusiasts, has never been more popular than it has been during the present year. The rough-and-tumble field sport has simply held its own with other recreations and pastimes. The country at large is feeling the benefits of healthful outdoor recreations, and coming generations will be the better for it. It is not so many years ago that men of wealth and social position shrank from seeing their names mentioned conspicuously in connection with any sporting event. To-day one cannot pick up a publication and not find the leaders of the mechanical, social, business, and political worlds mentioned in some connection with some branch of sport. This is one of the reasons why the American people have taken to pastimes and recreations. Once interested, the value of open-air exercise becomes apparent, and it is only the foolish who go back to the old way of living. Even the faddists, though they flop from one sport to another, never quite get out of the sporting atmosphere. If one wishes to feel this sporting influence, all he has to do is to visit one of the great competitions in any of the large cities of the East or West. Or one can find it on any of the great boulevards in any of the big cities on any pleasant afternoon. The millionaire, the clerk, the baker, and the butcher are there in one guise or another, and everybody is enjoying himself. Even the slow-moving cobbler feels the sporting contagion and picks up his feet in livelier fashion than is his wont. The hard-worked grocer's horse, hitched to the Sunday carriage and brushed up as he is only brushed up for the Sunday outing of his master, has forgotten his week of hard toil and steps out his prettiest. There are brushes between the fast steppers, and between those who can't travel so fast, but the spirit of competition is there. After seeing all this without being impressed the dyspeptic is indeed hopeless and there is no further chance for him in this land that was one of trials and troubles, but is now decidedly sporty.

**COMING GREAT GRIDIRON BATTLES.**—The eyes of the football world are focused at present on New Haven and Philadelphia, where the two great gridiron battles of the year are to be fought. Yale and Harvard meet at New Haven on November 22d, and the sturdy teams representing the army and the navy at Quakerstown one week later. Then the armor, face guards, and canvas jackets can be packed away, and the players will have a chance to try to straighten out their countenances so that their folks will again recognize them when they go to their respective homes to enjoy the holidays. The season as a whole has been replete with surprises, and while the critics are more or less confident that Yale will beat Harvard and that West Point will win from Annapolis, still the odds offered by some of the more enthusiastic are really not as large as have been stated in some quarters. Yale stock has not been quoted as high since her disappointing showing against West Point. The soldiers gave the sons of Old Eli about the biggest scare of recent years, and Trainer Murphy's men were played to a standstill and were satisfied at the end to break even with a score of 6 to 6. In this game alone a line is shown which would seem to make the West Point-Annapolis battle something of a cinch for the soldiers. Still football is a mighty uncertain game and the middies have had plenty of time to get into condition for the struggle. Harvard bent West Point, 14 to 6, and those figures are mightily reassuring to the sons of John Harvard. The Princeton-Cornell game proved to be one of the best of the year. Singularly enough, DeWitt won all the honors, for his two goals from the field were all that saved the Tigers. As a punter, the champion college weight-thrower seems to be in a class by himself this year. The game recalls that in 1899, when Cornell and Princeton had another sensational battle on the gridiron. George H. Young, called "Bobby" by the entire college, kicked a beautiful goal from the field at Ithaca,

in the last four minutes of the final half, and won the game for Cornell by the score of 5 to 0. "Bobby's" name has been in Cornell's sporting hall of fame ever since. While many players have been injured this season, it cannot be called a year of football fatalities. Considering the speed and fierceness of attack practiced this year, serious accidents have been remarkably scarce. This can be accounted for in a measure by the fact that the trainers and physical directors at the different universities have been closer students of physical development than before, and youngsters who would have been accepted as candidates in previous years, but really unable to stand the severe strain of football, have been rejected at the outset this year.

**QUEER DOINGS ON RACE-TRACKS.**—The racing season in the East comes to an end with the closing of the present meeting at Washington, which winds up on November 29th. Then the millionaire horsemen will retire their thoroughbreds to the farm for the winter, while the less fortunate owners will go to New Orleans or California, where the sport will be kept up all winter. Racing is today a perpetual sport, and there are some men who wager on the chances of the horses every week day, right through the year. This can be said of no other sport. With the ending of the racing in the East the well-wishers of the sport of kings are beginning to think that the Jockey Club has been entirely too lenient with evil-doers during the year. Admitting that a thoroughbred is a mighty uncertain animal to bet on, still reversals of form have been so frequent and flagrant, that it seems almost incredible that the stewards have not been more active. President Riley, of the Aqueduct track, tried to protect his patrons by giving an order to refuse entries from a certain stable in the future, but the stewards of the meeting failed to sustain him and established a bad precedent. The result was that some of the most glaring reversals of form immediately followed the action of the stewards. The members of the Jockey Club are men of wealth and position, and they have unquestionably done much for racing. Still, in the opinion of many, the Jockey Club makes a grievous blunder when it practically winks at fraud on the tracks, simply because its members believe the scandal will injure the sport. The stewards at each meeting should be paid regular salaries, and should not be allowed to have any financial interest in any stable racing at that particular track. Then their judgment would not be biased, and their rulings would be sure to give satisfaction. Lyne has proved himself to be about the best jockey of the year, while Redfern is unquestionably the best light-weight seen in many years.

KAPER (PRINCETON) HURDLING THE LINE IN THE RECENT PRINCETON-COLUMBIA FOOTBALL GAME.—Earle.

**AUTOMOBILE LEGISLATION.**—While nobody has any sympathy for the reckless driver of an automobile who gets into trouble, there is undoubtedly much ill feeling against the horseless vehicle for which there is no reason. The bright men in control of the various automobile clubs throughout the country realize this, and they have done much good work quietly to bring about different conditions. The case in Yonkers, where the driver of an automobile was hurried to jail, had his hair clipped and was otherwise treated like a criminal, seems to call for something more than an official apology. It was admitted that the trolley car ran into the automobile from the rear, and yet the driver of the motor vehicle was hustled to a cell and treated with as little ceremony as if he had been a bank burglar or a murderer. Drivers of automobiles have been stoned while driving through the streets of New York, Boston, and Chicago. All innovations are accepted slowly, but the auto's fight for recognition is becoming a severe one.

**THE STABILITY OF HOCKEY.**—The strenuous, scientific and spectacular game of ice hockey is bound to continue popular during the coming winter. The colleges have adopted the game with a zest which insures continued prosperity to the sport. Even at this early date, arrangements are being made for the amateur and intercollegiate championships. Yale turned out a good team last year and promises to have an even better one this year. The invasion of the Canadians during the winter will help to enliven the sport. Both the New York and Crescent athletic clubs will put strong teams in the field, and other cities East and West will do likewise. The rinks in New York and Brooklyn will open early in December, and the games will be continued up to April.

GEORGE E. STACKHOUSE.

## Sporting Queries Answered.

**W. G. G., INDIANAPOLIS.**—Animals are not supposed to be raced in this country until they are two-year-olds. Still many have raced as yearlings. Roserint won several races before she was fully two years old. Onward Silver, who created a new two-mile trotting record recently, is credited with being artificially bred.

**M. C. K., PHILADELPHIA.**—We never had a professional football league of the sort you mention. An association league was formed in 1894, but it lasted only a few months. New York, Boston, Philadelphia, Brooklyn, Washington, and Pittsburg furnished the teams, and all lost money.

**R. E. O., PHILADELPHIA.**—Small game is said to be unusually plentiful this fall in Virginia and North and South Carolina. Comparatively few of the farms are posted. It is, however, best to obtain permission before shooting in a strange country.

**Y. E. H., CHICAGO.**—Lead pads are placed in the saddle to make up the required weight which the horse is supposed to carry. If any of these pads slip out during a race the horse can be disqualified, even if it won by a city block.

**M. A. L., LOUISVILLE.**—The minor leagues have a national board of arbitration for the settlement of all baseball controversies. The smaller leagues are neutral in the fight between the National and American Leagues.

**J. A. L., MASSACHUSETTS.**—James R. Keene did not issue a statement regarding betting. He merely said that there was too much heavy plunging on the turf and consequent notoriety of a sort not desirable.

## OFFICIAL LEGAL NOTICES.

## IMPORTANT TO TAXPAYERS.

DEPARTMENT OF FINANCE.  
BUREAU FOR THE COLLECTION OF TAXES  
NO. 57 CHAMBERS ST. (STEWART BUILDING)  
NEW YORK, NOVEMBER 1, 1902.

NOTICE IS HEREBY GIVEN to all persons whose taxes for the year 1902 have not been paid before the first day of November of the said year, that unless the same shall be paid to the Receiver of Taxes, at his office in the Borough in which the property is located, as follows:

BOROUGH OF MANHATTAN, No. 57 Chambers Street, Manhattan, N. Y.

BOROUGH OF THE BRONX, corner Third and Tremont Avenues, The Bronx, N. Y.

BOROUGH OF BROOKLYN, Rooms 2, 4, 6 and 8 Municipal Building, Brooklyn, N. Y.

BOROUGH OF QUEENS, corner Jackson Avenue and Fifth Street, Long Island City, N. Y.

BOROUGH OF RICHMOND, corner Bay and Sand streets, Stapleton, Staten Island, N. Y.

before the first day of December of said year, he will charge, receive and collect upon such taxes so remaining unpaid on that day, in addition to the amount of such taxes, one per centum on the amount thereof, as provided by sections 916 and 918 of the Greater New York Charter (Chapter 378, Laws of 1902).

DAVID E. AUSTEN, Receiver of Taxes.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF November 6 to 10, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessment for OPENING AND ACQUIRING TITLE to the following named street, in the BOROUGH OF THE BRONX:

24TH WARD, SECTIONS 11 AND 12, EAST 194TH STREET OPENING, from Valentine Avenue to Webster Avenue. Confirmed August 4, 1902; entered November 5, 1902.

EDWARD M. GROUT, Comptroller, City of New York, November 5, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF October 24 to November 7, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessment for OPENING AND ACQUIRING TITLE to the following named avenue in the BOROUGH OF THE BRONX:

24TH WARD, SECTION 11, MONROE AVENUE OPENING, from Claremont Park to the Grand Boulevard and Concourse. Confirmed July 10, 1902; entered October 23, 1902.

EDWARD M. GROUT, Comptroller, City of New York, October 23, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF October 20 to November 13, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessment for OPENING AND ACQUIRING TITLE to the following named streets in the BOROUGH OF THE BRONX:

23RD WARD, SECTION 9, EAST 162D STREET OPENING, from Teller Avenue to Park Avenue, West. Confirmed August 12, 1902; entered October 29, 1902.

24TH WARD, SECTIONS 12 AND 13, WEST 252D STREET OPENING, from Riverdale Avenue to Broadway. Confirmed August 8, 1902; entered October 29, 1902.

EDWARD M. GROUT, Comptroller, City of New York, October 30, 1902.

## Jasper's Hints to Money-Makers

NOTICE.—This department is intended for the information of the regular readers of LESLIE'S WEEKLY. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to LESLIE'S WEEKLY at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.

THAT THERE is dynamite under Wall Street, the knowledge of which is carefully concealed from the public, is beyond question. We were much nearer to a frightful explosion, a short time ago, when Secretary Shaw sprang to the relief of the market, than the public had any idea of. The real truth regarding this critical situation was not disclosed by financial writers, whose interests all lie with the heavy holders of stocks and with financial leaders on the bull side. But secrecy cannot always be maintained. The remarkable sluggishness, indecision, hesitation, and languid aspect of the market on the week beginning November 10, with the quiet and persistent liquidation of thousands of shares of stocks, quietly carried on from day to day, caused more than one observer to apprehend acute trouble of some kind, and when the market broke sharply at the close of that week, the disclosure of the financial difficulties of one of the new trust companies, having behind it the names of some of the wealthiest men of the country, could no longer be suppressed.

It came out that The Trust Company of the Republic, which had undertaken to float the newly organized United States Shipbuilding Company, had found itself in deep water. The French underwriters of

\$4,000,000 of the shipbuilding securities repudiated their agreement and the trust company was compelled to look around on this side of the water for the necessary capital. A new syndicate, in which Mr. Morgan was interested, was organized to subscribe the necessary \$4,000,000, and a sigh of relief was heard when it was reported that, though with much difficulty and at great sacrifice, the deficit had been made up. The State superintendent of banks, it was then discovered, had had an examiner at work, looking over the affairs of the trust companies of New York, and another sigh of relief was heard when this examiner announced that, after having examined three-fourths of the local trust companies, he found them all in excellent condition.

This revelation proves what I have heretofore said, that foreign capital is getting to be very timid of our new industrial combinations and new railroad propositions; secondly, that we are short of money ourselves, and that our overloaded syndicates and combinations, many of them backed by the trust companies, must look out for themselves; and thirdly, the possibility that other trust companies, who have been floating industrial enterprises and new issues of railway bonds and stocks, may find themselves in trouble if gold is exported, if money rates continue high, and if the public refuses to buy the new securities. Finally, all these incidents are danger signals, justifying my repeated warning that prices are on too high a level, that there must be still further and more general liquidation, and that the speculators on the short side of the market are about to have their inning.

Speculators and promoters are fond of giving out for public consumption the statement that the Standard Oil crowd is interested in properties for which these speculators and promoters are seeking to find a market. We were told, for instance, that the Standard Oil was behind National Salt, when it was paying its unearned dividends, while insiders were unloading it upon the public. Similar reports have been printed regarding a number of other industrial propositions, and great railroad deals and combinations are often helped along by stories regarding Standard Oil backing which they are supposed to have. Those who really want to know what the Standard Oil banking interests, represented in concrete in the great City National Bank of New York, really think of the financial outlook, should observe the interesting address of the Hon. Frank A. Vanderlip, vice-president of the City Bank, recently delivered at Wilmington, N. C. This address has attracted very general attention, but it was exactly on the lines which have guided the declarations of this column for many months past.

Mr. Vanderlip, who has just returned from a journey abroad, pointed out that the financial signs in this country could not be regarded as wholly auspicious. He finds that "the edge is off our invasion of foreign markets," and that our domestic industrial condition is "not in every respect satisfactory"; and that we must "recognize unfavorable conditions that threaten a break in the unparalleled magnificence of this story of industrial growth." Worse than this, he finds a situation of peril in the enormous expansion of our deposits in the national banks, footing up over four billion and a half of dollars, as compared with three and a quarter billions, in 1899, without any increase in that period, worth mentioning, of the specie and legal tenders held by these institutions.

In this remarkable development of bank credit, largely attributable to the establishment of the trusts, and the vast expenditures of corporations, railroads included, Mr. Vanderlip finds a serious menace to our prosperity, and he advises the practice of wise discretion, with the alternative of continuing to borrow against the future until we are "brought up against a wall." Mr. Vanderlip sees in the possibilities of gold exports cause for further apprehension, and he may well do so. If this is the opinion of the Standard Oil and City Bank interests, it is only that of every other conservative observer of the events of the past two or three years.

Some of my readers have occasionally questioned the soundness of my judgment regarding the climax of our prosperity, which I have said was rapidly being attained. Some have found fault with my prediction that lower prices were inevitable and that a continuance of existing "boom"

conditions could not be anticipated much longer. The fact that the independent financial writers and many leading financiers are now pronouncing precisely the opinions that I have so long expressed, is only pointed out by me at this time to add emphasis to the argument in favor of the greatest conservatism in Wall Street operations and in business enterprises generally. I have shown more than once that the laws

## THUNDER MOUNTAIN

TO INVESTORS  
Invest in no Thunder Mountain Stock until you get my advice. I am in the center of the excitement—my advice may be valuable to you. Write to ADRIAN G. HANAUER, Speake, Wash.

## WHY WASTE YOUR MONEY?

We are not promoters, and we sell every thing at less than regular rates, especially stocks, etc. We know how. Now we want a little capital in a free gold proposition. Drop us a postal and we'll tell you why it's all right. Ellis & Hensler, 117 Columbia St., Seattle, Wash.

## Would You Invest \$100.00 to make \$10,000.00? If so, BUY HIDDEN FORTUNE

Stock of Lead, South Dakota, at \$2.00 per share. Property surrounded by the mines of the Homestake Company, whose stock advanced from \$2.00 to \$20.00 per share and pays 10 cents per share monthly in dividends. Hidden Fortune should do as well. They have \$1,000,000 in cash and will be on a dividend paying basis as soon as a new mill, now building, is completed. Wonderful discovery of ore running \$200.00 per ton just opened. Absolutely safe, as there is over \$200 worth of gold ore in sight for every share tested.

Send for Fully Illustrated Prospectus.

**HERBERT S. SHAW,**

Stom 14 and 15, Brown Palace Hotel, Denver, Colo.

## Life-insurance Suggestions

[NOTICE.—This department is intended for the information of readers of LESLIE'S WEEKLY. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.]

A GRATEFUL reader writes to thank "The Hermit" for an answer to an inquiry made nearly a decade ago. It was in reference to the order of the Iron Hall, then perhaps the strongest, most aggressive, and assertive of the so-called fraternal insurance orders. In answer to the inquiry at that time, I said that, in spite of the apparent prosperity of the order, it could not survive, because its system was unbalanced, unbusiness-like, and impracticable. I received many letters from members of the Iron Hall, some of them severely denunciatory, and many of them inspired, no doubt, by the managers of the order, who were enjoying a comfortable living out of the pockets of their victims. The disastrous failure which wiped out the concern came suddenly—like a shock—and all the much-vaunted promises of great returns to the members, to recompense them for their heavy assessments, were thrown to the winds. I am glad to see that recently a Baltimore company, which guaranteed certain policies of the Order of the Iron Hall, has been held responsible by the courts for guarantee.

The experience of the Iron Hall is that of all the other fraternal assessment orders which have failed, and it points out the probable end of all organizations which only provide for temporary and not for permanent life insurance. The Iron Hall ran along and was apparently successful for many years, until its certificates began

to fall due in large amounts. Then came the real test of its strength, and it fell, just as every fraternal assessment order must fall when its death rate begins to overtake its assessments. Many orders are endeavoring to save themselves from their inevitable fate by proposing a gradual and steady increase of assessments, so that the older the member the greater the burden he must bear. In an old-line company the older the member the easier his burden, for his policy has increasing value from year to year, while its cost never increases, and sometimes, by the payment of dividends, decreases.

"G." Belvidere, Ill.: They promise too much. "C." St. Matthews, S. C.: Reply by letter. Have asked a reliable party to send you the information in confidence.

"H." Buffalo: I have had a number of similar propositions, but obviously it would not be right to accept any of them, and all have therefore been refused.

"S." Detroit: The verdict of \$2,500 against the Modern Woodmen of America, rendered at Grand Rapids, was for physical damages for injuries received by a member while being initiated. "D. H. B." Wheeling, W. Va.: (1) I do not regard it by any means as perfectly safe or even reasonably safe. (2) If I sought an annuity, I should get it in the strongest old-line company I could find. Safety is the first element to consider.

"L." Buffalo: (1) The suit against the Safety Fund Insurance Society of New York, begun by Mr. Hausmann, charges the directors with having illegally sought to turn over the business and assets of the society to the American Guild, a fraternal organization of Richmond.

"L." Braumont, Texas: I believe, considering all the circumstances, that your first duty is to protect your own personal interests and I would therefore recommend the joint survivorship annuity. It is safe, expedient, and gives you the assurance of maintenance in case of later misfortune. Your children may be better able in your declining years to look out for themselves than you have been.

## The Hermit.

## Jasper's Hints to Money-makers.

Continued from preceding page.

"D." Newport, R. I.: Not in my judgment. "H." Big Stone Gap, Va.: Will make inquiries and answer later.

"H." Mendville, Penn.: Will endeavor to correct the difficulty.

"L." Mansfield, O.: I do not advise the purchase of Occidental.

"H. E. S." New York: I thank you for your letter of information.

"F." Philadelphia: Will make inquiries regarding the Suburban Development Company.

"H." San Francisco: The broker is wrong, though he may juggle with the figures to mislead you.

"D." Ballston Spa: I do not advise the purchase of United States Steel, or Union Bag, at present, though of the two I would prefer the latter. Industrial propositions are not in the highest favor.

"Hancock": Lehigh Valley has suffered with the rest of the coal roads, but an impression has gone out that large interests are piling up the stock on every sharp decline. I would therefore wait for developments.

"W." New York: The Union Pacific Convertibles do not pay handsomely, but their convertible property is virtually an option on the common stock, and that is why they are favorably regarded both by speculators and investors.

"C." Dover, N. H.: It is said that the dividend on United Box, Board and Paper Company preferred was deferred because the company lost about \$40,000 on account of the increased price of coal resulting from the strike.

"C." Manchester, N. H.: The president of the Pam Rubber Plantation Company, Mr. Cudahy, is a gentleman of wealth and successful business experience. Any mercantile agency would no doubt give you a detailed report.

"D." New York: As an employee of the concern, you might be expected to know something of the business. Its earnings certainly are large and its dividends generous. There is always danger of competition in industries.

"W. G. W." Brooklyn: (1) You could only lose in case you were unable to make your sheet sales good. You must guard against this. (2) The shrinkage would be inevitable if bankruptcy proceedings were impending, unless the stock is now selling at its real value.

"Z." Napa, Cal.: One dollar received. You are on my preferred list for three months. The business is very speculative and I would have nothing to do with the so-called "specials" or the "mutual investment," or with any other concern promising 10 per cent. monthly dividends.

"C." Johnston, N. Y.: Two dollars received. You are on my preferred list for six months. (1) I am inclined to agree with you that it is being picked up on the new low level. I have been making careful inquiries, but it is difficult to get at the real facts. I think something "is done."

"N." Little Rock, Ark.: Much depends upon the demonstrated practicability of the plan. A gas and electric-light franchise in a city of that size, would immediately command the necessary money. The experiment of a public heating plant has been tried in this State, but has not succeeded.

"G." Nashville, Tenn.: (1) It is true that the demand for iron rails and railroad iron generally is greater than the supply, but the demand for structural iron, wire nails, steel bars, sheet steel, tubes, etc., is not by any means greater than the supply. On the contrary, cuts in prices are being announced.

"C." Providence, R. I.: In the present temper of the speculative market, you would do wiser to hold on to your money and await the developments of the situation. It is not a good time to speculate unless you buy shares which you can dispose of at any time on the Stock Exchange. None of those to which you refer have a quotable value there.

"R." Shiremanstown, Penn.: (1) There are indications that it has been picked up on the decline by insiders. I do not advise its sale, but cannot get inside information. (2) All the iron and steel stocks are liable to suffer during the next year by a decreasing demand for iron and steel and the consequent reduction of prices of such commodities.

"Wheeling," W. Va.: One dollar received. You are on my preferred list for three months. I do not regard the stock as a permanent investment. At present it is making good returns on its capital, but it is an industrial proposition in a sense, and would suffer, like all other industrials,

from depression of business, which, sooner or later, must inevitably occur.

"Banker," Charleston, S. C.: A good bond, netting a little over 4 per cent. and recommended by Spencer Trask & Co., the well-known bankers, of 27 Pine Street, New York, is the Nashville, Chattanooga and St. Louis first consolidated 5 per cent. mortgage, selling around 116. A bond paying a little better, recommended by the same firm, is the Oregon Short Line 4 per cent. participating gold bond, selling around 90. Both of these have merit.

"J." Plattburgh, N. Y.: I would take my profit in Southern Pacific. The pool that undertook to advance it toward par is still loaded up with a good deal of the stock and will endeavor, no doubt, to market it before next spring, when the pool will expire. You might get a higher price for it, but a profit is a good thing to take at this time. No doubt if the leaders could relieve themselves of their burdens, Keene and Gates would both be found on the bear side.

"L." Memphis: (1) The declaration of a dividend of 6 per cent. on American Cotton Oil common, 4 per cent. payable next month and 2 per cent. way off in June next, may signify a possible alliance with a large concern and a distribution of the surplus meanwhile. (2) A great many small speculators began to realize that the bullish talk given out at intervals has for its purpose the unloading of certain stocks on the dear public. Talk is the cheapest commodity in Wall Street.

"F." Hartford, Conn.: (1) The stockholders of Greene Consolidated have ratified the proposed increase in the capital stock from \$6,000,000 to \$7,200,000. The unsubsided stock, it is said, has been underwritten at \$20 a share. The stockholders of the Greene would do well to select their own expert and make their own examination of the property. (2) The syndicate that underwrote the Allie-Chalmers stock, I understand, is loaded up with the shares, for which it has been unable to find a market.

"S." Cohoes, N. Y.: (1) The disposition of leading traders is more and more toward the bear side, as it always is when the factors point to liquidation. (2) American Locomotive preferred is not a standard investment. While the locomotive works are overrun with orders just now, they are all adding to their producing capacity, and the railroads are in many instances building their own locomotives. The Pennsylvania Railroad shops at Altoona, for instance, are increasing their capacity to the extent of ten locomotives a week.

"A." Akron, O.: (1) The losses to the coal roads, growing out of the strike, have not yet been fully disclosed. It is said that the Lehigh Valley's deficit will amount to \$3,000,000 and the Reading's to nearly \$10,000,000. The loss to the Erie will no doubt be considerable. (2) The earnings of Toledo, St. Louis and Western last year showed less than 1 per cent. on the preferred stock, after the payment of fixed charges. On the basis of earnings, Kansas City Southern preferred, which is earning about 4 per cent., looks cheaper.

"N." Tonopah, Nev.: I hardly understand your question. It is not unusual to have both common and preferred shares of industrial and railway corporations. The preferred has a prior claim on the company for dividends and is a prior lien on the company's property, but neither the common nor preferred can be retired unless that fact is expressly stipulated. In other words, whatever the owners and issuers of the concern, at the organization of the company, legally decide to do may be done. I will be glad to explain further if this is unsatisfactory.

"S. E." Vancouver, B. C.: (1) So little is revealed about the possible traction combination that I can give you nothing definite. Manhattan seems to be a natural outlet for the New York Central system. That may be its destiny. Vanderbilt association with it would of course add greatly to its value. (2) I do not advise the purchase of United States Steel common at a time when the shareholders are beginning to regret that the crest of the wave of prosperity in the iron market has been reached. (3) I have so many similar requests that it is impossible to comply. Can only answer inquiries as they are received.

New York, November 13, 1902. JASPER.

### Business Chances Abroad.

**THE** importation of bicycles into Japan has more than doubled in the past two years, the value of the imports in 1901 being \$269,027, over 95 per cent. of which came from the United States. The bicycle has not yet penetrated into the interior of the islands; it is used chiefly as a cheap method of locomotion in the seaports and large cities. Being employed principally for business rather than for pleasure, it is not subject to the caprice which caused such an extraordinary increase and decline in its use in this country. The demand for bicycles in Japan, we are informed by Consul-General Bellows, of Yokohama, is likely to grow for some time yet, after which it may be expected to continue fairly steady. He says there is a fair prospect that automobiles may generally come into use in Japan for purposes of business. The postal authorities are now considering the advisability of purchasing automobiles for the transportation of the imperial mails to Tokyo.

Business men interested in Madagascar state that a profitable cattle trade may soon be opened between that colony and the Transvaal. The southern part of the island is a rich field for raising cattle, and is good for little else. The cattle now there, owned by the natives, number from 800,000 to 1,000,000. In Madagascar cattle can be bought for \$19.30 per head, or less, and they will sell in the Transvaal for \$67.50. Any one wishing to engage in this business may obtain information by correspondence with M. Louis Jausaud, Tulear, Madagascar.

The French government has awarded the transport service between the coast of Madagascar and Tannanrivo, the capital and largest city on the island, to Mr. Edouard Giquel, a merchant of long standing in Madagascar. Mr. Giquel, who has studied the different patterns of hand-carts and "pousse-pousse" used, in the last two years, has come to the conclusion that the strongest, lightest, and most durable vehicle of the kind can be produced in the United States and, consequently, he is desirous of entering into correspondence with American wagon and carriage manufacturers in order to obtain something of purely American type.

### Special Prizes for Amateur Photographers.

LESLIE'S WEEKLY was the first publication in the United States to offer prizes for the best work of amateur photographers. We offer a prize of five dollars for the best amateur photograph received by us in each weekly contest, the competition to be based on the originality of the subject and the perfection of the photograph. Preference will be given to unique and original work and for that which bears a special relation to news events. We invite all amateurs to enter this contest. Photographs may be mounted or unmounted, and will be returned if stamps are sent for their return. All photographs entered in the contest and not prize-winners will be subject to our use unless otherwise directed, and one dollar will be paid for each photograph we may use. No copyrighted photographs will be received, nor such as have been published or offered elsewhere. Many photographs are received, and those accepted will be utilized as soon as possible. Contestants should be patient. No writing except the name and address of the sender should appear on the back of the photograph except when letter postage is paid, and in every instance care must be taken to use the proper amount of postage. Photographs must be entered by the makers. Silver paper with a glossy finish should be used when possible. Mat-surface paper is not suitable for reproduction. Photographs entered are not always used. They are subject to return if they are ultimately found unavailable in making up the photographic contest. Preference is always given to pictures of recent current events of importance, for the news feature is one of the chief elements in selecting the prize-winners. The contest is open to all readers of LESLIE'S WEEKLY, whether subscribers or not.

N. B.—Communications should be specifically addressed to "Leslie's Weekly, 110 Fifth Avenue, New York." When the address is not fully given, communications sometimes go to "Leslie's Magazine," or other publications having no connection with LESLIE'S WEEKLY.

## THROUGH AND THROUGH A LIFE-SAVER

Lifebuoy is not a transparent soap but a sanitary, antiseptic, disinfectant soap which purifies while it cleanses.

Lifebuoy Soap has life-saving qualities, and can be used like any other soap throughout the household, thereby ensuring a clean and healthy home. Try it.

### Great Is Texas.

AND THE EYES OF THE WORLD ARE UPON HER.

THE homeseeker wants to know about her "matchless" climate and her cheap lands. The investor wants to know about not only her cheap land and low taxes, but, as well, her wealth of mine and forest, and this is to let you know that the International and Great Northern, the Texas railroad, traverses a thousand miles of the cream of Texas's resources, latent and developed, penetrating the heart of the East-Texas Gold Mine—the fruit and truck-growing section—and that you can learn more about the great International and Great Northern country by sending a two-cent stamp for a copy of the "Illustrator and General Narrator," or 25 cents for a year's file of same; or by writing D. J. Price, G. P. & T. A., Palestine, Tex.

"Mother, where are the little red spots you had on your face?"  
"Gone, my darling. Sulphume and Sulphume Soap have taken them all away."

## THE REASON WHY!

### SULPHUME

is a chemical solution of Pure Sulphur, and when taken internally and applied as a lotion will cure dandruff or any skin disease; it is also a great hair invigorator. Price \$1.

### SULPHUME SOAP

stops itching and all skin irritations, softens and whitens the skin, and has no equal for the toilet or bath. Prices: Perfumed Soap, 25c a cake; Unperfumed, 15c a cake. Will mail trial cake upon receipt of price.

### SULPHUME SHAVING SOAP

is the perfection of soaps for shaving. It is a perfect antiseptic, prevents rash breaking out, cures and prevents all contagious skin diseases, gives a creamy lather and is soothing to the skin.

### SULPHUME LITTLE LIVER PILLS

act directly on the liver, kidneys and bowels, but do not gripe or nauseate. Price, 25c.

### SULPHUME BOOK

on care of the skin free.

*M. A. Day* Be sure this signature is on each package of Sulphume Preparations, otherwise it is not genuine.

Your druggist can procure Sulphume Preparations from his jobber, without extra charge to you.

## Educating Awkward Sea Lions and Seals.

Continued from page 481.

it necessary for me to keep at least two or three understudies, and to be continually training new seals in the tricks of the old ones.

"Charley, there, is one of my substitutes, and he is learning to clap his hands to show the audience that he appreciates the music of the seal band and the other tricks of his comrades. I am making him lie on his back and slap his front fins together. If you should see the performance a few months from now you would think that Charley was a good deal of a humorist. He's a stubborn little beast. I have to put him on his back and hold him there at first, to let him know what I want. Then I tap his front flippers so that he flaps them together."

While Mr. Judge was telling me this he was suiting the action to the word. Charley was considerably excited and a little unmanageable at being photographed. He had broken loose from his master and had loped away repeatedly. Finally he was made to lie still, for Mr. Judge caught him and held him down, and then when the trainer's little whip touched the sea lion's fins he clapped them together rapidly.

"Now when he has learned that," remarked Mr. Judge, "I can tie the tambores on his fins and Charley can play in the band."

The saddest fact about these seals and sea lions who are public entertainers is their tendency to blindness. In the collection of "Alaska" is one old lion, Nero, who is totally blind. His brown eyes have each a faded blue spot in the centre. It is his profession which has brought this about, for the calcium lights of the stage have burned away the animal's sight. Used in their native state to spending so much of their time under water, the eyes of the sea lion are not strong enough to withstand the strain of glaring, artificial light. Nero has been an actor eight years. He is between ten and eleven years old and his blindness has come on gradually. He was once a juggler, but he has been forced to give that up because he can no longer see. He still takes his place on the stage, however, and you wonder how he can find his way about and follow instructions.

"He does it entirely through knowing my voice," said the trainer. "He knows the direction from which it comes and that guides him. While I call him to his perch he will move forward until he strikes it with his nose and then he will climb onto it. His box always occupies the same relative position to the entrance of the stage, so that he can go to it alone, if necessary, simply by his recollection of the distance."
